SOME time ago there was talk of a great sale of pictures by a temple in Kyoto which had fallen into pecuniary difficulties. The story did not obtain much credence at the time, but it is now repeated by the *Jiji Shimbun* with very full details. The temple in question is Daioku-ji of Murasaki-no in Kyoto. Its debts having accumulated to a sum of nearly a hundred thousand yen, some method of clearing them off had to be found, and no better way presented itself than to dispose of a set of pictures of the five hundred Disciples of Buddha—the *Ahrats*—which had been in the possession of the temple for several generations. It is not stated by whom the pictures were painted. Probably the artist's name is not known, for in the case of the vast majority of the pictures preserved in Japanese temples tradition is entirely silent as to the painters' names, and since neither name nor mark was ever written on sacred pictures, there is no way of identifying the work except by internal evidence. We have never before heard of this wonderful set of pictures, but it is plain that they must be held in very high esteem to command such a price. The priests, before putting them on the market, were obliged, of course, to obtain the sanction of the authorities, and when the application was received, official reference was made to the Bureau charged with the duty of inspecting and keeping a record of public heirlooms throughout the empire. The Bureau replied that the pictures had been placed by it in the third class, and that the proposed price did not seem too low. Much regret was expressed by the Governor of Kyoto that such a unique set of paintings should be sold, but the circumstances left no choice, and permission was accordingly given. The *Jiji* does not know exactly how much the temple received for the pictures, as, of course, there

were sundry commissions to be paid; but it asserts that they were sold to an American merchant for a hundred and eighty thousand yen. We must confess to much scepticism about this figure. Two of the pictures are said to be missing, and thus the price paid becomes over 360 yen per picture. There are very few Japanese pictures for which any foreigner would pay 360 yen, and if any American merchant has disbursed such a sum for a figure of an Ahrat painted after the manner of mediæval Japan, we admire his enthusiasm more than his judgment. At all events it seems a pity that such heirlooms should be allowed to leave Japan.

CHINESE CHARACTERISTICS AND LOCAL JOURNALISTIC CHARACTERISTICS.

We find it very entertaining to observe the hubbub made by a section of the local foreign press about the misconception into which we were betrayed by the *St. James's Budget's* review of Mr. Smith's "Chinese characteristics." When we commented on the book we were careful to explain that we had never seen it, and that we based our remarks entirely on the review. Nothing could have been more misleading than the review. The book, as we know now from actual perusal, is admirable. It gives evidence of the keenest observation; is delightfully written, and shows throughout a disposition to be fair as well as marked distaste to assume omniscience. No one could have formed the smallest conception of such a book from the London journal's review. The review conveyed only one impression, namely, that Mr. Smith was one of those self-sufficient ignoramuses who judge a whole nation by their superficial observation of a unit's eccentricities or idiosyncrasies. Now a portion, if not the whole, of the book had appeared in the columns of the *North China Herald*, and had been praised by us at the time. Therefore, because we were misled by the review in the *St. James's Budget*, the Shanghai journal accuses us of "an extraordinary change of opinion." How delightfully ingenious on our contemporary's part! An "extraordinary change of opinion," when we had no portion of the book before us on the second occasion, but judged it entirely, as we were careful to explain, by the *St. James's Budget's* review! Had we said that the London journal's review distorted Mr. Smith into "an ignorant prig who does not hesitate to base monstrously ridiculous generalizations on his own equally monstrous ignorance," whereas we knew him by his book to be a wholly different kind of person, none of our gentle and ingenious critics would have made any protest. But unfortunately we did not know Mr. Smith's book; we had never heard his name in connection with any work on Chinese characteristics; and we were not aware that he was the author of the essays in the *North China Herald*. Our sole mistake was that we failed to recognise the Shanghai newspaper's very clever, very fair, and very open-eyed anonymous contributor in the Mr. Smith of the London journal. And we defy anybody to have identified the two without previous knowledge. One local journal alleges that we had ourselves reviewed Mr. Smith's work. That is an untruth. The *North China Herald* says that it sent us a copy of the work. Perhaps so, but we never received it. And what a storm in a tea-pot the whole thing is! Good for Mr. Smith, however. We are sure that he has forgiven us, being, as we take it, a shrewd as well as an observant and witty man. We wish that he would write a brochure about local journalistic characteristics in the East.

MR. MORTIMER MENPES.

The Dowdeswell Gallery, in New Bond Street, says a recent issue of a London journal, has opened with a pretty little collection of some sixty paintings and drawings of Venice by Mr. Mortimer Menpes, whom many of us remember in connection with his visit to Japan seven years ago. Very pleasing to the eye is the soft colouring of the architecture which characterises the greater portion of the pictures, though one cannot help regretting that nearly

all partake so much of the character of miniatures. Probably the exhibit which will claim most attention is a fine architectural study of St. Mark's (No. 14), lit up by the soft light of closing evening, and judiciously placed so as to afford a most pleasing contrast to its neighbour (No. 15), which represents the southern aisle of the same fine old building. The high altar of the same church also offers a fine subject, to which has been allotted a central position, though in the colouring natural truth would seem to have been somewhat sacrificed to effect. Although Venice, of all places in the world, offers to the painter so many subjects peculiarly characteristic of itself and pre-eminently effective in their grouping, it is only in one or two small pieces, such as "Cannareggio" (No. 13), and in a pretty evening effect ("Chioggia," No. 56), that the beaten track is followed, representations of characteristic, though not particularly picturesque, houses forming the bulk of the collection, which, however, for this very reason is perhaps the more worthy of a visit.

THE SCHOOL OF SERICULTURE.

THE ceremony of conferring diplomas on the graduates of the Sericultural School at Nishigahara, Oji, took place on the 30th ultimo, in the presence of his Excellency Viscount Sano, Minister of State for Agriculture and Commerce, Mr. Nishimura, Vice-Minister and other officials. Viscount Sano made the following speech to the graduates:—

I congratulate you heartily, gentlemen, on having brought your studies to a successful termination and obtained diplomas of proficiency. I desire to take the opportunity of addressing a few words to you. Food and raiment are the two most necessary requisites of daily life, and garments may be made of cotton, wool, hemp, and so forth, but certainly the finest material of all is silk. Silk is produced in various countries, but chiefly in China, Italy, and Japan. The quantity produced in Japan is small compared with the quantity produced in China—only about one half. A few years ago, however, when I was last abroad, it was only a fourth. Our silk stands distinctly on a lower grade than that of Europe, not because our silk-worms or our inueries are inferior, but because our methods of sericulture are less skillful. The great staple which preserves our balance of trade is silk, and if care be given to methods of sericulture so as to raise the grade of the article, very material results will ensue. Suppose, for example, that the price is increased twenty per cent, then on every hundred catties of silk sold there is an added gain of a hundred yen, approximately, so that the subject, as you perceive, is of the greatest importance. I trust, therefore, that you will devote the utmost attention to bringing about improvements in methods of sericulture as a matter of national interest. Remember, too, that no science or art can be thoroughly acquired by a single course of study, and above all that to apply in practice the knowledge obtained in the classroom is a matter of the greatest difficulty. Many a medical student graduates from the Imperial University, but very few indeed are the medical men that distinguish themselves in their profession. It is from this time forth that you must work hardest and must earnestly. To one other point I wish to direct your special attention. The most necessary factor in all human enterprises is confidence. It will be your part to inculcate this truth upon the lower orders, to instruct them and lead them in the right way, so that they may value honesty and sincerity above everything. These are behests I would make to you, gentlemen, while congratulating you on your success up to the present.

THE "KOKUMIN SHIMBUN" AND COUNT KURODA.

ON the one hand, writes the *Kokumin Shimbun*, there are ignorant fellows who attempt to thrust an unconstitutional argument down the nation's throat; on the other, there are still more extreme folks who hope to organize a military party to fight against the Opposition under a constitutional government. If the people of the empire were to rise against them the influence and power of Satsuma would fall to the ground at one stroke. The older members of the Satsuma representatives ought to be held responsible for correcting the situation. Therefore we hope that Count Kuroda will stand forth and strike down the sham heroes who are attempting to collect violent men, that he will lead the honest and peace-loving folks who refuse to enlist in the ranks of the Military Party, and that he will assist the Civil Party to form a constitutional

Cabinet. Count Kuroda is the only man suited for the post. He expressed his disapproval of official interference in elections; he dislikes the organization of the Military Party; and he has committed no political error lately. Besides, he is one of the most patriotic men in the empire. If he does not rise and give his aid, the doom of the Satsuma men is sealed, and he will be held responsible for the event.

POLITICS.

No light is yet distinctly visible on the political horizon. Long conferences are daily held by the elder statesmen, but the situation is one that requires much thought and many adjustments. Count Ito and Count Iwanoye will certainly not return to power unless they can see their way clearly to such a radical reconstruction of the Cabinet as shall not only guarantee it against a recurrence of the vicissitudes that have recently been experienced, but also give it strength to follow steadily the policy of independence which they rightly regard as the only prudent programme at present. It is too soon for the Government to identify itself with any political party for the sake of securing support in the Diet. Such an alliance would signify nothing less than government by party, and Count Ito will certainly not take the lead in prematurely inaugurating that last stage of representative institutions.

TAX ON DEALERS IN KEROSENE.

We read in the *Kokkai* that it is in contemplation to impose a special tax on the dealers in kerosene oil. There is at present no fiscal regulation applying to these traders, and the only resource has been to make them liable to the ordinary Business Tax. But the Tokyo journal asserts that a project of law on the subject is in course of preparation, and will be submitted to the Diet next session. Our contemporary adds that the amount annually realized by the tax would be over thirteen hundred thousand yen, but such a calculation is altogether perplexing. The value of the Kerosene oil imported into Japan has never reached five million dollars in any year, and how the retailers of that quantity of merchandise could be taxed to the extent of thirteen hundred thousand dollars we fail to see.

MORE SHIPWRECKED TURKS.

A TELEGRAM from the Hakodate Police Authorities, says the *Nichi Nichi Shimbun*, informs the Kanagawa Police that four more shipwrecked Turks have turned up in Kitami province, and that three of them are coming to this Settlement in the *Sagami Maru*. Whether these men belonged to the same crew as the eleven cast-aways already in Yokohama, or whether a second Turkish ship has been lost off the Japanese coast, the police do not profess to determine, but we should think it most improbable that two Turkish ships can have been in these waters simultaneously. It is certainly strange that no means can be found of communicating with the eleven Turks now in Yokohama, so as to learn their story.

TOKUSHIMA.

ANOTHER terrible disaster is reported from Tokushima Prefecture. During the recent typhoon a landslip occurred in the Otomura Division, blocking the course of a river and forming a lake, the waters of which gradually accumulated until the night of the 27th ultimo, when they burst their restraints and spread over the Nakakito Division, swamping several hundred houses, including the post-office, local offices, police-station, a temple, and so forth. Several lives are said to have been lost, and the district now presents the appearance of a sea.

THE RUSSIAN REPRESENTATIVE.

M. SCHÉVITCH, formerly Russian Representative in Japan, has been appointed Minister to Portugal, and the Minister from the latter country, Mr. Michael Hitrovo, has been nominated to represent Russia at the Court of Japan. This, of course, is the reverse of promotion for M. Schévitch, Russia's interests in Portugal being of a wholly insignificant character, while her

interests in Japan are very substantial. M. Hiltrovo was Russian Diplomatic Agent and Consul-General in Egypt from 1882 to 1886. From that post he proceeded, as Minister Plenipotentiary, to Roumania, where he served until 1891, being then transferred to Lisbon. He possesses Court rank.

THE WORLD'S FAIR AS AN ADVERTISING MEDIUM FOR JAPAN.

In a leading article, published in a recent issue, the *Yiji Shimpō* draws attention to the fact that the Chicago Exhibition will afford Japan a splendid opportunity for bringing to the notice of foreigners generally, the many attractions which the country offers to the tourist. The indirect benefits of the Exhibition appear to our contemporary likely to prove of far greater moment to this country than the trade in Japanese products, and works of art and industry. The object which exhibitors should set before them is to create the impression that a country which can send such exhibits as are displayed on the stalls must have a great deal that is worth seeing. To attract tourists to Japan should be one of the highest ambitions of exhibitors. The *Yiji* is of opinion that special steps should be taken to bring Japanese scenery, architecture, art, and various modern improvements calculated to show the enterprise of the nation, to the notice of foreign observers. It advocates the appointment of agents, whose special duty it shall be to furnish information to intending tourists respecting hotels, railways and a variety of other matters. Such agents should make a point of circulating pamphlets and advertisements in railway trains and other places of resort. If, as the *Yiji* anticipates, the Exhibition is the means of causing a large influx of tourists, then our contemporary advocates that measures be taken for the diversion and amusement of foreign visitors. Special Exhibitions should be held for their benefit, steamers should be ready to go on excursion trips, and so on. Japan's highest interest, argues the *Yiji*, lies in making herself better known. Already foreigners are wont to speak of this country as a Paradise. No visitor who comes to these shores goes away disappointed. All that is needed is to increase the number of visitors a hundred fold. The coming Exhibition offers a grand opportunity for doing this, and our contemporary insists on the importance of making the fullest use of it.

MR. GLADSTONE'S RYE.

THE injury inflicted on Mr. Gladstone during his visit to Chester has an exceedingly comical side. When the missile struck the Grand Old Man, he fell back in his carriage and said to Baron Halkett who was riding with him, "It was a cruel thing to do. I hope some notice will be taken of it." Notice enough was taken of it. Mr. Gladstone might have been pretty confident of that. The papers were full of the occurrence the same evening, and on the next morning (Sunday) the following singular scene took place in the City Temple:—

The Rev. Dr. Talmage, of New York, had been announced to preach, and not only was the vast building densely crowded in every part, but many thousands gathered outside in the street besieging the doors and unable to gain admission. Before the sermon was proceeded with the Rev. Dr. Parker said it was reported, but he hoped the report was exaggerated, that Mr. Gladstone had been brutally assaulted whilst addressing an open air meeting at Chester—(Hisses, and cries of "Shame.") The report was that some one in the crowd had thrown a missile which struck the aged statesman, and injured one of his eyes. This outrage, added Dr. Parker, would be universally execrated, and by none more than by the best class of the right hon. gentleman's political opponents.—(Hear, hear.) It was an infamous act. He Mr. Gladstone's political opinions right or wrong, that was not the way to oppose him.—(Hear, hear.) As an audience they represented many opinions, but they represented only one decency and one humanity.—(Cheers.) He condemned the outrage as mean, cowardly, and damnable. If those present shared this opinion, would they indicate it by standing up? In response to this invitation the entire congregation numbering 1,000 or 1,400 persons, instantly stood up. The service was then resumed. Subsequently the Rev. Dr. Talmage said:—I agree with what Dr. Parker has said in regard to the infamous attack upon one of your political leaders, and in about 24 hours you will hear a loud thunder of indignation rolling back from America.—(Cheers.)

This big congregation standing up to protect the interests of decency and humanity, and these "loud thunders of indignation rolling back from America" seem slightly out of proportion to an incident which was nothing worse than a woman throwing a gingerbread nut. To be sure it was described as a "hard nut"—gingerbread nuts generally are—and to be sure Mr. Gladstone himself said that he had "never seen a woman throw with such spite and energy." But still, after all it was only a woman and only a gingerbread nut. And the climax was reached three days later when the following letter appeared in *The Times*:—

Sir,—Friends of Mr. Gladstone will be glad to know that the lady who threw the gingerbread at him in Chester is one of his most ardent supporters. Far from intending to insult him, she only attempted to give some outward expression of her frenzied admiration.

I could give you her name and address, but she is so utterly overwhelmed with the consequences of her reckless zeal that it would be cruel to add to her sufferings.

Yours truly,

FREDERICK DRESSER.

Charlton-hall, near Chester, June 30.

So the spitefully energetic female became a "lady," whose ideas did not range beyond the amenities of friendly support. Instead of "huzzahing" or waving her hat, she threw a delectable article of food at the Grand Old Man whom she so ardently loved, without the smallest suspicion that great preachers and big congregations would be denouncing her the next morning, and that the fall of her gingerbread nut would cause a "loud thunder of indignation to roll back from America."

THE INAUGURATION OF THE PARCEL POST SYSTEM.

It will be remembered that a bill authorising the inauguration of the parcel post system, elaborated by the Department of Communications, was carried through both houses of the Diet during last session, and received Imperial sanction. The public are naturally anxious to know when the new regulations are to go into force. From a note in the *Nichi Nichi Shimbun* we gather that the Department of Communications finds itself without the necessary funds for carrying out the measures decided on. The sum required being over 400,000 yen, the Finance Department has been applied to, but has expressed its inability to meet such a demand with the means at its disposal. The Department of Communications has hitherto intended to open in October next some 50 parcel post offices. In many cases this would have involved the erection of new buildings, or the enlargement of those already in existence, and the incurring of various transport expenses. The Department finds that its original programme must be curtailed for the present, and it is now officially stated that there is a probability that parcel delivery will be confined to Tokyo, Osaka, and Kyoto for the first few months, or even that Tokyo alone may for a while reap the benefit of the new reform.

BESIDE A GRAVE.

A CORRESPONDENT of the *North China Daily News*, writing from Kiukiang, says:—

I have recently seen a curious sight in the country, and one that is not often to be seen, I think, and that is a man who has taken a vow to watch three years at his mother's grave. The old lady died last November and was buried as usual on the side of a neighbouring hill in the family burying place. When the remains had been consigned to the earth the son declared that he would not leave the grave for three years, and so far he has been true to his word. The neighbours took upon themselves to provide for his wants and a subscription list was started, ten piculs of rice being contributed by his relatives and those who knew him. Families take turns in preparing his food and bringing it to him. Others brought straw and poles and made a rude hut for him large enough to contain himself and the grave of his mother. I went to see him when he had already been at his self-appointed task nearly seven months, and I shall not soon forget the sight and smell! Around the hut there were three well kept graves, those of his father, brother and wife, and inside that of his mother. I opened the bundle of straw and twigs which he does duty as a door and had a look at him, and worse than that, had smell of him. During the three years of his watching he does not wash himself at all; the straw upon which he lies is not removed, he does not change his clothes till the time has expired, he does not come out of the little place for any cause whatever, he speaks to none except perhaps occasionally, and then only briefly to his nearest relatives. He spends the time muttering prayers and burning incense at the head of the tomb, along the length of which he is stretched. The hut is not high enough to allow him

to stand upright, and only a few feet longer than himself. One can faintly imagine the foulness of such a den and the condition of an unshorn human being after such an existence; what he will be like at the end of the summer I cannot well understand. It does not seem possible that a man should be able to live through three years of such horrors, none but a Chinaman could do it; his training will tend, however, to fit him for such a trial. If he survives the three years he will be highly honoured, the officials will go in state and receive him and report the matter to the Throne, and he will receive from the Emperor's hand a board containing four characters lauding his virtue. He may also receive some small official preferment and will thus be well provided for. The natives say that, although he is alone on the hillside among the graves, no ghosts or devils will interfere with him, and poisonous snakes will not come near him. I can well believe that even these scourges would avoid such a victim! The natives did not think, in reply to my question, that fleas and other vermin would leave him quite alone! People were not quite sure, some of them at any rate, what his motives were; some said, significantly, that he knew what he was doing. There was not very much to do, and at the end of three years lying at the grave, being fed by his friends, he would likely enough find a comfortable support for the rest of his natural life. The filial motive may have been the one that weighed the least.

THE TOKYO RICE EXCHANGE.

THE recent inundations and the damage caused by them to rice-land naturally effected the market and produced a rise in the quotations for rice. Speculators took advantage of the occasion to push the price still higher, with the result that many buyers who were not in among the "bulls" saw themselves threatened with heavy loss, if not ruin. The excitement ran so high on the 3rd instant that an assault was committed on one of the most active of the "bulls," and it is said that the police barely succeeded in saving him from the hands of his assailants. Subsequently the Exchange was closed by order, and business continues to be suspended. A threatening letter is reported to have been sent to the Minister of State for Agriculture and Commerce by a party of men who promise all kinds of terrible things unless speedy steps are taken to check these speculative dealings in rice. Evidently the old faith in official omnipotence still survives in Japan.

A WHIRLWIND AT ASAKUSA.

SEVERAL vernacular papers report that on Tuesday afternoon, at about half-past three, a violent whirlwind was felt at Asakusa, which lifted the roofs of 10 houses and filled the air with shingles, tiles, and dust. It commenced at No. 15, Uina-michi, Hatchome, and swept over the seventh and eighth wards of the same street. No one seems to have been seriously injured. The commotion caused by the materials carried up into the air drew a vast concourse of people to the spot, who were under the impression that a fire was raging in the vicinity. A party of *soshi* actors, who were reciting in the third storey of the Ichimura-za when the whirlwind carried the roof of a neighbouring building away, were greatly alarmed, and with a shout left the building in a body.

SHOCKING INCIDENT.

A MOST shocking incident is reported from Ibaraki Prefecture. Two or three days ago, a large fishing junk drifted ashore in Isohama Bay. Surprised at her apparently helpless condition, the people of the locality went on board, and found no less than thirty men lying dead. Further examination revealed a pot in which the last meal of the unfortunate sailors had been cooked. It contained the remains of a stew made of a shell-fish called *Nagarami-kai* and onions. There is nothing poisonous about these ingredients, but the only way of accounting for the men's deaths is that they had partaken of some poisonous matter. It is appalling to think of a whole ship's crew of thirty souls suddenly meeting their fate in such a manner.

DEATH OF MISS BARRIE.

WE regret very much to announce the death of Miss Barrie, daughter of Mr. W. Barrie, Superintendent Engineer of the Japan Mail Steamship Company. The young lady, a bright and beautiful girl of fourteen years, was on her way to England in charge of her Aunt, and being taken seriously ill at Singapore, expired

there on the morning of the 5th instant. Nothing could be sadder than the death of a much loved child thus separated from her parents, with whom the sincerest sympathy will be felt in their great sorrow.

A LAW COURT'S WORK IN JAPAN.

A RECORD of the cases tried by the Tokyo Local Court during the first half of this year shows that the hands of that tribunal must have been kept remarkably full. The criminal cases brought before it aggregated no less than 2,289, of which 2,203 were decided, being an average of about 15 per diem. The civil cases numbered 2,072, and of these judgment was delivered in 1,733 instances, being an average of about 11 daily. Thus, from January to June, the daily average of cases decided was 26. Of course the Tokyo Local Court has several sections, in all of which Judges are constantly sitting, but this record is not unworthy of note for all that.

THE ELECTIONS IN THE UNITED KINGDOM.

UP to yesterday evening the number of Yokohama and Tokyo British residents who had registered their votes at this office in connection with the elections in the United Kingdom was 192, divided as follows:—

Conservatives	165
Liberal Unionists	14
Liberals	13

Total 192

We trust that as such a substantial beginning has been made, other residents will follow the good example as quickly as possible.

THE CARGO OF THE "NORTH AMERICAN."

THE cargo on board the *North American* was shipped by the following firms:—Messrs. Otto Reimers & Co., camphor 1,336 cases, 2,000 cases of Camphor oil, and 1,500 bales of rags; Messrs. Browne & Co., 3,930 bales of matting; Messrs. Lucas & Co., 500 bales of matting; Messrs. Vantine & Co., 1,080 cases curios; Messrs. Tuska & Co., 343 cases curios; and Messrs. Witkowski, 69 cases of curios, besides 820 bales of matting and 343 cases of curios shipped by various Japanese.—*Hyogo News*.

JULY THUNDER.

It appears that July distinguished itself among recent years by its terrible thunder storms. The News Agency reports that during the month no less than a hundred and twenty places were struck by lightning; that over fifty people were killed, ten injured, fourteen rendered insensible but without any evil consequences, and six horses and oxen destroyed. This is a cruel record. The Japanese may well place lightning second in their list of things to be feared.

THE INDUSTRIAL EXHIBITION OF 1894.

AN Imperial Ordinance has been issued authorizing the postponement of the Industrial Exhibition which, under ordinary circumstances, would be held in 1894. This measure was evidently inevitable. It would have been impossible for the people to make any adequate preparations for an exhibition at home in 1894 after exhausting their energies upon the Chicago World's Fair of 1893.

THE NEGOTIATIONS BETWEEN KOREA AND JAPAN.

THE News Agency reports that the Japanese Government has signified its willingness to accede to Korea's wishes with reference to the Quelpart fisheries, but in return has submitted certain counter-proposals to Korea. What Japan has asked for we are not told, but the Agency says that Korea's answer is to be brought by an envoy who has already set out from Seoul.

NEW MEMBERS OF THE HOUSE OF PEERS.

THE *Official Gazette* announces that His Majesty the Emperor has been pleased to nominate Inspector General of Hospitals, Dr. Takagi Kanchiro, and Mr. Nishimura Ryokichi, to be members of the House of Peers. The House will gain materially by the presence of such a distinguished and active expert as Dr. Takagi.

THE TURKS.

MR. MANKICHI, who has interested himself in the Turks and had given them temporary em-

ployment, informs us that he has at present no more work to which he can put them, but that they will shortly be sent home. He begs on behalf of the unfortunates to thank the community for the sum subscribed towards their passage money—\$177.80. Of this Mr. Mankichi has placed \$100 in the hands of the Police, and a like sum will be handed over to them on the Turk's account as soon as the fund reaches that amount.

FATHER COOKE.

A WELL-KNOWN character has just died in India, namely, Father Cooke, Military Roman Catholic Chaplain at Poona. He was seventy-two years of age, was educated at Stonyhurst, was one of the earliest graduates of the University of London, and acted as tutor to the real Sir Roger Tichborne.

A NEW MEMBER OF THE HOUSE OF PEERS.

AS was anticipated by the vernacular press, Mr. Yasuba, hitherto Governor of Aichi Prefecture, who was placed on the Retired List on the 2nd instant, has been nominated by the Emperor a member of the House of Peers.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

THE Ministerial question almost monopolizes the attention of the metropolitan papers. What had for some time been feared has actually come to pass, even more early than had been expected, namely the fall of the reconstructed Matsukata Cabinet. Five of the Ministers, Counts Oki and Goto, Viscounts Enomoto and Sano, and Mr. Kouze, remain at their posts. But instructions having been directly given by the Emperor to Counts Ito, Kuroda, Yamagata, and Inouye to consult together as to the formation of a new Cabinet, the Ministers left behind by Count Matsukata at present occupy an extremely awkward position. It was at one time supposed that they would resign in the event of the retirement of their Premier, but it now appears to be their intention to remain in office until the conference of the four *Kuromaku* statesmen shall have reached a certain stage of progress. The latter statesmen meanwhile are daily conferring together, but as yet nothing is known as to the results of their meetings. There are several circumstances which may very probably cause considerable delay before a satisfactory basis can be elaborated for the organization of the new Ministry. In the first place, Count Ito or any other statesman about to assume the duties of the Premiership, must previously make himself pretty certain of the hearty co-operation of his colleagues as to the essential points of the policy he desires to pursue. But the greatest difficulty lies in the management of the Military party, which is at present inconveniently aspiring and influential. This party, however, as we have already pointed out, lacks the first essential of party efficiency, viz., a competent leader. Consequently, after offering some provoking embarrassment to Counts Ito, Inouye, and Kuroda, it is expected that the leaders of the party will finally yield to the guidance of these statesmen. Count Ito does not appear to be particularly desirous of becoming Minister President, but the whole vernacular press, with the single exception of the *Kokkai*, regard him as the inevitable chief of the new Cabinet. The *Kokkai* looks to Count Inouye for a solution of the Ministerial problem. In our contemporary's opinion, he is exactly the kind of man to assume the direction of affairs at a juncture like the present, where the qualities chiefly required are decision and courage.

The *Nichi Nichi Shimbun*, writing on the same subject, observes that the resignation of Count Matsukata under the circumstance was unavoidable. With reference to the Ministers who still remain in office, our contemporary thinks it but proper on their part to resign as soon as the new Minister President shall have been determined, so as to leave him entirely free to select his colleagues. As to the appoint-

ment of a new Minister President, the *Nichi Nichi* lays stress on the importance of selecting a statesman specially fitted to carry out a progressive policy. The Minister President, whoever he may be, must be released from all responsibility for the measures undertaken by his predecessor, and must, moreover, be allowed full scope for carrying out a new and thorough-going policy. Our contemporary, however, regrets to say that some influential men are now endeavouring to restore the lost prestige of clan influence. There are also signs of a determined attempt on the part of certain soldiers to meddle in politics. The *Nichi Nichi* further hints that some are so weak as to be a drag on their friends and co-operators. The statesmen now conferring about the solution of the knotty problem are reminded of these difficulties, and urged to seek such a solution as shall hold good for many years to come.

What is most noteworthy about the present Ministerial crisis, is the circumstance that the *Jiyu-to* and the *Kaishin-to* leaders have evinced a strong and active interest in the issue at stake. The Opposition politicians appreciate the importance of keeping in check the growing influence of the Military party. It was owing to this sentiment that they manifested open sympathy with Count Goto and Mr. Kono in these Ministers' brief struggle with Viscounts Takasima and Kabayama. The Radicals and Progressionists, especially the former, are inclined to give their support to the group of elder statesmen represented by Count Ito. The *Jiyu*, the Radical organ, has declared its party's willingness, not indeed to support, but to cease from opposing, the Government, should Count Ito and his fellow-thinkers return to power and follow an enlightened policy. The *Kokumin Shimbun* advises the Opposition to declare what sort of Ministry it desires to have formed; for our contemporary fears that, if things be left to take their own course, the Military party is likely to obtain the upper hand. The Radical and the Progressionist parties have re-called to the capital most of their leading members who were on lecture tours throughout the country. Mr. Suzuki Manjiro, a Radical member of the Diet, is said to have visited Marquis Tokudaiji, the Grand Chamberlain, to acquaint him with the wishes of his party about the character of the new Cabinet. Mr. Suzuki's object was no doubt to contrive that the matter should reach the ears of the Emperor.

The whole press is united in condemning the conduct of military men at the present juncture. The *Nippon* and the *Hochi Shimbun* are specially noted for their straightforward censure of the interference of soldiers in politics. The conduct of such meddlers is declared to be a disgrace to the country and to their profession. The *Hochi* advises Counts Ito, Kuroda, Yamagata and Inouye to keep themselves high above the level of these troublesome officers and, by remaining firmly united, to hold the latter under their control.

The Radical organ, the *Jiyu*, affirms that certain statesmen make no secret of an intention never to part with the power which they wrested from the House of Tokugawa at the point of the bayonet, unless they are forced by similar means to yield it up. It is no doubt true, we read, that the four clans of Sasuma, Choshu, Tosa, and Hizen wrested the administrative power out of the hands of the Shogunate by force. But the time has irrevocably passed when force is required to effect a transfer of political power from one set of men to another. Under certain conditions, the Radical organ would not hesitate to recognise the necessity of a revolution; but it can never approve the threatening and warlike views attributed to the above statesmen. It then proceeds to dilate upon the evil of military interference in politics. Men of the Army and Navy ought to confine their attention entirely to the question of the country's protection. If they do so, there will be no more danger of their

Original from

defensive measures being seriously thwarted by the people. The *Yiyu* professes to be deeply disquieted by the assertion that the Army and Navy being in the possession of Choshu and Satsuma respectively, the portfolios of these apartments must of necessity be occupied by officers of the two clans. If such be the case with the two branches of the Service, it is idle to look for the completion of any effective system of national defence. Our contemporary earnestly hopes that the crisis may create men capable of thoroughly re-organizing the Army and the Navy.

The cowardly attempt to blow up Count Okuma and Mr. Kono has caused some excitement in the capital. The Opposition papers are greatly exasperated about it. They have no manner of doubt that the culprits belong to the official party. From the elaborate manner in which the appliances were constructed, they arrive at the singular conclusion that at the bottom of the affair there must be men occupying a high position in society, and they call upon the police authorities to exert themselves to the utmost and never rest till the last person implicated in the matter has been arrested. Detectives are omniscient enough to record the most trifling words and actions of the politicians of the Opposition. If they bring to bear upon this case even a fraction of their usual sagacity, they will find it easy to track out the real offenders. But the Opposition journals are not without misgiving; for they say that there have been instances in which the police authorities showed themselves singularly incapable of bringing culprits to justice. The case of the threatening letter to Count Ito is cited as a recent instance of the mysterious failure of the police. It was rumoured that the latter had been traced to a certain high quarter and that the Authorities found themselves utterly helpless to deal with the real offenders. Now again, various extravagant stories are circulated as to the authors of the nefarious plot against the life of the Home Minister and the leader of the *Kaishin-to*. Several innocent persons are the subject of suspicion; and in justice to them, if not to others, the Authorities are recommended to take their usual prompt and effective measures to expose the real offenders, whoever and wherever they may happen to be.

The recent inundations of course receive much attention from the Metropolitan papers. The press in general, especially the Opposition papers, are loud in calling upon the Authorities to succour localities such as Okayama, Tokushima, and Hyogo, where extraordinary damage has been sustained. The *Mainichi Shimbun*, a Progressionist journal, thinks that in some respects the effects of inundations are more disastrous than those of earthquakes; for in the latter case injuries are generally confined to life, buildings, and personal effects, whereas in the former the damage falls most heavily upon cultivated land. Our contemporary has no doubt that the Governors of the three Prefectures mentioned above will convene the Local Assemblies and seek their consent to disbursement from the Agricultural Distress Relief Fund. But that source of aid being quite insufficient to meet the demands of the crisis, recourse must be had to the Treasury. The Local Assemblies of these Prefectures are urged to institute accurate investigations into the requirements of the situation, and make full reports, so that the Authorities in Tokyo, as well as the general public, may be able to obtain a clear notion of the extent of the injuries. All this display of unprecedented zeal on the part of the Opposition press is not unnaturally regarded as, in some degree, an attempt to remove the discredit attaching to the policy of obstruction pursued by the Diet in the matter of earthquake relief.

The *Kokumin Shimbun* complains that, with annual appropriations of from 3,000,000 to 3,500,000 yen for riparian improvements ever since 1882, more has not been done to prevent disastrous inundations like those which recently

took place in several localities. Our contemporary urges the importance of carrying out a more thorough-going and effective system of riparian improvement. It hopes that a project embodying some such system may be presented to the Diet on the earliest possible opportunity. But it does not notice that the Radicals and Progressionists refused to vote money for the survey of rivers in the first and second sessions of the Diet.

The *Fiji Shimpō* repeats its advice to the Government about the importance of diverting the attention of the people to Korea. It sees no other possible means of extricating the nation from the present entanglement in domestic politics. At the same time, it is careful to observe that it does not mean to recommend an armed invasion of the peninsular Kingdom. What it professes to mean is, that the Japanese Government should, by peaceful means, support the independence of Korea, and thus indirectly safeguard the interests of this empire. A curious way, this, of engrossing the attention of hot-headed politicians! No one capable of reading between the lines can fail to understand the *Fiji's* real meaning, especially after a perusal of its previous article on the same subject already noticed in these columns. Be that as it may, however, we follow our contemporary a little farther. To the objection that there is not a statesman in this country capable of being entrusted with such an undertaking, the *Fiji* replies that a great man is not needed. What is required is prompt and decisive action. If the ball be once set rolling, it will go on of its own accord, and the whole nation must, as an inevitable result, unite to push the programme to a successful result. Truly the *Fiji* is delightfully disingenuous as well as startlingly frank in this matter.

The Eastern Radicals (*To-yo Yiyu-to*) are a puzzle. For our own part we believe, as we have stated more than once, that they are a coterie of determined adventurers on the look out for some opportunity to bring about an international complication in the direction of Korea. The *Kokkai* thinks that their object is to become the pioneers of socialism in this country, to which belief it is led by the circumstance that in their recently issued manifesto they lay stress upon "the protection of the poor labouring classes." If their object is to be the friends of the poor, they have struck a field in which there is wide scope for the development of any party. Perhaps they are well adapted to be the friends of the poor, being themselves accustomed to the hardships of life. But at all events, we read, they had better keep in mind that the labouring classes in Japan are self-respecting and well conducted, not at all like their *confères* of the West. The Eastern Radicals have therefore a unique opportunity to evolve a socialism of ideal purity, a thing far more lovable and respectable than the socialism of European countries. They are warned against stimulating the labouring classes to institute such wild wars against capitalists as are waged by the socialists of the Occident. Instead of attempting anything like that, they are advised to better the position of their would-be protégés by establishing saving banks for them, by encouraging them to organize some joint enterprises, and by opening free schools to educate their children. If the Eastern Radicals are chivalrous enough to protect the labouring classes, they will receive the cordial support and co-operation of hundreds of young men who, after receiving a fine education, now discover little scope for the exercise of their energy. The *Kokkai* does not seem particularly confident as to the Eastern Radicals' ability or inclination to take such a noble line of action. But it does seem very confident about the possibility of an ideal socialism in Japan. May we all live long enough to see these grand consummations, Christianity purified and re-habilitated in Japan, Art recalled from errant routes into the path of perfection, and socialism idealized. Young Japan promises them all, and Young Japan has at least the strength of self-conceit.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

Proofs daily accumulate (if they were needed) that the intellectual side of religion is that which has the strongest attraction for the Japanese mind. The discussion of the month about revivals, for instance, indicates a decided lack of appreciation of the emotional in religion. In other Christian countries they do not talk about the best way of having good revivals; they have them. The slight hold which Buddhism has upon the educated classes is another instance. The best part of Buddhism is its esoteric part (in which, we venture to say, it offers more to the speculative intellect than Roman Christianity, its greatest rival among the humbler classes); and yet this inner core of Buddhism is practically ignored by those who alone can understand it. Again, we learn that many of the students of one of the Kyoto Buddhist colleges are thinking of entering the Doshisha, and similar movements, backwards and forwards, among the scholars of the different Christian theological schools, are too well known to need chronicling. How could this phenomenon occur, if it did not rest on a special sensitiveness to intellectual points of a religion and a relative dullness of the emotional nature, the faith to believe, which never permits such restiveness? One cannot help noticing also the absence of discussions of practical ethics—sanitary measures, charity, etc.—which fill such space in Western religious journals. At the same time we find the beginnings of a debate over the question whether emotion is the essential element of religion,—an indication, perhaps, of a consciousness of the quality which we have spoken of above. The New Buddhism we have not heard of at all for two months. Mr. Kanamori's book of last year took well in less time; and it is to be presumed that, if the educated classes have not declared for the New Buddhism (the only real hope for that cult) in the six months that have past, they will not do so at all.

In the *Rikugo Zasshi* (Congregational)—which we could not notice last month—Mr. Yokoi gives us two timely articles. "Religion and Science" is the title of the first. Alluding to the days when Draper's "Conflict of Religion and Science" raised such doubts, he declares that the controversy then raised has now almost ended. Religion and science are recognized not to be in conflict. They express two different but co-existing aspects of human nature. Religion is the higher: it is the sum of all philosophy. The Bible is not religion. It is an important book for the religious life; but it is not religion itself. We do not need to believe the scientific truth of every assertion in the Bible. The religious idea is common to all humanity, and may be seen in all quarters of the world, Science leads us to Religion; but there is no reason why we should set the two in contradiction. The second article is called "The Religion of this Life." There is a mode of thought, very common with religious people, which, so to speak, places the centre of gravity at quite the wrong point. This world is a miserable, sinful place, they say. Our only hope for happiness lies in the future life. Our chief aim is to escape the judgment of God and to learn to live amid our sinful surroundings in expectation of future bliss. Now such an attitude toward the present life is entirely erroneous. It is founded on a mistaken idea of the Old Testament. It can be easily proved that that Old Testament regarded the present life as that of chief and direct importance. Give up the idea that the present world is essentially sinful and unhappy. The most important thing for the Christian is to combat that notion, and to preach the worth and beauty of the world in which we have been placed.

In the same journal Mr. Ukita replies at length to the criticisms of Mr. Barnett on Japan. We published last month a brief notice of these criticisms. First, says Mr. Ukita, Mr. Barnett opines that the Japanese are not over-pious, but are light-hearted and frivolous. Now the first

is true enough, but the second quite incorrect. History refutes Mr. Barnett's statements. Conservatism, loyalty, obedience, appear on every page of Japan's records. These are serious and solid qualities. The past is the mother of the present; Mr. Barnett knows neither the first nor the second. Again, the Japanese, we are told, lack a genius for invention. This is true enough of the past, we admit. But perhaps things may change in the future. Again, Mr. Barnett says that the Japanese do not know true sorrow (*hiat*); the absence of deep piety prevents them from sympathizing strongly with those oppressed with sorrow; in Japan's history there is no hell, no Puritans. The first part of this statement is not justified in Japanese history. The poor and oppressed have ever found friends to come to their aid. Justice and friendship have been among the virtues highest prized. As to the other part of the statement, that there have never been Puritans in Japan, this is perhaps true; but then there never were in England until Christianity came. Japan may yet produce men of fervent piety and religious earnestness. Lastly, Mr. Barnett says, "When the last day comes, let it be remembered that Japan never had Moses and the prophets." If Mr. Barnett means that Japan never had men who were as religious as Moses or who taught the people of a future life, he is easily answered by the names of Shinran, Nichiren, Kusunoki, Confucius. Buddhism, Shintoism, Confucianism,—religions teaching lofty principles of loyalty and obedience—have made Japan what it is. Mr. Barnett cannot ignore these great qualities,—qualities of which every Japanese is proud. One may still claim credit for all that is due to these, while admitting that the Japanese people must look to Christianity for the supplementary qualities of piety and faith. In the same journal Professor Ono gives us a very disappointing article (if we consider his abilities and opportunities and his long silence) on "Moral Statistics of Japan." The thesis is that the modes of law-breaking differ in different countries according to the church of different peoples. In Japan the figures show the most frequent offences to be stealing, gambling, cheating, quarreling; crimes of personal violence and sexual crimes are far fewer than in the West. The very inadequate explanation is then offered that in the West material prosperity creates luxury and self-indulgence, and hence leads to sexual crimes. The possibilities of the subject are entirely missed in this article.

In the *Kiristukyo Shimbun* (Congregationalist) "Revival" is the topic of one article. Though men are rational beings, their acts rest on the emotions; Religion, most of all, is emotional. A religion without feeling is a religion without life. Unitarians and Calvinists are not fond of giving play to the feelings and therefore do not care for revivals. But the most important thing about religion is that it should be living, and to be living it must flow from the emotions. Many influential religionists have lately shown their dislike of revivals and have laughed at those who talk of them. But in reality it is the evil results, not the revivals themselves, that they deplore; and no doubt the results often are not desirable ones. Nevertheless revivals are as necessary for religious life as wind is for ships; only the stimulus should be a steady one, not dying away fitfully. In another number Mr. Uchimura writes on "Rational Revivals." There were times when science was young, and scholars were content to admit that the earth was made suddenly and in the space of 6 days—in other words, when catastrophism, or the operation of forces irregular and unusual, was an accepted doctrine. To-day catastrophism is rejected. First the seed, then the stalk, then the fruit, says the Bible. The progress of the spiritual nature can be no less gradual and regular than that of the physical. Nothing goes by starts and jumps; in everything there must be order. Revivals produce excess of feeling, which often mislead and cannot be relied upon. We should learn from the Bible that all spiritual progress, in order to be real, must be gradual.

The Sabbath question comes in for treatment at the hands of two acknowledged leaders. Mr. Yoko has just finished a series of articles in the *Kiristukyo Zasshi*, in which the subject is treated historically, and in the concluding article he deals with its practical aspect—the observance of Sunday in Japan. In the time of the Old Testament, it was seen, the purpose of the day was for rest only. Under the New Testament dispensation, on the other hand, worship and praise were the chief purposes, though rest was also included. The observance of Sunday cannot be the same in every country or even in all parts of the same country. Much must depend on the habits and character of the people. The main object is spiritual refreshment. Hence there should be as far as possible rest from physical labour. For such places as hotels, steamers, etc., there cannot be complete rest; but we should strive for as much rest as possible. Mr. Harada's essay dealing with the same subject is entitled "The Use of Law." There are two sorts of men,—those who use law and those who are used by it. We are not the servants of law, but its masters. The Sabbath was made for man, not man for the Sabbath. It is the spirit, not the letter of the law that is binding upon us.

Mr. Matsumura, in the *Kiristukyo Shimbun*, wishes that Christianity could acquire a stronger position before the public. The Christian workers have given their chief attention to the poor and humble. They have exemplified the Christlike virtue of benevolence and humility. But they must now turn their attention to the powerful and official classes. Many of those high in office have opposed Christianity, falsely charging it with inculcating disloyalty. The most important thing now for Christianity is to come forth and work publicly, acquiring a dominant influence in politics, trade, and all other departments of national life. In the *Gokyo* (Methodist) Mr. Yamada, writing on "The Influence of Christians," rebukes believers for condoning the covetous and grasping ambition of the politicians. To-day the politician worships only Self; and it is time for Christianity to set itself openly and resolutely against the evils which so disgrace our politics.

In *Shinri* (German Liberal), Mr. Minami writes interestingly on "What is Experience?" Beginning with the saying of Protagoras, "Man is the measure of all things," he traces the views of various philosophers in succeeding ages, thus leading up to his own conclusion, that experience is the source of all right judgment. Mr. Maruyama discusses "The Progress of Christianity." Progress is the law of all things, and not the less of religion. To-day the New Buddhism and Liberal Christianity are proving the continuity of this law. Christianity, as well as the opinions of Christians about the Bible, have differed in every age, but to-day we find that the unvarying tendency is with greater knowledge, to greater liberality. In the *Yiyu Kiristukyo Zasshi* (Universalist) the subject of Cruelty to Animals continues to be the subject of correspondence, and the movement seems to be progressing. "Modern Morality" is the subject of a writer calling himself "Kyokusen Gyofu," who rebukes those hypocrites who use religion as a cloak for various misdeeds. In *Shukyo* (Unitarian) a certain "Bando" writes on the "World-Haters." There is a class of people who believe that a higher Power controls and predestines events annulling free will and effacing the distinction between right and wrong. They are overpowered by the sense of fatality, and they cannot see the world in any other aspect. Such people are to be shunned. They do no good in the world. The sum of their philosophy is that they do whatever they are impelled to do,—that is, what they wish. Let us avoid a religious belief which binds us to seek conclusions. Mr. Minami, writing on "The Church and Believers," deplores the present backward condition of the Church, and recommends as a stimulant a more thorough acquaintance with Church history. Other articles are "The Religious Life," "The Condition of

Educational Science;" and "The Contest of Different Nationalities."

In the *Seikyo Shimpō* (Greek Catholic) Mr. Owada writes on "The Great Force," meaning Christianity. His article is a defence of Christianity from some recent attacks. Some of its opponents have said that it does not recognize the fundamental ethical duties of man; and have quoted in support the Bible passages about Christ coming to bring not peace, but a sword, about setting father against sons and mothers against daughters, etc. No doubt these passages, taken as they stand, may convey to the superficial reader an idea that Christianity's purpose is to dissolve the bonds of social life. But the real meaning of the words, and the whole import of Christianity, to those who are willing to reflect, is an utterly contrary one. Those who declare that Christianity ignores the great accepted ethical relations are simply ignorant of what they are talking about! Another writer, describing "Pious Heroes," claims that the heroes of all nations—Washington, Buntensho, Kusunoki, Justinian, etc.—have been truly religious men.

From Buddhist journals we have two of the usual notes,—the revival of Buddhism from its present apathy, and the decline of national morality. In *Gokoku*, appears an article "What shall we do for Buddhism?" There are two great forces in the religious world, Buddhism and Christianity. Until recently each pursued its course in its own domain without a rival. A collision has now occurred, and Christianity has seemed at first to get the upper hand. But this must by no means be taken as proof of the superiority of Christianity as a religion. Its superficial success is due purely to better methods of work. If Buddhism will discard its old-fashioned methods, and take up the task with a will, it can win the day. Let more regard be paid to the real needs of the people. Let us preach down to their intelligence, not over their heads. There is no reason why the better doctrine should not prevail, if properly taught. In the *Bukkyo* (Tendai Buddhists), there is also some very good "Advice to Buddhists." The writer first describes the impressions of a recent tour in the Occident, incidentally remarking that Christianity seemed to him to be at its best in the United States; and then takes up the subject of the weakness of Buddhism in Japan, and its failure to raise up religious heroes in the present day. The cause of this weakness, to his mind, lies in the neglect of the popular religious needs. "The preachers do not preach down to the people. They merely say: 'Buddhist doctrines are very profound; in fact you ordinary people could not understand them without a great deal of study. We will tell you Buddha's sayings; but you cannot understand them; simply remember them and do what we say.' Under such instruction, what can be expected? The people know that if they do evil they will go to hell (*jigoku*); if righteousness, to heaven (*gokuraku*); but of the real truths of Buddhism they are quite ignorant. I yield to none in my devotion to Buddhism. It is the best religion in the world, as all the world will one day confess. But at present its disciples are as one who has a sharp sword, and, ignorant of its use, cuts only his own flesh."

The *Taishakyo Zasshi* (Shinto) has perhaps received some encouragement to enlarge its scope, for it appears with a new and ambitious title, "*Fu-cho Shin-shu*," "New Magazine for the Harmonizing of Manners and Customs." The purpose, under the new management, is declared to be, "to set forth the true principles of Shinto, to increase the lustre of the national name, to make plain the relations of superior and inferior, to increase loyalty, to foster the love of national independence, to revive the spirit of patriotism, and to increase the prosperity of the country." The new editor's hopes are indeed, in the words of Camillo, a

"Foundation piled upon his faith,"

which will need to be strong.

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

THE KOREAN QUESTION.

THE Japanese public is subject to periodically recurring fits of alarm about the situation in Korea. The invariable characteristic of these fits has hitherto been that they pass away as quickly as they are caused easily. The present case, however, seems to be an exception, in this, and some other important respects. The event that aroused the public attention was the attempt to blow up the TAI WON-KUN'S palace at Sôul. A month has passed away since that singular incident began to be discussed by the vernacular press, and yet journalists do not seem to have said their last word on the subject. What is remarkable about their writings is an entire unanimity of view as to the general nature of the policy to be pursued by Japan towards Korea. Papers of all kinds—Opposition, Government, Independent—are agreed that the time has arrived when some decisive step must be taken by Japan in respect of the Peninsular Kingdom. They all urge the Government at once to resolve upon a resolute policy calculated to effectually safeguard the interests of this Empire. Because of this unanimity of view, and because of the pertinacity with which a strong policy is advocated, we think the matters worthy of special notice. Not unnaturally the various journals are reluctant to give plain utterance to their sentiments on a delicate international question. Speaking broadly, however, to secure Korea, even by force, from falling into the hands of a third power, seems to be the dominant idea of the vernacular press. But as to the method of attaining that end, there is a conspiracy of silence. The *Mainichi Shimbun*, a Progressionist organ, stood for some time alone in touching this aspect of the question. Its opinion, as we noticed in a recent weekly summary, was that Japan should combine with China and protect Korea against the aggressive designs attributed to Russia. The Japanese Government was advised to send at once an Ambassador to Peking for the purpose of arranging matters with the Chinese Government. A few days ago, a more plain-speaking essay was published by the *Fiji Shimpô*, an independent journal, whose characteristic manner of treatment attracts special attention.

The *Fiji* commences by reviewing the present state of Japanese domestic politics. It finds that the juncture is fraught with serious danger to the peaceful progress of the country. Sooner or later, it will become necessary to introduce a system of government by party. But for the present nothing could be more dangerous than to deliver the reins of power into the hands of the young politicians of the Opposition. The Government must, by all means, hold out as resolutely as possible against the Opposition. The Opposition, on the other hand, seems to be

resolved to make a business of harassing the Administration, and the political struggle has thus reached such a point that it is altogether impossible for the Government to carry out any undertaking of national importance. From such an unhappy state of affairs, the *Fiji* sees only one path of escape; namely, to divert public attention in a foreign direction. Our contemporary cannot agree with those who advocate the colonization of the South Sea Islands as a means of attaining that object. Such a policy "would be too commonplace to turn the nation's mind from domestic politics." It is to Korea that Japan has to look for salvation. The *Fiji* does not necessarily mean that war is to be made upon the Peninsular Kingdom; but it evidently knows well that nothing short of war can serve the purpose in view. It was to Korea, we read, that the great KIDO looked for the same purpose immediately after the Restoration, when the statesmen in power were puzzled what to do with the vast numbers of fighting men. The peaceful abolition of the clans and the establishment of a conscription system a few years later fortunately made it unnecessary to carry out the plan of Korean invasion. But had not these measures proved successful, it would have been necessary to plunge into a continental war. It is not exactly an invasion of Korea that the *Fiji* now advocates, but such a course of procedure as might possibly lead to that result. Apparently our contemporary agrees with the *Mainichi Shimbun* in urging the necessity of an alliance between Japan and China against Russia. Supposing such an alliance to have been formed, the Governments of the two countries must, before everything, remove from the Tientsin treaty the provision which requires either country to seek the consent of the other in order to send troops to Korea. Such a stipulation might dangerously inconvenience both empires in the event of an emergency. In the next place, both China and Japan, acting in unison, should endeavour to settle the feuds between the rival factions in the Korean Court. Should not these factions prove amenable to friendly mediation, open support is to be given to either of them, so that strength of administration may be secured. In the third place, Japan must strive to guide the Korean nation in a new career of civilization. Special endeavours should be made to assist Korea in reform of all kinds. If it be deemed necessary, Japan should supply her neighbour with the capital required for progressive undertakings on some good security. Moreover, in certain districts of the peninsula, more than a hundred thousand inhabitants are said to have crossed the frontier into Russian territory. Efforts should be made to fill up the gap by planting a Japanese colony in those districts. In carrying out this course of policy, it may perhaps, says the *Fiji*, become necessary to move troops, and that

would serve to effectually divert public attention from fruitless struggles in internal politics.

There is something charmingly frank about these utterances. History offers numerous examples of foreign wars undertaken under pressure of domestic complications, but we doubt if any leading journal in any country has ever been found to openly advocate such a remedy, and to carry its advocacy to the length of indicating the actual scene of proposed enterprise. But the *Fiji Shimpô* is nothing if not outspoken. We remember how it recommended official tolerance, and even encouragement, of Christianity as a political device, and we remember, too, how greatly it was misunderstood and how roundly it was abused by several critics on that occasion. It will be misunderstood and abused again now, and perhaps with better reason. For though we interpret it to write simply in the sense that the state of a country's domestic affairs must always exercise a strong influence on her foreign policy, and that the Japanese energy which refuses now to be restrained within convenient limits at home, might be advantageously directed abroad, many people will decline to acquit it of immoral and incendiary writing. Be that as it may, however, there is no denying the fact that such a state of public feeling as now exists in Japan, furnishes a strong incentive to activity abroad. The notion is in no sense new to us. We discussed it two months ago, and expressed the opinion that the foremost statesmen of the early *Meiji* era, were they now alive, would probably rescue themselves from the embarrassments of party pressure and parliamentary turmoil by means such as the elder SAIGO would have resorted to twenty years ago. HIDEYOSHI saved the situation under similar circumstances by planning and proceeding to execute a vast scheme of foreign conquest, the preliminary step of which was the invasion of Korea. IYEVASU resorted to the subtler device of inaugurating a system which, on the one hand, gradually paralysed the martial spirit of three centuries' growth; on the other, closed all avenues to that spirit's effective ebullition. SAIGO would have followed HIDEYOSHI's example, but circumstances proved too strong for him, and the great rebellion in which he lost his own life supplied the vent which he had desired to find abroad. OKUMA, guided by the same instinct of statesmanship, encouraged the Formosan expedition. If it be true that history repeats itself, we cannot wonder at the prevalence of such a tone as the vernacular press now adopts. Happily the control of affairs is in the hands of men not likely to bow too quickly under the pressure of domestic difficulties.

THE ELECTIONS.

YOKOHAMA and Tokyo are showing singular apathy about the proposal to record votes in connection with the general elections in Great Britain. Kobe has taken up the matter, and already a number of votes have been cast at the office of the *Kobe Herald*, but up to the present time barely a score have reached us. It is evident that to telegraph a partial result to London would be a futile kind of performance. There must be a tolerably universal expression of opinion if the numbers may be regarded as representative. We confess that we find difficulty in understanding the indifference of the British community in such a matter. It is true that the votes of residents in the East cannot directly affect the result of the elections. But surely some influence would be exerted upon public opinion at home were it rendered quite apparent that HER MAJESTY'S subjects in the Orient are overwhelmingly in favour of one side or the other. Hongkong has shown itself emphatically Conservative, and in Kobe, out of 79 votes recorded up to the evening of the 30th ultimo, 66 were Conservative; 3 Liberal-Unionist; and 10 Liberal. Thus far nearly every vote sent to us is Conservative, and we have very little doubt that Lord SALISBURY would receive a sweeping majority if the Settlements in Tokyo and Yokohama were polled. Why not let the fact be known, then? If circumstances deny us the privilege of taking an active share in the politics of the old country, that is no manner of reason why we should aid those adverse circumstances by effacing ourselves. It has been suggested that the advantage of representation in Parliament ought to be extended to the British Colonies, and assuredly nothing could be more unjust or unpractical than that a place for example, of Hongkong's wealth, importance, and population should be entirely unrepresented in the House of Commons, while nearly every petty borough in Great Britain sends a member of its own choosing to Westminster. We do not entertain the smallest doubt that this is an anomaly which will be redressed ultimately. How can British commerce be said to be properly represented in Parliament while no members sit in the House to make known the views and look after the interests of the pioneers of commerce, the men who conduct it thousands of miles away from home, and who devote their lives to finding new markets for it in distant lands? Judged by the test of property, education, or even numbers, the British communities in Japan are entitled to claim parliamentary representation, and if they care—which, being Britons, they assuredly do—to push that claim, the best possible way is to enlist the sympathies of the political party which can count on their support. Be that as it may, however, it would certainly be no

small feather in the cap of the Conservatives to know that every community of British subjects outside the United Kingdom supported them, and there should be no doubt that all of us are sufficiently loyal to go to the trouble of registering a vote for the purpose of affording such a measure of moral aid to the party in which we believe. A very small trouble it is too—merely to write one's name inside an envelope, with the letters C., L.U., or L. Names of course would not be published, but only numbers. All the local English papers will doubtless be glad to receive and record votes, and if the final results are sent to Baron REUTER'S Agent, we may assume that he will telegraph them to London. Let us make the effort.

THE YOKOHAMA PRINTING AND PUBLISHING COMPANY.

THE half-yearly report of the Yokohama Printing and Publishing Company for the period ending June 30th, shows a distinctly discouraging state of affairs. The Company has made a loss of over \$3,700 on the half-year, and it owes more than fourteen thousand dollars. The Chairman of Directors, in presenting the accounts, complained that, in consequence of the method adopted in compiling them, they showed a worse state of affairs than the reality, inasmuch as a portion of the money actually received for subscriptions and advertisements had been placed to the credit of the second half of the year, and therefore did not appear as an asset in the first half. This complaint will have been read with surprise by business men, we imagine. If an artisan undertook to carry on a certain work for a certain sum during a year, he certainly would not think of striking a balance between the total sum and his expenses during the first half-year. Obviously the proper method of stating his position at the end of the first half-year is to determine the difference between a moiety of that sum and the aggregate expenses incurred during the six months. Were the Chairman's plan adopted, the accounts for the second half-year would make a sorry showing, since whereas the work of composing, printing, and furnishing newspapers and of publishing advertisements, contracted for during the previous half-year, would have to go on regularly, there would be no income to set against the cost of performing it. So well is this understood that any one purchasing a newspaper deducts from the price the value of all work, in the nature of supplying copies to subscribers or inserting advertisements, which, though already contracted and paid for, has not yet been accomplished. There is no fault to be found with the method of compiling the accounts of the Printing and Publishing Company. A bad result has to be shown, and they show it fairly and squarely. A bad result, indeed, has had to be shown in every semi-annual

statement of accounts since the Company started, and the question is, can a good result be looked for at any time during the next few years. We do not think so. Naturally we cannot be expected to sympathise very deeply with the troubles of the Company. It was started, according to the open avowal of one of the chief promoters, with the intention of "killing the *Japan Mail*." We are not vain enough to suppose that no other object presented itself to the promoters, but certainly that was one of their objects, and they set about its achievement in a manner at once frank and flattering, namely, by imitating the *Mail*. They enlarged their daily sheet so as to equal the size of ours; they issued a weekly edition on the lines of ours, and they reduced their price to the same figure as ours. In fact they went into the fight openly, and since they would have been pleased to crush us, it is permissible for us also to be pleased that they have not succeeded. But it has thus far been a contest without any unsightly or exasperating features, and we have no consciousness that its results have warped our judgment. We do not speak under the influence of temper or bias when we say that from the very outset the whole enterprise seemed to us colossally mistaken. Its dimensions were altogether beyond the range of journalistic capabilities in Yokohama. We never could conceive under what impulse a number of shrewd business men could be found to set a value of \$55,000 on any local foreign newspaper published in this Settlement and circulating in Japan. One-third of the money would be considerably in excess of the value of any such journal. Yet not only was \$55,000 given for the *Japan Gazette*, but debentures to the extent of \$11,000 more were subsequently issued, and a debt of over \$13,000 was incurred to a bank, so that the paper now represents a total sum of \$78,649. The thing is laughable. It reads like a kind of romance. Three years ago, if such figures had been set before any experienced merchant acquainted with the conditions of the foreign communities in Japan, he would have regarded them as an arithmetical jest. Yet they became a reality. Certainly the celebrated meeting of 1890 must have created a species of vertigo in some quarters. It was a meeting with the original purpose of which everybody sympathised; for no foreigner in Japan would have been willing to surrender Consular Jurisdiction unconditionally? But the information submitted to the meeting was altogether misleading, as events have amply proved; the resolutions proposed and passed were clumsily constructed, exaggerated, and illogical; and the speeches made by those duly appointed to propose them contained errors and misconceptions that discredited the whole demonstration. But because we ventured to point out all this, we were called a great many ugly names, and so much caloric was excited in

certain quarters that nothing short of slaughtering the *Mail* could be regarded as a satisfying result. Business considerations seem to have been cast to the winds under the influence of this sentiment. The only pity is that those whose heads were hottest could not be left to purchase a wet towel out of their own pockets. Unfortunately, however, there were distinctly clever features about their scheme. The idea of running a newspaper and a printing office under the ægis of a Company in a place like Yokohama is excellent. Every shareholder becomes a warm supporter of the paper; endeavours to increase its circulation; is ready to procure advertisements and printing for it, and furnishes it with information. It is easy to see how well this has worked in the case of the *Japan Gazette*. Its accounts show that the daily paper's circulation does not reach 200 copies, yet advertisers, whose first thought should be to insert their notices in a widely circulating medium, actually carry them to the *Gazette*. Doubtless the shareholders were tempted originally by this specious feature of the programme, and having no conception of the real value of newspaper business in Yokohama, they consented to the preposterous figure at which the capital was placed. The past is past. A folly perpetrated cannot be mended. But what of the future? Does it present any rosier prospects? There should be no great difficulty in answering the question. The Company has three sources of income: subscriptions, advertisements, and job-printing. Neither of the latter is capable of much expansion. Every year, every month, competition becomes keener in the job-printing line, and we should say that if the *Gazette* fares as well hereafter in this respect as it has fared in the past, it will be fortunate. As for advertisements, there are no more to be obtained than the *Gazette* already receives. There remains, then, the item of subscriptions only. If the subscription list could be trebled the paper would just pay its way. Does any one imagine that three subscribers can be obtained for every one now possessed? Nothing of the kind is possible. There has been talk of the Company's having put its hand to an enterprise the management of which it did not understand. We regard that as moonshine. No mystery is involved in the conduct of a newspaper. Clever men of business, like those constituting the present Directorate of the Company, are perfectly competent to make a success of it if a success is attainable. But no men that ever lived could make a success of a Company weighted with a capital, debts, and current liabilities four times as heavy as it can support.

MR. J. LOUREIRO AND HIS TRADUCERS.

IN the interests of the commonest justice we feel constrained to refer to a letter published by the *Kobe Herald* over the signature of "One Aggrieved." The letter contains a violent attack upon an absent man, Mr. J. LOUREIRO, formerly Portuguese Consul-General and Chargé d'Affaires in Japan. It pronounces him guilty of "a shameful act," and declares that he is "the subject of unanimous criticism and censure by all Portuguese subjects in this country." The allegations upon which this charge is based must be repeated in detail for the sake of clear comprehension. Mr. LOUREIRO is accused of having suppressed, for his own selfish purposes, an ultimatum addressed through him to the Portuguese Government in May from the Japanese Authorities, to the effect that if, by July 1st, a legally trained official were not appointed by Portugal to the post of Consul-General in Tokyo, Japan would consider that the clauses relating to jurisdiction in the Treaty had been abrogated, and would herself assume the jurisdiction for which Portugal had failed to make proper provision. This communication, says the *Kobe* newspaper's correspondent, Mr. LOUREIRO quietly put into his pocket. He neither wired its contents to Macao, nor did he mail the document itself, but kept it and carried it away with him from Japan, thus leaving his Government in ignorance of the important step contemplated by the Tokyo Authorities, and virtually contriving that his nationals should be deprived of a privilege which they valued highly, namely, the privilege of being tried by their own tribunals. With regard to the purpose for which Mr. LOUREIRO is supposed to have adopted this extraordinary course, we are not left in any doubt. At first, indeed, the correspondent talks of "negligence," but presently he adopts a different tone, and roundly charges Mr. LOUREIRO with "abandoning his post," in the hope that "the attitude displayed by the Japanese Government would compel the Portuguese Government to re-instate him." In other words, he sacrificed all public considerations, and all considerations of duty and loyalty, to his own selfish interests. He "abruptly abandoned his post without taking the necessary precautions to protect the subjects of his Faithful Majesty:" he suppressed an official document of the gravest moment in order to precipitate a situation which might serve his own ends, and altogether he was guilty of conduct which "deserves the utmost censure his indignant countrymen can pass on him." Such is the accusation of this correspondent. He caps it all by a suggestion, which he declares to be "what the bulk of the Portuguese residents firmly believe," namely, that this disgraceful procedure on Mr. LOUREIRO's part was the result of "some possible arrangement" be-

tween himself and the Japanese Government. Now we have no right, and certainly we have no desire, to assume that "One Aggrieved" is deliberately mendacious. We assume rather that he is the victim of gross delusions, and content ourselves with saying that the allegations made by him are a tissue of falsehoods from first to last. The story of Portugal's action and of Mr. LOUREIRO's case is well known, but we must crave our reader's indulgence to repeat it, being confident that they will be no less desirous than we are ourselves to refute a base calumny uttered against one who cannot be immediately heard in his own defence, and to clear away from an important international incident misconceptions which altogether obscure its true character. In November last, Mr. LOUREIRO learned privately that the Portuguese *Official Gazette* contained an announcement of the abolition of the Consulate-General in Tokyo. He had received no official intimation of any kind from his own Government on the subject, but he nevertheless considered it his duty to communicate the fact to the Japanese Government, whom he found equally uninformed. Mr. LOUREIRO, appreciating the importance of the juncture, took an unusual step. He asked the Japanese Government to depart from the ordinary routine and to address the Portuguese Government direct, because communications passing through him might lose something of their force owing to his own interests being so greatly at stake. The Japanese Authorities admitted the justice of this suggestion, and thenceforth until the very eve of his departure from Japan in the following June, no official communications of any kind were addressed by the Foreign Office in Tokyo to Mr. LOUREIRO on this subject. A strongly worded telegram was, however, at once forwarded to Lisbon, via the Japanese Representative at the Portuguese Court, protesting emphatically against the contemplated step, and pointing out that its effect would be to leave Portuguese subjects in Japan without any judicial arrangements which this Empire could regard as satisfactory or sufficient; for, whatever false assertions may be published to the contrary, it is an undoubted fact, standing on official record, that the abolition of the Consulate-General in Tokyo removed the only authority under which judicial functions could be exercised in a reasonably efficient manner by the Portuguese Vice-Consuls at the out-ports. Failing to obtain any attentive consideration for this important telegram, the Japanese Government addressed a despatch to the Governor of Macao, setting forth the facts of the case in full detail, and requesting him to telegraph to his Government in Lisbon. The Governor, replying, said that he had telegraphed as desired, and that any answer received should be communicated to the Japanese Authorities. This was in February. Weeks passed

Original from

without anything being heard from Lisbon, and we believe we are correct in saying that not another word on the subject reached Tokyo from Macao. Meanwhile, Mr. LOUREIRO had received an intimation from his Government that his pay and allowances should cease from the end of March. Yet, so far from "abandoning his post," as his traducer now alleges, he continued in Tokyo, and subsequently received another intimation that passage to Macao would be provided for himself and family, and that he should continue to discharge the functions of Consul-General until his departure from Japan. Under the circumstances, it was his plain duty not to linger in Tokyo, and he accordingly left on June 1st—left in absolute ignorance as to what steps, if any, the Japanese Government proposed to take. Immediately on his departure becoming an accomplished fact, that is to say, immediately on the disappearance of any judicial arrangements for the control of Portuguese subjects, Japan conveyed to Lisbon, through her Representative there, a distinct announcement that, in view of the absence of such arrangements, she herself should assume jurisdiction from July 1st. This message was repeated towards the close of June, but still Portugal remained indifferent, and finally, on July 14th, Japan took the threatened step. It will thus be seen that Mr. LOUREIRO was never the recipient of anything like an ultimatum from Japan; that he left this country without so much as being aware that things would take the course for which he is now falsely held responsible, and, in short, that every one of the accusations preferred against him by the correspondent of the Kobe journal rests on a basis of absolute untruth. We have nothing to do with Portugal's action towards her servants, but it can scarcely be considered extravagant on our part to have expected that Portuguese subjects in Japan would have protested against an official of rank and considerable service being treated by their Government after a fashion unwarrantable even in the case of a menial. Assuredly, however, we should never have looked for any such expression of honourable sympathy had we imagined that a writer in the public press, professing to be the mouthpiece of his Portuguese fellow-nationals, could bring himself to fix upon his country's Representative the suspicion of having sold the treaty privileges of the Portuguese community to the Japanese Government, and upon the Japanese Government the suspicion of having bought them. There are some charges that serve only to disgrace those preferring them, and this is one of them. It is not without reluctance that we devote space to the refutation of calumnies so contemptible, but it would be regrettable that the reputation of an absent man should be aspersed without protest, and that further falsehoods should be suffered to circulate about the Portuguese incident.

THE NEW CABINET.

THERE is very little doubt that Count ITO will consent to form a new Ministry, but of course it is not yet possible to predict the composition of the Cabinet. Counts INOUE and YAMAGATA are tolerably certain to resume office. There was talk at first of the former becoming Minister of State for Finance, but on the whole this does not seem probable. It appears more likely that Count INOUE will accept the portfolio of Home Affairs. The post of Minister of War would be most suitable for Count YAMAGATA, but the Department of Justice is talked of. Count KURODA is universally indicated as President of the Privy Council. This would be a strong combination. Count INOUE was summoned to the Palace on the forenoon of the 2nd instant and had a long interview with the EMPEROR. Meanwhile, Count OKI, as the senior member of the Cabinet, has been instructed by HIS MAJESTY to assume the duties of Minister President *pro tem.*, according to the Regulations for the Organization of the Cabinet. Although we speak of Count ITO'S return to power as almost assured, it must not be imagined that the situation is without complications. On the contrary, judging by present prospects, many days, perhaps even weeks, will elapse before a settlement is evolved. As yet we can only conjecture. The serious element of the situation is the temporary ascendancy of the Military Party. Like begets like. It was not to be anticipated that the uncompromising attitude of the Opposition could fail to educate a correspondingly strong determination to resist on the part of conservative members of the Government, who hold that every radical attempt to extend the constitutional privileges of the people at this early period ought to be resisted by every possible means. An opportunity to obtain prominence and influence may perhaps have been afforded to the most resolute of these conservatives by the reserve of the elder statesmen, whose abstention from public affairs during the past two years has undoubtedly facilitated the strife of hostile elements and the emergence of comparatively unknown men to places of power. Thus there is now a military party disposed to hold the breach by methods such as military men might be expected to choose. At the head of this Party are Generals TAKASHIMA and KAWAKAMI, Admiral NIREI and others, men of ability and courage, whose strong point is their popularity and influence in the Army and Navy. It is stated, further, that they enjoy the support of the National Unionists, with whom are Viscount SHINAGAWA, the former Minister of Home Affairs, and Count SAIGO, the darling of the troops. By this Party Count MATSUKATA was compelled to resign, and we are sorry to hear it rumoured that he has taken just umbrage at the nature and manner of

the interference exercised, and that he is resolved to turn his back altogether on politics for the nonce at all events. On the other hand, Count ITO is understood to disapprove not less strongly of the Military Party's programme and methods. His present policy is absolute freedom from all party ties, and if he consents to form a Cabinet, it will only be on condition that every holder of a portfolio is free from connection with a political party. This involves at once the hostility of the Liberal Unionists as well as of the "Stalwarts," who have made common cause with them, and the question is whether such adjustments can be effected as will consist with Count ITO'S principles, or whether the reins of power must be handed over to the Military Party. We do not anticipate the latter contingency, seeing that the Party lacks the first essential of administrative competence, namely, a leader who could command some measure of support from the Sasshu and Choshu elements. But it will be seen from what we have said that the situation is uncertain, and that the elaboration of a wise compromise may involve considerable delay. These are difficult times for Japan. She is engaged in a great and complicated experiment which may well tax all the resources of her statesmen and the law-abiding qualities of her people. Shallow critics, incapable of understanding the situation, or too careless to study it, may point the finger of scorn at her embarrassments, and say smart things about her changes of Government and the vicissitudes of her administrators. But she is doing what no other nation has tried before, and an attitude of sympathetic counsel would become foreign observers better than one of superficial and captious condemnation.

PORTUGAL AGAIN.

IT is astonishing that any English writer should be found to deliberately advance the plea that Japan has behaved ungenerously to Portugal in treating her as she did recently. This is one of the charges preferred by the *North China Daily News*. Residence at a distance has probably prevented our contemporary from obtaining accurate information, for we observe that it makes several very erroneous statements in the context of its appeal to sentiment. It asserts, for example, that there is nothing to prevent Japan from adopting towards all Powers employing merchant Consuls the same course which she has now pursued towards Portugal. Yet surely the leading Shanghai journal ought to have learned by this time that the question is not primarily one of merchant Consuls against trained Consuls. That is a question of great importance, doubtless, and we are ourselves of the opinion that any Power not providing properly qualified officials and properly equipped courts for the exercise of the jurisdiction of which

Japan has been deprived, should forfeit the privilege of retaining judicial control of its subjects or citizens in Japan. But that we repeat, is not the prime question between Japan and Portugal. After submitting for a quarter of a century to the abuse of merchant Consuls, it would ill become Japan to suddenly claim that such a system is inadmissible, and to demand its abolition within the space of a few months. The real question has been stated with the utmost clearness; but we fear that it is a case of the old proverb, none so blind as those that will not see. Portugal never has entrusted to her merchant Consuls judicial competence such as could satisfy any reasonable standard of efficiency. The difference between her case and that of other Powers did not obtain recognition for the first time in 1892. It was recognised ten years ago, and made the subject of special protest on Japan's part, the result of that protest being that at the Treaty Revision Conference of 1882, Portugal undertook to appoint a Consul-General in Tokyo. This is the important point of which the critics lose sight so persistently that we must assume them resolved not to see it. Much talk is heard about Japan's high-handed attitude towards treaties, but not a word is said about Portugal's having deliberately terminated a system to which she had pledged herself, and terminated it without even informing Japan of her intention. That was in truth a nonchalant and cavalier-like method of dealing with international agreements. In 1882 Portugal acknowledged the inefficiency of her judicial arrangements and promised to appoint a Consul-General in Tokyo. In 1886, a flagrant miscarriage of justice led to the discovery that, though having duly appointed such a Consul, she had failed to invest him with competence sufficient to secure the very moderate degree of judicial efficiency for which Japan had stipulated. Again in deference to Japan's protests, she then invested him with that competence, and at the same time she reduced her Consuls at the outports to the rank of Vice-Consul, making the exercise of their jurisdiction subject to the authority of the Consul-General in Tokyo. Thus for the first time Portugal inaugurated a system, not indeed comparable with the systems of Powers like Great Britain, Germany, France, and so forth, but at any rate on a level with the systems of other States employing merchant Consuls. And, it must again be noted, she inaugurated that system in the sequel of remonstrances officially addressed to her by the Japanese Government on two occasions. But at the close of 1891 she removed the Consul-General, without conveying the slightest intimation to Japan, and without making any kind of provision to supply the judicial deficiencies which had necessitated his appointment. Yet our Shanghai contemporary ventures to affirm that "no practical change is made by the withdrawal of

Mr. LOUREIRO." Other writers, too, with misapprehension not less glaring, contend that Japan has nothing to complain of since the removal of Mr. LOUREIRO simply restores the state of affairs previously existing. It is precisely to the restoration of that state of affairs that Japan objects. She had succeeded in getting it reformed by international remonstrances in 1882 and 1886, and she naturally declines to be treated in 1892 as though those remonstrances had never been made at all, and as though the old faulty system might be restored at Portuguese convenience without a syllable of explanation or notice to the Government which had stipulated in former years against its continuance. It is surely a marvellously irrational claim that Portugal should be held to have satisfied her obligations and discharged her duty because she quietly reverted to a system which by her own admission and action had been pronounced defective, and which she had agreed to reform in compliance with the protests of Japan to whom she did not take the trouble of even intimating her retrogressive intentions. All this has been stated before with the utmost clearness, yet the *North China Daily News* evidently does not understand it yet. Is our contemporary disposed to understand it? We almost doubt it, when we find it advancing such a disingenuous argument as that "for twenty-two years after the treaty between Japan and Portugal was signed, there was no Portuguese Consul-General in Tokyo." It is indeed a sorry case that requires to be bolstered up by an inference drawn from Japan's competence between 1860 and 1882 to obtain international redress of a palpable wrong. Would not the opposite argument be much stronger, namely, that for nine years after the Conference of 1882, when Japan's claims first received some measure of consideration, there was a Portuguese Consul-General in Tokyo, and that his appointment had resulted from Japan's demonstration of the flagrant incompleteness of the Portuguese system? The plea *ad misericordiam* advanced in Portugal's behalf seems to us to be on a par with the above contentions. Japan, we are told, has been high-handed; she has "kicked" Portugal with impunity, and so forth. If there has been any high-handedness, it was on Portugal's side, who would not even take the trouble to consult Japan, or to convey any intimation to her about a radical change of arrangements which had been originally made in consequence of Japan's representations. It is idle, if not contemptible, to accuse Japan of want of generosity. When do we find that the conduct of Western Powers towards one another, and above all towards Oriental States, is swayed by feelings of generosity? Such a plea, were it advanced on Japan's behalf, would be denounced as maudlin sentiment, but the very persons who would

be most forward to denounce it, do not scruple to employ it on the other side when it suits their purpose. Truly, the local censors of this empire can only expect to be laughed at when they arraign an Oriental Power for failing to show generosity and philanthropy in its dealing with an Occidental State. The Japanese may well reply, "let the Occident begin by setting the example." Besides, these critics should be competent to perceive that from Japan's point of view she has not done anything so very ungenerous or unkind to Portugal. She has substituted her own tribunals, presided over by trained judges, for the merchant consulates of Portugal. Can she be reasonably expected to regard that as a very harsh or very offensive measure?

SIR EDWIN ARNOLD'S NEW DRAMA.

SIR EDWIN ARNOLD'S new Drama is finished and has been read by the poet to a few friends. It will probably be pronounced by the public one of the most beautiful and powerful of his productions. Sir EDWIN must have undertaken very extensive researches before compiling the drama, for he has succeeded in imparting to it a wonderful amount of Japanese colour, and the characters are not merely consistent with the parts played by them in the story, but are also thoroughly adapted to the roles which they afterwards performed in history. Running through the plot is one of those mystic threads of affinity which the Buddhist faith weaves from life to life in the round of existences. BAKIN, perhaps the greatest of Japanese novelists, loved to twine one of these subtle chains about the personages of his plots, and to work out the inexorable destiny thus ordained through mazes of skilfully contrived incidents and interactions. In "ADZUMA"—the melodious and love-suggesting title which Sir EDWIN has chosen for his drama—the hero, MORITO ENDO, and the heroine, ATOMA (or ADZUMA as she becomes in the drama), the KESAGOZEN of Japanese tradition and household veneration, are mysteriously drawn together by the affinity—or should we not call it antipathy?—that exists between the eagle and the snake. An eagle has been the presiding influence at MORITO'S birth; a snake at that of ADZUMA, and fate wills that the eagle shall destroy the snake in the next round of existence. These supernatural mysteries, which, we need scarcely say, have been entirely evolved from the wonder and admiration of subsequent generations, and form no part of the original historical story, are deftly introduced by the poet in a conversation between some of the minor characters, constituting a kind of prologue to the drama proper. Any one who has read the magnificent account of the warrior wooing of SIDDARTHA in the "Light of Asia" can easily understand what a noble prelude Sir EDWIN has constructed out of the slaying of the great

white eagle by the father of MORITO, to whose aid came the golden snake that loved the wife of the slayer. The poet treads, indeed, familiar ground in this part of the story, for has he not already written those not to be forgotten lines:—

"Lo! as hid seed shoots after rainless years,
So good and evil, pains and pleasures, hates
And loves, and all dead deeds, come forth
again
Bearing bright leaves or dark, sweet fruit or
sour.
Thus I was he and she Yasôdhara;
And while the wheel of birth and death turns
round,
That which hath been must be between us two."

MORITO ENDO, the betrayer of his friend, the murderer of his love, yet withal a man of great heart and highest courage, who afterwards played a prominent part in the twelfth century wars of the Hei and Gen, makes his first appearance in the drama as a noble *Samurai* at the Court in Kyoto. He is not aware that his father once sought for him in marriage the beautiful girl ATOMA, his cousin, and that her mother, his Aunt, KOROMOGAWA, knowing the mysterious influences that overshadowed the pair, refused to sanction their union. But all these things are well known to SAKAMUNE, a companion of MORITO'S, who having himself loved ATOMA—or ADZUMA as we had better call her, seeing that she goes by that name in the drama—and having failed to obtain her hand, now thinks only of avenging himself. MORITO has never seen ADZUMA. Her mother has spared no pains to keep the two apart, and as ADZUMA is now married to WATARU WATANABE, a wealthy and noble *Samurai*, destiny seems likely to be balked. But SAKAMUNE contrives that MORITO shall have sight of the lovely girl, and MORITO loses his heart at once. Not without great difficulty, however, does he allow his passion to turn him from the path of honour and friendship. Only when SAKAMUNE, by a series of crafty plots and skilful tales, persuades him that he has been grossly ill-used by ADZUMA'S mother, that the girl herself is madly in love with him, and that to rest quiet under such circumstances would be to act the part of a craven—only then does he give himself up to thoughts of violence and treachery. ADZUMA'S mother, in her young days, acting under the influence of a dream, had stolen a blue mantle from a lady sleeping in a temple, and by its aid had found a husband. In latter years she restored the mantle, and became the fast friend of its owner; but her crime remained unexpiated in the eyes of the law, which condemned sacrilegious thieves to lose their hands by the sword of the executioner. MORITO, made wise by SAKAMUNE, and taught to hate and despise his aunt, employs this unrevealed crime to intimidate her. But she laughs him to scorn. Then he produces evidence of ADZUMA'S guilty love for him—a letter forged by SAKAMUNE and a *tanzaku* written by ADZUMA herself, which has been deftly changed by the same traitor so as read like a declaration of hatred of her husband. ADZUMA

is summoned to her mother's house; she denies the authenticity of the letter but admits that she wrote the *tanzaku*, and her mother, convinced of her guilt, strikes her thrice and leaves her. MORITO, believing truly that ADZUMA loves him, and that she only shrinks from the consequences of her love, pleads his cause passionately and not without threats of disgrace for herself and her mother if she remains obdurate. Then ADZUMA, crushed and distraught, sees that whatever she does to clear herself, some stain must rest on her name, some cloud rise between herself and her husband. She therefore determines to die. The resolve is quickly taken. To MORITO she alleges her willingness to obey him, but declares that so long as her husband lives she cannot yield. Will MORITO kill WATARU? MORITO consents gladly, but how is the deed to be wrought? ADZUMA has her plan. She will ply her husband with wine and see that he lies down to sleep in a certain chamber to which easy access shall be arranged for MORITO. Further, since the thing must be done stealthily and in the dark, she promises to wet WATARU'S hair, so that MORITO, feeling the damp locks, may be sure of his man. That very night the plot is carried out. WATARU falls asleep, and while he lies with his head on his wife's knees, ADZUMA writes her last farewells to him and to her mother. The pathos of this scene is inexpressible. The lovely girl, little more than a child—she is only sixteen—has, with wonderful courage, maintained a bright mien during the last hours that she is to spend on earth with her much-loved husband. But when he sleeps and she finds herself alone with the night and the passing moments which bring her doom steadily closer, the woman's nature re-asserts itself. Will her death be rightly interpreted, and will not other arms and lips chase her image from WATARU'S memory? Her tears fall on his face and awake him to take part in a dialogue infinitely sad to those that know what it precludes. But WATARU sleeps again, unsuspecting, and ADZUMA makes her last preparations. She draws her hair back from her forehead, ties it in a knot behind after the manner of the Japanese *Samurai* of the time, and having cut it sufficiently short, wets it thoroughly. Then she goes and lies down in the room whither MORITO has been directed. MORITO comes presently feels the wet hair, cuts off the head and wrapping it up, carries it away. The dramatist shows us nothing of the cruel deed except what is conveyed in MORITO'S half-appalled soliloquy when he emerges with the terrible burden, and marvels at the ease of the foul deed and the stillness of the victim. After a moment he unfastens the cloth and discovers that he carries the head, not of WATARU, but of his love, ADZUMA. Nothing short of the poet's own words can suggest an idea of the terrible intensity of horror and anguish displayed

by the miserable man at this supreme moment. He sees the whole grandeur of ADZUMA'S heroic innocence and fidelity, the whole depth of his own duped baseness. There is only one course possible to him. At daylight, carrying the head wrapped up from sight, he forces his way through distraught servants into WATARU'S *Yashiki*, and finds him weeping beside ADZUMA'S body. MORITO lays the head of the wife before her husband, tells, in a few broken sentences, the incidents that led to the tragedy, and offers his neck to WATARU'S sword. But WATARU cannot consent to be an executioner. He bids MORITO live with his sorrow and his curse, and declares his own intention of taking religious vows, and devoting his life to the memory of the noble girl who died such a death. MORITO, already a renowned soldier and on the threshold of a career full of promise, announces that he too will take the cowl and the stole, and say prayers and burn incense for the sake of ADZUMA and in atonement for his own heinous deed. One more scene ends the drama. We are shown a temple and a group of officiating priests, among whom are WATARU and MORITO. SAKAMUNE passes, and to him MORITO'S attention is drawn by a faithful retainer. But MORITO cannot violate his sacred vows. His punishment is to see the ruffian blaster of his life and reputation pass unmolested, until the retainer follows and slays SAKAMUNE after a brief combat. History makes these two men, MORITO and WATARU, emerge from the cloister after three years and take part in the war which restored YORITOMO to power and overthrew the House of HEI, but the drama ends with the death of SAKAMUNE. These outlines will show what capabilities the story possesses, and under SIR EDWIN ARNOLD'S skilful touch the stirring incidents and deep passions of the drama have assumed vividness of colour and strength of realism that cannot fail to ensure public recognition. It is said that IRVING has promised to put ADZUMA on the stage. If so, we shall be curious to see how he deals with the Japanese costumes. There is no reason why a Japanese costume should not be presented to a London audience as successfully as are the curious dresses of Mediæval Europe at which our theatre-going folk gaze with admiration, if not with awe. But the middle classes of the British metropolis are not without prejudices. They have become accustomed to regard two-sworded *samurai* and Japanese maidens as denizens of fan-land and vase-world, and they may not be ready to admit the congruity of such figures in a drama of "ADZUMA'S" power and pathos. But it is well that London should see Japan in a light other than that of art decoration and trivial æsthetics, and if SIR EDWIN ARNOLD and HENRY IRVING cannot show it successfully, who can?

CORRESPONDENCE.

THE KONJIKI-DŌ.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have to thank "A Japanese Art Student" for his interesting rejoinder to my letter on cloisonné. But he is altogether too precipitate. He says, "Besides, the Konjiki-dō is worth visiting on account of its history and its various associations, of which "W.B.M." shows profound ignorance."

Naruhodo! Now, I did not even attempt to describe the building; that has been done elsewhere, and with full justice, as your correspondent might know, were he a constant reader of your columns. What I did say was that the main pillars of the Konjiki-dō were not made of cloisonné, as Mr. Dixon asserted they were, before the Asiatic Society, and in this, the chief and most important contention from an art point of view, "A Japanese Art Student" concurs. I did not get my knowledge of the place from "some ignorant interpreter," but, like your correspondent himself, from personal inspection and from written records. Unfortunately, however, that does not prove that either of us has hit the truth. The age of miracles is past, and Japanese records, especially temple records, are more remarkable for the marvellous than the veracious. And I repeat, without fear of contradiction, that he who expects to find in the Konjiki-dō a gorgeous temple edifice, like that described by Mr. Dixon, will assuredly be woefully disappointed.

I am, Sir, yours truly, W. B. M.
Tokyo, August 3rd, 1892.

THOMAS PAINE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I enclose a recent review of Moncreu Conway's "Life of Thomas Paine," which I beg you will publish as a sufficient answer to some of the untrue statements recently advanced by correspondents as to this American patriot.

J. H.
Tokyo, June 26th, 1892.

YOKOHAMA PRINTING AND PUBLISHING COMPANY, LIMITED.

The half-yearly meeting of shareholders in the Yokohama Printing and Publishing Company, Limited, was held on Saturday afternoon, at the Chamber of Commerce, the Chairman of Directors, Mr. H. C. Litchfield, presiding. Those present were Messrs. J. F. Lowder, M. Russell, Jas. Martin, W. Gordon, W. Denning, E. Leopold, C. W. Ure, W. J. S. Shand, and E. Binder.

The CHAIRMAN said—Gentlemen, this is the half-yearly meeting of the company, called in accordance with the Articles of Association. It is called for the purpose of receiving the report of your Directors for the first half of 1892, and also for the purpose of receiving a statement of the assets and liabilities of the Yokohama Printing and Publishing Company during that period. The report and accounts have been before you for the stipulated period, and I think that it is unnecessary for me to read them over to you. Certainly the report of the Directors is a short one. The accounts are presented to you in the form that the accounts have always been presented since the company came into existence. I should like, however, to supplement the report by a few words of my own. You must observe that where it is necessary that a meeting be called during the working year it necessitates also a division, to a certain extent, of the accounts; that is one reason why the report of accounts, as presented to you, shows us as being in an absolutely worse condition than we are. It shows, for instance, on the one side, the amount of subscriptions actually received, half of which may legally be appropriated to the first half year's working, while it also shows on the other, as one of our liabilities, part of the amount as being received on account to be carried forward to the balance of the second half to provide for work which has to be done. It is a very inconvenient arrangement, but our auditors and book-keepers insist on it being so placed upon our books. That is one of the reasons why our position looks worse than it is. I don't say that the business is flourishing, but although it is distinctly stated in our statement of accounts that the balance loss for the half year is \$7,954.10, yet in the actual working the Company is in a better position than last half year. Perhaps you will allow me to compare the present balance sheet with that presented for the previous year. Our debt to the Oriental Bank is now slightly less

than it was on the 31st of January. We have paid off several debentures due to Mr. Denning. At the same time, and in spite of that, on the 30th June we had a certain, though only a slight one I am sorry to say, balance in hand in cash. That is our position. Our auditor has tried to explain to me that our reports must continue to show a loss, and an increasing loss, until the debentures due to Mr. Denning are paid off. That is the reason why the results of that engagement is spread over a period of some time. He explained to me by figures and showed quite fully that our position was not so bad as it looked, though I am sorry to say I did not quite follow him, but he did show it, and I can assure you gentlemen, that I am perfectly satisfied at his conclusions. I hope the shareholders may be as complacent as I was. It is unnecessary for me to point out that the present year has been a most trying one to everybody, not only to printing companies but also to private individuals, and especially during these last two months, I mean May and June, they are the last two months concerned in our accounts. During the first quarter of the year the business of the company showed most fair working results. During May and June a strong wave of depression set in upon this Settlement, and the great depreciation was felt by this company as well as by others. The great falling off in the job printing accounts for a great deal in the bad results now shown. We are a public company, and therefore have to show our hand. It is an unfortunate position, and, feeling this and properly realising the situation, your Directors resolved to take the shareholders into their confidence and so have put the worst before you. It is for you to say what is to be done under the circumstances. The business of this meeting is to examine the reports and accounts and discuss the general business of the company. If you have any questions to ask me, I will do my best to answer them.

MR. DENING—I should like to ask a question in regard to the debt to the Oriental Bank. It is a big debt, and an important item in the accounts. When are the Company expected to discharge that debt?

The CHAIRMAN—You see by the balance sheet what the amount of the debt is. We have to discharge it, I suppose, when it falls due, or rather when the O.B.C. instruct their counsel to take steps to recover its debts.

MR. DENING—I infer from general information which is to be obtained in Yokohama that that may be in the course of next month.

The CHAIRMAN—Any time from a week to six months.

MR. URE—Have you any spare copies of the accounts?

The CHAIRMAN—I am afraid I have not—only my own copy.

MR. URE—If the Oriental Bank call up their debt how is it to be met?

The CHAIRMAN—The O.B.C. have first charge.

MR. URE—But how do you propose to pay it off—with the cash in hand of \$50.26 or the balance \$107.76?—(Laughter.)

The CHAIRMAN—That is rather a conundrum. I don't answer conundrums. As far as I am concerned I don't propose to pay it off.—(Laughter.)

MR. LOWDER—It is perfectly well understood that our company is in a very bad condition indeed. I quite sympathise with the Chairman in the remark which he made about our being a public company and therefore compelled to show our hand to the world. As a public company we are open to criticism, we have to invite criticism, but we can't transact at this meeting the necessary things or put the questions about our business, which the circumstances of the time demand. I therefore throw out the suggestion, and I intend to make a proposition as soon as our proper work is finished, that is the adoption of the accounts, and I intend shortly to propose their adoption—I intend, I say, to suggest very strongly to our directors, the urgent necessity of calling an extraordinary meeting of shareholders, when such steps can be taken to inquire into our business which cannot be done at an ordinary meeting. For an extraordinary meeting must be held to consider the position in private. The position has to be faced, the difficulties have to be met. The circumstances in which we now find ourselves have been brought about through no fault of our shareholders and the sooner we face our position the better.

MR. URE—Do you propose the adoption of the report?

MR. LOWDER—Yes, I propose the adoption of the report and accounts for the last half-year.

MR. MARTIN—I second.

The CHAIRMAN put the proposition to the meeting and it was carried unanimously.

The Profit and Loss Account, and Statement of Assets and Liabilities for the half-year ended the 30th

June, 1892, are presented to the Shareholders in accordance with the Articles of Association of the Company. The Directors regret that the working of the past half-year does not show a better result.

H. C. LITCHFIELD, } Directors.

E. & O. E.

Yokohama, June 30th, 1892.

H. C. LITCHFIELD, } Directors.
W. J. S. SHAND, }

We have examined the foregoing accounts and compared them with the vouchers of the Company, and certify them to be correct.
Yokohama, 22nd July, 1892.

O. KEIL, } Auditors.
R. S. SCHWAB, }

The CHAIRMAN—I may remark that it was my intention when the ordinary business of the meeting had been transacted, to propose that the Directors be asked to call an extraordinary meeting of the company, at which to discuss the condition of affairs. An extraordinary meeting requires a special resolution, and it would be necessary to hold an extraordinary meeting to inquire into the subjects proposed to be discussed, and which do not fall within the province of this meeting. As no other gentleman has any remarks to make or question to put, I declare this meeting dissolved.

LETTER FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, July 9th.
The principal Presidential tickets are now all in the field, so that voters can begin to be weighing the men and measures. The fourth great National Convention was that of the People's Party, whose delegates and "boomers" gathered in large numbers at Omaha. They were a motley assemblage of Greenbackers, Knights of Labour, Silverites, Farmers' Alliance men, Socialists, Anarchists, and various other miscellaneous "calamity howlers." They opened their meeting, Saturday, July 2, and spent the first day in the performance of the preliminary routine business, appointment of committees, addresses denouncing the Republican and Democratic parties and prophetic of the sure ruin of the country unless it listens to their warnings, takes their advice, and accepts them as leaders. Then they adjourned till Monday, July 4th, in order that the new party might be born on Independence Day.

Monday's session was long and exciting, but brought forth the new party amid the wildest enthusiasm. The platform with its long and windy preamble is as follows:—

Assembled on the 16th anniversary of the Declaration of Independence, the People's Party of America in their first National Convention, invoking upon their action the blessing of Almighty God, put forth in the name and on behalf of the people of this country, the following preamble and declaration of principles:—
The conditions which surround us justify our co-operation. We meet in the midst of a Nation brought to the verge of moral, political, and material ruin. Corruption dominates the ballot box, the Legislatures, the Congress, and touches even the ermine of the bench. The people are demoralized, most of the

Original from

States have been compelled to isolate the voters at the polling places in order to prevent universal intimidation or bribery. The newspapers are subsidized or muzzled, public opinion silenced, business as usual covered with a mortgage labour, impoverished, and the land concentrating in the hands of the capitalists. The urban workmen are denied the right of organization for self-protection; imported pauperized labour beats down their wages; a hiring standing army, unrecognized by our laws, is established to shoot them down, and they will rapidly degenerate into European conditions.

The fruits of the toil of millions are boldly stolen to build up the colossal fortunes of the few, unprecedented in the history of mankind, and the possessors of these in turn despise the Republic and endanger liberty.

From the same prolific womb of Governmental injustice we breed the two great classes—tramps and millionaires. The National power to create money is appropriated to enrich bondholders; a vast public debt payable in legal tender currency has been funded into gold-bearing bonds, thereby adding millions to the burdens of the people. Silver, which has been accepted as coin since the dawn of history, has been demonetized to add to the purchasing power of gold by decreasing the value of all forms of property as well as human labour, and the supply of currency, is purposely abridged to fatten usurers, bankrupt enterprise and enslave industry.

A vast conspiracy against mankind has been organized on two continents, and it is rapidly taking possession of the world. If it were not for the fact that once it is established, it would be the destruction of civilization, or the establishment of an absolute despotism.

We have witnessed for more than a quarter of a century the struggles of the two great political parties for power and plunder, while grievous wrongs have been inflicted upon a suffering people. We charge that the controlling influence dominating both these parties have permitted the existing dreadful conditions to develop without serious efforts to prevent or restrain them. Neither do they now promise us any substantial reform. They have agreed together to ignore in the coming campaign every issue but one. They propose to wage the battles of a plundered people with the spirit of a sham battle over the tariff, so that capitalists, corporations, National banks, rings, trusts, watered stock, the demonetization of silver, and the oppressions of the usurers, may all be lost sight of. They propose to sacrifice our homes, wives and children on the altar of mammon; to destroy the multitude in order to secure corruption funds from the millionaires.

Assembled on the anniversary of the birthday of the Nation, and filled with the spirit of the grand generation who established our independence, we seek to restore the government of the Republic to the hands of the plain people, whose class it originated; we assert our purpose to be identical with the purposes of the National Constitution—"To form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defence, promote the general welfare, and secure the blessings of liberty for ourselves and our posterity."

We declare that this Republic can only endure as a free government while built upon the love of the whole people for each other—the Nation that cannot be pinned together by bayonets; that the civil war is over, and that every passion and resentment which grew out of it must die with it, and that we must be in fact, as we are in name, one united brotherhood of free men.

Our country finds itself confronted by conditions for which there is no precedent in the history of the world. Our annual agricultural productions amount to billions of dollars in value, which must within a few weeks or months be exchanged for billions of dollars of commodities consumed in their production. The existing currency supply is wholly inadequate to make this exchange. The results are falling prices, the formation of combinations and trusts, and the impoverishment of the producing classes. We pledge ourselves that, if given power, we will labour to correct these evils by wise and reasonable legislation, in accordance with the planks of our platform.

We believe that the powers of government, in other words of the people, shall be expanded, as in the case of the postal service, as rapidly as the facts of the case require, so as to prevent the evils of the experience of Spain; to the end that no oppression, injustice, and poverty shall eventually ensue in the land.

While our sympathies as a party of reform are naturally upon the side of every proposition which will tend to make men intelligent, virtuous, and temperate, we nevertheless regard these questions, important as they are, as subordinate to the great issues now pressing for solution, namely, the rights of the individual property, but the very existence of free institutions, depends, and we ask all men to first help us to determine whether we are to have a Republic to administer before we differ as to the conditions upon which it is to be administered.

Believing that the forces of reform this day set in motion will never cease to move forward until every man, woman, and child, equal rights and equal privileges securely established for all the men and women of the country, we declare, therefore:

1. That the union of the labour forces of the United States, this day consummated, shall be permanent and perpetual. May its spirit enter into all hearts for the salvation of the Republic and the uplifting of mankind.

2. Wealth belongs to him who created it, and every dollar taken from industry without an equivalent, is robbery. "If any will not work neither shall he eat." The interests of rural and civic labour are the same; their enemies are identical.

3. We believe that the time has come when the railroad corporations must either own the people or the people the corporations, and should the government enter upon the work of owning and managing any or all railroads we should favour an amendment to the Constitution by which all persons engaged in the government service shall be placed under a civil service regulation of the most rigid character, so as to prevent the increase of the power of the National administration by the use of such additional government employees.

4. We demand a National currency, safe, sound, and flexible, issued by the general government only, a full legal tender for all debts, public and private, and that without the use of banking corporations, a just, equitable, and efficient means of distribution direct to the people at a tax not to exceed a per cent. per annum to be provided in set forth in the sub-treasury plan of the Farmers' Alliance, or a better system; also by payments in discharge of its obligations of public improvements.

(a). We demand free and unlimited coinage of silver and gold at the present legal ratio of 16 to 1.

(b). We demand that the amount of circulating medium be speedily increased to not less than \$50 per capita.

(c). We demand a graduated income tax.

(d). We believe that the money of the country should be kept as far as possible in the hands of the people and hence we demand that all State and National revenues shall be limited to the necessary expenses of the Government economically and honestly administered.

(e). We demand that postal savings banks be established by the government for the safe deposit of the earnings of the people and to facilitate exchange.

Transportation being a means of exchange and a public necessity, the government should own and operate the railroads in the interest of the people.

(a). The telegraph, telephone, like the post-office system, being necessary for the transmission of news, should be owned and operated by the government in the interest of the people.

(b). The land, including all the natural sources of wealth, is the heritage of the people and should not be monopolized for speculative purposes, and alien ownership of land should be prohibited. All land now held by railroads and other corporations in excess of their actual needs, and all lands now owned by aliens, should be reclaimed by the government and held for actual settlers only.

Your committee on platform and resolutions beg leave unanimously to report the following:—

Whereas, Other questions have been presented for our consideration we hereby submit the following, not as a part of the

platform of the People's party, but as resolutions expressive of the sentiment of this convention.

1. Resolved, That we demand a free ballot and a fair count in all elections and pledge ourselves to secure it to every legal voter without Federal intervention through the adoption by the States of the unperverted Australian or secret ballot system.

2. Resolved, That the revenue derived from a graduated income tax should be applied to the reduction of the burden of taxation now levied upon the domestic industries of this country.

3. Resolved, That we pledge our support to fair and liberal pensions to ex-Union soldiers and sailors.

4. Resolved, That we condemn the fallacy of protecting American labour under the present system, which opens our ports to the pauper and criminal classes of the world and crowds out our wage earners; and we denounce the present ineffective laws against contract labour and demand the further restriction of undesirable emigration.

5. Resolved, That we cordially sympathize with the efforts of organized working men to shorten the hours of labour, and demand a rigid enforcement of the existing eight-hour law on government works, and ask that a penalty clause be added to the said law.

6. Resolved, That we regard the maintenance of a large standing army of mercenaries, known as the Pinkerton system, as a menace to our liberties, and we demand its abolition; and we condemn the recent invasion of the Territory of Wyoming by the hired assassins of plutocracy, assisted by Federal officers.

7. Resolved, That we commend to the favourable consideration of the people and the reform press the legislative system known as the initiative and referendum.

8. Resolved, That we favour a constitutional provision limiting the office of President and Vice-President to one term, and providing for the election of Senators of the United States by a direct vote of the people.

9. Resolved, That we oppose any subsidy or National aid to any private corporation for any purpose.

The better element of this heterogeneous convention had been hoping that they could persuade Judge Walter Q. Gresham, of Chicago, to accept the Presidential nomination on a less radical and pessimistic, but thoroughly reform, platform; and maintained their hopes up to the very last. But the Judge refused to be inveigled into such a movement in favour of so many wild cat schemes. Consequently, when the convention came to ballot, there were only two candidates—Gen. Weaver, of Iowa, and Senator Kyle, of South Dakota. The Iowa man easily won on the first ballot by a vote of 995 to 265 for Kyle, and 3 Scattering. On the first ballot for Vice Presidential candidate, General James G. Field, of Virginia, was named [General James B. Weaver, of Iowa, has creditably served two or three times in the House of Representatives, and was the Greenback Labour candidate for President in 1880. General Field is comparatively unknown.]

It is rather early to make positive and permanent prognostications and comparisons; but it may be interesting and profitable to call attention even now to certain phases of the ensuing campaign. In the first place, all the candidates are honourable men, so that personalities and mud-slinging ought to find no place. Each Presidential candidate, moreover, is a good typical representative of his party and platform. The Republicans and the Democrats have taken all their candidates from the North; the Prohibitionists and the People's Party each took its Presidential candidate from the North, and its Vice-Presidential candidate from the South. It is a curious circumstance, that, in case of no election by the people, the Democratic House of Representatives would elect Cleveland President, and the Republican Senate would elect Reid Vice-President—both from New York.

Although it is not yet positively certain what line the campaign will take, it is well enough understood to warrant a comparison of the platforms and principles. The Republican party stands squarely for the McKinley bill and protection; the Democratic party stands squarely against protection and in favour of a tariff for revenue only; the Prohibition tariff plank is ambiguous, but leans, perhaps, the Democratic way; the People's Party are strongly opposed to a high protection. On the silver question the last party is, of course, in favour of an unlimited free coinage plank, and adopted an ambiguous statement; and the Republicans and the Democrats have an indefinite straddle: but both Harrison and Cleveland are confidently expected to veto a radical measure in favour of free coinage. On the liquor question, of course, the Prohibitionists alone take a square stand. If the silver question becomes the main issue, the opponents of free coinage can most safely trust the Republican Party, and should fear most the People's Party; for, though a Presidential veto is sure from either Cleveland or Harrison, a Democratic is more likely than a Republican Congress to pass a free coinage bill over the veto. But if, as seems probable, the campaign is fought on the tariff question, it will be a hard fight between the two old parties. The matter of civil-service reform can scarcely figure much in the campaign; for both Cleveland and Harrison have had a term of office, and have sinned about equally in the dispensing of the spoils to the victors. Each of them made a good President; each intended and tried to do right; each made mistakes. We are, therefore, confidently looking for a campaign, not of men, but of measures; not of personalities, but of principles:—a campaign of rational discussion, in which an

intelligent citizen can join without loss of either temper or self-respect."

"Fourth of July" was celebrated as usual by the small boy with noise and fire-works, and was attended, of course, with a large number of casualties. In many places patriotic orations were delivered; in Chicago, ex-Mayor Carter H. Harrison made his eagle soar; in Peoria, Hon. A. E. Stevenson was the orator; in New York City, Tammany Hall indulged in a big celebration with speeches and letters from the eminent Democratic statesmen; in Woodstock, Conn., among the many prominent speakers was Indian-Commissioner T. J. Morgan, who pleaded earnestly for justice to "Our Indian Fellow Citizens."

A bill has been introduced into the Canadian Parliament to restrict still further Chinese immigration.

Another cyclist is making the tour of the world under the auspices of the *Outing* magazine. He left New York City Hall, June 9, and expects, after travelling 22,000 miles, to reach New York again in the summer of 1894. He (Mr. Frank G. Lenz) will go via San Francisco to Japan.

The Boston correspondent of the *Chicago Inter-Ocean* has written very appreciatively of Professor Ernest Fenollosa and his work, particularly of his Phi Beta Kappa poem. She speaks of "the exquisite translations he has made of Chinese poetry," and calls him a "mystic by temperament with a poetic and impressionable nature." She quotes the following stanzas from his Phi Beta poem, "The East and the West":—

Faith incredulous of creeds
Love is full of bursting seeds;
Scatters showers of living flowers
Through a wilderness of weeds.
So may perfect art and prayer,
Life and faith in union rare;
Build the soul new tabernacles,
World-encircling domes of air.
Age of worship, crowned with spires,
Flames of purified desires,
Consecrate thy knights for battle
With thy symphony of choirs.
Who shall arm these knights with flame?
Who transmit the oath-bound aim?
Who shall crumble the stars to powder
With the sceptre of God's name?
Thou, O Allah, self-awakened priest,
Soul-wrapped manhood of the East;
Let thy herald with diamond lightning
Blast the eyelids of the West!
Thou may lightnought of defiance
Consecrate the aim of Science;
Twin-jointed vigour of the ages
Corner-stone of God's reliance.

She closes with the following complimentary characterization:—

Professor Fenollosa was for some twelve years a resident of Tokyo, filling a chair in the university, and his oriental study has been not only deep and extended, but the results are those acquired through the sympathetic perception as well as through actual labour. Impressionable and imaginative, Professor Fenollosa entered into the very penetra of Oriental thought, and there saw life and literature from their own points of view. He thus brings to his interpretation of this life qualities that are as rare as they are valuable, and to the Japanese department of the museum he is giving a dignity and significance that is exceptional in any art museum in America.

Japan figures more or less every month in the American magazines. In the July *Century* in Señor Castelar's valuable paper on "Christopher Columbus" is an allusion to the great discoverer's present view of "the island of Cipango fringed with spice-trees and begirt with pearls"; and in the same magazine, in Steadman's treatment of "Beauty" under "The Nature and Elements of Poetry" is a page on the "Japanese types of art and life." In the July *Atlantic*, Lafcadio Hearn has a charming sketch, "In a Japanese Garden."

The Chautauqua Summer School has opened with a large attendance; President Harper read an able paper on "Criticism."

This is the last day of grace for the University of Chicago in securing the \$1,000,000 for buildings. During the past week it has obtained two subscriptions of \$50,000 each from Mrs. A. J. Snell and Mrs. Jerome Bucher of this city; but this morning it lacked \$30,000. It is extremely improbable that the wealthy citizens of Chicago will allow such a grand enterprise to fail by such a small amount.

The Chicago Manual Training School, which opened Feb. 4th, 1884, is now one of the important institutions of the city. Its aim is to combine manual and mental training; and it, therefore, offers instruction and practice in the use of tools together with instruction in drawing, mathematics, and the English branches of a high school course. The roll of its graduates includes about 300 names; and the annual attendances exceeds that number.

This is a great city for panoramas. "The Battle of Gettysburg" and "Niagara Falls" have been here for many years; a more recent cyclorama is "The Chicago Fire," which is intensely interesting and marvellously realistic.

"Libby Prison" is also well worth a visit. The old prison has been put up here just as it stood in Richmond, and has been filled with thousands of war relics, both Union and Confederate, and many other interesting objects. It contains, for instance, Original from

an old and fine postrail of Columbus; two ancient match lock guns made in Japan; and the wheel of Com. Perry's flag-ship *Powhatan*.

The Young People's Society of Christian Endeavor is in session, 20,000 strong, in New York City, and is having enthusiastic meetings. It is an undenominational, union organization of Christian young people for more efficient work. It is only ten years old, but has become international, with 21,000 branches and 1,250,000 members. The convention has passed a resolution against opening the World's Fair on Sunday.

The Chief of Construction of the Columbian Exposition has issued a notice to foreign nations, that, "Unless plans are received and work actively commenced by September 1, * * * space should be promptly vacated." The Japanese Government must hurry.

The bad weather of June interfered somewhat with work on the Fair grounds; but the pleasant weather since has accelerated construction. In spite of the fact that the typical "day in June" was "rare," about 90,000 paying visitors were admitted to the grounds during that month. On the Fourth of July also there was such a crowd that carriages were forbidden to enter.

We have had another conflict between labour and capital with bloodshed. An attempt to reduce the wages of iron and steel workers in Andrew Carnegie's mills at Homestead, near Pittsburg, led to a strike. In order to protect new labourers from the strikers, the mills were fortified, and a force of Pinkerton's detectives was hired. The latter on landing at the mills were met by a mob of 3,000 strikers. It is not yet determined who fired the first shot; but a battle ensued with many dead and wounded on both sides. The Pinkertons had retreated to their barge, where they were besieged for many hours, and finally had to surrender. The strikers had even poured oil on the waters, not for peace, but for igniting the barge! When the Pinkertons were in the hands of the mob, they were shamefully maltreated and abused; but the next day they were released, and sent to New York. The County Sheriff cannot get a *posse* for the defence of the works which the strikers hold. It is hard to say what will be the outcome of this disgraceful affair. It is strange that there should be a reduction of wages in an industry highly "protected" by the McKinley Bill.

SOME NOTES ON ROUMANIA.

Not one of the lately renovated states of Eastern Europe is more worthy of attention than the Kingdom of Roumania. As the eyes of Englishmen are turned in that direction at the present moment, in consequence of the recently announced betrothal of the grand daughter of the Queen of England to the heir of its throne, a few notes on the subject may be acceptable to the readers of this paper.

Geographically the land enclosed by the Danube, the Pruth, and the Carpathians, and containing within itself numerous elements of wealth, would seem fitted by nature to be a successful nation. Its fate through ages has been to form the battlefield on which other nations have fought out their disputes and settled their destinies.

Roman and Spanish legions, brought there by Trajan to colonize and civilize the country, are the ancestors who have most firmly fixed their characteristics in the language and appearance of the people. The former is probably the nearest approach to Latin now spoken. It resembles Latin greatly shorn of its inflections, with hard consonant terminations to the words. Turkish and Slavonic substantives no doubt abound, but, putting these aside, the language can be understood without much difficulty by anyone with a knowledge of Latin or of its derived tongues.

In appearance the Roumanians are typical Italian figures. A touch of difference in the arrangement of kerchief or kirtle, of sheepskin coat or broad, brass studded belt, and one might meet their like on the Campagna. The straight, regular features and dark gleaming eyes are the same; so are the free, upright bearing, gracefully poised figure, and springing step. In the towns, as in most towns, there are many types, and any attempt at generalization would be more or less incorrect. The pride of this people is to be called Rouman; they never forget their origin, and are careful to maintain the distinction which exists between them and other races, of Tartar or Slavonic origin, who are their neighbours.

The Turkish rule, as such, never pressed so hardly on them as on the races south of the Danube. Turks never settled there, no Mosque or Minaret was to be seen in the country, and this immunity was latterly guaranteed to them by treaty. The Turkish authority was,

from the first, delegated, in great measure, to certain families of Phanariote Greeks, who gradually made themselves masters of a great part of the soil of the country, and constituted themselves into a class of feudal lords, becoming less obviously alien as time went on, and holding the population of the rural districts in an organized system of serfdom.

It is perhaps a mistake, or, at any rate, an anachronism, to speak of "the country," as, up to a time after the close of the Crimean War, the two provinces of Moldavia and Walachia of which it consists were in every respect distinct, although their language and many of their conditions were identical. The history of 300 years is mainly the history of those Phanariote Beyads, from among three or four families of the most powerful of whom Hospodars were chosen, to be deposed, imprisoned, assassinated, or beheaded, and succeeded by others, destined to share the same fate. The one bright spot in the midst of this oppression and confusion was the church. Latin in its origin, it had become Oriental to fanaticism, and, having given to the provinces the Cyrillic alphabet, the history of which is curious and well worthy of study, it fostered the literature of the country, and affords us the curious spectacle of this essentially western language expressing itself through those purely Slavonic symbols. Probably by this time the western Alphabet has asserted itself; twenty years ago its use was exceptional, and the subject of conservative protest.

The Phanariote lords, willing enough to apostatize as they had been in the south, were yet faithful sons of the Church in their new land. The Monasteries, scattered all over the Principalities, were a sure provision for their sons and daughters, and were, by common consent, exempt from the changes and confiscations to which the secular possessions were subject. So they grew in extent and importance; some were towns of several thousand inhabitants, living under the simple rule of St. Basil, cultivating the soil, pursuing trade and useful arts, sending out books from their printing presses, treating their serfs as their children, and forming little islands of calm and culture in the midst of the general disorder. The secular clergy were far from keeping pace with their Monastic brethren, and were often little better instructed than the illiterate peasants from whose ranks they were taken, and among whom they, their wives and families lived on terms of equality. The clergy have, however, been represented as being degraded to an extent which was far from being the case. The fact that all officials, however humble, connected with the Church wore ecclesiastical dress and claimed "benefit of clergy" has often caused men whose true status was that of sexton or verger to be confounded with priests proper.

The weak place in the monastic system was the claim laid by the monks of Mount Athos to a large annual tribute from certain of the Roumanian monasteries. The history of this arrangement need not be entered on here; the drain on the resources of the country, from the money sent to the Holy Mount on the one hand, and from the tribute enforced by the Porte on the other, caused a poverty, not severe perhaps, because the soil was exceptionally fertile, and the needs of the people exceptionally few, but still sufficient, in combination with the general insecurity, to prevent any real progress. Such was the state of things at the close of the Crimean War. The peace assured to the Principalities certain privileges as against the Porte, many of which they had practically enjoyed before; it failed to guard them from the Russian ascendancy which is always ready to assert itself in those regions. But the war, initiated on the banks of the Danube, had the effect of bringing the two provinces at once into touch with Western Europe. The consular posts of Bucharest became of considerable importance, and were held by men who, by their diplomacy, did much to guide events. Jassy, the capital of Moldavia, had always been less important. Walachia, the more Western province, shut out by the wall of the Carpathians from the neighbouring civilization of the Transylvanian "Grenze" so completely that the contrast between the eastern and western sides of the wild mountain passes was a thing to wonder at, was yet far less Russian than Moldavia, to which had been united, in 1829, the quasi-Russian province of Bessarabia. Jassy, was a city almost entirely "à la Russe"; full of churches and Monasteries, which, though nominally subjects to the Patriarch of Constantinople, yet looked to Kieff as their Holy City; while, in Bucharest, the Roumanian and Greek elements combined to produce a barbaric splendour, with an outside show of French civilization, side by side with a sordid, apathetic poverty, forming a whole, curious, if not too edifying to witness. One provision of the Treaty of Paris was that those two provinces, to which it gave enlarged powers of self government, should remain two. Within a few

months the same man had been elected Hospodar of both. By this step the treaty was not formally infringed, but a very short time served to bring about a revolution which placed the Hospodar, Alexander Couza, who was altogether a creature of Russia, at the head of a united Roumania. This remained a *fait accompli*, and, although grumbled at, was not disturbed by the powers. Prince Couza, an adventurer and gambler by nature, fought consistently for his own hand, but always subject to Russian influence and direction. Money was needed, and the monastic tribute to Mount Athos was a sufficient excuse for the entire confiscation of the property of the monasteries, both alien and indigenous; with some temporary exceptions, made with the view of clearing the ground more mercifully.

The next step, possibly an experiment *in corpore vultu* on the part of Russia, was the complete emancipation of the serfs; which measure, carrying with it a new set of conditions for military service, doubtless did much to raise that intrepid body of men who made a name for their country and themselves at Plevna. But the vices, public and private, of Prince Couza, and also, probably, the fiat of Russia brought about a revolution which sent him to join the band of "*Rois en exil*" in Paris, and which, after a more than usual amount of diplomatic juggling, brought Prussia to the front, by placing at the head of the United Principalities a brave and wise young member of the house of Hohenzollern. Prince Charles and his young wife, Elizabeth of Wied, had already made steady progress in the affections of the people who had adopted them, when the Russo-Turkish war of 1876 drew the country once more into the turmoil of the nations.

To many of us that march of the mighty host led by Alexander and his generals seems a thing of yesterday. "Across the Pruth" was the *mot de guerre* then, as in 1854. Then they passed, in long line, up the five miles of raised *chassees* which runs parallel to the Danube from Reni to Galatz. There were Turkish gunboats on the river, but not a shot was fired. They marched through Galatz, and on for three miles more, up to the bold headland where the Danube and the Sereth join; up to the great green plateau where the Rouman regions had their camp ages ago, leaving their coins and potsherds and broken earthenware, to make a holiday joy for little children who gather violets there. Here the Russian host halted for three days, a gallant show; and then, without let or hindrance crossed over to the reedy shore of the Dobrudja to begin the great campaign which ended under the walls of Constantinople and which, among its other results, made Roumania a Kingdom, and turned its Prince—Hospodar into King Charles I. If Charles is King, Elizabeth is Queen and more; a very womanly queen; one of those women with whom logic is second, but who justify their position by success. Very successful she has been, chiefly by becoming heart and soul a Roumanian. Carrying which her to her new home the high aims and ideals which were hers as a romantic girl by the Rhine, she has made a place for them by the Danube and the Bistritza. She has caused the quaint and soul-stirring Rouman legends, and they are many, to live afresh in the hearts of the people; she has been more Rouman than the Roumanians. But two aims above all others have been hers. First it has been in her heart to help and sustain her husband with all womanly sympathy and encouragement, in a position so full of difficulty that a man less bravely resolute and high-minded would have given up in despair. And, secondly, she has spared no effort to raise the standard of education and morals among the women of her adopted country. The way in which she has done this, learning thoroughly in order that she might teach, spending hours of every day in working and showing others how to work, is known to most of us. She has taught the girls in the village schools, and the women in their homes; and has made it her pleasure to surround herself with a band of noble maidens to be trained to share her own high aspirations, never through it all losing sight of the truth that women should be womanly; "not lesser men, but different." Critics there are ready to smile at "Carmen Sylva," or to pass judgment on same recent events, which, but for the fierce light which beats about even the Roumanian throne, would be utterly unknown to them. Such critics do not consider that the life of this devoted wife, this childless mother, who is the mother of a whole nation's womanhood, is a life of steady, quiet work, of which a book of poems is but the solace, a nervous illness but the temporary interruption. What has been already said will suggest that the life of the ruler of Roumania must be full of cares, and must involve no small amount of self devotion and self sacrifice. The Roumanians have many qualities which go to the making of a

nation; qualities of race which must tell in the end; qualities also of patience, gained during ages when patience has been their only armour. Nay, for they have also had the armour of duplicity and cunning which oppression never fails to produce. It has produced also a readiness to have recourse to corruption, bribes, treachery, any means by which the favourable turn of the wheel may be made to neutralize the unfavourable turn which is sure to follow. Nothing can speak more highly for the consistent courage of the king and queen than the steady stand which they have made against those vices, and the fact that already a large and increasing public opinion is with them, and ready to aid in unmasking, and putting a stop to the unworthy intrigues which are still too common. Then there is the great problem of a so-called free peasantry, deeply mortgaged to the Jews, which has taken the place of the serfs with few responsibilities and few hopes. The emancipation is 30 years old; it is only within the last five or six years that the difficulty has become acute. As in Russia, those serfs were emancipated with a light heart, and turned, all at once, into tax-paying responsible subjects; the results must be faced, bravely indeed, but with hearts less light. The problem of Russian ascendancy is also there, as where is it not? The Turkish problem has well nigh, or altogether solved itself. In the proposal to marry the heir to the throne, the nephew of King Charles, to the grand daughter of Alexander II, and of Queen Victoria, there is, no doubt, policy, and, though alliances of royal houses do not seem now to have the importance which was once attributed to them, we cannot but hope that this union may be for the good of the Roumanian kingdom, as well as for the happiness of the future king and his young bride.

If the political future of the country can be assured its material prosperity will, without doubt, continue to increase. In spite of drawbacks such as those just referred to, its progress during the last thirty years has been immense. At the close of the Crimean War there was no such thing as a road, properly so called, in the country, and what trade there was remained in the hands of Jews and of foreign merchants, mostly Greek or Italian, in the towns on the river. It was not till 14 or 15 years later that the first railway was opened in the country. The great fertile plains to the north of the Danube, scratched with a wooden plough, produced rich harvests of wheat and maize, far in excess of the needs of the population. The river was the natural outlet for all this surplus food; a majestic stream, flowing, after its dash through the Carpathians at the Iron Gates, in a free, level stream; not the "blue Danube" of the poets, but a great, resistless yellow tide, soaking through long reaches of marsh and meadow, swelled by great tributaries, and fit for the bearing of navies—so far; but, for the last hundred miles of its course becoming more and more undetermined what the course should be; with shallows here, awkward bends there, lagoons and subsidiary streams everywhere. The grain did indeed get shipped from the two river ports of Galatz and Ibraila. To reach those ports from the fields where it grew, it had to be dragged over weary miles of well nigh trackless steppe; down into the deep valleys which intersect it, and up to the level again. Long trains of blue-grey oxen, pulling from the forehead with patient strength, dragged the cracking arabas, with no vestige of iron in their composition, through clouds of yellow dust, past village and convent tower; stopping to rest at noon or night-fall in the courtyard of some square, white Kabin, or camping in front of some "bordei," a hut, sunk deep in the ground, its grass grown roof scarcely serving to distinguish it from the countless tumuli which dot the plain; only those resting groups, or the acrid smell of the raki sold within, marking it as a *krishma*, or wine shop. On reaching the port the grain was shipped in such craft as the river afforded, and worked its way to the Sulina mouth, to be there transferred to flat bottomed lighters. These lighters were owned and managed by a set of Greeks, who found this form of piracy more easy and profitable than that practised on their own coasts. Some of the grain found its way to the storm-tossed corn ships lying out in the Black Sea; the rest became the spoil of the lightermen, and it was "a far cry" to any source of justice or restitution. The town of Sulina, then one long street of wooden houses, with a mosque and some attempt at a lighthouse, ran up the right bank of the river, for a mile or more. No tree, no trace of vegetation, no stone or pebble even varied the monotony of this desolate ridge of muddy sand. The wreck-strewn water, half river, half tideless sea, lay in front, and behind; for miles and miles the gigantic reeds growing in the marsh, the haunt of wolves and wild boar, stretched, without interruption, southward, to the St. George's

mouth of the river. What money or profit came to the owners or tillers of the soil for the grain thus sent from it, who can say? The varied and valuable mineral resources of the country were equally ill off for any means of development: sheep and oxen were killed for the sake of their skins and their bodies left neglected on the plain; there was no possibility of transporting timber to any extent from the immense forests of oak, beech and fir which clothed the uplands of the north; great trees rotted where they fell, and no one heeded them. Ever since the peace of 1829 the question of the improvement of one or other of the three mouths of the Danube had been before those interested. There has been an idea, stated and controverted, that Russia persistently opposed any practical steps, in the interest of her own Odessa trade. Probably she may have added some extra weight to the *vis inertia* which was always sufficient for much in those regions. In any case, some feeble dredging of the Sulina mouth, quite inadequate for any real good, was all that was attempted for twenty-seven years. The Treaty of Paris made provision for an international commission to deal with the improvement of the lower Danube. The work of that commission during its first years has been the subject of interesting papers, included in the literature of more than one scientific society; these give, in some detail, the history of a work which has had an immense effect in promoting the welfare of Roumania. The first British commissioner has described the bewilderment and discouragement with which this little band of strangers viewed, for the first time, the scene of their future labours. The river, furnished, to a certain extent, the means of transport, but there all facilities ended. Forests had to be explored for timber, quarries opened for stone; and labourers had to be, first found, then trained and organized for everything directly or indirectly connected with the temporary works which, after much debate, and many delaying objections and suggestions from the various head quarters, it was at last decided to begin at the already so far practicable Sulina mouth. As the Sulina is by far the most insignificant of the three main branches into which the Danube divides itself, bearing indeed no more than one twenty-seventh part of its water to the sea, there was very great unwillingness on the part of certain of the commissioners, as on the part of their able engineer-in-chief, to abandon the idea of eventually opening up the St. George mouth, which seemed to present many advantages. But circumstances were too strong for them, and it is the great triumph of the present successful works at Sulina that, step by step, what was temporary and ephemeral, has been adapted and strengthened, and, at a minimum of expenditure, has produced a permanent, self-dredging channel, allowing ships of the largest tonnage to pass to and fro with ease, where formerly there were but three or four feet of water on the bar. The Sulina of to-day, with its long line of quay, its countless ships of all nations, its bowery gardens, formed with imported soil, and stocked with imported flowers and fruit trees, would fail to recognize the description given above and, being a town which thinks well of itself, would probably be inclined to resent it. Farther and farther up the river improvements have been carried out. Good roads bear the produce of Roumania to the railways, and from thence they are carried by river and sea to all lands whose commerce may claim them. It is an old, half forgotten story how a little band of foreigners, with often small encouragement, it might be even with positive discouragement from the governments they represented, fought the questions, of money, not easy questions—of international jealousies, of engineering possibilities and results; and opened up a new highway for commerce; so helping in the making of a nation.

In climate Roumania may be called extreme. The summer is like Greece, the winter like Canada, cold, clear, bracing. Lakes and rivers are frozen; the sleigh bells ring out along streets and country roads. There is much skating, and great hunting parties camp in forest huts, and bring home spoil of wolves and wild boar, or track the brown bear among the crags of the Carpathians. The great thaw in March is a sight to witness. The river traffic, suspended for two months or more, has taken another, than its usual form, and a constant stream of arabas, variously laden, has established communication between the banks at points where a town or village on either side invites it. The thaw comes, sometimes with but little warning: a rush, a stampede sets in. Then, for a day or two the river is impracticable for either cart or boat, and lives are often lost, crushed out among the huge ice blocks. A week or so of mud and misery follows; then the whole land is green, as if by magic; the plains are fragrant with violets and purple with dwarf iris. Easter-tide, the "Ortho-

dax" Easter, sees the houses and cottages all decked with willow boughs; and over and over again one may witness the conventional representation of the Good Shepherd repeated, as the master of each house brings home the Paschal lamb, "bearing it on his shoulders, rejoicing." Then may be seen the village festival, when the choric dance, regarded with so much interest by antiquarians, takes us back to classic times. Then also is the great time for weddings, where the bride, rapt away from her home like a Sabine maiden, is united to her husband by rites elaborated through ages of Oriental Christianity.

Summer is the time of roses; they are every where; fresh and lovely in the gardens, drying into pot pourri, distilled for rose water, or boiled into a thick confection, the favourite *douichats* which precedes the black coffee, used in Roumania as universally as in Turkey. It is a fruitful summer too; and a fruitful autumn succeeds it. The vintage is late; the wine, white and red, and of an excellent quality and flavour is produced in abundance only too great for home consumption. Those best able to judge of its qualities say that its exportation is only matter of time. The scenery, even of the lower plains, has the beauty of vastness, and of a clear, shining atmosphere which gives full value to details; invests them sometimes indeed, on hot summer days, in wonderful mirage; that of the upper country, by the Bistritza, and on the eastern slopes of the Carpathians, is often indescribably lovely in form and colour. The Treaty of Berlin restored Bessarabia to the Russians, and gave to Roumania in exchange the Dobradja, South of the Danube; a possible source of trouble in the future. Its mixed population includes few Romanians, and it is by no means fertile.

If the Eastern question could sleep for half a century it might wake harmlessly enough for Roumania; as it is, we can but hope that the results of the last 30 years may endure, and be only the beginning of still better things.

KOBE CHAMBER OF COMMERCE.

HALF YEARLY MEETING.

At the Masonic Hall yesterday (July 29th), at 4.30, the ordinary half-yearly meeting of the Hiogo and Osaka Chamber of Commerce was held, Mr. Matthew Brown, Jun., presiding. There were also present Messrs. Bardens, A. Woolley, Kochen, Faber, T. W. Hellyer, Th. de Bernigny, and J. M. Mur, Secretary.

The minutes of the previous meeting having been read and adopted the half-yearly report was also read by the secretary. It was as follows:—Gentlemen, we take this opportunity to place before you a few comments on the foreign trade of the port for the six months ended on 30th June. Raw Cotton has continued to take the leading place amongst Imports and it is likely to maintain this ascendancy as the local spinning establishments require a large quantity to keep them going, but we may say that these wants, large though they be, have always been amply supplied. Cotton yarn shows a considerably increased importation as compared with that of the corresponding period of last year, but it should be remembered that the stock at the beginning of 1891 was much heavier than that with which we commenced the present year, and it would therefore appear that the actual consumption is not on the increase. The local manufacture of yarn continues to be carried on with success; reports from the mills prove that most of them are working at a satisfactory profit.

Piece Goods.—This branch of business has had to contend with many drawbacks, amongst which we may mention the general dullness of trade, the unsettled condition of exchange, and the gradual growth of native manufacture in several fabrics, such as Calicoes, T. Cloths, Turkey Reds, Satins, &c., but the future is still regarded with hope in some quarters and a more prosperous state of trade generally would no doubt have good effect.

Metals, Chemicals, Oil, and Sugar take their usual large place in the list of imports and call for no special remark. Prospects for the future look not unpromising when we consider that the crops so far have turned out well and that stocks of goods in second hands must be moderate—but no permanent improvement can be looked for until importers have learnt to abstain from bringing excessive supplies to a limited market.

The present unsatisfactory state of affairs is partly attributable to the great facilities afforded to importers by the Banks. Not only foreign but Japanese merchants have availed of these facilities with the result that the trade has been overdone. The impecunious importer cannot afford to hold goods for better prices and is often compelled to sell on arrival, thus producing

a ruinous effect upon the market. A steady business has been done in the principal articles of export on terms which are remunerative to the producers.

The tea trade shows no signs of falling off. The export of new leaf is not so large as at the corresponding period of last year, by reason of the larger proportion of fine teas produced, which has reduced the bulk whilst the money value of the crop is greater.

The quantity of Rice exported has not reached expectations, prices were forced up by speculations to a point which foreign markets could not entertain, and when quotations had declined to a more reasonable level, the best shipping season was over.

Campior shows a much diminished export, whilst Copper attains to almost its former figures. Antimony has been exported on the same scale as last year.

In Silk the trade has been insignificant, but in waste silk a good business has been done notwithstanding adverse markets at home, and there is every prospect of a more extensive trade in this article in the future. The tonnage returns, including the local trade with China, show such a gratifying increase as to warrant the remark that Kobe is now the leading port for shipping in Japan.

On the motion of Mr. BARDENS seconded by Mr. WOOLLEY the report, as altered at the suggestions of Mr. Hellyer and Mr. Woolley was adopted.

The accounts, which showed a falling off in the subscriptions, but an increase of revenue owing to the issue of additional circulars, were passed on the motion of Mr. BERIGNY, seconded by Mr. BARDENS.

Two new members were elected, namely, Messrs. C. P. Low & Co., and Messrs. R. Isaacs & Bro.

Mr. WOOLLEY attributed the scant attendance to insufficient advertising, he thought a notice should have been inserted in both papers.

The CHAIRMAN agreed, and then asked if the members approved of the Committee making any representation to have the Fourth National Exhibition held in Kobe.

Mr. HELLYER thought some action might be taken, and in reply to Mr. Kochen's suggestion that it was to be purely a Japanese exhibition and that they might look on foreign suggestions as an intrusion, said he felt confident the action would be received in the right spirit.

The matter was left in the hands of the committee.

Mr. BARDENS then read the following circular which had been issued by the Custom House authorities:—"Notice is hereby given that from this date the Customs will only grant permission to land cargo under *General Permit* by one Landing Agent, or, from alongside vessel, and that permission will no longer be granted to discharge under *General Permit* by two or more parties, and from alongside the vessel at the same time, the Customs Authorities having found great inconvenience in keeping the run of cargo when landed under *General Permit*, as heretofore." This notification, was he said, being carried out rather rigidly, and within the last three or four weeks it had given great trouble to steamers. He had had one steamer since the notice had been issued. It would certainly be troublesome to consignees. Before that was issued shipping people had got a *General Permit* to land cargo, and consignees could, if they wished, send off and land their own cargo themselves. Now, the agent has to land everything in bulk. He had been asked by three steamship agents to bring the matter to the notice of the Chamber. It was a matter, it was true, for the consignees, as later on if they wished to take delivery of their own cargo, it would be refused. He had no proposition to make, but he thought it was a matter that should be known. The circular was dated 2nd July.

Mr. HELLYER thought it was a matter the Chamber should take up as the authorities were, as a rule, extremely reasonable in listening to representations brought by foreign merchants.

Mr. BARDENS said that when he was dispatching the *Cardiganshire* some consignees had asked for their goods, and his firm had been put to the trouble of making out 50 or 60 different permits, whereas under ordinary circumstances nothing of the kind would have been necessary. The result was that the steamer had been kept here nine days doing what ordinarily she would do in three days. It was true three of those days had been wet days, but the fact remained she should have been able to leave the port before those wet days set in.

In reply to the Chairman, Mr. BARDENS further added that the old system worked satisfactorily. After some discussion it was decided to let the matter stand over for the present, and the proceedings terminated with the usual vote of thanks to the Chairman.—*Hyogo News*.

REVIEW.

The Life of Thomas Paine. By MONCURE DANIEL CONWAY. In two vols. New York: G. P. Putnam's Son: 8vo.

Mr. M. D. Conway has rendered the life of Thomas Paine a great service in the researches by which he has unearthed and presented anew the real history of this remarkable man, who was the first to suggest American independence and to point out the working principles upon which our government is based. He has been tireless in his endeavours to bring out all the facts in regard to Paine's career, and the result is a biography which throws important light upon his personal public history. Thomas Paine was born January 29th, 1736 7, at Thetford in England, and was brought up in the Society of Friends. He was baptized in the Church of England. This is inferred from the fact that in one of his volumes he speaks of himself as a member of the English Church. In early youth he had but few privileges among the plain people who rejoiced in the simplicity of Quaker life. He says of himself:—"My parents were not able to give me a shilling beyond what they gave me in education, and to do this they distressed themselves. My father being of the Quaker profession, it was my good fortune to have an exceedingly good moral education and a tolerable stock of useful learning. * * * The natural bent of my mind was to science. I had some turn, and I believe, some talent, for poetry, but this I rather repressed than encouraged, as leading too much into the field of imagination. He also was strong in mathematics. His early life was a struggle. In his 25th year he had the office of exciseman, and lived under the pressure of two great hungers, for bread and for science. His income, after paying his expenses, was only about £32 pounds per annum, but he contrived to support himself under these limitations. It was an improvement upon the business of a staymaker to become an exciseman, but this was not to be his calling. He speedily emigrated to America, and brought with him political opinions which had just begun to be agitated in Europe. Shortly after he came to this country he published the *Pennsylvania Magazine*, and in this organ sowed the seeds of great reforms which were then ripening with the progress of civilization. What these were is well stated by Mr. Conway:—"Events selected his seeds of American independence, of republican equality, freedom from royal, ecclesiastical, and hereditary privilege, for a swifter and more imposing harvest; but the whole circle of human ideas and principles was recognized by this lone wayfaring man. The first to urge extension of the principles of independence to the enslaved negro; the first to arraign monarchy, and to point out the danger of its survival in presidency; the first to advocate international arbitration; the first to expose the absurdity and criminality of duelling; the first to suggest more rational ideas of marriage and divorce; the first to advocate national and international copyright; the first to plead for the animal; the first to demand justice for women; what brilliant would our modern reformers have contributed to the coronet for that man's brow, had he not presently worshipped the God of his fathers after the way that theologians call heresy!"

In this country he became a notable person. He gave utterance, probably, to the earliest printed suggestion of independence in America. Mr. Conway notes that there are three stages in the evolution of the Declaration of Independence, resistance, separation, and republicanism. Paine's work was to stir up the colonies to resistance. He wrote his pamphlet entitled: "*Common Sense*," in the autumn of 1775, and with the new year it burst from the press with an effect which has rarely been produced by types and paper in any age or country. It was full of flaming arguments for separating the colonies from Great Britain. The work was, for a time, attributed to Franklin, and the doctor was reproached by a loyal lady for using in it such an epithet as "the royal brute of Britain." Franklin assured her that he had not written the pamphlet and would never have so dishonored the brute creation. Mr. Conway says: "No other pamphlet published during the revolution is comparable with common sense for interest to the reader of to-day, or for value as an historical document. Therein, as in a mirror, is beheld the almost incredible England, against which the colonies contended. And therein is reflected the moral, even religious, enthusiasm which raised the struggle above the paltriness of a rebellion against taxation to a great human movement—a war for an idea. The art with which every sentence is feathered for its aim is consummate." The writing of this pamphlet brought the author into close relations with Washington and

Jefferson, and did much to provoke serious political thinking among the American people. Though not a military leader, Paine in the pamphlet entitled "*The Crisis*," pressed forward the objects which the friends of the revolution had in view and was constantly on the watch. When the war was over he was a great deal mixed up with the embassy to France. During the war he had the most important congressional secretaryship, but when the contest was over he was reduced to a clerkship in a law office. But his work was not done with the revolution, and his services were of almost as much value in constructing the constitution as they were in encouraging men to fight for their country.

One of his greatest services was his visit to France in 1781. He went to France with Franklin in order to induce the King to loan money to the United States, and it was the use of this money which enabled Washington to meet the demands of his army and carry on the war. No one made greater sacrifices at that time than Thomas Paine. He gave everything to secure the independence of the nation, his copyright, his secretaryship, his clerkship. But the result was that it left him in a state of dependence. The nation practically refused to reimburse him for what he had done in its behalf, and it has refused to this day. This did not discourage him. As he was the to raise the flag of republican independence, so he was the first to raise that of a union, which, above the states, should inherit the supremacy wrested from the crown. He understood, as if by anticipation, what the difficulties were to be under our system of government, and touched very gently the doctrine of centralized power. He put the case exactly when he said that "each state is to the United States what each individual is to the state he lives in," and that "it is on this grand point, this movement upon one centre, that our existence as a nation, our happiness as a people, and our safety as individuals, depend." He also struck the federal keynote by saying:—"The United States will become heir to an extensive quantity of vacant land"—the doctrine of national inheritance, which cost him dear.

A very striking chapter in this book is entitled "Great Washington and Poor Paine." In September, 1783, the month of final peace, Washington was at the height of his fame, in the receipt of the greatest honours, but Thomas Paine sat in his little home in Bordentown, living on his crust. One day the great commander wrote him a kind and friendly letter, which brought him to Washington's head-quarters with joy. Also the General Assembly of Pennsylvania voted him a special compensation of £500 for his services. Congress afterward voted him \$3,000, but these sums did not begin to cover the loss which Paine sustained while trying to serve his country. The greatest leaders of that time are strongest in their testimony to the value of Paine's work for the country.

If there were times when, both now and afterward, he was not properly appreciated, this was not the case when Congress sat in New York in 1785, where he was the literary lion of the metropolis. He was at this time only known by his political writings, and, though he had enemies, and was a man always ready to make enemies, he was having the most interesting years in his whole career. In 1787, he returned to his old home in England. He first landed in France, but went quickly over to England, and visited the Quaker meeting house in Thetford, near which his mother, then in her 91st year, lived. This was in 1789. At this time, says Mr. Conway: "America was working by his hand, looking through his eyes, and silently publishing to the people from whom he sprang what the new nation could make out of a starving English staymaker. He was a living Declaration of Independence. The Americans in London—the artist West and Trumbull, the Alexanders (Franklin's connections) and others, were fond of him as a friend, and proud of him as a countryman."

Thomas Paine was destined to have a singular experience in France. He was in Paris during the revolution of 1789, and he was just the person to take hold of this new effort to sustain liberty. It was at this time that he published "*The Rights of Man*," in which many principles of the revolution were warmly advocated. He had a wonderful insight into these political questions. He did not found the European republic in the same sense that he founded the American nation, but he was full of the republican element and was the bitterest antagonist of Burke in his "*Reflections on the French Revolution*." His next work was to exert the same constructive influence upon French politics which he had already exerted upon American politics. Much fresh light is thrown upon the French revolution in these pages, but it takes too much space to state what this new light is. His stay in Paris was made wretched by his imprison-

ment for nearly a year in the Luxembourg prison, where he expected to be gillotined at any moment. This was undoubtedly the saddest and most trying part of his career. From this prison he appealed in vain to the American government for relief. Even Washington was either ignorant of his situation or had broken friendship with him from other causes. He left him to languish in prison, but Monroe showed great magnanimity in the treatment of Paine. He took him to his house on his release from the prison and set him upon his feet. It was now that he wrote a pamphlet on "First Principles of Government," which is one of his best productions, and which had its influence upon the new French constitution which was then ready to be submitted for popular consideration.

Up to this point, Paine had not published any of his religious writings. "The Age of Reason" was begun shortly after he left the prison of Luxembourg. It was a book written not so much to advance inquiry as to express the writer's prejudices and to stir up the feelings of those who believed differently from himself. Mr. Conway indulges in a good deal of bluff when he takes up this part of the subject, and does not write in the same calm and clear manner which he maintains in other parts of his work, but he can be depended upon for telling essentially the truth about this famous production. Paine was not an infidel, but a deist in the same sense that Washington was a deist, and when his "Age of Reason" is carefully studied it is found to be an antagonism to a certain conception of Christianity rather than an attack upon it in its essence. The force of this work was not in its theology, which was but gradually developed. It was an attempt to deal with religion rationally, and so little danger was anticipated from it that it was at first published in America as a religious book. It was circulated in Virginia by Washington's old friend, Parson Weems. He put into it his rejection of certain phases of Christian teaching, but he also put into it his own heart.

It was the good fortune of Paine to know all the great men of his time in three countries, and the chapter devoted to his friendships is one of the most acceptable in Mr. Conway's work. He had intimate relations with the French government after the revolution was over, and he gained great credit throughout Europe by his pamphlet on "The Decline and Fall of the English System of Finance," in which he predicted the suspension of the Bank of England, which followed the next year. When the relations between the French government and Minister Monroe were strained to the point where they were almost intolerable in 1796, Paine came to the rescue of Monroe very much as Monroe had come to his rescue when he was released from prison. The American legation found through him a *modus vivendi* with the French government, and he more than paid back the kind services which had been rendered to him. Paine's religious writings, while not nearly so bad as they seemed to be, had the effect of raising against him, the prejudices of the people in England and America, and did much to obscure the great claims of his political works. The time was not ripe at the beginning of this century, especially in this country, for the writing of a free book on religion, and Paine made his work needlessly objectionable by the temper and freedom and personality which he put into it. He was too honest and outspoken to be a successful free thinker, and his religious writing did much to increase the rancor of his enemies and to turn against him the prejudices of the religious world. The result was greatly to his disadvantage, and interfered much with his personal happiness.

He died the 8th of June, 1809. On the morning of his death two clergymen invaded his room, and spoke to him about his opinions; but Paine said: "Let me alone; good morning!" Mrs. Bonneville asked if he was satisfied with the treatment he had received in her house, and he said, "Oh, yes." These were his last words. He had no fear of death. He held fast to his principles to the very end of his life, and those who followed him to the grave were humble and plain persons who believed in the goodness of the man. The following ill-natured epitaph was written on him in 1796, when it was supposed that he was dead. It reads thus:

Blasphemes the Almighty, lived in filth like a hog,
Is abandoned in death, and interred like a dog.

This was far from being the truth. The clergy were not present at his grave, but the Quaker preacher, the wife of an oppressed French author, and her sons and two negroes followed his coffin to the grave.

The chapter devoted to the personal traits of Paine is very readable. It refutes the charges that he was a drunkard or given to sexual immorality, or the charges that he was addicted to any other social vices. Those who knew him intimately declare that his life was without fault. He

was prodigal of snuff, but used tobacco in no other form. He had aversion to profanity, and never told or listened to indecent anecdotes. He neglected his personal appearance, and was slovenly in his dress. Mr. Conway affirms that there is no truth in the charges of excessive drinking which have been made against him. In earlier life he drank spirits, as was the custom in England and America, and he drank brandy enough to give him a red nose when he was 55, but he was no more intemperate than were hundreds of others in those days. Mr. Conway regards Paine as a profoundly religious man, and as one who practised all the moral virtues, trying to live up to his own ideal of what life ought to be.

We are greatly indebted to Mr. Conway for the patience and fidelity of his historical studies into the career of Thomas Paine. His work is clearly and honestly written, but it is not free from slurs and innuendoes whenever Paine's religious opinions are presented, and it is too diffuse and extended a work for its subject. Quite a large portion of the book might have been omitted to the advantage of what remains. Mr. Conway enters into many useless inquiries. He might better have presented extracts from Paine's writings, which give the gist of his principles, and he might have curtailed many pages where his explanations add nothing to the strength of the narrative. His historical writings have been in better form and of more permanent value than his religious writings. These volumes furnish the best treatment that the career of Thomas Paine has ever received; in fact, it is the only biography of this notable man that has ever come up to the standard which his life demands, the only large and careful treatment, at the hands of a sympathetic writer that has ever been attempted. Taken as a whole, the work is one which will be read with great interest and will give an entirely new impression of one of the greatest political benefactors that America has ever known.

ACTION TO DECLARE MARRIAGE NULL AND VOID.

IN THE UNITED STATES COURT FOR HIOGO
AND OSAKA.

CORA LAFFERTY V. CONRAD HARVEY.

Readers will have observed in our columns during the last three weeks a published summons addressed to one Conrad Harvey, ordering him to appear in the Court of the United States Consulate at Higo and Osaka on Monday, the 1st day of August, as defendant in answer to a petition from Cora Lafferty Harvey praying that her marriage with the said Conrad Harvey be declared null and void *ab initio*.

The story of which this is the culminating point is a very painful one, and shows an almost incredible depth of depravity and scoundrelism on the part of the defendant to the suit, and, in justice to the plaintiff, it is worth while giving a brief outline of it. Conrad Harvey came to Japan in the early part of 1889, and staying for some time in Yokohama, came down to Kobe and entered the office of the China and Japan Trading Co. at this port. He was at that time to all appearances a quiet and unassuming young man, whom one would have been last to suspect of being a fugitive from justice, as he in reality was. In June of the same year he was introduced at Osaka to Miss Lafferty, a young lady employed as teacher in a mission school, and before two or three months had passed away Miss Lafferty had promised to become his wife. From the beginning Harvey impressed upon her the necessity of the engagement being kept secret, giving some plausible reason therefore, and having first ascertained that she was herself an orphan and had no friends in America who were likely to make inquiry into his antecedents. From most persons he on his part kept his engagement a profound secret, and none were more surprised than his acquaintances when he one morning informed them that he had got married on the previous day. The marriage took place on February 9th, 1890, before the present United States Consul in this port, the religious ceremony being performed by the Rev. B. C. Howarth, and for several months Harvey appears to have been a most devoted husband. Shortly before his marriage Harvey had become acquainted with the late Mr. Dernen, who was in Kobe at the time engaged in establishing a branch of Messrs. Grisar, Dernen & Co., and he managed so completely to deceive this gentleman as to his true character that he was appointed the Kobe agent, Mr. Dernen returning to Europe.

Things seemed to go smoothly until the end of September or the beginning of October, when

Harvey commenced to act somewhat strangely, being frequently absent from home. On 21st of October he suddenly informed his wife that he was compelled to go to Hakodate in connection with a contract concerning sulphur, and he left Kobe in a Nippon Yusen Kaisha steamer on that day, since which time his wife has neither seen nor heard from him. Harvey had promised to telegraph his arrival at Hakodate, and when a day or two passed without any telegram being received inquiries were made, and it was found that he had not arrived there. For some time it seemed as if he had vanished completely, and it was several months before the whole story was unravelled. It was then discovered that he had embarked at Yokohama on one of the Canadian Pacific steamers and had landed in Canada before any hue and cry had been raised against him. On his books being examined it was found that he had robbed his employers in Kobe of a considerable sum, and further inquiries elicited the facts that he had fled from America some two or three years ago to escape punishment on a similar charge of theft, and that at the time he went through a form of marriage in Japan he was already married, his first wife living in Iowa and having been deserted in the year 1888.

The extraordinary part of the whole story is the facility with which the man was able to delude those with whom he was brought into contact. Men of the world, business men and ministers of religion were all deceived in him; for he was a man well read, could converse on a variety of topics with much ease, and professed to be deeply religious, and it is therefore scarcely surprising that he was able to deceive a young lady who had little experience of the villainy which a fair-seeming surface may conceal. Efforts, we believe, are still being made to trace Harvey, and we accompany this brief account of the man's career with a portrait in the hope that our Canadian or American exchanges will copy it and so perhaps be the means of bringing him to justice.

The following was the evidence given in the recent case on Monday last:—

Hunter Sharp, sworn: I am the marshal of this United States Court and a summons was placed in my hands July 15th last, but the defendant not being found in this Consular district I made a return accordingly. On the 16th of July, under the order of the Court, I caused the summons to be published in the *Kobe Chronicle* once a week for three consecutive weeks.

Cora Lafferty Harvey, sworn: I am the plaintiff in this case. I was married to Mr. Conrad Harvey Feb. 9th, 1890, by the Reverend B. C. Howarth, and in the presence of the United States Consul at Kobe. I had not at that time any reason for believing that Mr. Harvey was a married man. After he left me I heard he had a wife in America. I have since seen the evidence taken in America under the commission issued from this Court.

Testimony offered in evidence and read as follows:—

The deposition of witnesses taken at Guthrie Centre in the State of Iowa, before J. H. Applegate, one of the District Judges of said State of Iowa, in and for 5th Judicial district of said State, which said district includes the country of Guthrie and the County of Madison, said deposition being taken in obedience to a *Dedimus Potestatem* which was issued by the Hon. Hunter Sharp, U.S. Vice-Consul, Acting Judicially, on the thirteenth day of July, A.D. 1891, same to be read in evidence in a suit pending in the Consular Court of the United States Consulate for Osaka and Higo, Japan, wherein Mrs. Cora Lafferty Harvey is plaintiff and Conrad Harvey defendant.

Reverend W. D. Swaim of lawful age, being first duly sworn, deposeth, answereth and says as follows, to wit:

1. Are you acquainted with Conrad Harvey, and if so, state when and how you became acquainted with him?—I became acquainted with Conrad Harvey in the fall of 1884 at Panora, Iowa. He was then the station agent at said town of Panora, Iowa.

2. Do you recognize the photograph now shown you, marked "Exhibit No. 1," as being the likeness of any one you have ever known?—Yes, I recognize the photograph as the likeness of W. C. Harvey, commonly called Con or Conrad Harvey, formerly of Panora, Iowa.

3. Did you perform the ceremony at the marriage of Conrad Harvey and Miss Della Pierce, and if so, when and where did it take place?—Yes, I performed the ceremony of marriage between Conrad Harvey and Miss Della Pierce, at her father's residence, near the town of Yale, in Guthrie County, Iowa, on March 10th, 1885.

Original of any doubt as to the photograph just shown you being a true likeness of Conrad

Harvey?—No, sir, I haven't any doubt as to its being a true likeness of Conrad Harvey.

[Signed and attested.]

Mrs. Della Pierce Harvey of lawful age, being first duly sworn the depose, answereth and says as follows, to wit:

1. Do you recognize the photograph marked "Exhibit No. 1 United States Consular Court for Osaka and Hyogo," as being the likeness of any one you have ever known?—I do. I recognize the photograph as the likeness of Conrad Harvey.

2. Were you ever married, and if so, when and to whom were you married?—Yes, I was married March 10th, 1885, to Conrad Harvey.

3. Have you any doubt as to the photograph, just shown you being the likeness of Conrad Harvey, your husband?—I have no doubt of it whatever.

4. State the name of the clergyman who married you?—Reverend W. D. Swain.

5. When did you last see your husband?—December 20th, 1888.

6. Has he communicated with you since his departure?—Not at all.

7. Have you had any knowledge of his whereabouts since he left you?—Only indirectly, and not in that way until about last February, and that in connection with his marriage to Mrs. Cora Lafferty Harvey.

[Signed and attested.]

Mrs. Cora Harvey's evidence continued: I last saw Mr. Harvey's on October 21st, 1890. He then informed me that he was going to Hakodate. I have not heard from him since, nor do I know where he is.

JUDGMENT OF THE COURT.

I have read and carefully considered the evidence in this case and find that the plaintiff was married to the defendant on February 9th, 1890; that at the time of this marriage the defendant had a lawful wife residing in the United States I therefore adjudge that the plaintiff is clearly entitled to a decree annulling the marriage between herself and the defendant, and giving her the right to resume her maiden name. A decree accordingly will be issued.

(Signed) E. J. SMITHERS.

Kobe, August 1st, 1892.

—Kobe Chronicle.

AN INDIAN THOUGHT-READER.

Mr. L. C. William, B.A., Acting Inspector of Schools, Northern Circle, writes to a Madras paper:—

"Seeing in the January number of the *Theosophist* an account given by Lieutenant Peacock of an interview he had with Govinda Chetty, the famous astrologer of Valangiman, I think it desirable for the benefit of your readers, many of whom I am sure must be quite sceptic about the marvellous powers of this wonderful man, to give a brief account of an interview I had with him in September last. Having finished the examination of a school at Valangiman, I went to the house of Govinda Chetty, where I found quite a crowd of people come from far and near waiting to know the past and the future from his lips. His manners were not certainly attractive at first, and whether it is not during this period of harsh manners, he prepares himself for the work he has to do, I cannot say. Having seated himself on the floor with a piece of paper and pencil and a number of cowries, he asked me what I wanted. I replied that I wanted him to tell me the word I was thinking about and of an event expected to happen in the near future. After looking at me steadfastly for a few seconds, he wrote down something on a piece of paper, now with me, and placed it in the hands of a man who was with me. Then he began to display his wonderful feats of calculation. He wanted me to multiply or divide very large numbers, and before I could proceed beyond a few steps he gave out the answers, which I found afterwards to be quite correct. These calculations were done in such astonishingly short time that I began to suspect if these too were not done by means of occult powers. This playing with cowries and figures lasted for about half an hour, when he asked me to tell him what the futher event I wanted to know was and what the words; and on my telling him what they were he asked the man who had the written paper to read out what was in it, and the man read out the following in Tamil. So and so (here giving the name of my wife which he had not the remotest chance of knowing) will give birth to a son on the 22nd Masi (about 3rd of March). The word thought about is *Pensylvania*. Need I tell your readers that I was astonished to find both quite correct. The word *Pensylvania* is a word I had thought about two years before with a view of testing the man, when I had occasion to go

to Valangiman. This being the 20th of February, I am not in a position yet to tell you how far the prediction about my wife's confinement will be correct. But he was quite right in giving the event itself, which is expected to be sometime early in March. Then he asked me to repeat any line of poetry in any language I knew. Many a line in English and Tamil passed through my mind, and after a few seconds I repeated the first line of 'Paradise Lost,' and it was found that he had already written on the piece of paper the identical line in Tamil letters, as he does not know English. He had also written down my age correct to a month.

"I am told that there is not another man in the Presidency, if not in the whole world, who possesses similar powers. He lives in Tirumiray Inpatam, near Negapatam.

"Now coming to analyse his powers we find in the first place that he is certainly a thought reader. Giving the word I wanted, the name of my wife, my age and about my wife's confinement, are all cases of thought-reading. They were in my mind, and he read them as from a printed page. Even should the date of confinement turn out to be true, I may say it is thought-reading, as it is future contingent on the past; and if the past is known by the process of thought reading, the future is derived from it.

"But the most inexplicable part of his performance is writing out beforehand the exact line of poetry I was going to repeat half an hour or an hour hence. I had not myself thought of any particular line when I went to him, nor did I fix upon a line until a few seconds after he told me to repeat a line. That this man, utterly ignorant of English, should have foretold the particular line I would repeat sometime hence out of the hundreds of lines I remember is a clear case of prediction. It is not a case of suggestion, because he is not expected to know anything about the line; and it is only that he knows already that he may, by some occult process of placing his mind *en rapport* with mine, be able to suggest to me. It is decidedly a case of prediction; but whether he is able to predict beyond a certain period of time I cannot say, and all of my friends who had seen him doubt his powers of prediction. As regards his powers of suggestion he gave me an illustration. While he was making his calculations with the cowries, ostensibly for the purpose of testing the correctness of the statements already given on paper, he told me to write down any five numbers below 800 and that I would find that their sum would be divisible by 12.

"Without any idea of falsifying his prediction at random I wrote down the numbers 700, 500, 400, 300, 200, and you will see that their sum is divisible by 12. If I did want to falsify his prediction, I could easily have selected such numbers as whose sum would not be divisible by 12. But no such idea struck me at the time, and I was perfectly under his influence with all my individuality merged as it were in his towering personality. If any of your readers are still sceptic about the power of this man they have only to go to Valangiman, a village six miles from Kumbakonam, and test the man for themselves. He takes presents, and I am told his income from this source is several hundreds a month."

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, June 29th.

The *Times* says that the Sultan of Morocco has asked Russia to accredit a Minister to Fez, hoping thereby with [the assistance of] France to render himself independent of all the great Powers.

London, July 31st.

The result of the elections gives Mr. Gladstone a majority of forty. Nothing is yet known of the future composition of the Cabinet. Some divergence continues in the Party, some insisting on the precedence of Home Rule, which others are urging the necessity of commencing the work of the session by the introduction of other reforms.

London, August 1st.

A scrutiny of the election returns at Greenock shows that Sir Thomas Sutherland has obtained a majority.

Mr. Gladstone is suffering from a cold, and has had to take to his bed.

PASSENGERS.

ARRIVED.

Per British steamer *Empress of China*, from Vancouver, B.C.:—Mr. D. E. Brown, Mr. Bacon, Captain Du Boulay, Messrs. C. S. Bragg, C. F. Bragg, Brit. T. Brown, Miss Ganes, Miss Deering, Mr. James Deering, Mr. Fukunaka, Miss L. A. Godfrey, Messrs. W. S. Hamilton, K. Ijime, E. I. Lewis, Prof. K. Monita, Mr. R. L. Myric, Miss A. K. Murray, Miss M. D. Murray, Messrs. W. D. Murray, Otto Menner, G. B. Dodwell, C. S. Broadwood, A. S. Broadwood, H. Coulson, Major Pritchard, Captain Nicholas Rosanoff, Mr. and Mrs. T. D. Moorhead, Mr. E. W. Newell, Mr. Platt, Mr. and Mrs. J. H. Scott and 2 children, Mr. and Mrs. Slade, and Colonel E. Wagack in cabin; Dr. Yoshida and Mr. Kuwabara in second class, and 69 passengers in steerage.

Per Japanese steamer *Sendai Maru*, from Kobe:—Captain Forbes, Captain Devenish, and Mr. J. A. Engle in cabin; 32 passengers in steerage.

Per Japanese steamer *Higo Maru*, from Hakodate via ports:—Miss Grant in cabin and 32 passengers in steerage.

Per British steamer *Verona*, from Hongkong via ports:—Mr. Warburton, Mr. E. M. Bowden, Mr. A. C. S. Manners and servant, Major and Mrs. Wynne Eytton, infant, and servant, Mr. John White, Mr. and Mrs. Kleinworth, and Mr. and Mrs. Arimola Sukich in cabin.

Per Japanese steamer *Sakata Maru*, from Kobe:—25 passengers in steerage.

Per Japanese steamer *Sagami Maru*, from Otaru and ports:—Mr. C. Nakamura in cabin; 19 passengers in steerage.

Per Japanese steamer *Miike Maru*, from Kobe:—Judge Hansen, Miss White, Mr. Macondray, and Mr. Hasche in cabin. For Hakodate: Rev. and Mrs. Hind in cabin; 20 passengers in steerage.

Per Japanese steamer *Tsuruga Maru*, from Yokkaichi:—43 passengers in steerage.

Per Japanese steamer *Kumamoto Maru*, from Hakodate via Miyako:—17 passengers in steerage.

Per British steamer *Gaelic*, from Hongkong:—Mr. and Mrs. M. Hughes, maid, and 2 children, Mr. and Mrs. E. Farrow, maid, and 3 children, Miss L. Griffin, Miss M. Griffin, Mrs. H. Herchoff, Mr. M. Griffin, Mr. J. S. Van Buren, Mr. R. Fraser Smith, and Mr. and Mrs. Wang (at Hong and 2 children in cabin. For San Francisco: Mr. M. A. Munson, Colonel J. Bud, Mr. W. B. Peters, Mr. S. Edwards, and Mr. J. Bernhard in cabin; and one Japanese in steerage.

Per Japanese steamer *Kobe Maru*, from Shanghai and ports:—Mrs. W. V. Drummond and child, Mrs. Gray and child, Mrs. A. Buelho and 2 children, Rev. and Mrs. J. P. Hearst and children, Mr. and Mrs. S. L. Goldman, Colonel Judd, Governor K. Iwasaki, Messrs. Rosanoff, T. Browne, J. Caldecott, and Shaw in cabin; Mrs. Ah Ling, Mrs. S. Seki, and Mrs. S. Hagi in second class, and 45 passengers in steerage.

Per French steamer *Yarra*, from Marseilles via ports:—Mr. Oki, Mr. and Mrs. Sakurai and infant, Lieut. Colonel Cogan, Messrs. Germain, Piller, Gamier, Mr. and Mrs. Lord, Messrs. de Mendoucer, Jubiot, A. Rizetti, A. Garco, and de Wendrich in cabin.

DEPARTED.

Per French steamer *Salasie*, for Shanghai via Kobe:—Mr. and Mrs. Hausell, Mr. and Mrs. K. Morrison, Messrs. A. Winstanley, A. Bizzelli, Chancel, Lai Bing Koon, H. Delmas, Le Campion, Herve, Miyun, Mouy, H. E. Banatvala, S. Louisa, Mrs. A. Gulein, and Mr. J. Jacobson in cabin.

Per Japanese steamer *Saikio Maru*, for Shanghai and ports:—Miss Pass, Mrs. Fuller and infant, Mrs. Uveda, Mrs. Matsumitsu and child, Mr. and Mrs. R. W. Little, Captain Squire, Lieut. A. Petroff, Captain Rosanoff, Rev. A. R. Morris, Rev. F. S. Tyng, Rev. A. R. Fuller and 2 children, Messrs. Kamio, S. Ueno, Masumitsu, A. R. Lamb, S. D. Abraham, Uyiota, M. Kawakura, and C. V. Bowra in cabin; Messrs. H. Togo,

Original from

Cheong On Won, Mori, H. Tajima, and Ogata in second class, and 124 passengers in steerage.

Per British steamer *Verona*, for Hongkong via ports.—Mr. Maylor, Mr. and Mrs. J. K. Morrison, Mrs. Dudley, Mr. J. H. Wong, Mr. Broadrick, Captain Butcher, Mr. Wm. Walker, and Mr. D. Kennedy in cabin; 1 Chinese and 3 Indian in steerage.

CARGOES.

Per Japanese steamer *Kobe Maru*, from Shanghai and ports.—Treasure, \$30,000.00.

Per French steamer *Salasia*, for Shanghai via Kobe.—Raw Silk for France, 603 bales; for Italy, 20 bales; for Switzerland, 35 bales. Waste Silk for France, 38 bales. Treasure for London, \$85,000.

Per British steamer *Verona*, for Hongkong via ports.—Silk for France, 173 bales; Waste Silk, 126 bales.

REPORTS.

The Japanese steamer *Sendai Maru*, Captain Tittle, reports:—Left Kobe the 30th July at noon; passed Oshima at 9.9 p.m. and Rock Island the 31st at 11.55 a.m. Arrived at Yokohama at 6.15 p.m.; had moderate to gentle S.W. to S.S.W. winds with fine pleasant weather throughout the passage; 12 miles N.E. of Rock Island passed a loaded foreign ship apparently bound for Yokohama.

The Japanese steamer *Hiogo Maru*, Captain Pender, reports:—Left Hakodate the 29th July at noon; had gentle southerly breeze and cloudy weather and barometer falling down quickly; at 4 a.m. on the 30th barometer showed 29.56; then anchored at Miyako shelter at same time; 7.35 a.m. barometer started to rise then, left Yamada. Arrived at Oginohama the 30th at 5.45 p.m. and left the 31st at 4 a.m.; had light south-westerly breeze and overcast weather with rain at times. Arrived at Yokohama the 1st August at 7 a.m.

The Japanese steamer *Sakata Maru*, Captain Walter, reports:—Left Kobe the 1st August at 4 p.m.; had light westerly winds and smooth sea; at 9.27 p.m. passed Hiro-misaki, light variable winds with swell from S.E.E.; on the 2nd at 2.22 a.m. passed Shiwo-misaki, light variable air and calm, smooth sea; at 3.50 p.m. passed the Henri Line steamer *Oceana*, gentle to moderate breeze from the east with slight sea; at 9.25 p.m. passed Rock Island; thence to Kannon-saki, which was passed the 3rd at 3.40 a.m., had light variable winds and calms, smooth sea. Arrived at Yokohama at 5.20 a.m.

The Japanese steamer *Sagami Maru*, Captain Hussey, reports:—Left Otaru the 30th July at noon; had moderate to fresh westerly winds and fine weather throughout the passage. Arrived at Hakodate the 31st at 7 a.m. and left the 1st August; had light westerly winds and fine weather to Oginohama, where arrived the 2nd at 11.40 a.m. and left at 3.30 p.m.; had light southerly winds and fine weather throughout the passage. Arrived at Yokohama the 3rd August at 5.30 p.m.; when passing Inuboye-saki observed the steamer, *Meiji Maru*, at anchor near the Lighthouse.

The Japanese steamer *Miike Maru*, Captain MacMillan, reports:—Left Kobe the 2nd August at 6.30 p.m.; passed Oshima the 3rd at 4.05 a.m., Rock Island at 6.53 p.m.; anchored at Honmoku Lightship the 4th at 1.25 a.m. Arrived at Yokohama at 5.05 a.m.; had light variable winds and fine weather, smooth sea throughout the passage.

The Japanese steamer *Tsuruga Maru*, Captain Wilson, reports:—Left Yokkaichi the 3rd August at 7.45 p.m.; had light westerly winds and fine clear weather; from Irako-saki to Rock Island had north-westerly gentle breeze and fine clear sky and hence light variable winds. Arrived at Yokohama the 4th August at 3.45 p.m.

The Japanese steamer *Kumamoto Maru*, Captain Olsen, reports:—Left Hakodate the 1st August at 4 p.m. and arrived at Miyako the 2nd at 8.10 a.m.; had light wind and fine weather all the way. Left Miyako the 3rd at 2 a.m.; passed Kinkasan at 11.45 a.m.; at 6.40 p.m. met steamer *Sorachi Maru* bound north; the 4th at 5.24 a.m. passed Inuboye Lighthouse; at 1.30 p.m. passed Noshima Light house, and arrived at Yokohama at 5.30 p.m.; had moderate wind, smooth sea, and fine weather throughout the passage.

The British steamer *Gaelic*, Captain Pearne, reports:—Left Hongkong the 30th July at 4.07 p.m.; had southerly winds and fine weather to August 2nd; thence to port light westerly winds and smooth sea. Arrived at Yokohama the 4th August at 6.43 p.m. Passage, 5 days and 54 min.

The Japanese steamer *Kobe Maru*, Captain Haswell, reports:—Left Shanghai the 29th July at 2 p.m. Arrived at Nagasaki the 31st at 5 a.m.

and left at 5 p.m. Arrived at Kobe the 2nd August at 8 a.m. and left the 4th at noon. Arrived at Yokohama the 5th August at 4 a.m.; experienced fresh to moderate S.W. winds and fine clear weather to Nagasaki; light northerly winds and fine clear weather to Shimonoseki; throughout the Inland Sea to Kobe light variable winds were met with, and fine clear weather to arrival.

LATEST COMMERCIAL.

IMPORTS.

A much better feeling is becoming apparent with the advent of the 8th month, and Autumn trade requirements are already receiving some attention, but dealers cannot quite satisfy their minds on the subject of higher values which low Sterling Exchange means when backed up by small supplies. A large quantity of Indigo Shirtings is reported to have been recently sold for arrival at a considerable advance, and an improvement in price has taken place in glb. Shirtings, with a good demand, as also for Washed Shirtings, whilst other Fancy Cottons are more enquired for at better rates generally. Woollens have only been dealt in sparingly, though the chief difficulty seems to be the firmness of holders. Yarns have been rather quiet, but steady in price, excepting 16/24's, which may be quoted a trifle lower. Sterling Exchange is quoted 2/10 for Bank demand, and Bar Silver at 38½ pence per oz. being ½ below record. Sales for the week comprise 200 bales English Yarn, 30 bales Bomblays, 10,000 pieces glb. Shirtings, 1,500 pieces 7lb. T.-Cloths, 2,500 pieces Washed Shirtings, 100 pieces White Shirtings, 36,000 pieces Indigo Shirtings, 1,500 pieces Prints, 3,000 dozen Handkerchiefs, 1,000 pieces Victoria Lawns, 900 pieces Velvets, 1,200 pieces Turkey Reds, 250 pieces Silk-faced satins, 150 pieces Fianel, 1,250 pieces Italian Cloth, and 5,000 pairs Blankets.

COTTON PICKER GOODS.

	PER PIECE.
Grey Shirtings—8½ lb, 38½ yds, 39 inches	\$1.55 to 2.15
Grey Shirtings—9lb, 38½ yds, 45 inches	1.85 to 2.55

METALS.

Some enquiry for "futures," but the prices buyers offer are below cost, and nothing results. Some little trade continues in Wire Nails for "spot" cargo.

	PER PIECE.
Flat Bars, 4 inch	\$2.85 to 2.90
Flat Bars, 6 inch	2.95 to 3.00
Round and Square up to 4 inch	2.85 to 3.00
Nailrod, assorted	Nom.
Nailrod, small size	Nom.
Iron Plates, assorted	2.95 to 3.15
Sheet Iron	3.35 to 3.80
Galvanized Iron sheets	6.60 to 6.90
Wire Nails, assorted	4.70 to 4.90
Tin Plates, per box	5.00 to 5.20
Pig Iron, No. 3	1.25 to 1.30

KIOSKING.

Market quiet; prices well maintained in the prospect of low exchange. On the other hand, buyers hold off. Some arrivals have come to hand and the stock is ample.

QUOTATIONS.

Chester	—
Cornet	\$1.57 1/2 to 1.60
Devos	1.52 1/2 to 1.55
Russian Anchor	1.54 1/2 to 1.55
Russian Moon	1.50 to 1.52 1/2

SUGAR.

Fair amount of business all round, and Browns are the turn dealer. In Takao sorts about 7,000 piculs have been sold, but the remaining stock is left on hand, as buyers have apparently filled their present requirements. In White descriptions a steady trade at unchanged rates.

	PER PICUL.
Brown Takao	\$4.15 to 4.25
Brown Daitung	3.30 to 3.40
Brown Canton	3.50 to 3.70
White Java and Penang	6.10 to 6.20
White Refined	5.50 to 5.70

EXPORTS.

RAW SILK.

Our last advices were of the 29th ultimo, since which date settlements on this market amount to 1,287 piculs, divided thus: *Hanks*, 87 piculs; *Filatures*, 933 piculs; *Re-reels*, 119 piculs; *Kakeda*, 131 piculs; *Oshu*, 17 piculs. There have been no direct shipments during the week, so that the total business done is represented by the above-named 1,287 piculs.

Prices are gradually working up under the influence of a very active market, with large buyers both for Europe and America. Some excitement was caused at the beginning of the week by one large buyer attempting to corral all the good *Filatures* on offer. This was playing into the hands of sellers who, of course, took the opportunity to raise prices. After this American mail leaves, there is no steamer for San Francisco until the end of the month, and holders are afraid that during the long interval prices may show some loss of strength.

The principal demand seems to be for the best grades *Filatures* and *Re-reels*. There are plenty of medium and common silks in the market, but good qualities are decidedly scarce. It would seem that although we have a fairly large quantity of silk in our present crop, the bulk of it will be of the lower grades. From recent cable advices, it appears that a similar state of things exists with regard to the European crop.

Exchange has remained fairly steady, declining only a small fraction, keeping pace with the silver market in London.

There has been only one shipping opportunity since we last wrote, the French mail *Salasia*, which left port on the 31st ultimo, taking 640 bales for Europe. This brings the present export up to 3,188 piculs, against 3,095 piculs last year and 1,639 piculs at the same date in 1890.

Hanks.—A fair amount of business from day to day, new *Foshu* bringing \$195 and new *Maebashi* \$500. One parcel of so-called *Shimonita* has been entered at \$510. Nothing done in *Hachoji* the last few days.

Filatures.—As hinted above, the great demand has been in this class, *Shinshu* silks suitable for America being freely taken at an advance of from \$15 to \$20 per picul, according to chop. In *Koshu* sorts, one parcel of *Yufima* has been booked at the reported prices of \$697 1/2, which seems incredible when compared with the values of good *Shinshu* silks; Matsushiro Extras having been done at the same figure. In fine sizes for Europe a small business in Extras at \$27 1/2, while a great many medium grades have been booked at prices ranging from \$640 to \$660.

Re-reels.—Trade in these has not been large, buyers require good quality, which does not exist. A few settlements in medium grades at \$625 for silks from *Foshu* district. Some little business has been done in *Bushu* at about \$600 per picul, but these grades are not in demand, and the quality is not such as to tempt every buyer.

Kakeda.—There has been a fair amount of business in this, chiefly for Europe, about 130 piculs finding buyers at unchanged prices.

Oshu.—One sale of new *Hamatsuki* reported at \$475. Beyond this, no business.

Export Raw Silk Tables to 5th Aug., 1892:—

	Season 1891-92	1891-92	1892-93
Europe	1,762	2,068	438
America	1,347	2,031	1,151
Total	3,109	4,099	1,589
Settlements and Direct	4,250	3,850	1,600
Export from 1st July	3,200	4,650	6,200
Stock, 5th August	7,450	8,500	7,800
Available supplies to date	7,450	8,500	7,800

WASTE SILK.

A small business during the week, sales registered amounting to 100 piculs, of which *Noshi* 75 piculs; *Kibiso*, 25 piculs.

There does not seem as yet much disposition to make purchases; in the meantime, arrivals are plentiful and the stock has increased to 6,000 piculs. Holders appear to be rather firm at quotations, whereas telegrams from consumers seem to demand lower prices.

There have been two shipping opportunities during the interval, the French mail, on the 31st ultimo, taking 37 bales for Europe, and the Canal steamer *Macduff*, leaving port to-day, has 5 bales Mawata for New York. The total shipments to date are 1,232 piculs, against 120 piculs last year and 727 piculs at the same in the previous season.

Pierced Cocoons—The dead lock here still continues, holders requiring \$100 or over for ordinary good stock, which is a price no buyer as yet has the courage to pay.

Noshi—The business done has been in *Foshu*, fair quality, ordinary assortment, at from \$52½ to \$65. Nothing done in other kinds.

Kibiso—Several small parcels of *Filatures* have passed the scales at from \$82 to \$85 per picul.

In other sort no business done.

THE GREATEST WONDER OF MODERN TIMES.
HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In I short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors the throughout Word.

Perfect blendings of the Choicest Brands of the Highest Classes of Fine Old Whiskies in their Native Purity, as produced in Scotland, absolutely untampered with.

MATURED IN SHERRY CASKS.

A LUXURY ■ PURE SCOTCH WHISKIES.

The letters BOS are the Name, Brand, and Registered Trade Mark of this Matchless OLD SCOTCH WHISKY.

BOS

*** Gold Capsule.

** Blue "

* Green "

Exquisite blendings, possessing a flavour so rare, a character so novel and so entirely their own, that they may fairly claim the very first place among high-class stimulants. Clever judges pronounce them *unique and unrivalled*.

BOS Whiskies are remarkable for their "delicious individuality of flavour," mellowness and softness on the palate. — "A very Nectar," in marked contrast to ordinary blended Whiskies, which are more or less dominated by one or other of the Whiskies used in blending.

BOS is sold in separate white bottles, labelled and capped, the quality being notified by a small label on each bottle. The Proprietors are skilled blenders of Scotch Whiskies, but in all the experience of their Firm, extending nearly over the present century, they have never been able to accomplish anything so fully complying with the most exacting tests, as is now presented in these special blends of BOS.

Correspondence invited from Firms who desire to handle our Whiskies.

YOKOHAMA: SATURDAY, AUG. 13TH, 1892.

SUMMARY OF NEWS.

CAPTAIN KUROOKA TAITO has been appointed to the *Tsukuba Kan*.

THE *Matsushima Kan* left Naples on the 3rd inst. for Alexandria *en route* to Japan.

H.I.M. THE EMPRESS visited the residence of H.I.H. Prince Fushimi on the forenoon of the 8th inst.

H.I.H. PRINCE KOMATSU AKIHITO left the capital on the 6th inst. for Kanagawa and Shizuoka Prefectures.

DURING last month gold and silver coins were struck in the Osaka Mint to the following amounts:—Gold 5-yen pieces, yen 118,720; silver 1-yen pieces, yen 1,415,000.

VISCOUNT HIGASHIZONO, a Chamberlain, was despatched by the Emperor on the 5th inst. to inquire into the condition of the sufferers in the inundated districts of Hyogo, Okayama, and Tokushima Prefectures.

DEPUTY-INSPECTOR-GENERAL of Hospitals and Fleets, Saneyoshi Yasuami, was promoted to be Inspector-General on the 6th inst. He has been appointed Chairman of the Central Committee of Health in the Naval Department.

A TELEGRAPHIC message from Okayama announces that during the night of the 7th inst. flames burst out in the *Sanyo Shimo* Office, and before the firemen could successfully grapple with them the office and twelve other buildings were burnt.

A GREAT general assembly of paper manufacturers throughout the Empire is to take place in Osaka on the 20th inst. in order to consider matters in regard to specimen papers to be exhibited at the World's Fair. They also propose

to discuss the best methods for improving the export paper trade.

THE postal receipts throughout the Empire during the month of July last amounted to yen 424,105, an increase of yen 9,280 against the previous month. As compared with the corresponding month in the previous year the above shows an increase of yen 34,164.

DEPUTY-INSPECTOR-GENERAL of Hospitals and Fleets, M. Kagami, Chairman of the Committee of Health at the Yokosuka Admiralty Station, has been made President of the Naval Medical School. His late position has been given to Deputy-Inspector-General of Hospitals and Fleets, H. Toyozumi.

DURING the eight months ended May last the number of whales captured in Nagasaki Prefecture was 50, of which 12 were caught at Ikuzuki, 4 at Hakozaki, 31 at Arikawa, 1 at Kashiwa, and 2 at Tsushima. Their total weight amounted to 1,365,607 *kin* (one *kin*=1½ lb) and the blubber and whalebone is valued at about yen 64,732.

H.I.H. THE CROWN PRINCE, who is now staying at Kamakura, visited the Hachiman Shrine on the 5th inst. Major-General Oku, Grand Master of Services to His Highness, several officials of the Imperial Household, Governor Utsumi, of Kanagawa, and Mr. Uchida, Headman of the Kamakura District, were in attendance.

THEIR IMPERIAL MAJESTIES the Emperor and Empress have been pleased to grant yen 2,500 towards the relief of the sufferers by the great inundations in the Prefectures of Tokushima, Okayama, and Hyogo. The sum of yen 250 has also been contributed towards the relief of the families of persons drowned by the wreck of the *Inagawa Maru*, of the Osaka Shosen Kaisha, which foundered off the Shodzu Island on the 23rd ult.

H.I.M. THE EMPEROR, attended by Marquis Tokudaiji, Grand Chamberlain; Viscount Hijikata, Minister for the Imperial Household; Chamberlains, Court Physicians, and Secretaries of the Imperial Household proceeded to the Naval Academy at Tsukiji on the 5th inst., leaving the Palace at 8.30 a.m. The Imperial Party arrived at the school about 9 a.m. and was welcomed by a large number of distinguished guests, and the instructors and students of the institution. The Emperor was at once conducted to a salon, where he gave audience to naval officials of *chokunin* rank and others. After a brief rest, His Majesty attended the ceremony of conferring diplomas on the Graduates of the Academy, and afterwards listened to a lecture on the history of the navy by Shiga Nanzo, a Graduate. He left for the Palace at 10.20 a.m. Among those present were H.I.H. Prince Komatsu Yorihito, Viscount Enomoto, Minister of State for Foreign Affairs; Viscount Sano, Minister of State for Agriculture and Commerce; Vice-Admiral Ito, Vice-Minister for the Navy; Rear-Admirals Ito, Arichi, Inouye, Fukushima, and Aiura, Chief Account Inspector Honjoku, President Hida, of the School for Paymasters; and President Saneyoshi, of the Medical School.

THE ages of the statesmen comprising the new Cabinet are as follow:—The Premier, Count Ito, 52 years; Count Kuroda, Minister for Communications 53; Count Yamagata, Minister for Justice, 55; Count Oyama, Minister for War, 51; Count Inouye, Minister for Home Affairs, 58; Viscount Nire, Minister for the Navy, 62; Count Goto, Minister for Agriculture and Commerce, 55; Mr. Mutsu, Minister for Foreign Affairs, 49; Mr. Kono, Mini-

ster for Education, 49; and Mr. Watanabe, Minister for Finance, 47. Of the above gentlemen the first seven were born in the Tempō era (1830-1843), the following three in the era of Kokwa (1844-1847). The nick-name "Tempō Cabinet" has already been given to the present Cabinet by reason of this circumstance. The oldest of Count Ito's colleagues is Vice-Admiral Nire, and the youngest Mr. Watanabe. The Ministers who possess no patent of nobility are three, Messrs. Mutsu, Kono, and Watanabe. The people of the province of Shinano, in Nagano Prefecture, are to be congratulated upon the distinction of having their chosen representative promoted to a seat in the Cabinet. Mr. Watanabe is also a native of the above province. This is the first occasion upon which a native of Shinano has had the honour of holding the portfolio of Minister of State.

THE opening ceremony of the Hokkaido Exhibition, at Sapporo, took place on the 1st inst. The rooms provided for the occasion were neatly decorated, flags of various nationalities being draped here and there, both within and without the building. The proceedings commenced with an introductory address by Mr. Shirahito, Chairman of the Business Committee of the Exhibition. Mr. Suzuki, Secretary of the Hokkaido Administration Board, then read a congratulatory address on behalf of the Governor of Hokkaido. Various other addresses were also read by Messrs. Tsushima Kisaburo, who represented the exhibitors, and Tani Shichi, President of the *Kyoran Kan*. Afterwards the guests were conducted through the galleries, and inspected the large collection of Hokkaido productions under the guidance of the Business Committee. Among the guests were several high officials of the Administration Board, Commander Nagayama, Assistant Commander Iyemura, and other superior officers of the Hokkaido Colonial Force; Chief Public Procurator Yoshiye, and many other Judges and Procurators of the Law Courts in Hokkaido; Director Yamanouchi and other officers of the Hokkaido Branch of the Imperial Estates Bureau; officers of the Mine Superintending Office, Mr. Tanaka Chief Manager of the Japan Agricultural Society, bankers, leading merchants, and journalists.

THE Import trade is quieter, mainly due to the apathy of buyers. Only small sales of Yarn have been effected, and Woollens are very dull. Light parcels of miscellaneous Cotton goods have been taken, the only article in good demand being glb. Shirtings, of which 22,500 pieces have been sold. Nothing to report in Metals. No extensive orders from the interior have yet come in for Kerosene, but prices remain firm. There has been a fair demand for Sugar, and values are still about the same. The Silk trade is on the increase, prices are full generally, and higher for choice chops. The rates ruling have induced an influx of Silk from the interior, owners being anxious to strike the iron whilst hot, and get rid of their Silk before the present high figures decline. The Waste Silk business has not been large, a wide gulf existing between buyers and sellers, the latter being possessed of the idea that rates for Waste should follow those for Raw. The Tea trade is rather dull, and a considerable stock of leaf is accumulating. During the last day or two, however, holders have realized the fact, and a slight reduction has had to be conceded to move off the parcels that have been taken. Further reductions in silver in London are reported, but exchange here, due to local circumstances, has remained

EDITORIAL NOTES.

THE POLITICAL SITUATION.

COUNT KURODA and Yamagata were received in audience on the 6th inst. by the Emperor, and after their departure from the Palace, the Minister of the Imperial Household was sent for Count Ito, who is now staying in the Imperial Hotel. The Count repaired immediately to the Palace and remained some three hours with the Emperor. It was conjectured that during this last interview the composition of the new Cabinet had been determined, and that the names would be published in two or three days. The conjecture received confirmation on the 7th inst. for the three statesmen, Counts Ito, Yamagata, and Kuroda, were then summoned to the Palace together and received his Majesty's commands. Very little doubt could any longer be entertained that a satisfactory programme had been elaborated, and that the organization of the new Cabinet would be speedily announced. Count Ito was indicated as Premier, and the Department of Home Affairs, at present considered the most important in the Administration, was presided over by Count Inouye. It is understood that the arrangement thus happily evolved is due in great part to Count Inouye's sagacity and tact of compromise. The differences that had to be reconciled were sufficiently serious to threaten a long delay, but owing to his efforts they were been adjusted much sooner than had been anticipated. On Monday evening the new Cabinet was officially announced. Its composition will be found in our leading columns.

GREAT BRITAIN IN KOREA.

THE Hongkong *Daily Press* censures the *Nichi Nichi Shimbun* for commenting unfavourably on a recent rumour that Great Britain, with the consent of China, had asked the Korean Government to permit the establishment of an English coaling station at Port Hamilton. The Hongkong journal says that there is "no need for the *Nichi Nichi Shimbun* to go into hysterics over the intelligence," for, "if Great Britain wanted Port Hamilton and purchased or rented it as a coaling station, it would constitute no menace to Japan." The British Government has always exhibited the friendliest interest to Japan, and is much more likely to go to war with any Power threatening her with aggression and despoliment than she is to take a rood of ground in the fair land of the Rising Sun. Not only does the Government regard Japan with sympathy, but the ever increasing hosts of Britons who annually flock to Japan in search of the unique and the beautiful are by degrees building up in the British Empire a feeling of admiration and liking for this land and its people such as has never existed there for any other Asiatic country and race. In Japan they see the Britain of Asia, and the efforts of its people to make progress in the newer civilisation of the West have won their hearty sympathy, and would command their support if there ever seemed any prospect of the island empire being crushed by a ruthless aggressor. The presence of a British garrison of 100 marines in Port Hamilton a few years back was no threat to Japan and gave no real uneasiness either to Peking or Tokyo. Nor would the re-occupation of those tiny islands by the vessels of the British Squadron possess any significance for Japan.

* * *

All this is very true and very well put, but it misses the point of the matter. We do not believe that Japan has the smallest apprehension of British aggression. We have never heard such an apprehension formulated by a Japanese, or observed an indication that it is entertained. What Japan objects to, as we understand, is the propinquity of great rival Powers like England and Russia, Powers which must, as the world believes, come into collision sooner or later. It is a perilous business for the earthen-ware pitcher to undertake a voyage down stream in company with the iron pot. While the sky is fair and the stream gentle, the companionship may continue comfortably enough. But in the day of storm and flood, the

vessel of crockery cannot hope to fare well. Japan may have entire confidence in British friendliness and British good faith, but she sees, as all must see, that England is growing and that Russia is growing also, and the contingencies connected with growth of two Great Powers which have not yet resorted to that artistic and delightfully Pharisaical device of nineteenth century aggression, namely, the mutual mapping out of their "spheres of influence" may well cause uneasiness to a comparatively small Power lying on the edge of their probable battlefield. There is nothing like keeping out of harm's way. No prudent State could view with complacency the occupation of a weak and neutral neighbour's territory by a strong and active Power. In that nut-shell, we think, the whole matter lies, so far as concerns a British *piéd-à-terre* in Korea. The echoes of big guns at a great distance may be a tolerable, if not a diverting, feature of national scenery, but when one gets close enough to hear the whistle of the bullets, things assume a different complexion. We are not of those who regard a collision between Russia or England as inevitable, but the belief is so prevalent that statesmen have to reckon with it as a factor not unlikely to bring about the very result to which it points. Who can blame Japan, then, if she wishes to remain beyond the dangerous range of the shock?

TOKUSHIMA.

THE detailed record of the losses caused by the recent gale in Tokushima Prefecture makes an appalling list. The vernacular press publishes them as follow:—

Persons carried away and drowned by flood:—Men, 101; women 60	161.
Persons crushed to death by falling houses:—Men 91; women 49	140.
Persons wounded:—Men 49; women 40	89.
Houses swept away, partially destroyed, or inundated by the sea	42,080.
Vessels and boats destroyed	477.
Length of river banks broken down or injured	182,360 yards.
Length of sea embankments destroyed or injured	29,384 yards.
Length of piers injured	242 yards.
Length of roads injured	1,234,442 yards.
Area of hills broken down and forests destroyed	3,061 acres.
Area of salt fields injured	243 acres.
Area of fields and building lands inundated by the sea	14,670 acres.
Area of fields and building lands inundated by rivers	42,230 acres.
Area of land injured by inundations	23,135 acres.
Area of land completely devastated by inundations	19,968 acres.

No estimate is given of the total monetary loss, but it must evidently have been immense. Their Majesties the Emperor and Empress have contributed 2,000 *yen* each to the aid of the unfortunate sufferers, and Viscount Higashisono has been despatched by the Sovereign to visit the three Prefectures of Hyogo, Okayama, and Tokushima, and to report upon the losses incurred there.

MAJOR FUKUSHIMA AND THE "CHICAGO DAILY NEWS."

WE reproduced recently a letter contributed to the *Chicago Daily News* by Mr. V. Gribayedoff, the subject being Major Fukushima's ride from Berlin to Shanghai. Mr. Gribayedoff's account of the enterprise is well conceived, but as to its truth we say nothing, being only too familiar with the sensation manufacturing mania that besets the European correspondents of American journals. The statement is that the plucky Major's big ride was brought about by a plot to contrive his absence from Berlin, the chief plotter being the brother of a beautiful young lady to whom the Major was paying marked attentions. Commonplace enough was the method of carrying out the scheme. The Major was plied with champagne, and then taunted with his countrymen's inability to ride, a well known fact being that the introduction of horses into Japan was comparatively recent. Flaming himself on his equestrian abilities and being further zealous for the reputation of his countrymen as well as urged

by the courage of champagne, the Major made a heavy wager at long odds to undertake the big ride. There is one obviously absurd element in this tale, namely, that the introduction of horses into Japan is of comparatively recent date. The long bow evidently comes in at that point. However, the story, if it adds a spice of romance to the enterprise in one direction, takes off a good deal in another, and it is consequently resented by the *Nichi Nichi Shimbun*, which avers that it knows the Major a great deal too well to believe him the victim of any such folly. We observe that the *Nichi Nichi* itself errs in repeating the tale; for it makes the young lady's relatives promise her to the Major if he accomplishes the proposed ride, a degree of complacency not attributed to them by the Chicago journal's correspondent. For the rest, however, our Tokyo contemporary is thoroughly confident. So complete is its distrust of items appearing in American newspapers that it declares the Berlin belle, her brother, and even the correspondent Gribayedoff himself to be in all probability mythical personages, and laughs a good deal at its vernacular contemporaries for reproducing the tale without comment. We are disposed to think that the *Nichi Nichi Shimbun* is perfectly right.

THE LONDON PRESS.

THE greatest innovation has recently been introduced in the newspaper press of London that has ever been witnessed since the repeal of the stamp duty. This has been thrust upon the principal London dailies by the pressure brought to bear upon them by a new advertising agency, and consists of what will be regarded with the utmost distaste by the elder generation of pressmen, namely, the insertion of stereotype blocks and cuts. Reuter's Telegram Company has effected this much-to-be-deplored arrangement, and having succeeded in the case of *The Times*, *Telegraph*, *Standard*, *Daily News*, and *Morning Post*, it stands to reason that all other papers will have to follow suit. It may not be generally known that Reuter has lately started an advertising agency. That the Telegram Company has done so to some purpose is evidenced by the fact stated above, and the influence they wield in their new business is apparent by their having been able to accomplish in a few months what the united efforts of all the London advertising agents have failed to effect after being "on the job" for fifty years past.

"ONE AGGRIEVED."

WE have to apologise to the anonymous correspondent of the *Kobe Herald* who writes over the signature of "One Aggrieved." We erred as to the sex of the writer. Had we recognised that Mr. Loureiro's accuser was a woman, we should not have treated her so seriously. Now that the fact becomes apparent from a second letter penned by the same person, we are of course willing to concede the license universally accorded to the fair sex in respect of irrelevance and illogical prattle. These things are a lady's right, and "One Aggrieved" shall not be deprived of them by us. And now that we have made this *amende* we trust that our fair assailant will soften some of the very hard missiles with which she pelts us. We could afford to be told by female lips that there is "mysticism in the black concoction of our scurrilous defence;" we could afford to be charged with indulging in a "course of vituperations;" we could afford to be accused of writing in "a spirit altogether disproportionate to journalistic etiquette." But truly this gentle combatant is a little too severe when she calls us "a modern curiosity worth exhibiting in the coming World's Fair." That is very painful. However, we must not complain, perhaps, since it is evident that her perturbation has reached an extreme pitch. We would willingly do anything in reason to restore our fair opponent's moral equilibrium, and in that spirit we venture to congratulate her very sincerely on having entirely abandoned the accusation previously preferred by her against Mr. Loureiro. It is true that she inveighs against our "cabalistic assertions," and declares herself to be "at one with her fellow-countrymen in

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

preferring the accusation; but that is a woman's way. She has at any rate given up all talk about the ultimatum which Mr. Loureiro was supposed to have suppressed, and we compliment her on the sacrifice. Our only regret is that we cannot conform with her advice in selecting our sources of information. She says that we "should have waited to communicate with Mr. Loureiro" before answering her letter; that our "mystic assertions are obtained from official sources;" and that what we "know comes from Mr. Loureiro." The "aggrieved" lady will pardon us, perhaps, if we confess that we cannot follow her in this matter, since, if as she alleges, what we know is already derived from Mr. Loureiro, there can be no need to seek information from him before writing, and if it comes from him, it cannot easily be derived, at the same time, from official sources. We are equally perplexed to understand what she means by the following:—"As I said in my previous letter that the Japanese Government had done what they should do under the circumstances, I still adhere to my belief that if they did so at all it was, as is asserted by the defender of the defenceless official, done through that dignitary's suggestion, a suggestion which constitutes a diplomatic scandal." If the Japanese Government did the right thing at Mr. Loureiro's suggestion, in what did that official err? And why does his suggestion of the right thing constitute a diplomatic scandal? But there! We do not wish to disturb our gentle assailant's equanimity any more.

MURDER IN NAGASAKI.

A most fearful murder was committed in the native town about midnight on the 27-28th ult. The facts of the tragedy, briefly, are as follows: A blacksmith named Koga, residing in Kajiyamachi, had two apprentices, who resided on the premises, the household consisting, in addition, of Koga's wife and two sisters. One of the apprentices, Tomojiro by name, fell in love with the younger sister, O'Ko-san and the feeling was reciprocated to such an extent that marriage was contemplated. The master, Koga, gave his consent to their becoming man and wife, but his wife and elder sister objecting, the match was broken off. On the night in question, the master being absent, the remainder of the household retired to rest as usual, and nothing transpired until shortly after midnight, when loud screams were heard to issue from the lower storey of the house, where the female portion were sleeping, the apprentices being upstairs. Imakichi, Tomojiro's fellow-apprentice, states that, hearing the cries for help, he rushed downstairs, and finding the door of the house open ran out and called in some neighbours, who upon procuring lights were confronted with a most horrible spectacle. O'Masa, the elder sister of Koga, was lying dead, from a number of sword wounds; whilst O'Toyo, Koga's wife, was dangerously, though not mortally, wounded. Tomojiro was at once suspected, and being missing, search was made for him, with the result that he was found concealed underneath the floor of the Yem-meji temple in Tera-machi, on the afternoon of the next day. He was at once arrested, and is now waiting trial.—*Rising Sun*.

A PORTUGUESE HEROINE.

We take this from the *North China Daily News*:—

Chinamen often speak of, and not infrequently write on the extravagance and luxuriousness of foreign ladies, but they have just had in their midst an exceptional instance of thrift, economy, and frugality, in a foreign woman, which they deem fit to place on permanent record.

Lio, a common Cantonese labourer from Canton, found his way in some manner to Lisbon, where by the industry and saving habits which characterise his countrymen he was enabled to open a shop; where also he wedded a woman of Lisbon, by whom he had a son and a daughter. But he did not prosper in business and he desired to return to China; but he loved his wife from the West and was at a loss what to do. She, however, understanding his feelings, said "Go, and take me with you; I know I shall be a foreign woman in your country, but I cannot part from you, I will accompany you." He replied, "Western women are accustomed to comfort and luxuries; if you go with me you will be obliged to toil hard in rice fields, and undergo much hardship; I fear it will be more than you can endure." He replied, "Be it luxury or ease, I am prepared for either, I can but accompany you; some Western women are economical and saving." Lin

gladly assented, but frankly stated that he had no house to take her to, that she must wear Chinese clothes, etc. Undismayed by the gruesome prospect, the fair Lusitanian made the voyage to Canton, thence to Hsing-hai Weifu with her husband and two children. Lin's clan were proud of their new sister, and extended to her and the little ones the warmest welcome. At work she went, joining her fellow-villagers in climbing mountains to cut grass for fuel, or wading through the mud of the rice fields under the fierce rays of a tropical sun, not only without murmuring, but cheerfully, thereby endearing herself to the whole village; her only desire was to discharge her duties as a wife and as a member of her husband's clan. Alas! Early last spring her husband succumbed to disease, when the bereaved Portuguese showed that she had been thoroughly imbued with the customs of her adopted country—had so far become Chinese, that she determined to immolate herself as an offering to the manes of her husband. The phrase employed on the occasion was that applied anciently to the act of being buried alive with the corpse of a superior, but it has come to mean suicide by any mode. She elected starvation, but before dying from that cause her maternal feelings were revived by appeals made on behalf of her children, and she consented to live. She lived four months only, dying from a "coughing disease." Evidently grief had brought on a wasting disease, which closed the fitful drama of Lisbon's unhappy daughter.

Men may not take note of the fact, but instances are constantly occurring illustrative like this of the self-sacrificing devotion of woman, and have been in all the ages, in all climes, among all races. The spirit of the Lusitanian wife is an instinct of womankind.

THE NEW CABINET.

DIVIDED according to localities, the members of the new Cabinet stand thus:—

Count ITOChoshu.
Count INOUEChoshu.
Count YAMAGATAChoshu.
Count KURODASatsuma.
Count OYAMASatsuma.
Viscount NIRESatsuma.
Mr. MUTSUKishu.
Count GOTOTosa.
Mr. KONOTosa.
Mr. WATANABENagano.

Mr. Ito Miyoji, Chief Secretary of the Privy Council, has been appointed Chief Secretary of the Cabinet, in addition to his present post. Mr. Herayama, hitherto Chief Secretary of the Cabinet, retires.

Count Oyama, who returns to his old position of Minister of State for War, has been replaced upon the Active List as a full General, in consideration of his long and meritorious services.

Count Oki, Minister of Education in the Matsukata Cabinet, returns to the position formerly held by him, namely, the Presidency of the Privy Council. Viscount Sano, Minister of State for Agriculture and Commerce, and Viscount Enomoto, Minister of State for Foreign Affairs, resume their seats in the Privy Council. Count Matsukata is gazetted to the position of *Jako-no-ma Giko*, or Attendant in the Incense Chamber, an honorary rank carrying no salary, so far as we know, and he is further to receive the treatment of a Minister President. The posts in the Privy Council are, of course, salaried, a Privy Councillor receiving 4,000 yen annually, the President of the Privy Council 5,000 yen, the Vice-President 4,500 yen, and the Chief Secretary 3,500 yen. When an official is appointed to discharge the duties of a second office in conjunction with his own, he receives one-third of the salary attaching to the latter.

THE OFFENDING FOREIGNER.

THERE are two offences charged against foreigners by vernacular newspapers. The first, which we find in the *Choya*, is that one of two foreign athletes now visiting Japan professionally, has been telling untruths about his nationality—trying to pass as a British subject when in reality he is an American citizen; the second, published by the *Shogyo Shimpo*, is that some American has been buying a pack of Japanese toy-dolls in Nagoya, and that, as this is evidently a commercial transaction, it constitutes a breach of the treaty—Nagoya being outside treaty limits—and a complaint has accordingly been lodged by the police at the Nagoya Local Court. We are pleased to learn that nothing worse can be laid to the charge of the "masterful foreigners" than these peccadilloes. The authorities might, perhaps, send a copy of Chabaud's lecture on "Treweth" to the men-

dacious wrestler—though we doubt whether he is worth it—but we recommend them not to make a test case of the *chin* poodles. It would be just a trifle too ridiculous.

MAX O'RELL'S LAST.

MAX O'RELL is such a conspicuous and shining light amongst all other writers upon the idiosyncrasies of different peoples, that his trite sayings will live for many generations. He has the happy gift of catching up eccentricities, and of describing them in such terse, piquant, good-humoured phraseology that offence is not possible. John Bull does not mind being told that his feet are big, so long as his strength and his moral faculties are not impugned; and Max O'Rell is always just. The Frenchman, he says, fights for glory; the German for a living; the Russian to draw attention from misgovernment at home; but the Briton—is a reasonable and reflective person. He fights to raise the standard of civilisation of his enemies in this world, in order to secure them a better opportunity in the next; therefore, he goes to battle carrying a Bible, and, presently, the untutored savage has the Bible, whilst he has the land!

THE POPULATION OF LONDON.

THE necessity of providing a water supply for London that shall suffice to meet the needs of an ever growing population, has led the London County Council to enter into a calculation as to what approximately will be the population of the city fifty years hence. The conclusion arrived at was that 17½ millions would be the maximum and 9,666,687 the minimum number. The former figure is obtained by inferring that the rate of increase will go on in the same proportion as indicated in the last census period. The latter estimate assumes that London in the future will alter its rate of progress and only grow greater by the natural increase of births over deaths. The County Council, after taking these and other calculations into consideration, decided that there is every reason to anticipate that the population of the city in 1941 will be 12½ millions, and recommended that measures be taken for providing water for this number. *The Spectator* is of opinion that the 17½ millions estimate is more likely to be verified. The tendency to congregate in cities among the middle and lower classes is very strong, and the attractiveness of suburban life is constantly being increased by modern improvements of various kinds. When we consider that future London may contain as many people as were in the whole of England and Wales in 1851, and in the whole of Spain in 1887, and remember that the vast majority of the inhabitants of the great city will always be dependent for sustenance on goods conveyed from a distance, we begin to realise how terrible might be the consequences of a great naval war.

THE TOKYO "SHIZOKU" FUND.

WHEN feudalism was abolished and the power, previously wielded by the *Daimyo* passed into the hands of the Central Government, a large number of *samurai* were thrown out of employment, and in order to assist them to start afresh in life funds known as *shisan-kin* were raised by the Government and appropriated to their use. The administration of these funds has usually been in the hands of prefects or governors of cities. The plan adopted by such officials has been to allow prominent and representative *shizoku* to draw on the funds for purposes of trade, industry, and the like, it being understood that the profits realised should go to augment the principal, which was considered in most cases too small to allow of its being distributed among the large number of men entitled to a share. Our readers will remember that last year no small stir was caused when it became publicly known that Mr. Taguchi Ukichi had been allowed to use a large sum of money drawn from the Tokyo *shizoku* fund for the purpose of opening up a trade connection between Japan and the South Sea Islands, the result of the agitation being that Mr. Taguchi dissolved the company that he had formed, sold the vessel which he had purchased, and reimbursed the *shizoku*

fund to the extent of 63,000 *yen*. The *shizoku* who took the lead in bringing about this result were represented by Mr. Murata Masanori. This gentleman obtained the permission of his associates and of the Governor of Tokyo to exercise control over the above named sum, and to establish a lace manufactory with such portion of it as might be needed. Before being entrusted with this power he was required to sign a contract which contained the following conditions: (1) None of the money belonging to the fund was to be used for any other purpose than the carrying on of the business of the factory; (2) Money not in actual use was to be deposited in the 5th National Bank, the 19th National Bank and the Mitsui Bank. Some little time ago it was rumored that Mr. Murata was making an improper use of the money entrusted to him. Headed by the famous lexicographer, Mr. Watanabe On, and backed by Messrs. Isobe Shiro, Hata-yama Kazuo, Miyake Kozo, Kuroiwa Tetsunosuke and Hashimoto Yoshimasa, the Tokyo *shizoku* took the field against their former leader. They obtained legal permission to attach the factory and other property and to institute an inquiry into the uses to which the money had been put. The full results of this inquiry have not yet been made known, but it is stated that neither of the three above named banks hold any money deposited by Murata. A sum of 30,000 *yen* has been found in Mr. Murata's possession, but this, it is stated, even allowing for the outlay required to establish the factory, leaves a large margin unaccounted for.

It seems to us that in a case of this kind the simplest and safest plan to adopt would be to place the fund under the management of a Committee, to be chosen by those for whose benefit it is administered, instead of relying on the probity and the business capacity of individuals, as has hitherto been done. It is of course premature to infer from the suspicions of the *shizoku* that Mr. Murata has misappropriated the money entrusted to him, since so far no details have been ascertained relative to the cost of establishing the factory and the carrying on of the business connected with it.

THE DEATH OF HARA TANZAN.

THIS famous Buddhist priest and philosopher, for many years professor of Buddhist philosophy in the Imperial University, expired at his residence in Tokyo on the 27th ult. He was over 70 years of age. He died, as he had lived, a philosopher to the backbone. A man of extraordinarily robust constitution and simple habits, he is said not to have known what illness was until the end. It was his opinion that the medical profession did not exist for the sake of men of his type. When asked to consult medical men he smiled contemptuously. Up to the day of his death he displayed no signs of serious illness. On the 18th ult., he remarked to his disciples that he thought he should die soon, and that it might be convenient (*tsugo ga yoi*) if he were to die on that day. The disciples became alarmed and insisted on his seeing a medical man. The doctor called in recommended tonics, but the old man said, "I want no tonics." On the 20th ult. Dr. Miyake was consulted, and after a thorough examination, said, "It is as you have ever boasted. There is no disease of any kind." On the 22nd ult. Mr. Hara asked for writing materials, saying that as he had not much more time he should write his thoughts. On the 27th, the day of his death, he awoke from a refreshing sleep at 2 p.m. in excellent spirits. Without consulting any one, he took some post cards that were near and commenced writing to his friends the following few lines:—"I write to inform you that I am now leaving you." The priests in attendance on him remarked: "If that is all you are writing, why not leave us to do it if anything should happen?" The old man smiled, lay down again, dozed, and slept to awake no more. A few days prior to his death he was asked whether he had any directions to give as to what was to be done after his decease. He replied: "What is the use of my concerning

myself about what is to be done after I am gone?" He then added, "It is customary with Buddhists to say a great deal about the future life. This I have never done. My views respecting a future life differ from those of other Buddhists. You will find them expressed in a manuscript, which I have prepared for publication after my death." The remains of the venerable old priest were cremated on the 31st ult. and will be laid in their last resting place, at the Saijoji, in Sagami, with great ceremony on a day to be hereafter notified.

THE FLOODS IN HARIMA.

THE *Hyogo News* thus concludes its account of the recent floods:—

Tatsuno, as I have said, lies in an oval shaped plain, tapering almost to a point where the hills shut it out from Harima. There is no stream of any size running through it, excepting always the Ibigawa, which in reality forms its western boundary. But the portion in which the village of Tatsuno and the railway station stand slopes at a gentle incline from the bases of the mountains which hem it in on the northern side. This slight declivity accounts for the great destruction wrought on the railway line. As we neared the station the hamlet surrounding it presented a very battered appearance. Three or four rubbish heaps were all that remained of one or two tenements. Others had a gaping breach in the walls, and all had a muddy deposit in place of the raised floor. The railway line rises a foot or two above the normal level. This had been partially carried away, the deluge had swept off the ballast and in places the rails remained suspended, a goods shed at the station looked as if it had been subjected to a heavy cannonade, so huge were the gaps in it, and so wrecked did it appear. It was half tilted over, and railway packers were busy removing the damaged stores. Over and under the hills on the left, situated on a raised slope, was a rather large village, which looked untouched, owing its immunity to advantages of its situation. Otherwise the whole of the plain had been submerged, though but for a few layers of mud here and there, and one or two places where the water had not yet subsided, the rice was in magnificent condition, indeed this was a feature of the whole trip. Except in limited areas, where the torrents had left pebbles and mud, the rice looked all the more flourishing for its universal submersion, so that there is really no reason to believe that the inundations will have any marked effect on the crops other than beneficial.

Leaving Tatsuno we continued our journey to Naba, which had been badly treated, but nothing like so harshly as Tatsuno. The railway was almost intact, and the houses damaged were much fewer in number. Some of the wayside cottages *en route*, however, were sorry spectacles. In front of some, the water had ploughed up the roadway, and dangerously undermined the whole fabric. In some instances the flooring had been ripped up, but as marking the cheerfulness and almost indifference with which the people viewed the catastrophe, I may mention that in one of the worst served houses, a bevy of young girls, at ages ranging perhaps eight from eighteen, were playing a game at cards, and were as merry as if no mud begrimed the walls, and as if a misfortune of any kind was a thing never experienced in their locality.

From thence on to Naba the damages were less noticeable. Everywhere there had been a submersion, but the waters had receded, and except for the muddy floors of the houses and the stain on the walls, there were no prominent indications. Naba in the vicinity of the station suffered little. The ground there has a considerable slope towards Omura, where the inlet of the sea, one of the most off romantic on the coast, was sufficiently wide to take all surplus water. From the station the roads winds round the shores of the inlet, and then begins an ascent through a pass rising up to some 1,200 feet. The hill slopes and ravines there are densely wooded, and the walk up to the summit, for we walked despite the faint protestations of the kuruma-men, to the invigorating atmosphere at the summit of the pass, was a most enjoyable one, though the temperature was very high, and the sun broiling. At the mouth of the pass stood the ruins of two huts. One had fallen completely, a victim of the wind and not of the floods. The other, in which were a woman and two children, was a sad wreck. One side of the hut had disappeared, another was partially destroyed. The roof had large holes in it, and yet the cheerful old woman seemed as light-hearted and gay as if her tenement, open as it was to the wind and rain, was a mansion stocked with every comfort. We gave her ten cents for a cup of tea, a generous donation which by the number

of expressions of thanks she tendered was appreciated a thousand times above its value. On turning the edge of the road we entered upon a steep declivity, and a magnificent yet heart-rending spectacle met our gaze. On our right was a deep ravine, with precipitous sides which meant death to anyone blown over, or falling by a slip. The wind, although it was a calm day, rushed through the funnel like pass with tremendous force so that we had to hold on our hats very tightly to prevent losing them, and it needed no very strong imagination to conceive of one being hurled down the yawning yet picture-que chasm, if there was anything like a storm raging. Below us stretched the delta of the vale of Chikusagawa. From Une it winds between two very high hills, which opened out at the place of our descent and then widened towards the sea-shore at Ako, some three or four miles distant. The only dry object in that formerly smiling plain was the river bed. The boundaries had been burst at many places and there was now spread out a calm lake, with its waters up to the edges of the hills, dissected by the dry watercourse, and dotted here and there with the upper parts of a few semi-demolished houses which marked the site on which Kariya once stood. The greater portion of the town had been demolished, and how any people escaped to tell the tale is surprising, for the steep sides of the mountains offered scarcely any foothold, while it was just near the sides that the torrent must have been strongest. The salt pans, or at least the majority of them, had disappeared, and all the way up that sinuous valley as far as the eye could reach, was but a panorama of devastation and ruin. One was terribly knocked about, a railway bridge had been carried away and the houses were laid low. The picture was fascinating in its complete destruction.

Having briefly investigated the various pitiable scenes, we set our course homewards, for we had nearly 40 miles of road to cover and it was already near six o'clock. Our men, extremely plucky fellows, announced their willingness to travel through the night and bring us back to Kakogawa to catch the 5.42 train in the morning, providing they had a rest at Aoyama. They had already brought us close on towards thirty miles, but as they seemed anxious to fulfil the task we consented. A little past Naba my ricksha collapsed. Another was procured a mile or two further on, and leaving the big shaftsman behind with the damaged vehicle, we obtained the services of a young fellow, who ran gamely but found the work too much for him. We reached Aoyama at about 9 o'clock in the evening and were greeted with the utmost cordiality, not only by the pleasant hostess of the *chaya*, but by a swarm of big mosquitoes, the biggest and most bloodthirsty insects I ever encountered. They met us at the door, accompanied us to the backroom, and pestered us with their unwelcome attentions all the time of our visit, as if delighted to meet a stranger. Mosquito nets, smoke and fans were of no avail, and when we emerged at one o'clock, we bore with us countless marks of their too intrusive familiarity.

Our kuruma men roused us sharply at one a.m., and half asleep, and occasionally mildly ejaculating over the stings of our late visitors, we proceeded homewards. Without stop or halt, up hill or down dale the kuruma men ran on, but my little leader began to show signs of exhaustion, and just before reaching the Ichikawa, a little beyond Himeji, he fell as if shot, and stumbled on to a board at the roadside with a bad attack of cramp. Undaunted my other man insisted that he could take me to Kakogawa. Fortunately we roused up another man, and reached the station in good time, though in lugging the kuruma over the embankment at Himeji my kuruma man, who had behaved so pluckily, fell from the top to the bottom, badly scarring his arm almost from the wrist to the elbow.

We had seen but a fraction of the ravages of the floods, and only those which lay close to the main roads, but those were so great that our description is but a faint portrayal of the actual suffering inflicted. The unfortunate people deserve every commiseration, and we trust their appeal for succour will not pass unheeded.

A STORY FROM BUNGO.

THE *Choya Shinbun* tells a terrible tale of an incident said to have occurred recently in the province of Bungo. A farmer, Kono Gihei, of Yasaka, in tolerably good circumstances, was much troubled about his mother's eyes, which, despite the use of all kinds of medicines, had gradually grown more and more useless for eleven or twelve years, until finally complete loss of sight was threatened. Having heard that the liver of a freshly killed bird or animal was effi-

cacious in such cases, Kono procured the liver of a fowl and gave it to his mother. The effect was good and the woman rejoiced greatly in a partial recovery of her sight. But after a time her malady re-asserted itself, and Kono was in much trouble. He then learned that the liver of a human being could not fail to be efficacious, but although he travelled to Osaka and Kyoto in search of this commodity, he could find no trader in it. Finally he concluded that the only resource was to give his own liver, and with this object he had a sword divided into two parts, one of which, being sharpened, was to serve for cutting open his stomach. But when he came to do the deed, it occurred to him that his death would be useless, unless he could contrive some means of getting his liver administered to his mother. Unable to think out any plan for that purpose, he then conceived the idea of killing his own child, an infant five months old, but when he carried the little girl out into the garden with the intention of despatching it, his fatherly feelings overcame him. Nevertheless he could not dismiss from his mind a sense of the imperative duty of saving his mother's eyes, and at last, on the night of the 27th of July, he resolved that the child must die. Awaking his wife he explained his purpose to her, but the woman would not hear of it. Seeing, however, that her husband was much concerned, she offered her own life, like a true mother. But Kono could not persuade himself to kill her, until she tied a rope round her own neck and bade him strangle her, which he at last did. Cutting out a portion of her liver, he was proceeding to cook it, when a servant, roused by the noise, awoke the younger sister of the murdered woman, and Kono was handed over to the police. The *Choya* adds that the deluded man was an exceptionally devout Buddhist, and hints that his weak understanding had been unhinged by extravagant teaching about his duty to parents and so forth. It says that it could not have been believed that Japan owned such a barbarian. The story is indeed appalling, but the devotion of the unhappy mother Sugi, who gave her life to save that of her baby, is a redeeming incident of the awful tale. She was only twenty years of age, we read; probably a girl with little education and only one creed, self-sacrifice in everything. Such women are indeed examples.

THE TOKYO RICE EXCHANGE.

THE trouble in the Tokyo Rice Exchange has been adjusted after much difficulty. Owing to the recent disastrous tempest with its consequent inundations, and owing also to the unseasonably cool weather which prevailed at the close of July and the beginning of August, speculators succeeded in pushing up quotations in the rice market, until suddenly dealers who had contracted to sell at fixed prices on certain dates found themselves in a grave dilemma. The rule of the Exchange is that margins must be kept covered from day to day, but the margins created by the recent sudden and rapid rise of quotations were more than sellers could fill in, and the result was serious difficulty which ended in the temporary closing of the Exchange on the 3rd instant. Over thirty brokers were defaulters, and the officials of the Exchange were divided in their opinion of the course that ought to be pursued, some maintaining that brokers who had failed to cover their margins ought to be expelled from the Exchange, while others deprecated such an extreme measure. The former party was led by Mr. Yonekura, the President, and Mr. Sekine, the Vice-President, the latter being headed by Mr. Matsuzawa. Meanwhile, Messrs. Amemiyama and Tsuji were endeavouring to affect a compromise between the sellers and the buyers, but in this they were unsuccessful, the sellers not being convinced of their integrity of purpose. Finally, on the 6th instant, the Vice-President, Mr. Sekine, caused letters to be addressed to the defaulting brokers, informing them of the Exchange's resolve to treat them as violators of contracts, and to deal with their cases in accordance with the rules of the Exchange.

The brokers replied by a joint petition, asking for two days' delay. But this petition could not be lawfully entertained unless it bore the signatures of both parties to the contracts, and therefore there appeared to be as little prospect as ever of a settlement. Strenuous efforts were made by the mediators, to whose number Mr. Kato Tokuzo had been added, and the principal buyer, Mr. Nakamura, having expressed his willingness to agree to a reduction of price, a conference of buyers and sellers was held at the Umeyoshi restaurant. The brokers for the sellers declared themselves ready to complete one half of the transactions at 8.30 *yen* for delivery this month, 8.25 *yen* for delivery in September, and 8.20 *yen* for delivery in October, but the buyers would not accept this proposal. Another mediator then intervened, Mr. Kameda Masakichi, and at his instance the sellers consented to reduce the above figures by 5 *sen* each. The buyers, however, declined to go above 8.15 *yen* for August, 8.10 *yen* for September, and 8.05 *yen* for October. Thus there remained a difference of 10 *sen* per *koku*, and as the parties could not be brought any closer together, the Exchange finally agreed to pay the difference itself. The quantity of rice in question was not large—only 64,930 *koku*—but 10 *sen* per *koku* on that amount represents 6,493 *yen*. The trouble was thus adjusted at 1 p.m. on the 8th instant, and business was resumed in the Exchange the same afternoon. A somewhat similar trouble appears to have occurred in the Osaka Rice Exchange, but news of its settlement has not been yet received. The amount at stake there is considerably larger, so there will doubtless be correspondingly greater difficulty. Indeed, it must strike anyone as very astonishing that the paltry sum involved in the Tokyo dispute could have led to the temporary closing of the Exchange. The suspension of such an institution on account of some ten thousand *yen* or thereabouts, is difficult to understand.

COUNT MATSUKATA.

WE learn from the *Mainichi Shimbun* that although there is no salary attached to the position of attendant in the Incense Chamber (*Fako-no-ma Giko*) to which Count Matsukata has been appointed, the Emperor grants to its holder an allowance equal to one-fourth of the salary received by him in his previous office, together with one two hundred and fortieth of that salary for every year of service over fifteen years. Count Matsukata's service extends from 1870 to 1892, a period of twenty-one complete years. He therefore receives one-fourth plus one fortieth of his previous salary, or eleven fortieths of 9,600 *yen*, namely 2,640 *yen*. This is the first instance of an ex-Minister President becoming an attendant in the Incense Chamber.

THE POLICY OF THE NEW FINANCE MINISTER.

THE new Minister of State for Finance assembled the Heads of the various Bureaux and the chief officials of his Department on the 9th instant, and addressed them briefly. He said that he was fully conscious of his small merits and of the greatness of the trust reposed in him, but that he intended to devote his whole energies to the discharge of his duties. With regard to the policy of the Department, he explained that it was his intention to follow strictly in the footsteps of Count Matsukata, and that he hoped to complete any reforms which, though contemplated by the latter, had not yet been carried out.

* * *

Speaking of financial policy, we observe that the *Fiji Shimpō* severely criticises Count Matsukata's financial administration, and contends that his method of restoring specie payments involved a needless amount of commercial and manufacturing distress. We wonder how the *Fiji Shimpō* would have proceeded to achieve that immensely difficult undertaking. Our own belief is that when historians come to write the account of Japan's resumption of specie payments, they will be unanimous in describing it as an eminently well conceived, ably carried out, and successfully accomplished operation. Does the *Fiji Shimpō* imagine that it could

have been achieved without any effort or any suffering whatever? A foreign loan was the panacea suggested at the time, but had Japan contracted a large obligation seven or eight years ago to a gold-using country, the burden of paying the interest and repaying the principal would now be almost intolerable. It is possible that the indirect effects of the policy pursued would have been felt less severely had the empire's financiers proceeded with greater deliberation, but that is a nice question which no man of understanding will venture to answer at once. Nothing is easier than to be critical. Any one can condemn; any one can destroy. But how many can construct? And what country ever extricated itself more speedily and with less distress from the slough of a depreciated fiat currency than Japan?

CONJECTURES.

MR. GLADSTONE, whenever the heat of politics becomes inconvenient, seeks rest and recreation in some intellectual feat, an essay on Homer, a paper on Biblical exegesis, and so forth, which to men cast in a lesser mould would represent exhausting mental toil. We have him now discussing at length and with much evidence of minute research the curious problem:—"Did Dante study in Oxford?" Mr. Gladstone answers in the affirmative. He reaches his conclusion by a chain of reasons many of the links of which are extremely subtle, and some are forged by veritable feats of intellectual acrobatics. We do not purpose, to follow the Grand Old Man as he tracks the immortal poet through all the wanderings, moral and physical, that point to Oxford. His remarkable essay concerns us for the moment on account of one sentence only:—"Whatever be the spurious honours that we pay to our time, this one at least is genuine: it has been distinguished by the close and searching examination of texts." So indeed it has, and it is distinguished also by the wonderful theories that clever men build upon the fragments of fact revealed by their examination of texts. The internal evidences that Gladstone adduces from the *Inferno* to prove the probability of Dante's visit to Oxford pale in ingenuity before another hypothesis enunciated contemporaneously by Mr. T. J. J. See—a hypothesis about the mystery of the Phoenix. The Phoenix figures in all art decoration from the banks of the Nile eastward. It shares with the dragon the honour of pre-eminence in Japanese and Chinese art. What then was the Phoenix? Usually we find it described "as a miraculous bird of Arabian origin—the only one of its kind in the world, adorned with golden and red plumage, and in form resembling an eagle; it was sacred to the Sun, and appeared at the Temple of Heliopolis at long intervals of time. When of a very great age, it built a nest of twigs and branches, ignited it with fire, and forthwith lighted upon the funeral pyre, and was consumed to ashes, from the glowing embers of which the new Phoenix at once triumphantly arose." All this however, is a myth; an allegory. It leaves us as far as ever from knowing the Phoenix. But by that "close and searching examination of texts" to which the Grand Old Man refers, Mr. See has found that Tacitus speaks of the bird as vulgarly reported to live 500 years, whereas some positively affirm that its span of years is 1,461. Now this is not a very helpful tradition, one would imagine. But see what Mr. See makes of it:—"Fourteen hundred and sixty-one years is the length of the Sothic period, and such a coincidence in length of time cannot be the result of chance. Therefore a strong presumption is at once raised in favour of the idea that the Phoenix is a symbolization of the Dog-Star period. The Egyptian year, as is well known, consisted of 365 days, and consequently the calendar annually fell short of the Julian or natural year, one fourth of a day. This annual difference would accumulate, and in 1,461 Egyptian years amount to a whole year, so that the cycle would begin anew. This great cycle is what is known as the Sothic period, which began when the first of Thoth, (the first month of the Egyptian calendar) coin-

Original from

cides with the heliacal rising of Sirius. This phenomenon of the Sun and Dog-Star rising together took place on the 20th July, and marked the beginning of the inundation of the Nile. Sirius was anciently fiery red, and this colour will not only enable us to explain the gorgeous plumage of the Phoenix, but also how the bird was mystically spoken of as consuming himself with self-ignited fire, and the new bird rising from the glowing ashes. For the colours of the Phoenix were merely the hues of the golden Sun and of the ruddy Sirius. And the old Phoenix cycle closed its long career when the first of Thoth came round to the day of the fixed year (July 20th) on which Sirius and the Sun rose together, and the Sothic or Phoenix cycle began on the same day. Therefore, since the beginning and end of the Sothic period was determined by the heliacal rising of Sirius, and that star was fiery red, it is easy to see why the priests represented the old Phoenix as consuming itself with self-ignited fire (of the Dog-Star) at self-appointed time, and the new Phoenix as arising immediately from the ashes of the old. Since the Sothic Period was determined by observations of the heliacal rising of Sirius, made at the Heliopolitan Temple of the Sun, we can readily understand why the Phoenix was spoken of as coming from Arabia, which lay to the east in the direction of the expected phenomena. The Phoenix being a symbolization of the Sothic cycle, there could, of course, be only one such "bird" in the world; and since the period extended over ages, it is easy to conceive how a very little mystic or even poetic fancy would enable the priests to represent it as a bird with swift wings, symbolic of the flight of time. The Sothic period being reckoned from the heliacal rising of Sirius, it is also plain why the bird was sacred to the Sun, and why it appeared to the priests at Heliopolis. Lastly, since the cycle repeats itself in endless succession, its duration is eternal, and hence the secret of the immortality of the Phoenix. The only point that needs further elucidation is the period. Tacitus relates that the first Phoenix appeared in the reign of Rameses II., and we learn from Censorinus that a Sothic period was completed A.D. 139. Therefore that period must have begun B.C. 1322; an epoch which falls within the dates assigned to the reign of Rameses by different chronologists. Tacitus records the dates of other appearances, but he does not hesitate to question the genuineness of the latest of them, and we need not hesitate to conclude that of all the Phoenixes reported by Tacitus only the first was genuine. The others occurred in the reigns of very powerful kings, and is likely that in their ambition to glorify their reigns, they may have celebrated the completion of some numerical part of the Sothic or Phoenix period, and proclaimed, as a special sign from Heaven, the coming of the sacred Phoenix."

THE ABORIGINES OF AUSTRALIA.

People living in the East have learned to take with a large grain of salt the literary condiments served up in Western journals. They see how egregiously writers at a distance err about the affairs of the Orient, and they naturally assume that similar blunders may be made by writers similarly circumstanced towards other countries. Dr. Karl Lumbholtz, however, lived for fourteen months among the aborigines of Australia, so perhaps we shall be justified in accepting as true what he tells us about them in the *Duheim* of Leipzig. It is difficult for any people to occupy a lower stage in the gradation of humanity. They live like beasts of prey upon anything they can catch or kill, and like beasts the women have to do all the manual and heavy work. They are cannibals. "They make no secret of their fondness for human flesh, and regard it as the finest food. The details of their cannibalistic practices are horrible. It is only seldom that the 'black police,' whom the Government sends out to protect the colonists, interfere with the barbarity. The traveller found these peoples exceedingly unreliable, treacherous, and immoral. The only attractive trait he could discover was the intense love of the mothers for their offspring. These people are not, however,

alone to blame for the deplorable condition of affairs. Their treatment at the hands of the whites is terrible, especially in Northern Australia. Settlers frequently offered to shoot natives for Dr. Lumbholtz, as he was anxious to secure specimens of their skulls. In Northern Queensland he often heard the words:—"The only right way of treating the natives is to kill them." One squatter there acted on this principle, and shot down every native he saw on his pastures, and the murder of the women he justified on the ground that their children would be thieves. In some districts the treatment is better, and the natives are utilized as shepherds and servants, and they even attain a certain degree of civilization; but even where the attempts to civilize them have been seemingly successful, they fall back into their barbarous state at the first contact with their people." No wonder that this people is dying out—shall we not say, is being exterminated?—rapidly. A few years ago their number was estimated at several hundreds of thousands. To-day there is only a remnant of sixty thousand. It took 60 years to sweep the Tasmanians from the face of the earth. They were a mere tribe, five thousand strong in 1803, but still the fact that not a single one of them remained in 1872 is remarkable. The Australian aborigines are rapidly going the same way.

TYNDALL AND GLADSTONE.

MR. GLADSTONE has his most implacable foes in Ireland, and at the head of them stands Professor Tyndall. Looking at the Professor's picture no one could doubt that he would be shockingly in earnest about everything. He is evidently built that way. Yet the impression left upon one's mind in the sequel of all his tirades against the Grand Old Man, is distinctly painful. The scientific luminary seems to shine with a sadly enfeebled light when he enters the political arena. It does not suit his gifts. One is oppressed with a sense of incongruity; a notion of the *sutor* who has laid his last aside with bad results. The Professor is on the war-path again. He has written a tremendous letter with a comically scenic conclusion—a veritable bit of dramatic posing. The *Pall Mall Budget*, reproducing the document, appends an illustration in which we see the shaggy scientist, with Celtic fury in his face and political ire in his attenuated thews, hacking away at a snow image of the Grand Old Man, who receives the strokes with cold and lofty imperturbability. It is very clever. Here are extracts from the letter:—

Gladstonian prints describe me as an "Ulster Orangeman." Were this true, I should accept the designation with pride. The term "Orangeman" is, for the time being, the most forcible antithesis to the "traitor." But I am a Leinster man, I have never been an Orangeman. Indeed, my desire in life has been to soften those sectarian animosities which after a full of considerable duration, the evil genius of Mr. Gladstone has so effectually revived. When Mr. Gladstone and that arch doctrinaire, Mr. John Morley, who, it is alleged, first planted the "microbe of Repeal in the brain of his venerable friend, launched the first Home Rule scheme, they forgot that there was any Ulster at all. Of Mr. Morley I would speak more in sorrow than in anger. Those of us who once knew him as a man of elevated mind, and regarded him with a feeling warmer than friendship, now mournfully behold him degraded to the level of the professional politician. No trace of personal hostility can mingle with my feelings towards Mr. Gladstone. At a time when my physicians predicted that a few hours would finish my career on earth, his warm and generous sympathy was abundantly shown. Would that his course were one that I could follow and applaud! But futility to him would be treason to something infinitely higher. The first Loyalist blood shed in Ulster for the sake of Messrs. Walsh, Croke, and Healy would rouse in this country a feeling which would sweep his Irish policy to perdition. And now for a practical winding up. I occupy no post, I receive no wages, I enjoy no pension. But a money dribble comes to me occasionally from a more precarious source. Some time ago I received from publishers the sum of £103 7s. 6d. in payment for two little books of mine. This seasonable windfall I have divided into two parts, one of which, £37 7s. 6d., I keep for myself; the other, £66, I send to you.

NOTICE TO MARINERS.

THE following notice to mariners relating to the wreck of the steamer *Peking* in Bonham Strait, has been issued from the Coast Inspector's Office

of the Chinese Imperial Maritime Customs:—Notice is hereby given that the wreck of the steamer *Peking* lies in a straight line drawn from the summit of Napier Island (368 feet high) to the south-western extreme of Gutzlaff Island, and with Bonham Island Lighthouse bearing S. 33° 25' E. true, distant 6½ miles. The Button Islet open its own length to the eastward of Pirie Island leads clear, to the westward, of the wreck; and the eastern extreme of The Button in line with the eastern extreme of Pirie Island leads clear, to the eastward, of the wreck.—Caution: Vessels having to pass the wreck by night should pay careful attention to the bearings of Bonham Island and Gutzlaff Lights and to the set of the tides, which are very strong in this vicinity.

THE VERNACULAR PRESS ON THE NEW MINISTRY.

Now that the new Cabinet is formed, the vernacular press has much to say on the political situation. The following are extracts from some of the leading papers:—

The *Nichi Nichi Shimbun* declares that the statesmen who were called *Kuromaku*, or men behind the curtain shrinking from open responsibilities, have now formed a Cabinet. It is a Cabinet of the most eminent politicians of the country; and the *Nichi Nichi* is anxious to see by what method they will ameliorate the present situation. National progress since the Restoration has been very remarkable—wonderful—but there is always a fear of the sun sinking rapidly behind the western mountains, whereas the goal to be reached is still very far; meanwhile all kinds of trouble and embarrassment have arisen. In fact the chief achievement of the past 25 years has been nothing more than the centralization of the administration and the breaking down of the barrier between the Government and the people. Whether the prosperity of the nation will be promoted by the working of the constitutional machinery is still vague and uncertain. Moreover, in congratulating the country on the wonderful results accomplished in recent years, many abuses have to be mentioned, and for these the men that planned the Restoration must be held responsible. They are responsible not alone for making the constitutional machinery workable, but also for the administrative errors in which they have been directly concerned. The Yamagata and Matsukata Cabinets fell without accomplishing anything, yet the Popular Party, though it was known to be anxious to assume the reins of Government, did nothing. Not only did it not anticipate the Imperial command to form a Cabinet, but among its leaders there were none who ventured to undertake such a duty. Therefore, though dissatisfied, the nation is compelled to grant Count Ito its commission, and consequently the Cabinet which he has formed ought not to be considered a remnant of Clan Government. "Were we to express our opinion about the Cabinet without reserve, we should be obliged to say that it does not include a man capable of ruling with a light heart by strength of arm, nor do we see any prospect of the speedy appearance of a hero competent to form his own plans and put them into execution with complete indifference to the disorderly conduct of party politicians and to the ill-regulated procedure of the noisy Diet. Count Ito, seeking to organise a coalition Cabinet, has made Count Kuroda Minister of Communications and Count Yamagata Minister of Justice. The public may be inclined to smile at the combination, but its members are not concerned about that. In truth the strength of the new Cabinet lies in its practical object. It is not like Count Kuroda's assemblage of prominent men in 1888, or Count Ito's declaration of a theoretical policy in 1885. It is to be a genuine reformer and constructor of the constitutional government."

The *Choya Shimbun* observes that the public is only too familiar with these constant changes of the Cabinet. Ministries are pulled down by themselves on every occasion. In organizing the present Cabinet Count Ito must have considered

all this. We may, therefore, expect that it will be firm and strong. The most difficult duty of the Government at present is to bring the constitutional machinery into working order, and as Count Ito is the compiler of the Constitution, he is evidently the right man to be Minister President. There will doubtless be some change in the methods of administration, but the general policy will not change. The members of the new Cabinet formerly worked in the cause of that policy while in office, and during their retirement they assisted and advised their successors. It is certain that they will not alter the general policy. Such rumours as that Count Ito is willing to accede to the desires of the Popular Party in the matter of amending the Three Regulations, reducing the land-tax and so forth, are entirely without foundation. The new Cabinet must have a very extensive programme. Its attitude towards the Diet is only a small part of that programme. It must have a policy with regard to foreign intercourse, with regard to the Eastern Question, with regard to the Korean Question, with regard to the Emigration scheme, with regard to Hokkaido, and so forth. The present Cabinet consists of first-class statesmen. Hitherto when second or third class statesmen formed a Cabinet, they could always fall back on their superiors. But there is nothing behind the new Cabinet. If it fails, totally new elements must be introduced into the Government.

The *Mainichi* says that the nature of the discussion which took place at the various meetings of the Camera statesmen is unknown, but it is said that there was a collision between Count Ito and Yamagata, the former desiring to establish a civil Cabinet, and the latter a military Cabinet, and that Count Inouye acted as mediator. The result is that all three are in the same Cabinet now. Count Ito is not the man to accept such a responsible post unless his opinions were accepted by his colleagues. Therefore it is safe to conclude that the civil party obtained the victory. Count Ito is one of the most competent men in the empire. His ability as a Minister of State in the days of absolutism is well-known. But he now appears for the first time as Minister President under a constitutional government. The *Mainichi* sincerely hopes that he will publish his policy, and show the people the order of the improvements he contemplates. Such is the duty of the constructor of a new Cabinet under a constitutional régime.

The *Hochi Shimbun* observes that it was Count Ito who reformed the Organization of the Government in 1885, a most necessary measure at the time. He was astute enough to detect the accumulated abuses of the Administration, but unfortunately he had not the courage to put his reforms into practice. Consequently the first and second sessions of the Diet were consumed in disputes about Administrative Expenditure, and the session after the dissolution led to the abuse of Official Interference. All these quarrels arose from defective administrative management. Count Ito was unable to carry out thorough reforms when he reconstructed the organization seven years ago. Unless he makes a complete change this time, he cannot avoid becoming once more the object of popular attack.

The *Kokumin Shimbun* congratulates the new Cabinet, but promises that if Count Ito fails to establish the fact of constitutional government it will spare no pains to attack him. After the resignation of Count Matsukata two parties—civil and military—fought for power and both have now entered the same Cabinet. One of the most important positions in the Cabinet, perhaps even more important than that of Minister President of State, is the position of Minister for Home Affairs, which post is filled by Count Inouye, known as the backbone of the civil party. By this fact alone the civil party may be said to be victorious, for the National Unionists recommended Count Yamagata, and the local governors who interfered in the elections attempted to prevent Count Inouye's appointment to the portfolio, but their efforts were

useless. The *Kokumin* shows the victory of the Civil Party by the following table:—

Count Ito, Count Kuroda, Count Inouye, Count Goto, Mr. Matsuo, Mr. Kono, Count Yamagata and Count Oyama	Pure Civil Party.
Count Okai and Mr. Watanabe	Incline to the Civil Party.
Viscount Nire	Inclines to the Military.

It is also praised the ability of Count Inouye in inducing Count Yamagata to accept the portfolio of Justice, for the question relating to the postponement of the Codes is by no means easy to settle. Count Ito is in favour of postponing them, but he does not clearly see how to do it, so he has imposed the responsibility on Count Yamagata. The *Kokumin* sincerely hopes, first, that Count Ito will announce his policy; secondly that changes will be effected in the local governors and superintendents of police who interfered in the last general election; and thirdly that all the accumulated administrative abuses will be reformed, so as to bring about the reality of a perfect constitutional government.

The *Fiji Shimpō* remarks that Count Ito's assumption of the office of Minister President of State is natural not only on account of his ability, but also in respect of the proper order of succession. Count Ito formed a new Cabinet in 1885, and was followed by Count Kuroda, Count Yamagata, and Count Matsukata in order. Therefore unless a new minister be chosen, the post must revert to Count Ito. Count Inouye's return to office as Minister for Home Affairs was little expected; but since the post is a difficult one the selection is good, especially as Mr. Mutsu becomes Minister for Foreign Affairs. Both Count Oyama and Viscount Nire's appointments are also suitable. Had they consented to serve sooner the Matsukata Cabinet might have remained. The entrance of Count Yamagata and Count Kuroda shows that the new Cabinet is strong. The *Fiji Shimpō* only hopes there will be no disagreement between the two last Ministers and the other members of the Cabinet. Mr. Watanabe's appointment seems rather out of place, for everybody is anxious to obtain his position. But that position is like an only daughter with two suitors. Either is good enough for her, but in order to avoid subsequent quarrels she is married to a third. The circumstance plainly shows that the old abuse of *Fojitsu* has not yet become extinct.

The *Nippon* writes two short leading articles, one about Count Matsukata and the other about Count Ito, his successor. In the former, it says that Count Matsukata was Minister of Finance for over 10 years; that he managed the nation's financial affairs well, and that his good qualities are unlimited experience in administrative business and skill in settling differences and averting collisions between the Satsuma and Choshu statesmen. On his retirement the people of the country ought to express their gratitude for his long service. Another most praiseworthy feature of Count Matsukata's retirement, concludes the *Nippon*, is that, whereas retiring Ministers, as a rule, seek some position which will bring them a high salary, he, on the contrary, has refused every offer. So, in thanking him for his service, his sincerity and purity ought also to be remembered. In the second article it says that Japanese society has been dislocated, and that the nation itself, though it looks orderly, is quite unsettled. But the situation can be saved. Count Ito is responsible for it. He ought to be consoled with rather than congratulated on his appointment, for he must now fight his conclusive battle. It is said that there are only two able statesmen in the Empire, Count Ito and Count Okuma; and that the latter is waiting for the disappearance of the former. Count Ito's responsibility must be very great indeed. The *Nippon* promises to write the history of Count Ito's career, and will then set forth its hopes and its conclusions.

THE TANKO RAILWAY COMPANY'S SHARES.

THE shares of the Tanko Railway Company seem to be an object of considerable speculation as present. Until quite recently they were quoted persistently below par (50 *yen*), but

suddenly they began to rise, and the quotations now are 56.30 *yen* for delivery in August, 56.20 *yen* for delivery in September, and 55.80 *yen* for delivery in October. This happy change in the public estimate is said to be due almost entirely to the action of the Fifteenth National Bank, which, last month, began to purchase the shares in considerable quantity, with the immediate result of a marked appreciation in their price, for in Japan almost all kinds of securities seem to be in a delicate condition, susceptible to influences which ought not to affect them materially. The officers of the Bank were not of one mind as to the prudence of the investment, and four managers were accordingly despatched to Hokkaido to inspect the state of affairs. Their reports proving satisfactory, Marquis Ikeda, President of the Bank, and Marquis Mori, together with other principal shareholders, approved of purchasing the shares. The Bank therefore acquired, at 48 *yen*, six thousand shares which had been deposited with it as security by the Tanaka Bank. Thenceforth the shares rose steadily, and were soon quoted above par. The opposing party in the Bank, however, were not yet satisfied. They sent one of their number, Mr. Matsuura, to conduct an independent investigation in Hokkaido, but his report only confirmed the favourable accounts previously obtained. Moreover, in order to place the matter beyond all doubt, an entirely independent person has been despatched by the President and Directors.

Immediately after the announcement of the new Cabinet, the Fifteenth National Bank raised the figure at which it was prepared to accept Tanko shares as security, and the following morning the market quotation showed an appreciation of 60 *sen*, which became a *yen* as the day advanced. It is supposed that Count Kuroda's appointment to the post of Minister of State for Communications had something to do with this appreciation, as the Railway Bureau being now attached to his Department, he will be able to give effect to the interest he has always displayed in the development of Hokkaido. Another point is that Mr. Watanabe, ex-Governor of Hokkaido and now Vice-Minister of State for Home Affairs, who, rightly or wrongly, is considered hostile to the Tanko Company, will probably be removed to some other post. Altogether the Company's affairs look much more promising than they have done for a long time.

THE VICE-MINISTER OF FINANCE.

THE new Vice-Minister of Finance is to be Mr. Tajiri Inajiro, hitherto Director of the Revenue Bureau. He is a Satsuma man, and was for some time Professor of Political Economy in the Imperial University. Mr. Tajiri has always been regarded as an official of great ability, and he possesses a faculty which is of no small value in these parliamentary days, eloquence and fluency. As Government delegate in the House of Representatives he will have ample opportunity to utilize this quality. We suspect that the capacity to make a good speech in the House will soon come to be regarded as a strong recommendation in a rising official. The usefulness and influence of a Government Delegate would be materially increased if he possessed the happy knack of presenting the case for the Administration in an attractive and convincing light. The Government labours under some disadvantage in this respect. While the members of the Opposition have for years been practising the art of oratory, the members of the Administration have been sitting silent. The resulting difference makes itself very evident in the Diet, and to correct the disparity will surely become an official object sooner or later.

POLITICAL MANIA.

A CERTAIN official, whose words are reported by the Tokyo News Agency, expresses the opinion that few nations become so excited about politics as the Japanese. The number of sanguinary outrages that have been committed since the Restoration in consequence of this fever is re-

markable. On January 5th, 1870, Privy Councillor Yokoi Heitaro was waylaid by Kashima Matanojo and others, and killed. On the 4th of September of the same year, Mr. Omura Nagatoshi, Vice-Minister of War, was assassinated in Kyoto by Sekijima Kinjuro and others. On the 9th of January, 1871, Privy Councillor Hirosawa Naotomi was killed in his house by rebels. On the 14th of January, 1874, the Minister of the Right, Prince Iwakura, was attacked and wounded at Akasaka, Tokyo, by Takeichi Kumakichi and others. On the 14th of May, 1878, Shimada Ichiro and a band of assailants attacked the Minister of Home Affairs, Mr. Okubo Toshimichi, on his way to the Palace, and assassinated him at Kioizaka in the Kojimachi District of Tokyo. After this there was an interval of comparative quiet which lasted until the year of the promulgation of the Constitution (1889) when, on the 11th of February, Nishino Buntaro stabbed Viscount Mori to death in the official residence of the Minister of State for Education, Nagatacho. Then followed Kurushima Tsunekichi's attempt to blow up Count Okuma, Minister of State for Foreign Affairs, with a bomb, before the gate of the Foreign Office, on the 18th of October 1889; and finally we have the recent case of sending bombs to Count Okuma and Mr. Kono. There must also be added to the list the attempt upon the life of Mr. Itagaki (now Count Itagaki), twelve years ago, as well as the various attacks made by *soshi* upon politicians. With a Diet in front ready to rend them metaphorically, and these assassins behind, seeking an opportunity to cut short their careers, prominent Japanese statesmen have certainly a rough time.

CONSOLIDATED BONDS.

THERE has been some commotion of late in the Japanese financial world with reference to an issue of Consols. In July the Minister of Finance announced that three million *yen* worth of Consols (*sairi kosaisho*) would be issued, and called for applications. These securities are always in favour, and just at present there appears to be a good deal of money seeking investment, for the Sanyo Railway Company have been able to obtain an increase of three million to their capital without difficulty. Before many days the applications for the three million *yen* worth of Consols amounted to over five million *yen*, and the Finance Minister, influenced perhaps by this fact, perhaps by other considerations, announced in August that the issue should be increased by one million *yen*. Thereat considerable clamour was raised. People affirmed, with evidence justice, that in operations of such importance there ought to be no change of programme: that the Finance Minister should make up his mind from the outset, and that it was not fair to intending investors to be treated in such a manner. We cannot see that there is any valid excuse for this procedure on the part of the Finance Department. If it were found convenient to make an extra issue of consols, additional tenders ought certainly to have been invited from the public. To announce an issue of three millions only, and then, after applications have been sent in on that basis, to increase the issue to four millions without calling for fresh applications, is assuredly a loose method of conducting finance.

These Consolidated Bonds are one of the features of Count Matsukata's very successful financial policy. When he received the portfolio of Finance in 1881, Seven-per-cent Government securities could be obtained in the open market at a price from 25 to 30 per cent. below their face value, and they consequently offered such an excellent form of investment that capital was inconveniently diverted from the routes of manufacture and commerce. Moreover, these Public Loan Bonds were more or less influenced by speculators, and responded, at a distance, to the variations in the hard-money value of *kinsatsu*. Considering their nature—securities issued by the State in connection with the commutation of the feudal chiefs' pensions—they ought to have stood much

higher in the market and been far more independent of the vicissitudes attending other kinds of security. Count Matsukata, therefore, determined to shape his policy so as to raise their price, first and chiefly because they would then cease to attract capitalists so strongly, and secondly, because the national credit was not truly reflected by them in their then condition. He succeeded so well that it soon became possible to obtain large sums for purposes of railway construction, and in 1885 the price of public securities had appreciated so much, and the general rate of interest had fallen so low, that he saw his way to commence the conversion of the national debt. The smallest interest then paid on Government Bonds was 6 per cent. Many carried 7, and some 8, per cent. It was determined to issue 5 per-cent. Consols in lieu of these securities. The operation began in October, 1886, with an issue of 10 million *yen* worth of Consols. These were taken up at once, and in February, 1889, the state of the market being judged favourable, an issue of five millions was made. The total amount issued, including the last installment, is 30 million *yen*—

October, 1886	10 millions.
February, 1889	5 millions.
August, 1891	5 millions.
April, 1892	6 millions.
July and August, 1892	4 millions.

With regard to the quotations of these securities in the market, the following figures are interesting:—

DATE.	PRICE OF 100 YEN CONSOL. YEN.
April, 1887	104.00
April, 1888	101.75
April, 1889	102.00
April, 1890	100.90
April, 1891	99.25
May, 1891	100.25
June, 1891	99.25
July, 1891	101.70
August, 1891	100.95
September, 1891	100.85
October, 1891	101.55
November, 1891	102.20
December, 1891	100.20
January, 1892	100.80
February, 1892	101.30
March, 1892	102.35
April, 1892	102.30
May, 1892	102.70
June, 1892	101.25
July, 1892	101.70
August, 1892	101.70

The interest on the bonds being paid twice annually—in June and December—their market price increases towards the months of payment, but, for the rest, they are wonderfully free from fluctuations, and for that reason, as well as in respect of the bi-annual payment of interest and the fact that the holders' name is registered, so that the safety of the bonds is always assured, they offer perhaps one of the best opportunities for investment in the East.

APPOINTMENTS IN THE FINANCE DEPARTMENT.

THE position occupied by Mr. Tajiri, prior to his elevation to the rank of Vice-Minister of State for Finance, namely, Director of the Revenue Bureau, is regarded as the most important post in the Department after those of the Minister and Vice-Minister. It has been given to Mr. Kato Takaaki, hitherto Director of the Bureau of Inspection, Mr. Susaki Toshiyuki succeeded to the Directorship of the Bureau of Inspection, and being succeeded in his former post—Director of the Bureau of Deposits—by Mr. Hyoto Masanori, a Counsellor of the Department.

The promotion of Messrs. Tajiri and Kato must be very gratifying to Count Okuma. Both of these gentlemen are protégés of the great political leader. Mr. Tajiri is married to the Count's niece, and when the Count was Minister of Finance he recognised the young official's ability and promoted him to posts of trust. Mr. Kato is well known to foreigners. He acted as Count Okuma's Private Secretary when the former was Minister of State for Foreign Affairs in 1888 and 1889, and upon all with whom he came in contact he produced the

impression of remarkable ability, as well as integrity and tenacity of purpose. If Count Okuma himself had succeeded Count Matsukata as Minister of Finance, his choice of a Vice-Minister and Director of the Bureau of Revenue would doubtless have fallen upon precisely these two gentlemen, and there can be no doubt that it would have been a wise choice in the interests of the country.

COUNT INOUE.

NUMEROUS, as may well be imagined, are the comments of the vernacular press on the new Cabinet. The country in general may not be looking for great things, but the Opposition seem to be bent upon raising hopes which can scarcely be satisfied. Next to open hostility the most unfavourable reception that could be given to an incoming Ministry is an extremely sanguine one. It is not within the bounds of reasonable probability that Count Ito and his colleagues should accomplish everything expected of them, and by so much as their achievements fall short of the scintillating expectations roused by their opponents, by just so much will food for subsequent discontent be furnished. In the Home Department, for example, a great deal is demanded. The Opposition Journals apparently anticipate, or profess to anticipate, that all the Governors and local or police officials who are accused of having unduly interfered in the last elections will be removed from office. The *Mainichi Shimbun*, a *Kaishinto* organ, evidently influenced by this expectation, writes of Count Inouye, the new Minister of State for Home Affairs in a strongly eulogistic strain. Count Goto and Viscount Takashima, it says—coupling the names of two statesmen who were never supposed to work in unison—led the Matsukata Cabinet, and the resignation of the former killed the Cabinet. Who will be the leaders in the Ito Cabinet? Count Goto and Mr. Kono are doubtless able men, but their influence is small, and Mr. Mutsu, whose astuteness and capacity are of the highest order, can scarcely play a strong rôle under Count Ito. The only possible leader is Count Inouye. He has clan support; he is bold and resolute; he is one of the statesmen that made modern Japan; he has a vast number of followers among officials. No one is better suited to fill the post of Minister of State for Home Affairs at this juncture, for he has preeminently the strength and the ability to remove accumulated abuses. His history, too, shows that even Count Ito does not venture to gainsay him, and moreover he and Count Ito have always worked together and are now said to entertain very similar opinions. If with his talents, position, and influence Count Inouye fails to introduce much needed reforms, the nation will not regard him as the Inouye Kaoru of former times. "The first step he should take is to reconstitute the local administration, removing Governors and the police officials who hold office merely because of Satsuma patronage. It is a difficult task, but nothing is beyond Count Inouye's courage and competence."

The *Nippon* has a leading article much in the same strain. It declares that Count Inouye is the most suitable Home Minister that could have been found, for no other is so competent to correct existing abuses. He has had many nicknames given to him, and they are not all complimentary, but his character is by no means such as some people have painted it. If mistakes were formerly laid at his door, they have been entirely obliterated by the much greater mistakes of his successors during the three years of his abstinence from office. The nation receives with favour the news of his appointment. During his retirement he thoroughly studied the condition of the people, and if he still possesses his former ability and resolution, he is precisely the man for the situation. Almost every administrative affair is more or less connected with the Home Office, and whatever example Count Inouye sets will be followed by the Government generally. "The one object of the Home Department's policy hitherto has been to defeat political

Original from

parties. But Count Inouye is not the man to secretly instruct local authorities to fight against political opponents. He is not the man to scatter detectives and spies throughout the empire and to make the Home Office the centre of political intrigue. The new Cabinet is said to be unfettered: it has been formed simply in obedience to the Imperial command. Therefore Count Inouye need not hesitate to change any policy of which he does not approve. The people of the country have long been weary of police government."

Even a supporter of the Government like the *Choya Shimbun* adds its voice to this chorus of sanguine expectations. The *Choya's* particular theme is foreign policy. It says that the Cabinet has to settle two great problems without any delay or hesitation, namely, treaty revision and the Korean question. Hitherto no satisfactory results have been attained owing to want of united action. One statesman might toil hard, but others looked on with indifference; or, if some error was committed, the Ministers or statesmen not directly concerned, instead of assisting to correct it, attacked its perpetrators in such a manner that the nearly completed negotiation fell to the ground. But now for the first time all the empire's best statesmen are in the Cabinet. If they cooperate heartily they can settle the most difficult questions. If, on the other hand, they shrink from the task, the nation will lose all confidence in them, and Count Ito's fame will be a thing of the past. It was Count Ito and Count Inouye who established Korea's independence and introduced her to the civilized world. Ten years ago they conceived and accomplished these great things. Now they are together in power once more and the country looks to them to repeat and consummate their exploits. If their Cabinet be content simply to fight against the Diet in pursuance of a time-serving policy, leaving tasks of real difficulty and national importance unassayed, the Ito Cabinet will forfeit all title to esteem both at home and abroad.

Thus by friends and enemies alike an extensive programme is mapped out for the new Cabinet. It will be hard to satisfy these great expectations. One thing, they show, however; namely, that the country is impatient of seeing the attention of its administrators absorbed by political squabbles. No wonder.

JAPANESE PAPER.

We are not surprised to learn that manufacturers of Japanese paper begin to regard their industry with strong misgivings. Foreign paper, imported or made in Japan, has come to discharge a great part of the duty that fell to the Japanese article in former times, and, moreover, a marked increase in the cultivation of the paper mulberry (*Kosu*) and the *Edgeworthia papyrifera* (*Mitsumata*), which constitute the chief material for paper manufacture, has led to a corresponding increase of the manufactured product, so that the market is overstocked, and prices have become quite unremunerative. So, at least, says the *Kokkai*, but we should be disposed to conclude that too extensive cultivation of the *Kosu* and the *Mitsumata* is not a cause, but a feature, of the over-production into which their inexperience of industrial enterprise is apt to betray the Japanese. Certainly they have lost their heads in the matter of *yoshi*—foreign-style paper—the early profits derived from which, when a moderate number of mills only were in operation, induced such a rush to the trade that the business is altogether overdone at present, and manufacturers must find their balance-sheets exceedingly unsatisfactory. Very likely the boom in the cotton-spinning industry will develop similar excesses, and several companies will have to go to the wall before survivors can count on a sound business. The *Kokkai* says no dealer is disposed to lay in a stock of Japanese paper at present. All are concerned simply to clear off their present stocks. Hence the manufacturers are driven to choose between one of two alternatives—either to reduce the

number of factories or to find a new market for their products abroad. We do not see that the latter offers a very hopeful prospect, but, at the same time, it has to be remembered that some Japanese papers find no counterparts in the West. The variety called *Hosho*, for example, which contributed so much to the successful production of the beautiful and unique Japanese chromo-xylographs of former days, is without peer in the important fact that it does not require to be moistened in order to take up the colours in printing, and that, consequently, the lines of the drawing come out far more clearly than they do in the case of Western paper, the necessary moistening of which causes irregular expansion and contraction. *Hosho*, which, in addition to its natural qualities, possesses the advantage of being seasoned by age, is an ideal paper for engravers in Europe and America, and is eagerly sought after by artists visiting this country, but of course the supply is exceedingly small. It is conceivable, however, that a fairly remunerative market might be found abroad for various varieties of Japanese paper if the methods of manufacture were modified to suit the requirements of foreign consumption. The only kind of Japanese paper that shows at present any tendency to attract increasing custom in the West is *Gampshi*—made from the *Gampi* plant (*Wickstramia canescens*)—and even of this the export in 1891 did not exceed 52,000 *yen*.

THE CONSPIRATOR MASON.

SHANGHAI has seen the last of the crack-brained conspirator, Mason. The *North China Daily News* of August 4th says:—"Yesterday morning the order for the deportation of Mason, who has recently completed the term of imprisonment to which he was sentenced at the Supreme Court in October last, was carried out. A good deal of secrecy has marked the latter proceedings in the case, and the authorities were evidently anxious that Mason's departure should be effected without attracting public attention. Accordingly, some time after three o'clock yesterday morning, some police officials visited the gaol with the necessary authority for Mason to be handed over to them. Those at the Gaol had got everything in readiness, and Mason was soon conducted down to the *Glenfruin*, which was the vessel selected for his passage home. Mason wore a blue suit, and seemed to take his departure with indifference. He will be accompanied to England by two police officers."

TEA-HOUSES AT THE WORLD'S FAIR.

THERE is a project, says the *Kokkai*, to open some Japanese tea-houses at the World's Fair in Chicago. Certain members of the Merchants' Association of Tokyo have the matter in hand. They have borrowed eighteen thousand *yen* on their personal security from Mr. Otani Kahei of Yokohama, and to this they propose to add seven thousand of their own and two thousand obtained from the Government, making twenty-seven thousand in all. On the 4th instant, Messrs. Aizawa, Date, Kunio, and Fukano, members of the Association, applied to the Department of Agriculture and Commerce for permission, and if it is granted, commissioners will be despatched this month to Chicago to make preparations. We wonder what is meant exactly by "tea-houses." Are they to be the orthodox wooden buildings, duly matted, provided with miniature gardens, and furnished with the smiling "musume"?

THE VICE-MINISTERS.

THE *Mainichi Shimbun* makes a prediction about the Vice-Ministers of State in the new Cabinet. Our contemporary's idea is as follows:—

Communications.....	Mr. Komaki Shogyo.
Home Affairs.....	Mr. Furusawa Shigeru or Mr. Saito Shuichiro.
Finance.....	Mr. Tajiri Inajiro.
Education.....	Mr. Kawazu Sukeyuki or Mr. Watanabe Chikaki.
Commerce and Agriculture.....	Mr. Kawazu Sukeyuki or Mr. Furusawa Shigeru.
Justice.....	Mr. Kyowa Keigo.
Foreign Affairs.....	No change.
Navy.....	No change.
Army.....	Mr. Kurokawa Teuki or Mr. Kodama Gentaro.

The continuance of Mr. Hayashi as Vice-Minister of Foreign Affairs would be welcomed

heartily by the Foreign Corps Diplomatique, with whom he is universally popular, and the appointment of Mr. Saito Shuichiro to an important post would also be good news, for every one that has had the pleasure of being brought into contact with Mr. Saito recognises his great business capacity and tact.

THE HOME OFFICE.

THE News Agency reports that Mr. Kono, the retiring Minister of State for Home Affairs, and Count Inouye, the new Minister, proceeded to the Department together on the 9th instant, and having assembled the Heads of Bureaux and other chief officials, addressed them briefly. Mr. Kono spoke first. He confined himself to saying that if his brief tenure of office—less than 30 days—had not been marked by any mistake, the fact was due to the zeal and ability of those whom he addressed, and he congratulated the staff of the Department upon having obtained for their future Minister one of the most experienced and renowned statesmen in Japan. Count Inouye was even briefer. He merely announced his assumption of the duties of Minister, and said that he intended to carry on his functions with the aid and advice of the Department.

THE OPPOSITION AND THE NEW CABINET.

THE *Nippon* publishes an interesting article about the probable attitude of the Opposition towards the new Cabinet. The facts are said to be obtained from an influential member of the so-called "Popular Party." He alleges that for years back the *Kaishin-to* have regarded Count Ito as their greatest enemy, and now that the latter has assumed the control of the Administration, they will spare no pains to attack him. Count Okuma is reported to have said that he was only waiting for the appearance of Count Ito to put forth his full strength in opposition and that his Party will fight more stoutly than ever in the next session of the Diet. On the other hand, Count Itagaki has no special cause of unfriendliness towards Count Ito. He is absent now from Tokyo, so that his exact opinions cannot be ascertained, but being a thoroughly just man, he may not approve of the *Kaishin-to's* blind attack on the Cabinet. Mr. Hoshi, President of the House of Representatives, is an intimate friend of Mr. Musu, the new Minister of State for Foreign Affairs, and will doubtless support the Government so long as the latter does not introduce any extreme measures. Moreover, his present views are understood to be that questions of foreign policy press more urgently for solution than questions of home policy, and he is prepared to support any Cabinet that deals boldly and thoroughly with the former. It is not at all likely, therefore, that he will join the *Kaishin-to's* destructive campaign. Further, Mr. Kono Hironaka is reported to be no longer the Kono of former days. He says that the time for attacking the Government has passed, and that Count Ito, being the compiler of the Constitution, is not likely to pursue an objectionable policy, but will surely shape his measures in accordance with constitutional principles. Hence he considers that unvarying hostility need no longer be resorted to by the Opposition: they may determine their attitude towards each question according to its merits. A number of the influential members of the *Fiyu-to* are said to be in favour of Mr. Kono's views, so that their union with the *Kaishin-to* is not likely to last long. The *Kaishin-to*, however, adhere to their old contention that until clan government is destroyed no genuine improvement of domestic administration is possible, and that until internal affairs are duly ordered, it is idle to think seriously of foreign affairs. This is precisely the opposite of the view attributed to the *Fiyu-to*. Hence, according to present appearances, the coalition of parties forming the Opposition will probably be dissolved next session.

More significant even than the above is an article in the *Mainichi Shimbun*, the chief organ of the *Kaishin-to*. There we read—of course as the opinion of "a certain old man"—that the

Original from

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

Government will have no difficulty in dealing with the Opposition next session, for the latter must feel that their position *vis-à-vis* the former is like that of "sheep before a fierce tiger." Since Mr. Mutsu has become Minister of State for Foreign Affairs, all the Kishu members well support the Government, and so will Mr. Arai Shogo and his followers, who have left the *Fiyu-to*. Further, since Count Goto has become Minister of State for Agriculture and Commerce, several of the *Fiyu-to* members who are deeply interested in mining affairs, will doubtless vote for the Government, and two or three *Kaishin-to* men also are pretty sure to turn their backs on their Party. Thus the Government will be able to obtain a victory in the House without much difficulty. Strange to say, the *Mainichi*, while reproducing the above, makes no attempt to contradict or controvert it, but confines itself simply to saying that it awaits the result anxiously.

A NOVEL LAW CASE.

A LAW case of rare character and considerable interest is reported from Koga. It has resulted in the attachment of the Koga Town Office and other Government property by the 120th National Bank. The following is the history of the affair:—In 1883 a large school was erected by the inhabitants of Koga at an expense of 4,000 *yen*. The sum of 3,000 *yen* was raised at the time, and the remaining 1,000 *yen* was borrowed from the 120th National Bank, in the name of the Mayor and two other town officials. The bank pressed for payment in 1887, but nothing resulted. The case was allowed to stand over until a few months ago, when the bank was informed that the new mayor and his fellow-townsmen were of opinion that they were not responsible for debts contracted prior to the inauguration of the local government system. This point the Bank determined to test. The case was tried in the Mito District Court. The verdict given was that the new Mayor was in his official capacity responsible for 600 *yen*, and that the balance must be recovered from the ex-officials—a verdict which we find it impossible to explain. The Bank appealed. The Tokyo Court of Appeal decided that the present Mayor is responsible for the whole of the debt. The Mayor informed the bank that he was unable to discharge the debt—that there was no fund at his disposal to meet it. Hence the Bank applied for an order to attach the town office and all that it contains. Even the boxes which contain money paid as taxes have not been spared. The proceeding certainly calls for more explanation than is furnished by the vernacular papers. To ordinary people it would seem contrary to the proper order of things that public property should be attached for a debt of the kind contracted by the Koga officials. There must be some regulations bearing on the incurring of pecuniary liabilities by local officials which are capable of being applied to the present case.

THE NEW CABINET AND THE CODES.

THE Bill passed by the Diet for postponing the operation of the Codes, writes the *Nichi Nichi Shimbun*, was placed in the hands of Count Matsukata, and has passed, on his resignation, to the new Cabinet. What they will do with it is not yet known, but if the opinions of some of the principal members be examined, the destiny of the Bill may be ascertained. Count Ito is reported to have recently declared that the Codes are by no means perfect as laws, and that they require much alteration. Were there, he said, any urgent necessity to put them into immediate operation they might be enforced. But the chief argument advanced in favour of immediate operation is that they are needed for concluding Treaty Revision, and that in the interests of that problem they ought to be enforced, all necessary amendments being made afterwards. It is clear, however, that Treaty Revision cannot be concluded simply by putting the Codes into operation. Hence the urgency of the step from that point of view is not apparent, and the best course is to amend the Codes without delay. Such are said to have been the words of the

new Minister President; so that he is evidently one of those who favour postponement. Count Yamagata, the new Minister for Justice, was among the countersignatories of the Ordinance promulgating the Codes. Hence he has always been against their postponement. But if he discovers that to enforce them would not settle the long-delayed Treaty Revision, and that his other colleagues are in favour of postponement, he will agree. Facts are stronger than arguments, and he was the man who proposed the postponement of the Commercial Code. Though the opinions of the other Ministers have not yet been published, Count Inouye is certainly in favour of postponement. In view of all this, and of the resignation of Count Oki and Viscount Enomoto, as well as the absence of Count Yamada from the Cabinet, the policy contemplated on this point is clear enough.

Elsewhere, referring to our eulogy of Viscount Enomoto, who carries with him into his retirement the respect and good wishes of all his foreign friends and acquaintances, the *Nichi Nichi*, while applauding his resolute advocacy of the immediate operation of the Codes, says that it always differed from him in this respect. In truth everything indicates that the Codes are doomed. We derive no comfort whatever from our contemporary's alleged uncertainty as to their fate. They will be postponed. The majority in the Diet will be satisfied. But will the country benefit? Impossible to believe anything of the kind. The country, standing in urgent need of a good, comprehensive body of laws adapted to modern requirements, is condemned to do without anything of the kind nominally for three years. Nominally, we say, because we cannot hope that this postponement will be so brief. The character of the proposed revision will have to be judged, not by a committee of experts, but by a multitude of party politicians. Can such judges be brought to agree? The prospect would be hopeless elsewhere. But in Japan the unexpected often happens. Perhaps our misgivings may prove unfortunate. It is a slender hope, however.

THE ELECTIONS IN GREAT BRITAIN.

It is worth noticing that, after all, we in Japan were abreast of London in our knowledge, or rather in our forecast, of the result of the general elections in Great Britain. In London, on July 16th, the following was the prophecy, as reported by telegraph in the columns of the *New York Herald*:—"The result of the elections returns yesterday makes it probable that Mr. Gladstone's majority in the House will be about fifty." When forming this estimate, the London folks had before them the returns from 622 constituencies: only 48 remained to be decided. But we, in Yokohama, writing on July 17th, with the returns of only 532 constituencies before us, said:—

Of the remaining 138 constituencies, it may be anticipated that Ireland will give the Gladstonians 37, Scotland will give 44, and England and Wales will give 15. Thus the final result would be:

Conservatives and Liberal Unionists	350
Gladstonians and Irish Nationalists	360

* * * Hence the picturesque old man—and we strongly suspect that the romance connected with his age and courageous perseverance has had more influence upon many voters than any political reasoning—will find himself at the head of a party out-numbering its opponents by 40 or 50.

Thus, on July 17th, we were able, with less complete data, to arrive at a more accurate conclusion than London had reached on the preceding day.

* * * With regard to the perplexity into which many people seem to have been thrown by the telegrams of the past few days, we may say that the situation seems quite clear to us. There has as yet been no change of Government. Reuter would have told us if there had, and the Foreign Office in Tokyo would have been informed at least a day earlier than that on which Reuter's telegram could reach us. Lord Salisbury has determined to hold on until a division can be taken on the Liberals' want-of-confidence proposal in connection with the Speech from

the Throne. The debate on the Address began last Monday and is probably going on still. A few days more must put us out of our pain. Meanwhile, the question addressed to the future Lord Chancellor in the Upper House about foreign policy, was doubtless in the course of the debate. It was not a question addressed by the "outs" to the "ins," as some have imagined.

THE NEW STAR IN AURIGA.

THE spectroscopic, among its other wonderful achievements, enables astronomers to measure motion in the line of sight. By its aid the approach or departure of a star moving directly towards or directly away from our planet can be ascertained. Hitherto such a star had been absolutely stationary for us. No telescope was powerful enough, nor any measuring instrument delicate enough, to show how the star was behaving. But in the spectrum obtained by the spectroscopic every change in the distance of the object is marked by a change in the wavelength, or pitch as it is scientifically called, of the light. The lines in the spectrum are shifted. They move towards the blue when the object is approaching the observer; towards the red when it is receding from him. It was owing to the spectroscopic that the new star in Auriga, for which, according to Professor Huggins, 1892 is memorable, came to be accurately observed. The star appears to be moving through space with stupendous velocity. Dr. Max Wolf photographed Auriga on December 8th, 1891, with an instrument powerful enough to include all stars to the ninth magnitude. The Nova was not on the plate. Two days later, December 10th, a photograph taken at Cambridge showed it to be already of the fifth magnitude. In 48 hours it had sprung from below the ninth magnitude to the fifth. It did not long remain an object of visible interest. Attaining to a magnitude of four and a half, it fell to the eleventh magnitude by March 24th and to the fifteenth by the beginning of April. What was this extraordinary phenomenon? The conclusion arrived at by Professor Huggins is recorded in the *Fortnightly Review*. After describing the spectroscopic appearances of bright lines and dark shadows, he says:—"The secret was revealed; we had a magnificent example on a great scale, of motions in the line of sight. Two mighty masses of hydrogen fleeing from each other, the hotter one, which emitted the bright lines, going from us, while the cooler one, producing the dark shadows by absorption, approached us with a relative velocity as great as 530 miles a second. Now, during the whole time, some seven weeks, that the spectrum was under observation, this relative velocity was maintained materially unaltered. How are we to account for the appearance and doings of this new star, or rather stars? A reasonable explanation may perhaps be found, if we venture to assume, though with some hesitation, as the subject is very obscure, two gaseous atmospheres, moving away from each other, after a near approach, in parabolic or hyperbolic orbits. Decisive information from the motions of the two bodies at the critical time of the outburst are wanting, but analogy from the variable stars of long period would suggest the view that the near approach of the two bodies may have been of the nature of a periodical disturbance arising at long intervals in a complex system of bodies. The phenomena of the new star scarcely permit us to suppose even a partial collision, though if the bodies were diffused enough, or the approach close enough, there may have been possibly some mutual interpenetration and mingling of the rare gases near their boundaries."

TO SHIP MASTERS.

THE *Gaceta de Manila* publishes a description of a new shoal discovered by the Spanish gunboat *Callao* on the 8th of May, 1892, in the Araceli bay (S.E. coast of the island of Dumarang). Its bearings are: Raquit Island, N. 60 E.; Quimitad Island, S. 82 E.; Mantuary Island, S. 36 E.; Langoy Island, S. 2 E. The point where these four lines converge may be taken as the approximate locality of the shoal. It is named Concepcion Shoal, and is more or less of elliptic

shape, extending from N. to S. some 500 or 600 metres. It is almost entirely formed of mother-o'-pearl shells with a few patches of sand; the centre or the most elevated portion is composed of mother-o'-pearl shells and rocks. Any attempt at crossing it is attended with considerable danger even to vessels of light draught.

The following is the result, so far, of the hydrographic survey, instituted by the Spanish gunboat *Mariuelo*, of the Argyll shoal (not marked in any chart) on the S.E. coast of the island of Paragus. The *Comercio* of Manila says that the gunboat *Mariuelo* having been commissioned to ascertain the exact position of the shoal on which the British ship *Argyll* was recently lost, records in her log that she traversed a large number of shoals in that vicinity between two points; one from the S. of the islet Pirata and the other from the islet Ursula. She marked approximately the site where the hull of the *Argyll* lies as lat. 8° 17' N., long. 123° 46' E., with islet Ursula bearing N. 70° W. about five miles. The exploration of this portion of the Jolo Sea not being yet complete, it is recommended that its navigation should be made with great precautions. Due notice will be given when the survey is completed.

THE TEMPERATURE.

THE exceptional coolness of the present summer has caused some uneasiness about the prospects of the rice-crop. The following figures, compiled at the Central Observatory, show the comparative temperatures of each day during the *Doyo* (mid-summer) for the past four seasons:—

Doyo Days.	1889.	1890.	1891.	1892.
Max. Min. Max. Min. Max. Min. Max. Min.				
July 1st	29.5° 23.5°	31.5° 25.5°	30.5° 25°	33.5° 28°
July 2nd	27.5° 21.5°	29.5° 23.5°	28.5° 22.5°	30.5° 24.5°
July 3rd	25.5° 19.5°	27.5° 21.5°	26.5° 20.5°	28.5° 22.5°
July 4th	23.5° 17.5°	25.5° 19.5°	24.5° 18.5°	26.5° 20.5°

July 26th	-20.5° -26.5°	-18.5° -24.5°	-19.5° -25.5°	-17.5° -23.5°
July 27th	-22.5° -28.5°	-20.5° -26.5°	-21.5° -27.5°	-19.5° -25.5°
July 28th	-24.5° -30.5°	-22.5° -28.5°	-23.5° -29.5°	-21.5° -27.5°
July 29th	-26.5° -32.5°	-24.5° -30.5°	-25.5° -31.5°	-23.5° -29.5°
July 30th	-28.5° -34.5°	-26.5° -32.5°	-27.5° -33.5°	-25.5° -31.5°
July 31st	-30.5° -36.5°	-28.5° -34.5°	-29.5° -35.5°	-27.5° -33.5°
August 1st	-32.5° -38.5°	-30.5° -36.5°	-31.5° -37.5°	-29.5° -35.5°
August 2nd	-34.5° -40.5°	-32.5° -38.5°	-33.5° -39.5°	-31.5° -37.5°
August 3rd	-36.5° -42.5°	-34.5° -40.5°	-35.5° -41.5°	-33.5° -39.5°
August 4th	-38.5° -44.5°	-36.5° -42.5°	-37.5° -43.5°	-35.5° -41.5°
August 5th	-40.5° -46.5°	-38.5° -44.5°	-39.5° -45.5°	-37.5° -43.5°
August 6th	-42.5° -48.5°	-40.5° -46.5°	-41.5° -47.5°	-39.5° -45.5°

It will be seen from the above that, except on a very few days which probably produced an exaggerated impression, the temperature this season has not been below the average. Indeed the 27th, 29th, 16th, and 30th of July were hotter than the corresponding days in any of the three preceding years. Since the 11th instant, too, an unmistakable August temperature has prevailed.

MISSING STEAMER.

MESSES. BRADLEY & Co.'s steamer *Pakshan*, says a Hongkong paper, is now eight days overdue at Singapore. She left Saigon on the 24th ult. with a full cargo of rice consigned to Chinese in Singapore (a two days' voyage) and has not since been heard of. Fears are entertained that she has encountered a typhoon and been lost, or has broken down or run short of coal and is trying to "make" some port under canvas. She was fully insured with home offices. Her officers are:—Chief, C. M. B. Maddox; Second, W. Winch; Chief engineer, John Pender. Her crew of 26 Chinese were chiefly natives of Canton and vicinity.—Several days later it was stated that no news of the missing steamer has been received by the local agents or her registered owners. The agents think it highly probable that she has foundered in a typhoon. She is now more than a fortnight overdue from Saigon to Singapore. The *Pakshan* was commanded by Captain Jenkins.

SUICIDE IN TOKYO.

On the 11th instant Mr. Tsuzakibara, Director of the Bureau of Affairs in the Hokkaido Administration, committed suicide at an inn where he was staying in Yamashita-machi, Kyobashi District, Tokyo. He had paid a visit in the morning to Mr. Watanabe, former chief of the Administration, and on returning to his inn was visited by Mr. Imari, an official of the same Ad-

ministration, with whom he conversed for some time. After the latter had taken his leave, Mr. Tsuzakibara went to the kitchen to obtain a drink of water, and there furnished himself with a knife (*deba bocho*) which he carried to his room, cutting his throat with it immediately afterwards. The police were summoned at once, but they found that the jugular vein and the wind-pipe had been severed and that life was extinct. No reason has been discovered for the deed.

THE VOTING IN CONNECTION WITH THE HOME ELECTIONS.

THE final results of the voting in Tokyo and Yokohama with reference to the Home Elections are as follow:—

Conservatives	187
Liberal Unionists	19
Liberals	25

Total 231

Two hundred and thirty-one is a very respectable vote, numerically speaking, for Yokohama and Tokyo. Combining the above figures with those for Kobe, we have the following totals:—

Conservatives	253
Liberal Unionists	22
Liberals	35

Total 310

ARIMA.

A CORRESPONDENT, writing from Arima, says:—There are at this place at present, probably, more foreigners than ever in any previous season—130 at least, not to mention those who pay visits of a few days' duration. This is not surprising, as Arima is delightfully cool and pleasant, especially so after sundown. Bishop Key and Bishop Mallieu have both been here and during their stay preached to large congregations. The second season of the Arima Christian Conference opened with a large attendance, and will be concluded in eight days. Rev. Dr. Davis, of Soochow, read an able paper on the condition of Christian work in China, and the Rev. I. H. Correll a similar statement as to Christian work in Japan. There were four services on Sunday last, and there are morning and evening services every day, which are largely attended.

AN INDISCREET PASTOR.

It is stated in the *Nichi Nichi Shimbun* that a Japanese Christian minister, while preaching in a chapel situated in Temma-cho, Sendai, on the 31st ult., in the course of his remarks said: "Orientals and Northerners are barbarians." The assertion was challenged by one of the audience, and an altercation ensued which led to blows. The pastor, by way of enforcing his doctrine, is said to have dealt a heavy blow at his opponent, which was sufficiently serious to lead to the arrest and detention of the preacher. How far what took place is correctly reported we are unable to say, but if the pastor made the statement attributed to him and enforced it in the manner described, he has apparently mistaken his *metier*.

OFFICIAL APPOINTMENTS.

THE following official appointments have been made, and will be announced to-day:—Messrs. Ariga Nagao and Nanabusa Naosaburo, hitherto Secretaries of the Privy Council, to be Private Secretaries of the Minister President of State; Mr. Dokei Sei, hitherto Private Secretary of the Prime Minister and Secretary of the Cabinet, to be Secretary of the Privy Council and Private Secretary of the President of the Privy Council; and Mr. Komiya Miomatsu, hitherto Secretary of the Privy Council and Private Secretary of the President of the Privy Council, to be Secretary of the Cabinet.

DR. E. BAEZ.

ACCORDING to an announcement in the *Official Gazette*, the honorary title of Professor of the Imperial University has been conferred on Dr. E. Baelz. The fact will afford much satisfaction to the foreign communities of Tokyo and Yokohama where Dr. Baelz has made himself innumerable friends, and where his great pro-

JAPANESE COTTON.

THE *Nichi Nichi* has an interesting note about Japanese cotton. It will be remembered that during the past two years there has been much talk about abolishing the import duty upon raw cotton, and putting an end altogether to the growth of cotton in Japan. That course would appear to be the most economical, since Japan is not well suited, apparently, for the cultivation of cotton on a large scale. But the *Nichi Nichi*'s information, obtained from a practical expert, is that although Japanese cotton is exceedingly short in the staple and therefore inconvenient for working up, it excels all other cotton in whiteness, and is therefore preferred by manufacturers for articles in which purity of colour is a desideratum. The quantity procurable, however, is so small that recourse must be had, even in the case of these articles, to Chinese cotton of the highest quality, and this must be subjected to a bleaching process in which sulphur is used. The result of the bleaching is satisfactory so far as concerns appearance, but cotton thus treated loses so much of its strength that stuffs made of it will last only one half as long as stuffs made of Japanese cotton, and, moreover, in dyeing it, three times as many hours are occupied as in dyeing Japanese cotton. On the whole, therefore, the home-grown cotton is far more economical than the imported, and instead of advocating the abandonment of cotton culture in Japan, the important question would seem to be whether it cannot be grown in larger quantities.

A DICTIONARY OF JAPANESE SECRET TERMS.

A BOOK bearing the title of the 日本秘密集 *Nihon-in goshyu*, or "Collection of Secret Terms," has just been published in Fuchu, Hiroshima, and is advertised for sale by the Seibun-kan, a book-store of the above named place. The author is the Fuchu Inspector of Police, Mr. Inuyama Kosao. In the discharge of his duties Mr. Inuyama had constantly observed that criminals were in the habit of using language not generally understood, and he saw how important it was that detectives should be versed in that tongue. He obtained official permission to make the round of the prisons and collect words, the result being the compilation of a dictionary covering 450 pages and containing some 20,000 words. All the police offices and the Courts of the empire have been supplied with a copy of this useful work. It is now for sale at 41 cents per copy, which includes postage. It will doubtless prove of great use to philologists as well as to detectives.

MAJOR FUKUSHIMA'S JOURNEY.

FROM a letter which appears in the *Jiji Shimpō*, the doughty major encountered a good deal of difficulty between Moscow and Kazan, owing to the prevalence of famine and the extreme poverty of the inhabitants of the villages through which he passed. His food consisted almost exclusively of black bread and eggs. For these he had to pay high prices. Distress had rendered the inhabitants of the famine stricken districts reckless, and the Russian Home Minister, conscious of the danger to which the solitary traveller was exposed, telegraphed orders that a policeman should attend the Major as far as Kazan. It is stated in the letter that the new horse cost 350 roubles, that he is 7 years old and was holding out remarkably well.

THE DIFFICULTY OF FORMING A CABINET.

WRITING on the above subject, a day before the formation of the present Cabinet, the *Jiji Shimpō* remarked that a minister who is endeavouring to select from a number of available candidates statesmen to serve the country in the capacity of Cabinet Ministers, resembles a man who lends money on security. The money-lender need

not trouble himself about the exact nature of the security given, so long as he can insure himself against loss. "The minister who for some days past been endeavouring to form a cabinet it over particular about the nature of the security to be given. One statesman has been asked to do this, and another that, and days have been occupied to no purpose in endeavouring to make terms and conditions. The better plan would be to take what material offers by way of security, and deal with it later on." We admire the *Fiji's* rough and ready statesmanship.

THE LATE PRINCESS HIROKO.

THE statement that Princess Hiroko, relict of H.I.H. Prince Kuniye, died in Kyoto appears to have been erroneously suggested by the fact that the principal funeral ceremony is to take place in the city. Her Imperial Highness expired in the palace of Prince Fushimi, in Kioicho, Kojimachi District, Tokyo. The bier is to leave the palace to-day at 2 p.m. and to proceed to Zojoji in Shiba Park, where service will be performed. The coffin will then be carried to Shimbashi station and placed in the 9.50 p.m. train for transportation to Kyoto, where it will be interred in the cemetery of Sokokuji.

SIBERIAN EXILES.

KATE MARSDEN, who is deeply interested in a project of planting colonies in certain parts of Siberia, on her way from St. Petersburg stopped at Berlin and gave a graphic description of the terrible condition of the exiles in that desolate land. They live scattered through the great forests, and eat the bark of trees and decayed fish which are given them by friends. Good food cannot be had. Their huts, which are partly underground, are unbearably filthy. Madame Marsden thinks of locating her first colony at Belinsk. We wonder how much of their colour her pictures owe to imagination.

THE TURKISH CASTAWAYS.

THE *Kokkai* says that Mr. Masuda Mankichi, who has charged himself with the care of the eleven shipwrecked Turks, has succeeded in raising a sum of over three hundred yen to pay their passage home. It appears, however, that in order to carry them to the nearest Turkish territory, a sum of \$85 per man will be required, which means that a total of about a thousand dollars must be raised. Mr. Masuda thinks that there will be difficulty in obtaining that amount in Yokohama alone, and is therefore contemplating an appeal to foreigners in Tokyo.

THE KING OF SIAM.

THE Order of the Annunziata, which will be presented to H.M. the King of Siam by the Italian Ambassador to China, Japan, and Siam, in September, is the third rank of all orders of knighthood, the British Garter being the first, and the Austrian Order of the Golden Fleece second. It is first of the five orders of knighthood in Italy, and is almost as exclusive an order as that of the Garter. It was recently conferred on Prince George of Wales, now the Duke of York.

FIRE ON BOARD THE CANADIAN MAIL STEAMER.

THE agents at this port received a telegram yesterday from Captain Lee, of the *Empress of Japan*, in which he stated that he had been compelled to put back and make for Hakodate in consequence of fire having broken out in the after hold. The message states that the passengers are all well. It is probable that the ship will have to discharge a certain quantity of cargo—sugar. The steamer left here last Monday and had on board a large quantity of tea and silk.

ABSENT WITHOUT LEAVE.

ON Wednesday afternoon James Shaw, Peter Burns, Walter Payne, Griffith Roberts, and David Thomas, sailors, were brought before James Troup, Esq., Assistant Judge, in the British Court, charged by Captain McDougall of the barque *R. Morrow*, with being absent without leave. His Honour gave them the option of

being sent aboard their ship or seven days' imprisonment. All elected to go to prison with the exception of Shaw.

PICKPOCKETS AT THE POST OFFICE.

PERSONS having business at the Post Office should be on the lookout for pickpockets while their attention is engaged in the transaction of the business which takes them there. On Tuesday a gentleman was relieved of his watch who was not in the place two minutes, but the Police on being informed of the loss went to work, and a detective got the thief the same night with the watch still in his possession.

A SHIP IN TWO TYPHOONS.

THE British barque *Anglo-Indian*, Captain Ray, which vessel arrived from Tientsin in ballast on Saturday last, says the *Rising Sun* of the 3rd inst., reports having experienced two typhoons on the voyage. In addition to losing a quantity of sails, she got a severe shaking up, which will probably necessitate her being re-caulked, she being a very old vessel.

ONE HUNDRED AND FIVE YEARS OLD.

A REMARKABLE instance of long life is recorded of a lady now living in Wood County, West Virginia. She was born in Georgia 105 years ago, and is now able to walk more than one mile unassisted. This lady—Jane Baumgarten—has been an inveterate smoker for the past 50 years, threads her needle, and sews every day without the aid of spectacles.

MR. KONO'S INSTRUCTIONS.

It is stated that one of the only measures taken by Mr. Kono during his brief tenure of the portfolio of Home Affairs, was to issue an Instruction to all Local Officials and Police, directing them to abstain altogether from interference in elections. That is certainly a point of policy which Count Inouye is not likely to alter.

SUBMARINE TELEGRAPHS.

It has been already stated that a submarine telegraph connecting the mainland of Japan with the Riukiu (Loochoo) Islands is to be laid next, if the Diet grants an appropriation for the purpose. We now read in the *Fiji Shimpō* that a similar step is to be taken, the year following, with regard to Chishima.

THE AUTUMN MANŒUVRES.

IMPERIAL permission has been granted for autumn manœuvres on a special scale, this year. They will take place during six days, from the 20th to the 27th of October, and the place is to be Shirakawa, in the province of Oshu. The Emperor has announced his intention of witnessing the manœuvres in person.

SHARE VALUES.

THE Fifteenth National Bank has announced an improvement in the values at which it is willing to accept certain shares as security for loans. The following are the shares and the alterations:—

	Amended Value.	Former Value.
Yokohama Specie Bank (old shares).....	190 yen	180 yen
Yokohama Specie Bank (new shares).....	95 yen	90 yen
Japan Railway Company (new shares)...	40 yen	33 yen

DEATH OF AN IMPERIAL PRINCESS.

A TELEGRAM from Kyoto announces the death in Kyoto, at 12.05 p.m. on the 8th instant, of Her Imperial Highness Princess Kaneko, relict of the late Prince Kuniye. Court mourning for three days, including prohibition of all public entertainments, has been announced, over the signature of H.E. Count Ito.

NINETEEN THOUSAND DOLLARS FOR A DOG.

THE largest and most valuable dog in the world, says a Dutch paper, is a St. Bernard named "Lord Bute," for which an American paid 19,000 dollars. The animal measures at the shoulder 1.10 metres and has obtained 26 prizes at exhibitions.

VISCOUNT TAKASHIMA.

LIEUT.-GENERAL VISCOUNT TAKASHIMA, hitherto Minister of State for War, has been nominated

a Privy Councillor. Thus Viscount Kabayama, former Minister of State for the Navy, is the only member of the outgoing Cabinet who remains without any office or appointment.

THE "IKAWA MARU."

THE sad case of the Shosen-Kaisha's steamer *Ikawa Maru*, which foundered during the recent gale near Shotojima, with the loss of over fifty passengers, has excited much compassion. Their Majesties the Emperor and Empress have each contributed 250 yen for the relief of the families of the sufferers.

HARMSTON'S CIRCUS.

OWING to the magnitude of this show, some difficulty has been experienced in obtaining ground of sufficient dimensions upon which to pitch the tents. This obstacle has now been overcome, and the company, after drawing very large houses at Osaka, has left that city for Yokohama.

THE NEW CHINESE REPRESENTATIVE.

THE name of the official who is to take the place of H.E. Lord Li, during the period of the latter's mourning for his mother by adoption, is not Kyo Woo Soon, as translated by us from a Japanese journal in our issue of Monday last, but Wong Fong Tsao.

THE PRESIDENT OF THE RYOMO RAILWAY COMPANY.

We have already announced the election of Mr. Watanabe Koki to be President of the Ryomo Railway Company. It is appears from the vernacular press that the salary attaching to the post is 150 yen per month.

THE NEW MINISTER OF STATE FOR FOREIGN AFFAIRS.

We are requested to state that pending removal to the official residence within the enclosure of the Foreign Office, H.E. Mr. Mutsu, the new Minister of State for Foreign Affairs, will reside at the Imperial Hotel, and will receive visitors at the Foreign Office.

COUNT OKI.

THE Minister of Education is reported to be suffering from boils, and to be unable to leave his residence. This accounts for his absence from Cabinet meetings on several important occasions.

THE HAPPY VALLEY MURDER.

THE trial of Emin Deen for the murder of Ram Samy, at Happy Valley, Hongkong, on the 19th June, has been concluded. The prisoner was acquitted.

ORME.

"ORME," the Derby favourite, who was "doctored" just before the race and could not run in consequence, has won the Eclipse Stakes of £10,000.

THE REV. GEO. COCHRAN, D.D., will preach in the Union Church, to-morrow, morning. The service commences at 11 o'clock.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The Ministerial problem, which occupied public attention for more than a month, has at last been settled by the accession of Count Ito as President of a Cabinet of Camera statesmen. When Counts Ito, Inouye, Kuroda, and Yamagata were invited by the Emperor to form a new Cabinet, it was feared that several weeks would elapse before any satisfactory result could be attained. There was, indeed, a rumour that differences of opinion between Count Ito and Count Yamagata, or, as the papers put it, between the Civil and Military parties, were so great as to threaten the breaking up of the conference. But the gravity of the issue and the fact that they had been personally charged by the Emperor to settle the Ministerial question, happily led to an early and eminently satisfactory conclusion. This result is by the public attributed to the indefatigable zeal of Count Ito,

to the consummate tact of Count Inouye, and to the magnanimous example of Count Kuroda. The new Cabinet has, upon the whole, been favourably received by the vernacular press. The temporary ascendancy of the Military party had the effect of making the Opposition sincerely desire the return to power of Count Ito, who is universally regarded as the leader of the Civil party in the Government. It is even reported that one of the most influential members of the Radical party actually offered to Count Ito the hearty support of his party, or at least of the section under his control, should the Count see his way to the formation of a Ministry. This offer is said to have been unceremoniously rejected. Whatever may be the truth of the rumour, there is no doubt that the Opposition journals are, if anything, pleased with the success of Count Ito in forming a new Cabinet. The Count is far from satisfying the qualifications required by them in an ideal statesman, yet all the papers in the capital unite in according him the first place among Japanese statesmen of the present day. He is expected to introduce thorough reforms in all branches of the Administration, and to anticipate the wishes of the Opposition by punishing the officials who interfered in the elections of February last, and by revising the Regulations relating to the Press, Public Meetings, and Publications. In short, the Opposition politicians fully recognize their inability to form a Cabinet, and for the present are satisfied to work, if possible, in harmony with a Ministry disposed to pursue a liberal and constitutional policy. All the papers urge upon the new Minister President of State the importance of taking an early opportunity to declare the policy of his Cabinet.

On the accession of Count Ito, the public supposed that the *Nichi Nichi Shimbun* would be the most hearty supporter, if not the direct organ, of the Ministry. But judging from its article on the New Cabinet, it appears that our contemporary will maintain an independent and critical attitude towards the Ito Ministry. The *Nichi Nichi* has been for some time praying for the appearance of a great man on the political stage. It professes profound regret that not one of the new Ministers of State possesses the qualifications of its ideal hero. It frankly tells the new Ministers of State that they are morally bound to remedy the evils which they have been instrumental in fostering. These evils are the spread of democratic principles, the tendency to value individual liberty above the interests of the country, and the general breakdown of respect for order. The seeds of these evils were, in our contemporary's opinion, originally sown by the authors of the Restoration. In all departments of the Administration, in the system of local self-government, in the defence of the country, and in foreign relations, the work begun by the Meiji Government remains yet to be completed. What has thus far been accomplished during the past twenty-five years has been merely to prepare the framework of the new Administration. The men directing the progress of the country since the Restoration have been guilty of grave mistakes, chief among these being over-hastiness in introducing reforms and changeableness of purpose. The difficulties of the present situation are in a large measure the natural results of their own faults. Upon them therefore devolves the responsibility of extricating the country from its present embarrassments. With all the faults of these statesmen, however, our contemporary admits that they are at present the only materials out of which a capable Cabinet can be formed. Whether they will be able to carry out their own policy, irrespective of the attitude of the Opposition, the *Nichi Nichi* does not pretend to know. But they are at least entitled to high praise on account of their sacrifice of self interest to the good of the country, as is abundantly proved by the fact that minor positions have been accepted by men like Count Kuroda and Count Yamagata. This is surely a hopeful sign, and on account of this circumstance the *Nichi Nichi* thinks that the new Cabinet has some chance of effecting something. Our contemporary promises always to

judge the conduct of the new Ministry by the light of justice and reason, and never to spare outspoken criticism when faulty steps are taken. Truly it seems a pity that all affairs of State cannot be placed under the control and management of newspaper editors.

As to the attitude of the Opposition towards the new Cabinet, the general tone of the articles in the organs of the *Jiyu to*, and, to a certain extent in those of the *Kaishin-to* also, leads one to believe that these parties will not persist in the policy of wanton hostility which they pursued with some success in the past three sessions of the Diet. With how much interest and even sympathy the Opposition leaders have been watching the short lived struggle between the so-called Civil and Military Sections in the Government, and how pleased they are with the ultimate victory of the former may be gathered from occasional unguarded utterances in the columns of their organs. That some of them regard the accession of Count Ito as though it were victory of their own party or parties, is proved by the language in which the *Kokumin Shimbu* censures them against supposing "that, with the fall of the Military Section, their political antagonists have been entirely swept out of the field." The Civil party, continues our contemporary, is not synonymous with the Popular party, and who knows but that the new Cabinet, just like the Military Section, may prove antagonistic to the wishes of the people. The *Kokumin*, however, admits it as a fact that the Ito Cabinet is against interference in elections, that it contemplates the adoption of the programme of the Popular party, and that it is bent upon remedying the evils of clan Government. But everything, we are told, depends upon how far the Ministers are prepared to go in each of these undertakings. In fine, our contemporary cautions the Opposition against committing itself to any definite attitude until the Cabinet's real position becomes tolerably clear.

The *Jiyu*, the Radical organ, distinctly tells Count Ito that he can expect no concession from the Popular party unless he succeeds in restoring discipline in the Government, in anticipating the wishes of the people, and in meting out punishments to those Governors who abused official power by interfering in the elections of February last. This, then, is the price at which the good will of the Radicals may be bought. The Progressionist organs, on the other hand, are more guarded in their utterances as to the conditions of their party's support. They are, however, unanimous in expressing pleasure at the victory of the Civil party.

The *Nichi Nichi Shimbun* has just concluded a remarkable series of articles entitled "Social Questions." Its essay, like that recently published by the *Jiji Shimpō* on the Korean question, is distinctly the sign of the times. Both advocate the diversion of national attention by an excursion into the field of foreign politics. The *Nichi Nichi*, however, goes a step farther than the *Jiji*, for it traces the cause of the present political crisis, and seeks to probe the matter to the very bottom. It states that the seat of the malady lies in a lack of unity and harmony in every department of national life. History teaches that a period of prosperity and strength in the career of every nation is coincident with the unity of its life, or, in other words, with the subordination of all ideas to one great programme. Greece was strong when her people were united by common anti-Persian feelings. Similarly Rome became strong under the influence of the all powerful idea of foreign conquest. It will be vain, says the *Nichi Nichi*, to talk of social or political reforms without first securing that which is absolutely essential to the health of national life, namely unity of national purpose. The *Jiji Shimpō*, as we recently noticed, seeks to attain this end by pursuing an aggressive policy in Korea. But the *Nichi Nichi* thinks that the best plan would be to take some vigorous steps in connection with the problem of Treaty Revision. The importance of this question

can never be estimated too highly. It not only concerns the national welfare of Japan, but is also, in the broader sense, a question of civilization, being destined to inaugurate a new epoch in the intercourse between the East and the West. Should Japan's aspirations be denied by Western Powers, Oriental civilization will receive its death-blow. The unique civilization belonging to India, China, and Japan will be for ever crushed by Western civilization. Should, on the contrary, Japan's just demands be approved by the Occident, the two civilizations will have a fair chance of being harmonized into a perfect whole. From this point of view, therefore, the question of Treaty Revision may even be said to possess a vital connection with the future development of the human species. A problem of such importance is certainly worth fighting for with the whole energy of the country. The *Nichi Nichi* is well aware that Western Powers will not easily accede to Japan's claims, and that strong pressure may be brought to bear upon her. But that is the very reason why our contemporary considers the question preeminently fitted for the purpose of uniting the nation. As to the methods of carrying out this policy, the *Nichi Nichi* remains silent. But it urges a speedy resumption of the task.

The *Choya Shimbu* has just finished its long essay on the Korean question. There are 15 articles in all. Our contemporary takes much pains to describe the position which England, China, and Russia respectively hold in the peninsular Kingdom. Coming to the policy which Japan ought to follow, it agrees with the rest of the vernacular papers in urging upon the Government the importance of adopting a strong attitude. In the first place, Japan is to be the guide of Korea in the latter's career of progress along the path of the new civilization. The dangers that surround Korea are the results of her inability to take care of herself. Consequently, the first requisite for her independence is to make her strong and wealthy by the introduction of Western civilization. But Korea, if left alone, will be unable to take the initiative; some external stimulus must be applied. Of all her neighbours, Japan is best fitted to be her guide in her career of regeneration; for Japan has no designs upon the peninsula, and has further precisely the experience which is needed by Korea, having herself passed through a somewhat similar stage of progress. Japan should spare neither intelligence, knowledge, nor money to enable the Koreans to introduce the necessary reforms in all departments of their national life. In the second place, steps have to be taken to guard against the interference of Russia and China. The most effectual method of doing that is to supply Korea with a strong army. But in her present condition she cannot afford to maintain a large force. China, in our contemporary's opinion, might be induced without much difficulty to relinquish her absurd policy of irresponsible interference in Korea's domestic affairs. A greater difficulty is apprehended from the direction of Russia. The *Choya's* ideas on this point are very hazy and crude. It recommends Japan to denounce, in the face of all nations, the pernicious intrigues which Russia is supposed to be carrying on at the Korean Court. Russia will of course persist on her policy of secret intrigue, but Japan may gradually obtain a sufficiently firm hold in Korea to withstand the encroachments of the Great Northern Power. In the third place, Japan has to form an alliance with Korea in order to maintain a commanding position in the East. The *Choya* has firm faith in the natural resources of Korea. Should she become strong and rich through the chivalric guidance of Japan, the two countries would be inseparably connected with each other. If they only combine (supposing of course that Korea is destined to become strong), they will be absolute masters of the sea of Japan and the China Sea. Such in brief is the idea of the *Choya* about the policy to be pursued toward Korea. Like poor Joe's will, it is "writ very large," but there is not much of a really practical character in it after all.

YOKOHAMA'S WATER SUPPLY.

MISLED, apparently, by comments appearing in the foreign local press, we find some Japanese newspapers repeating the singular errors and false assertions circulated in this Settlement with regard to the Yokohama Water Supply. The original text of these misapprehensions was a notice lately issued by the Waterworks Office, enjoining the practice of economy in water consumption during the hot months. This notice was employed as a basis of charging what the critic called the "Waterworks Company," not only with having failed at the outset to make adequate provision for increase of population, but also with having set the daily consumption per head at too low a figure. As to the first of these charges, it is true that the time has arrived for taking steps to increase the supply. But, with curious unfairness, no mention is made of the fact, clearly indicated in the notice itself, that the present condition of things is the direct result of an increase of population and of consumers which has altogether surpassed the expectations entertained by the Japanese authorities and the public generally a few years ago. Any just writer would have been careful to explain that this increase has been abnormally rapid, that the population of Yokohama has nearly doubled itself in the course of the nine years which have elapsed since the works were projected; that there was no reason whatever in 1883 to expect such an extraordinarily sudden growth, and that twenty years instead of nine might at that time have been fairly regarded as the period which would elapse before the immediate limit of the works' capacity would be reached.

As to the second charge, the whole question, is begged by the amazing assertion that "it is generally allowed" that the consumption of water is greater in the East than in the West. To this are added three flagrant untruths, namely: (1) that "the minimum supply in English towns has been placed at 27 gallons per head," (2) that "in Glasgow 52½ gallons per head was considered alarmingly inadequate," and (3) that the Yokohama Waterworks were not opened before October, 1888. In these statements we have illustrations of ignorance not merely of facts but also of the value of language. To instance the last, let us look for a moment at the remarkable sentence "In the West it is generally allowed so much water is not used as in the East." Could looser language have been used? Not to speak of "the West," what on earth, in this context—that, namely, of water-consumption—is "the East"? Is it a Chinese city such as Canton, or a Japanese city such as Kyoto, or a foreign settlement such as this of ours, or what? The *Japan Gazette*, from which we quote, prudently abstains from definition. It is

careful not to say, for example, that in a city like Canton ten gallons per head would be a liberal daily allowance, that in many East Indian towns the same and yet smaller quantities have been found to suffice, or that in a place like Yokohama, where Occidentals do not number a thirtieth of the population, Japanese usage is, in effect, the standard. It is careful not to say that such large items as trades and manufactures, water-closets, street-watering, &c., which in most Western towns represent ten gallons or more daily per head, do not figure appreciably in the waterworks consumption of Yokohama, or that the consumption here for laundry-work, on horses, and on carriages is insignificant in comparison with that of any Western city. Nor does it say that, excepting the hot bath—ascertained after careful investigation to represent here an average consumption of seven gallons daily per consumer—the Japanese regular use of water in any quantity is practically limited to rice-cleaning, cooking, and drinking. All these truths would have been highly inconvenient. It was much simpler and safer to take refuge in the vague assertion that "in the West it is generally allowed so much water is not used as in the East." We understand that as a matter of fact the average daily consumption here is only 15.4 gallons per head, and that the figure of 18 gallons originally fixed by the Authorities has only been reached occasionally in the hottest weather. The statement that 18 gallons per head is an insufficient allowance is therefore false. The present need of economy is the result, not of any error in the estimated quantity per head, but of the abnormal and wholly unexpected growth of population already named, as well as of extensive illegitimate use of the water—in consequence of which, though the conduit is delivering daily at Noge-yama upwards of a million gallons more than the original nominal limit, it has already become necessary to urge thrifty consumption, pending the completion of arrangements for an auxiliary supply.

As to the *Gazette's* assertion that "the minimum supply in English towns has been placed at 27 gallons per head," a more incorrect statement was never made. Some such average may have prevailed—may even still prevail—in a few towns under the old and extravagant system of "intermittent" supply, and where no proper steps have been taken for the prevention of waste. But modern precautions and the "constant" system long ago upset all the ancient figures; and, without including such favourable cases as Norwich with 14.8 gallons, Huddersfield and Gosport with 10 gallons each, and many others, it is an incontrovertible fact that, if we take any fairly representative group of English towns with good waterworks on modern principles, we shall find the total daily consumption, waste included, to vary between

about 17 and 22 gallons per head, from one-third to one-half of which is used for purposes from which Yokohama is practically exempt, namely, trades, manufactures, and water-closets. Manchester, for example, is satisfied with 21 gallons per head for all purposes (manufactures and trades alone absorbing 7 of those gallons), Liverpool, Hastings, and Leicester with the same, Leeds with 22, Derby with 20, Bath, Shrewsbury, and Sunderland with 19, Cambridge, Berwick, and Nottingham with 18, Portsmouth and St. Helens with 17, and so on. London uses from 16 to 21 gallons in the districts under constant service. In short, statistics amply establish that, in modern English waterworks with an unstinted "constant" supply, from 14 to 16 gallons is the maximum daily consumption per head for all domestic and public purposes, and that where those figures are exceeded the difference is caused by the use of water for trade purposes and in many cases by preventable waste. Glasgow has been a bye-word in the matter of waste for the last thirty years and more—since Mr. BATEMAN reported that of the 22 million gallons daily being supplied in 1860 more than half was going to waste, the waste from leaky taps alone being at that time no less than 20 gallons per head per day, or nearly as much as the whole average consumption, waste included, of such cities as Manchester and Leeds. The amount of waste at Glasgow is still notorious. To speak, therefore, as the *Gazette* does, of 52½ gallons per head being "alarmingly inadequate," without saying a word about the waste, is a great untruth, if only in the sense that it is a very palpable *suggestio falsi*. It is safe to say that, despite even its enormous consumption for manufacturing purposes, which is probably greater per head of population than that of any other city in the world, Glasgow might without much difficulty be brought down to an average of 30 gallons daily per head, or even less. As to the third untruth, namely, the date of opening the Yokohama works, they were opened in October, 1887, not in 1888. Lastly, from references made to the Deacon Waste-water Meter, it is evident, but hardly surprising, that the writer does not understand what he is writing about. The Deacon Meters, here as elsewhere, have served their purpose admirably. But the waste to which the Waterworks' notice refers is of a very different kind from the underground and other continuous waste which Deacon's Meter so perfectly detects. It is, in fact, the *illegitimate use* of water, such as misuse, extravagant use, and pilfering from the street fountains and elsewhere, that the notice is aimed at. These have nothing to do with the Waste-water Meters, and they may best be checked by the vigilance, good sense, and honesty of the consumers themselves, to whom the notice appeals. We trust that Japanese journals which have allowed themselves to be misled on this subject, will correct their misapprehensions from what we have written above.

THE A. B. MISSION.

THE Report of the American Board Mission for the year ending March 31st, 1892, contains much information. It is edited by the Rev. D. C. GREENE, with whose admirably clear and well balanced writings the foreign public in this country is familiar. The mission is one of the largest and most important in Japan. Its foreign staff consists of 95 men and women, of whom 9 are now absent, leaving 86 actually at work. These 86 are distributed through 14 principal districts, and, in addition to purely evangelistic work, carry on—with Japanese assistance, of course—18 schools, with a total average daily attendance of 1,893 students throughout the year, an endowment of 150,079 yen, an annual expenditure of 42,297 yen, and buildings valued at 52,665 yen. The Board has 53 fully organized churches, and a total of 195 places for preaching, the aggregate congregations being 10,760, in which is included an addition of 806 during the year. Finally, the contributions to the support of these churches totalled 25,707 yen throughout the year, which money presumably came entirely from the Japanese members. These figures bear in themselves sufficiently eloquent testimony to the magnitude and usefulness of the work done by the Mission. It may be objected that a congregation of about eleven thousand does not represent a large result for seventeen years of labour; but in truth the good wrought by such a Mission cannot for a moment be measured by any arithmetical statement of its converts. Its educational accomplishments are immense, and its general influence in directing public interest to questions of morality and religion is perhaps the most important feature of its labour. The Report contains a significant paragraph on this subject:—

It is worthy of record that at the close of the year 1892, a third of a century of missionary work in Japan will have been completed. While the large hopes indulged by many of us ten years ago with regard to the growth of the churches have not been fulfilled, the influence of Christian thought upon society at large has been increasing day by day. The so-called reaction has but superficially affected the growth of this influence. The missionary work is but one of many forces which are combining to spread Christianity over Japan. Every year that passes brings Japan nearer to the countries of the West, not so much by the shortening of the voyage across the Pacific through commercial competition, as by increasing the dependence of Japan upon foreign thought, at once the cause and the effect of a growing sympathy with that thought. Not only foreign books, but the best periodicals of Europe and America are finding their way into Japanese hands. The number who can read, more or less, three European languages is considerable. The number of those sufficiently familiar with English so that they live in a quasi Anglo-Saxon atmosphere is already very large. Sometimes we are reminded more forcibly than pleasantly of the fact that the Japanese around us are through our periodicals made aware not only of the good but also of the evil connected with our western civilization. The progress of the Chinese Exclusion Bill through the United States House of Representatives was watched with keen interest by the Tokyo editors, and the gross selfishness and injustice which it embodied met with scathing condemnation from their pens. Dr. Parkhurst's campaign against official corruption in New York received due attention, though here it was gratifying to find that some, at least, were less impressed by the existence of barefaced corrup-

tion, than by the promptness with which the public conscience responded to the preacher's impassioned appeals.

It must always be remembered, too, that the past three years have not been at all favourable to the spread of any foreign innovation in Japan, whether of manners or of morals. We do not find in the Report much allusion to this phase of popular sentiment. Perhaps its public discussion in such a publication would not be prudent. If in one place there is talk of the Japanese pastors and evangelists "having bent, perhaps too easily, when the first torrent of national feeling caught them two years ago," this suggestion of censure is immediately followed by a statement that they have now "well recovered themselves, and are bravely meeting the problems which the political excitement of the past two years has created." Political excitement has, in short, opposed obstacles to all progress in the moral no less than in the material field. Elsewhere the Report makes reference to the singularly conservative and mediæval views that found expression last year in certain quarters:—

The morbid nationalism of last year must still be mentioned as lessening not a little the influence of the Christian community. In the large centres of population public opinion seems to have fixed upon a solution of the vexed question of saluting the Imperial photographs and rescripts. We understand that in these centres the obnoxious word signifying worship is now seldom, if ever, officially used of this ceremony which would seem in itself no more inappropriate than raising the hat on viewing one's national flag. In the smaller towns, however, the trouble is not quite over. In one case that is reported, the charge of a lack of patriotism has arisen from the wrong choice of a word in speaking of putting away the Emperor's portrait after the ceremony of salutation was over. As judged by foreign standards, it may safely be said that the unfortunate teacher, who in this instance lost his place through a slip of the tongue, would not have been one whit less ready to sacrifice his life for his Emperor, or his country, than the best patriot among those who forced his withdrawal from the school. In another station, a perhaps unguarded speech which sounded the praises of a broad philanthropy brought from the Prefect an order that the teacher who uttered it should be dismissed. It is difficult to reconcile such things with our western ideas, and yet we must admit that Japan is passing through a critical time and that the new strain to which her institutions are subjected must cause deep anxiety to all patriotic Japanese. That in such a time of stress, mistakes should be made, even by the best men, is inevitable, and it is not strange that among these mistakes should be that of sadly misunderstanding the temper and the purpose of the leading Christians who, when the time of trial comes, will unquestionably be found in the very front rank of self-forgetful patriots.

The Report notices a fact which may have been observed already by readers of these columns, namely, that "the multiplication of orphanages, day schools for poor children, and poor relief societies was one of the noteworthy features of the past year." In truth the disposition to found such institutions became almost a mania, involving irresponsible persons who did not hesitate to push their schemes by house-to-house visits for the purpose of collecting subscriptions. Mr. GREENE says that, whereas in foreign countries such enterprises can generally be managed best by boards or committees, in Japan the largest measure of success seems to be attained under the rule of "a single personality."

This, we think, might have been anticipated. The Japanese is a curious mixture of enthusiasm and altruism. Working alone and depending on himself entirely, he exhibits almost feverish zeal and devotion. Working in company with others, his tendency is to efface himself. On the other hand, it is certainly remarkable that charitable folks trust their money so readily to individual promoters of benevolent undertakings. Christian propaganda has brought in its train not only philanthropic ardour but also charitable confidence.

Another fact brought out by the report is that, owing to Christian initiative, there are gradually springing into existence in Tokyo boarding houses where the numerous students who come to the capital for education and cannot obtain accommodation in the dormitories of schools, may "secure good healthful board, quiet rooms, and helpful associations at a reasonable price." This is a conception of immense practical value, which will be pushed, we hope, with all possible energy.

It has often been charged against the missionaries that they are not frank towards their constituents in England and America. A more conclusive answer to this criticism could scarcely be given than that furnished by the following paragraph:—

An increasing number of Christian tourists visit Japan from year to year. We appreciate the interest they have manifested, but may we not ask a larger share of their time and thought, that we may be able sometimes to see our work through their eyes and be benefited by their counsel? Is it not possible, that in some way such visitors may be made the messengers of the churches and thus be made to feel a certain responsibility to study the missionary work minutely, so that they may be able to carry back to the churches an independent opinion of its extent and thoroughness? In many respects, the work in Japan has reached a more advanced stage than in any other mission field. There are problems confronting us which call for special consideration; they cannot always be settled off hand in the light of experience in other lands. In settling these problems, great help would come from the more judicial attitude of mind of visiting friends, provided they were able to take the time to acquire a sufficient knowledge of the facts to render an intelligent judgment. If such visitations and investigations can be made systematically in connection with the Prudential Committee of the American Board, so much the better; but if that is not feasible, let them be made in some less formal way which shall at least insure the public use of the information gained, so that, sooner or later, it may not only lead to a more enthusiastic, but also to a more intelligent, interest in the cause of missions. We believe the churches of America will not discharge their responsibility toward Japan and other non-Christian countries until some such co-operation in the work, on the part of our constituents, is provided for. God grant that they may speedily awake to a sense of this duty!

Before we take leave of this interesting and ably compiled Report, we desire to draw the attention of the editor to a statement which appears erroneous. In speaking of the earthquake of 1891, and of the admirably charitable spirit displayed by foreigners in connection with that terrible calamity, he says that "foreigners at the open ports contributed not less than \$10,000." Now in an article published in this journal early in December last, it was shown that the foreigners at the open ports had already subscribed \$25,507, independently of the sums sent directly by

Original from

them to the Japanese Authorities and the Japanese press, and independently of money and aid in kind given through missionary sources. Since that time the total has been very largely raised, and it would certainly have been much more correct had the editor of the Report spoken of \$35,000 as the aggregate contribution of the foreign communities at the open ports. The mistake is evidently due to inadvertence, but we take pains to point it out, because the expression of friendly helpfulness conveyed to the Japanese nation by the foreign residents in connection with the earthquake deserves to be remembered.

THE NEW CABINET.

ON Monday forenoon Count ITO was formally appointed by the EMPEROR to the office of Minister President. The composition of the rest of the Cabinet is as follows:—

Minister of Home Affairs	Count INOUE.
Minister of Foreign Affairs	Mr. MUTSU MUNEMITSU.
Minister of Finance	Mr. WATANABE KUNITAKE.
Minister of Justice	Count YAMAGATA.
Minister of War	Count OYAMA.
Minister of the Navy	Viscount NIRE.
Minister of Education	Mr. KONO.
Minister of Communications	Count KURODA.
Minister of Agriculture and Commerce	Count GOTO.

This is almost a complete change: only two members of the former Cabinet remain in office, and even in their case there is a shifting of portfolios, Mr. KONO exchanging the portfolio of Home Affairs for that of Education, and Count GOTO being transferred from the Department of Communications to that of Agriculture and Commerce. It was understood from the outset that one of the conditions most imperatively insisted upon by Count ITO was a thorough reconstruction of the Cabinet, and in this respect he has carried his point. The hope at one time entertained that Count MATSUKATA would consent to remain in the Cabinet as Minister of Finance has proved delusive. The former Premier, true to the resolute policy which distinguished him throughout his period of Presidency, appears determined not to accept any compromise. The foreign public will probably be more or less perplexed to understand in what respects a compromise would have been necessary. The main principle of Count MATSUKATA'S Administration is believed to be identical with the main principle of Count ITO'S: both are equally in favour of standing aloof from party alliances. From that point of view, therefore, Count MATSUKATA might have consented without any hesitation to hold a portfolio in Count ITO'S Cabinet. But there are other considerations, and not least important among them, we imagine, is the question of the new Codes. Count MATSUKATA would have put them into operation at the time originally fixed; Counts ITO, INOUE and YAMAGATA are in favour of postponing their operation

until further revision shall have been effected. Whether a difference existed on minor issues we cannot pretend to say, but considering that Count MATSUKATA worked for so many years in the closest and most sympathetic relations with Counts ITO and INOUE, there should have been no difficulty in renewing the bond. It is doubtless owing to the same cause—the postponement of the operation of the Codes—that Count OKI and Viscount ENOMOTO go out of office. The former has always associated himself closely with the Codes, ever since the time when their compilation was undertaken during his tenure of the portfolio of Justice; and the latter resolutely maintained the advisability of putting them speedily into operation in the interests of the nation both at home and abroad. Neither statesman can consent to sacrifice his opinion on such an important issue. Viscount ENOMOTO'S resignation of the portfolio of Foreign Affairs will be regretted, we believe, by the whole Corps Diplomatique. His frankness, integrity, and earnest common-sense made him a *persona grata* with every one. As a Minister he has shown himself prompt and resolute to assert his country's just claims, and as a diplomat he has earned a reputation for tact and moderation. But no one in the outgoing Cabinet has risen higher or more rapidly in public esteem than Count MATSUKATA. During his long tenure of the portfolio of Finance he was regarded chiefly as a sound and careful administrator, thoroughly competent to carry out the details of a policy, but not likely to initiate one, and scarcely gifted with the qualities requisite in a leader. He has shown, however, that this estimate by no means did him justice. As Minister President of State during a most trying and difficult era of domestic politics, his honesty, and integrity of purpose, his indomitable courage and resolution in the face of ominous crises, and his capacity for organization and command, mark him out as one of Japan's most distinguished statesmen. He carries with him into his retirement the esteem and respect of all parties.

Of course the question of chief interest is the policy of the new Cabinet. Are we to look, next session, for a renewal of the implacable obstruction hitherto organized by the Opposition to all Government measures. At first sight it would seem that the answer must be in the affirmative. The policy of the Cabinet being abstention from all party alliances, one does not immediately perceive why the hostility of the *Fiyu-to* and the *Kaishin-to* should be diminished. Nor indeed do we anticipate that the *Kaishin-to* will allow itself to be materially placated, although it is represented in the new Cabinet by its ex-Vice-President, Mr. KONO. But the *Fiyu-to* may be expected to prove more amenable than it has been hitherto. Probably the truth is nearly expressed by saying that

the opposition of the Radicals next session will be based upon measures not upon men. Hitherto nothing emanating from the Government was acceptable to the Radicals. Everything bearing an official *cachet* was condemned. Hereafter they will be guided, it is predicted, by the nature of a proposal rather than by its source. Of course Count ITO'S Cabinet will have to face the same issues that confronted its predecessors—curtailment of State expenditure with the view of reducing the land tax, and a large advance in the direction of liberty of speech and public meeting. But these need not create anything like the sense of unrelenting antagonism that governed the relations of the last Cabinet to the majority in the House of Representatives. On the whole, we think that the new Cabinet will be found to be in tolerably easy touch with the bulk of the Opposition, and that Count ITO'S accession to power marks the commencement of an era of comparative peace.

MR. LOUREIRO & HIS TRADUCERS.

THE attack made by some of his nationals upon Mr. J. LOUREIRO, formerly Portuguese Consul-General and *Chargé d'Affaires* in Tokyo, has now assumed a comical aspect—comical, because of the extraordinary bewilderment and confusion of ideas displayed by those preferring it. It is the old story, so familiar to any one who has ever watched the course of a controversy in this Settlement: little by little the public is led away from the question originally under discussion, until at last the truth is obscured behind some wholly irrelevant and trivial issue. The charge preferred against Mr. LOUREIRO in the first place was of a simple and direct character. It was alleged that, having received, last May, in his official capacity of Portuguese Representative, an ultimatum from the Japanese Government declaring that unless by July 1st a legally trained official were appointed to the post of Consul-General in Tokyo, Japan would consider as abrogated the extraterritorial clauses in her treaty with Portugal, and would herself assume jurisdiction over Portuguese subjects in this empire, he quietly put the ultimatum into his pocket, neither wiring its contents to Macao nor mailing the document itself. By this act—which his accuser called “shameful”—he was represented as having left his Government in ignorance of the important step contemplated by Japan, and as having, for his own selfish purposes, dishonestly connived at the loss of a privilege which his nationals highly valued. Now, however false and inexcusable this charge might be, it had at least the merit of being plain and direct. The answer to it, therefore, could be distinct and conclusive. It was this:—in the first place, Mr. LOUREIRO was not made the medium of any communication whatever between the two countries in this matter.

Original from

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

From outset to close Japan addressed herself to Portugal, either through Macao or directly through her own Representative in Lisbon. In the second place, Japan's intimation of an intention to assume jurisdiction herself from the first of July was not made until after Mr. LOUREIRO had left Japan and was never officially communicated to him but sent direct to the Government in Lisbon. Therefore the charge that he had been the recipient of such a communication, and that he wilfully withheld it from his Government, was a gross falsehood. All these things are surely plain and distinct enough. But now observe what happens. Another anonymous correspondent comes forward and attempts to traduce Mr. LOUREIRO again. Evidently the *canard* that an official ultimatum had been deliberately suppressed by the Consul-General must be abandoned: it is too palpably baseless. Another point of attack has to be sought. It is found in an assertion that "while on board the mail steamer Mr. LOUREIRO told several of his nationals, in very bitter terms, that from the day following his departure they would be placed under Japanese jurisdiction." Now what in the name of all common sense does it matter whether he did or did not make such a statement? The whole original accusation is confined to one simple issue—had Mr. LOUREIRO been the recipient of an official communication from the Japanese Government, and, if so, did he suppress that communication? It does not matter a row of pins what opinion he may have expressed to his nationals on board the mail steamer. Perhaps he foresaw how things were likely to shape themselves; perhaps he did not foresee. We have nothing to do with his speculations. The indisputable fact is that, officially speaking, he was absolutely ignorant of the intentions of the Japanese Government. The anonymous correspondent who now comes forward and endeavours vaguely to re-fix the charge upon Mr. LOUREIRO by saying that, on the eve of his departure, he warned his nationals of what was impending—this correspondent must either have stultified himself or be seeking to stultify others, for the whole question turns upon Mr. LOUREIRO'S official knowledge. His private predictions are matters absolutely irrelevant. Moreover, the *Japan Gazette*, in which the correspondent's letter appears, actually writes thus:—"Accusations have recently been brought against Mr. LOUREIRO in Kobe and the *Mail* has undertaken to refute them. The accusations have been endorsed in Yokohama and the *Mail* has not replied them." "The accusations have been endorsed in Yokohama"! Was ever such an endorsement heard of before? The accusation was that Mr. LOUREIRO had been the official recipient of an ultimatum from the Japanese Government; that he had deliberately kept it from the knowledge of his own Government, and that he

had thus been the means of betraying his nationals in Japan. The "endorsement" is that on board the mail steamer Mr. LOUREIRO, in very bitter terms, told some of his nationals that they would be under Japanese jurisdiction from the next day. Truly we must be excused if we decline to treat such an "endorsement" seriously. And as for the *Japan Gazette's* additional assertions that its correspondent's remarks are "pertinent;" that he "is in a position to speak with authority" and that it behoves us to answer him, we have three things to say: first, that its correspondent prefaces his letter by rudeness which disqualifies him to receive a courteous answer from anybody; secondly, that the assumption of authority made on his behalf still further disqualifies him, for if, having authority, he resorts to anonymous correspondence in the public press for the purpose of maligning his country's sometime representative, he shows himself unworthy of trust; and thirdly, that the ludicrous irrelevance of his assertions places them beyond the pale of serious notice. We have another word also to say to the *Japan Gazette*, namely, that it would have done well to examine previously whether there was even a semblance of reason or logic in the slanders which it has lent its leading columns to disseminate. It publishes an article headed "Mr. LOUREIRO and Japan's Ultimatum," the whole object of the article being to show that Mr. LOUREIRO behaved in a culpable manner with regard to that ultimatum. Yet not a tittle of proof is given from first to last. We showed that Mr. LOUREIRO never had anything whatever to do officially with the so-called "ultimatum," and that it was not even penned until after his departure; nay, the anonymous correspondent of the *Gazette*, the man speaking "with authority," himself admits that the preferrer of the charge about the ultimatum "may have overshot the mark or may have been very inaccurate in some of his facts." Yet the *Gazette* alleges that this correspondent "endorses the charge," and employs its own columns to support the endorsement, even going so far as to say:—"It was then obvious that Mr. LOUREIRO was anxious to retain his post, and it is not at all unreasonable that, putting two and two together, and not forgetting his own words, Portuguese residents here find little difficulty in tracing to him the origin of their present position." Was there ever such reasoning? Premises:—Mr. LOUREIRO was anxious to retain his post; he prophesied, after his sentence of removal had become irrevocable, that his nationals in Japan would be brought under Japanese jurisdiction; conclusions:—therefore his post was abolished, and therefore his nationals were brought under Japanese jurisdiction! The process of "putting two and two together" becomes a mysterious and awful performance when, as in the case of the *Japan Gazette*, the "two and two"

are entirely invisible. In the context of such confusion and irrelevance we are not surprised to be summoned to answer whether Mr. LOUREIRO handed over the archives of the Portuguese Legation to the French Minister, and if not, why not. Truly we do not know and do not care. The archives of the Portuguese Legation may be a unit of the mystic "two and two" which some wonderful arithmeticians have been putting together, but as they have nothing whatever to do with the matter under discussion, we must decline to be catechised about them.

THE NEW MINISTER OF FINANCE.

MR. WATANABE KUNITAKE'S appointment to the post of Minister of State for Finance is evidently regarded by the Japanese with much interest as the first instance of an official originally of *Hannin* rank attaining to the dignity of becoming a portfolio-holder. The untitled members of the present Cabinet, Messrs. MUTSU and KONO, commenced their official careers as *Sonin*, but Mr. WATANABE began life as a *Zokkan* of the Finance Department. He was originally a retainer of the small fief (30,000 *koku* of rice) of Takashima, in Shinshu, the former chief of which is now Viscount SUWA, *Kannushi* of the Toshogu Shrine in Shiba Park. As years went by he gradually rose through various grades in the same Department, but when he attained to the position of Vice-Minister, the public imagined that his official career had reached its climax. Since the Restoration the Cabinet offices have been occupied, we might almost say monopolized, by men of the four great clans, Satsuma, Choshu, Tosa, and Hizen, usually spoken of by the public as "Sat-cho To-hi." The exceptions to this rule may be counted on the fingers of one hand; namely, Count KATSU and Viscount ENOMOTO of the Bakufu; Viscount TANAKA, of Bishu (Owari); Mr. MUTSU of Kishu; and Mr. YOSHIKAWA of Awa. Of the influence and power of the Bakufu it is unnecessary to speak. One can easily conceive reasons of State for appointing some of its representatives to leading positions in the Administration, especially when men of such experience and reputation as Count KATSU and Viscount ENOMOTO could be chosen. Owari, again, was one of the most opulent and puissant fiefs of feudal days, and the same is true of Kishu. The *Dai San-ke*, or Three Great Houses of Japan—that is to say, the Houses from among the scions of which a successor to the TOKUGAWA Shogun was to be chosen in the event of any failure of the original line—were Owari, Kishu, and Mito. Of these three Owari and Kishu have been represented in the Government by Viscount TANAKA and Mr. MUTSU, but Mito has been less fortunate. An explanation is doubtless to be found in the fact that Mito main-

tained a stubborn attitude towards the centralization of the Government and the importation of Western civilization. The celebrated REKKO, chief of Mito, was emphatically conservative, and the great Mito scholar FUJITA TOKO, a man whose reputation for learning and literary ability stands second to none in modern times, devoted his pen almost entirely to bringing discredit on the radical impulses of his time. It was not likely, therefore, that any member of the Mito clan should easily find his way to a high post in the Administration under the centralized and pro-foreign Government. As for the province of Awa, which has furnished a Cabinet Minister in the person of Mr. YOSHIKAWA, the enlightened and prominent part played by its Chief SHIGENORI at the time of the abolition of the *Han* may suffice to account for the consideration subsequently extended to one of its members. But, at any rate, one exception during a period of over twenty years only serves to give prominence to the general rule, namely, that, omitting Court Nobles like Princes SANJO and IWAKURA, the Administration has been carried on ever since the Restoration by representatives of the four great clans, Satsuma, Choshu, Tosa and Hizen, assisted by representatives of two out of the Three Great Houses, Owari, Kishu, and Mito. Hence the appointment of Mr. WATANABE to the important post of Minister of Finance naturally receives much attention as the first example of an official climbing to such a position from the lowest ranks without clan influence of any kind to aid him.

Speaking about the Four Great Clans, it is worth while to note that if they have furnished occupants of the highest posts in the Government, they have also supplied the vertebræ of the Opposition. Count OKUMA, the leader of the *Kaishin-to*, is a Hizen man, and Count ITAGAKI, the President of the *Yiyu-to*, is a native of Tosa. In short, we have Tosa and Hizen in Opposition, and Satsuma and Choshu in power. Yet the former claim that their campaign is against clan Government.

COTTON SPINNING IN JAPAN.

THE first half of the present year was a very remarkable epoch in the history of Japanese cotton spinning. We read in the vernacular press that the various mills—except that of Owari, which has not yet recovered from the effects of the great earthquake of 1891—numbering 35 in all, with 324,800 spindles, turned out no less than 40,875,583 lbs. of yarn from 47,988,537 lbs. of raw cotton. The significance of these figures will be better understood if we place them side by side with the corresponding totals for 1891:—

	Half year ending June 30 th , 1892.	Whole year 1891.	Whole year 1890.
Yarn Spun	40,875,583	44,314,096	42,437,820
Cotton consumed: 47,988,537	51,559,46	49,247,120	

It will be seen from these figures that the production for the first half of the current year is virtually equal to the production for the whole of either of the preceding years. Each of the 35 mills worked, on the average, 182½ days during the 6 months, the time per day being 22 hours. They employed a total of 21,430 hands, namely 5,420 men and 16,010 women, the former's daily wages being 16.20 *sen* and the latter's 8.6 *sen*. Such a prosperous state of affairs was never before experienced in the cotton-spinning industry. It appears that in spite of their very large production the mills could not keep pace with the demand; that the stock of yarn in the market is very small, and that the majority of the mills are now occupied discharging orders from three to six months in advance. The total output of the year is expected to reach a hundred million lbs., which will be more than double of the production of any previous year. Of course all this has exercised a very perceptible effect on the earnings of the factories. The following table shows the dividends paid by the ten principal mills for the half-year, as compared with the preceding semi-annual term:—

	Dividend for 1st half of 1892.	Dividend for and half of 1891.
Dojima Mill	19 per cent. ...	9.5 per cent.
Hirano Mill	20 per cent. ...	13.3 per cent.
Kanegafuchi Mill ..	6 per cent. ...	4 per cent.
Kurashiki Mill	25 per cent. ...	13 per cent.
Miye Mill	15 per cent. ...	8 per cent.
Naniwa Mill	8 per cent. ...	nil
Osaka Mill	15 per cent. ...	10 per cent.
Temima Mill	12 per cent. ...	6 per cent.
Tokyo Mill	10 per cent. ...	3 per cent.
Wakayama Mill	18 per cent. ...	2 per cent.

It is not easy to determine the cause of this remarkable briskness. The most natural explanation seems to be that a succession of good rice crops accompanied by high prices for the grain, and a marked development of profitable sericulture in obedience to the demand of foreign markets, have enriched the agricultural classes and enabled them to become large purchasers of yarns. But whatever the cause may be, there is no question about the fact, nor any doubt as to its significance in respect of the future of the cotton-spinning industry in Japan. The mill-owners of Bombay recently expressed the opinion that nothing serious or permanent was to be feared from Japanese competition, inasmuch as the vitality of the industry in this country depended on protection. What the statement signified we cannot easily comprehend. Japanese cotton-spinners enjoy no protection. There is a small duty upon imported yarns, but any trifling advantage that might be derived from this is nullified by the duty upon raw cotton, and by the greater cost of shipping the latter to Japan as compared with the cost of shipping the manufactured article. Possibly the Bombay mill-owners laboured under the impression that the Japanese cotton factories enjoy some measure of official support. But that is altogether a misapprehension. The mills are the outcome of purely

of any kind from the Government. It is well that the truth should be understood and faced in this matter. The Japanese have many advantages to aid them. The cost of labour, as given above, is a most important item. When a man's daily wage is less than sixpence, and a woman's about threepence farthing, there is a large margin for the manufacturer to work on. The great obstacle to solid success in all such enterprises in Japan is faulty organization. That, however, is a defect which time will mitigate, and perhaps mend altogether. Importers of yarns may well view the present state of affairs with uneasiness.

THE CONRAD HARVEY CASE.

SOME surprises are connected with a case tried a few days ago before the United States Consular Court for Hyogo and Osaka. It appears that one CONRAD HARVEY, a youth of engaging manners and prepossessing appearance, came to Japan a few years ago, and succeeded, after a time, in obtaining the confidence of a Belgian merchant who made him his representative in Kobe. HARVEY led a seemingly exemplary life, being especially conspicuous for his attention to all the forms of religion. But in truth he was a fugitive from justice, being a swindler. Moreover, he had deserted his wife in Iowa. By and by he secured the affections of a missionary lady, Miss CORA LAFFERTY, whom he met at Arima, and in February 1890, he went through the form of marriage with her. But in the fall of the same year he repeated his old manoeuvres, namely, swindling and desertion. He ran away with a considerable sum of his employer's money, and left the unfortunate young lady to shift for herself. Inquiries were then instituted, and HARVEY'S true character having been discovered, an appeal was made by the woman he had deceived to the United States Consular Court for Hyogo and Osaka. All this presents no novel feature. Swindlers and deceivers of women are old-fashioned and familiar phenomena. But the procedure of the Court was less hacknied. In the first place, it issued a commission to the judicial authorities in Iowa requiring them to summon and examine the real wife of HARVEY and the clergyman by whom the marriage ceremony had been performed. The commission was accompanied by a photograph, constituting "Exhibit No. 1." This photograph, being shown to the wife and the clergyman, was by both of them unhesitatingly identified as the photograph of CONRAD HARVEY, formerly of Panora, in Iowa, the husband of Mrs. DELLA PIERCE HARVEY, legally married to her in 1885 by the Rev. W. D. SWAIM. The depositions of this lady and of the clergyman, having been duly recorded by an Iowa tribunal, were returned to the U.S. Consulate in Kobe, and on the strength of them the petition of Mrs.

Digitized by Google

CORA LAFFERTY HARVEY against CONRAD HARVEY was heard, the Consul finally issuing "a decree annulling the marriage between the plaintiff and the defendant, and giving her the right to assume her maiden name." Our readers will observe that we have said nothing as to the origin of the photograph. In truth its origin is one of the perplexities of the case. Presumably it was a photograph of the CONRAD HARVEY who went through the form of marriage with Miss CORA LAFFERTY in Kobe in February, 1890, and who deserted her in October of the same year. But, according to the published proceedings, there was not a jot of evidence to connect the face in the photograph with the face of the Kobe swindler and wife-deserter. We have no doubt that the two were identical, but it certainly would have added to the regularity of the Consular Court's methods had this vital point been duly established by evidence. However, that is a trifle compared with the interesting discovery that a United States Consular tribunal in Japan possesses the competence of a Divorce Court. We never imagined that such power was vested in a Consular tribunal. Yet we now find the United States Hyogo and Osaka Consulate issuing "a decree annulling a marriage." We must assume that the Consul possesses knowledge of the law which he administers, but it is undoubtedly a matter of surprise to find that the public has hitherto been labouring under such an erroneous impression as to the competence of a Consular Court. And a still more striking feature presents itself when we contrast this "decree annulling the marriage" with the fact that there never had been any lawful marriage at all. If CONRAD HARVEY was duly married to Miss DELLA PIERCE in Iowa in 1885, and if Mrs. DELLA PIERCE HARVEY remained living and his wife in February 1890, it is obvious that his nominal marriage with another woman in the latter year was a fraud, and that "a decree annulling it" is a travesty. If there was a marriage legally cognizable in 1890, then the Kobe Consular Court had no competence to issue "a decree annulling it," and if there was no such marriage, then the issue of "a decree annulling it" becomes a work of comical supererogation.

THE AMERICAN BOARD MISSION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Allow me to thank you for your very kind words regarding the Report of the American Board's Mission, in your issue of this morning, but especially for calling attention to the error in the amount of the contributions of the foreign residents in aid of the earthquake sufferers. How this regrettable mistake arose, I do not quite understand. My regret for it is, however, mitigated by the fact that it has called out your re-

newed statement of the very large aggregate of these noteworthy benefactors.

They were suited to make and, as I know from my own observation, have made, a most happy impression upon the Japanese people—an impression which will not soon be forgotten.

I am, yours faithfully,

D. C. GREENE.

August 8th, 1892.

THE GENERAL ELECTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As a propounder of conundrums, the ingenious Reuter is entitled to high praise. As a provider of news he has certainly mistaken his vocation. On July 31st he tells us that Mr. Gladstone has a majority of 40; that nothing is known of the composition of the new Cabinet, and that Gladstonian counsels are divided on certain important matters. On August 3rd he telegraphs that the Opposition are going to move a direct vote of confidence; and on the 5th he makes an airy reference to the "accession of Mr. Gladstone,"—apparently as an accomplished fact.

Now, Sir, who are the Opposition, and in whom or what are they going to move a vote of confidence? If, as would appear from the last telegram, Mr. Gladstone is in power, the Opposition means the Unionist minority. Are they, then, going to move a vote of confidence in themselves? Or, if the Opposition means the Gladstonian majority, are they going to express their confidence in the Government, by way of keeping it in office? It has been suggested that this mysterious vote of confidence means really the precise reverse. Perhaps that is near enough for Reuter. Let it be so. But who is who, and which is which?

On July 12th it was reported at the Conservative Clubs that, in the event of Mr. Gladstone having a small majority, Lord Salisbury would probably continue in office until beaten upon a division. This, I believe, was not telegraphed by Reuter. It affords, however, the only explanation of Reuter's telegram of the 24th, to the effect that even if Lord Salisbury were defeated he might simply prorogue Parliament until February, carrying on the Queen's Government meanwhile—*more Japonico*. It is therefore just possible that Mr. Gladstone has found his majority of 40 too much divided to form the basis of a Cabinet, and that the Conservatives are still in office. But this is only guesswork. Things have occurred which Reuter has not informed us of, and we are left to fill up the gaps as best we may. Reuter's conundrums require altogether too much ingenuity to unravel, and I suppose we shall be left in the dark until fuller telegrams reach us through the columns of the American press.

Yours obediently,
August 9th.

A UNIONIST.

THE LATE DR. SCUDDER.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The impression made upon most minds by reading the account of Dr. Henry Scudder's death is that he was guilty of the death of his mother-in-law, Mrs. Mary Dunton. But an intimate knowledge of the circumstances, obtained from a friend when in Chicago, leads me to a very different conclusion. Dr. Scudder was no doubt deranged; and to this fact is due his sad death; and also the lack of any refutation of the false statements that have appeared in regard to him.

Mrs. Dunton died of heart disease; and Dr. Scudder was her most constant and faithful attendant. Just before her death she was seized with a paroxysm in which the pain was so intense that she felt from an invalid chair in which she was reclining and struck her forehead against a table. The result was a severe and bloody wound.

Dr. Scudder was present; and as she was writhing with the double pain attempted to help her resume her former position in the chair. A few moments afterwards she expired, as was predicted four days previously by a council of skilled physicians.

A servant girl heard the noise of the fall, and the screams of Mrs. Dunton, and rushing up the stairway saw Dr. Scudder holding Mrs. Dunton and trying to put her into the chair once more. This is the basis of the theory that Mrs. Dunton was beaten to death with a club. The wounds upon her forehead were not such as would have been made if struck with a club, and no trace of any such instrument was found. And then too how utterly absurd to think that any skilled physician should try to take the life of a patient in that way.

Mrs. Dunton had no children of her own and in her will made suitable provisions for her husband

and then gave the rest of her property to Miss Scudder, who was her adopted daughter. It is greatly to be regretted that Dr. Scudder's mental condition prevented his being able to defend himself and put an end to the many false and injurious statements which have gone into circulation. An attempt on the part of some of the relatives to break the will and get possession of the property has led to the statements that have appeared to the discredit of an unfortunate and innocent man who has no longer an opportunity to be acquitted by an earthly court, but has gone where the calumnies and wrongs of the afflicted here shall all be redressed.

Yours, &c,

H. LOOMIS.

Yokohama, August 12th.

AQUATIC SPORTS.

The swimming and diving competitions promoted by the Yokohama Amateur Rowing Club came off on Wednesday afternoon in delightfully cool weather. The bathing large was crowded to its fullest extent by interested votaries of the science of natation who one and all seemed to derive a considerable amount of amusement from the various events. The tide was at the flood, but there was very little current to interfere with the success of the long dive, which Campbell won splendidly with a tolerably long immersion and straightness of line. The boys' races were spirited affairs, and the first was near being a dead heat. During the proceedings the big pontoon of the Harbour Works departments under the skilful guidance of tug *M* did its level best to run the bathing large down, fortunately nothing but a severe shaking resulted. The judges, who discharged their duties most impartially, were Mr. S. D. Hepburn, Dr. Wheeler, and Mr. E. W. Tilden, assisted by the Hon. Sec., Mr. C. K. M. Martin. Details:—

STANDING HEADERS OFF BATHING BARGE.

P. S. Bent	1
H. P. Blanchard	2
W. W. Campbell	3
H. F. Arthur	0
J. Eytton, Jr.	0
S. E. Unite	0
K. Kingdon	0
O. Balk	0

Five points each were allowed for take off, entrance, recovery, and general elegance. The competition was very close.

SWIMMING RACE.—100 YARDS.

J. Eytton, jun.	1
K. F. Crawford	2
H. P. Goddard	3
L. Salabelle	0

Eytton lead from the start, and won easily in 54½ secs; a close thing for second place.

LONG DIVE.

W. W. Campbell	1
Geo. Hood	2
C. K. M. Martin	3
W. Goddard	0
H. F. Arthur	0
O. Balk	0
S. E. Unite	0

The winner rose after 45 secs. immersion, at a distance of about 150 feet.

SWIMMING RACE FOR BOYS UNDER 13.—75 YARDS.

Geo. Wheeler	1
J. Walker	2

The little fellows swam pluckily, neck to neck, the whole way along, but Wheeler touched the steps half a second in advance of Walker.

RUNNING HEADERS OFF SPRING BOARD.

W. W. Campbell	1
J. Eytton, jun. (equal)	2
K. Kingdon (equal)	2
H. P. Blanchard	3
H. F. Arthur	0
H. S. Goddard	0
O. Balk	0
J. S. Kilgour	0
S. E. Unite	0
P. S. Bent	0
H. Goddard	0

Some of the headers were extremely gracefully executed, while there was little to choose between the winning men.

SWIMMING RACE.—¼ MILE.

K. F. Crawford	1
P. S. Bent	2
H. Goddard	3
H. F. Arthur	0

Crawford led round the moored sampan at the

first lap, Goddard coming next; at the barge Crawford had a long lead, with Bent, Goddard, and Arthur to the rear in the order named. Crawford spurred upon turning for the last time and Bent followed suit. Half way down, the distance between them was considerably lessened, but it was too late in the day for Bent to do more than taken second place.

SWIMMING RACE FOR BOYS UNDER 15 YEARS. 75 YARDS.

Carst	1
Sidney Wheeler	2
Drummond	0

The boys went at the business with right good will, but Drummond soon retired, leaving it to the other two to fight out. The finish, as usual, was very close. Time 40 secs.

THREE FEATS FROM BATHING BARGE, SPRING BOARD, AND HORIZONTAL BAR.

P. Blanchard	1
W. W. Campbell	2

The six different feats were equally clever, and Blanchard clearly won by his last daring jump from the barge roof on to the spring board and from thence into the water.

RUNNING HEADERS OFF TOP OF BATHING BARGE.

P. S. Bent	1
W. W. Campbell	2
H. P. Blanchard	3
H. F. Arthur	0
H. S. Goddard	0
O. Balk	0

There was little to choose between the merits of the leaders, but Bent's dives were extremely pretty.

LETTER FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, July 21st.

It was only a few minutes after I had mailed my last letter that I learned from an evening paper that the University of Chicago had secured the million dollars for buildings. When the Board of trustees met on the last day of grace, \$38,000 were still lacking; but Major H. A. Rust, the Vice-President of the Board, at once subscribed \$50,000, and thus brought the total \$12,000, above the required amount. Moreover, another member of the Board had privately secured the signatures of twenty leading business men of this city to a paper guaranteeing any deficiency up to \$100,000; but this was, of course, not needed. The contracts have been, or soon will be, let for the erection of several more buildings. Chicago is proud, and justly so, of the success of this effort to raise \$1,000,000 in three months! The new university, not yet opened, is already worth about \$5,000,000, of which \$3,000,000 or more is endowment fund.

The National Educational Association met this summer at Saratoga, N. Y., and had the honour and privilege of an able and felicitous address by President Harrison.

The Baptist Young People's Union of America has had an enthusiastic convention at Detroit, Mich. There was one sensational and beautiful incident. When the various State banners were brought forward to be saluted, Dr. Laming Burrows, of Georgia, arose and unfurled a large American flag; whereupon Mr. Thomas Ughart, of Toronto, expressed regret that there was no Union Jack at hand to be unfurled with the others. The band then played "God Save the Queen;" and the audience followed very appropriately with "Blest be the tie that binds." Resolutions were passed against Sunday opening and the sale of liquor in connection with the World's Fair; and in favour of government prohibition of the liquor traffic.

The W.C.T.U. Convocation and School of Methods is now in session in this city, and is favoured with valuable addresses on appropriate topics by the prominent ladies of the organization.

Cyrus W. Field breathed his last, "calmly and peaceably," on the 12th instant. His name will always be honored on account of his wonderful perseverance and final success in the matter of the Atlantic submarine cable, and ought to be associated with that of S. F. B. Morse in the annals of telegraphy.

Mrs. Rose Terry Cooke, the well-known authoress, who has portrayed New England life in a peculiarly faithful manner, died July 18 at Pittsfield, Mass.

The terrible conflagration which destroyed half of St. Johns, Newfoundland, with a loss of \$20,000,000, and made 15,000 people homeless, has aroused the people of Chicago to the necessity of

immediate and generous relief. This necessity is the more imperative because the people of St. Johns aided Chicago after the great fire of 1871.

It seems as if in every letter I am called upon to record some great calamity. This time it is again the havoc caused by the storming in a cyclone which swept over Springfield, Ohio, on the 13th inst., and partly or entirely demolished 200 houses.

Mr. W. J. Campbell, of this city, has declined the position of Chairman of the Republican National Committee; and Mr. Thomas H. Carter, of Montana, has been elected in his place and has accepted. Mr. Carter has served as Governor of Montana, Congressman, and Land Commissioner.

It is now pretty certain that the ensuing campaign is to be fought on the tariff question. The Stewart free coinage bill has been killed by the House of Representatives. On July 13, by a vote of 154 to 136, it was sent to the foot of the calendar where it cannot be reached this session. Thus the silver question has been relegated to the rear by the Democrats and the Republicans, both of whom will make their fight "straight and square" on the tariff issue.

The People's Party probably will push the silver question to the front, and undoubtedly will draw free-coinage men from both parties,—in the North from the Republicans, and in the South from the Democrats. They have received great encouragement from the National Mining Congress, which has recently been in session at Helena, Montana, and has passed long and strong resolutions in favour of bimetallic coinage.

In advance of Mr. Cleveland's formal letter of acceptance which will be expected to lay down positively the lines on which the Democratic campaign will be waged, the following in very encouraging:—

Ralph S. Hoyt of the Chicago Single-Tax club, and a former Republican, addressed a letter to the Democratic candidate a few days ago asking for an unqualified assurance that the campaign would be fought on the lines of tariff reform as radical and unequivocal as the platform adopted by the Convention.

He has received the following letter in reply:—"Giray Gable, Buzzard's Bay, July 14, 1892.—Ralph S. Hoyt—My dear Sir: Your letter of July 2 is at hand, and I am exceedingly gratified to learn of your intention to support the principles and candidates of the Chicago Convention. I think no sincere advocate of honest tariff reform can be dissatisfied with the position the Democratic party has assumed on that subject, and I am sure none need fear that the contest will not be made on the lines laid down, which have proved to be so acceptable to a great majority of the people. Very truly yours, GROVER CLEVELAND."

Last evening, in the Madison Square Garden of New York City, Cleveland and Stevenson were both formally notified of their nominations, and made formal speeches of acceptance. Both of the gentlemen, ex-President Cleveland particularly, referred to the tariff question in such a way as to indicate that it will be made the issue of the campaign. Long and formal letters may be expected soon from all the candidates.

The President has made another excellent appointment in nominating George Shiras, Jun., of Pittsburgh, Pennsylvania, as Associate Justice of the Supreme Court, in place of the late Judge Bradley. Judge Shiras is considered one of the best and ablest men in the legal profession in that great State.

The *entente cordiale* is now finally and formally established between Chile and the United States. When a new Ministry was formed in Chile about a month ago, the new Minister of Foreign Affairs, Señor Errazuriz, communicated to our Minister Egan the disposition of the Chilean Government to come to an adjustment of the *Baltimore* indemnity matter. On the 13th instant, Señor Errazuriz sent a note to Mr. Egan with \$75,000 in gold to be distributed among the families of the two seamen who were killed, and the surviving wounded members of the crew. On the 17th, Mr. Egan accepted the offer "as a frank, friendly, and entirely satisfactory settlement;" and on the 19th Mr. Foster, our new Secretary of State, made a public and formal announcement of the settlement.

After considerable discussion, the Senate passed the increased appropriation for the Government exhibit at the World's Fair, the Sunday closing clause, and the \$5,000,000 general appropriation, and rejected a clause prohibiting the sale of intoxicating liquors. When the subject came back to the House of Representatives, they agreed to the Sunday closing clause by a vote of 147 to 61 (the Senate had passed it by a vote of 34 to 17), but they rejected the increased appropriation for the exhibition, and the \$5,000,000 appropriation, the last by the close vote of 122 to 110. The matter now goes for harmonizing of disputed points to a conference committee of both Houses and will come up again by report of that committee to each House. The supporters of the \$5,000,000 appropriation are very hopeful now that it will pass next time it is brought to a vote. But, even if it again fails, the efficiency of the Fair will not be affected, for a loan can easily be negotiated. In any event, it has been finally and positively settled, that the Columbian Exposition will not be open on Sunday.

Within the last two weeks we have had more than our share of labour troubles, including strikes and riots. On the 10th day of this month Gov. Pattison, of Pennsylvania, ordered out the National Guard of about 8,000 men to restore order and protect the Carnegie Mills at Homestead. The different brigades of the State militia met in rendezvous at various places, and during July 12 all met at Homestead. The strikers had planned to give the officers of the guard a formal but cordial reception: but General Snowden, the commander, snubbed the committee, and in a dignified manner befitting the chief military officer of the commonwealth, took possession of the mills and the town. At first, some of the militia felt inclined to have a good time out of it, and to enjoy a good spree; but they were at once put under strict military discipline. Moreover, as the radical element among the strikers were still talking violence, a few arrests were made, and the town practically came under martial law. In the meantime the "strike" idea had spread; and, chiefly out of "sympathy," the employees in the upper and the lower Union Mill of the Carnegie Co., in Pittsburgh, and the men in the Beaver Falls Mills of the same company, went on a strike. On the 16th letters were sent by the Superintendent of the Homestead Mills to most of the old employees, and posters were put all over the town, giving an opportunity until 6 p.m. of to day (July 21st) of returning to work. It is reported that a number have availed themselves of the privilege. The next move, though not unexpected, created great excitement. On the 18th warrants were issued in Pittsburgh for the arrest of seven principal strikers on the charge of murder. The seven persons were Hugh O'Donnell, John McLuckie (Burgesses of Homestead), Sylvester Critchlow, Anthony Flaherty, Samuel Burkett, James Flannagan, and Hugh Ross. McLuckie at once surrendered, but was yesterday released on \$10,000 bail. O'Donnell had already left for the East, but has now returned and surrendered. The other accused have not been found, though they are supposed to be waiting in Homestead to be arrested. At present it is so quiet there that one brigade has been ordered home; *heredomo*.

Idaho also has been visited with serious labour riots at Cour D'Alene. There had been a strike caused by a reduction in the wages of miners; and feeling was running very high between the shut-out union miners and non-union men engaged in their places. On the 11th inst. the strikers attacked a mill, and blew it to pieces with giant powder, killing ten men. The next day they captured three other mills; and perpetrated fearful barbarities on the men who had surrendered. In the meantime, the state militia had been called out, but was unable to cope with the large mob, which was committing devastation all around. Consequently, U.S. troops were ordered to the scene of the troubles, and succeeded in quieting matters without any collision. They arrested and carried to Spokane, Washington, large numbers of the striking and riotous miners, who will be severely punished. On the 16th President Harrison issued a proclamation to all persons in that mining district to disperse and retire to their homes. The troops are guarding the mines, and mills and tramways; all is quiet again, *heredomo*.

IN THE YOKOHAMA LOCAL COURT.

Before Judge Ono and Assistant Judges.

WEDNESDAY, May, 18th, 1892.

MOURILYAN, HENMANN & Co., v. The GOVERNOR of KANAGAWA.

THE KEROSENE OIL CASE.

The Judge—What I wish to know is, whether those 1,400 cases are included among those for which you are demanding indemnity?

Counsel for Plaintiffs—Yes, they are included. They were wrongfully delivered like the others, but we were unable to produce evidence to prove that it was so. The cases, however, are lost, so we demand indemnity for them.

The Judge (to Counsel for defendant)—What Counsel for plaintiffs asks is whether the dates and the number of cases mentioned in document No. 5 are correct or not; you say that you refuse to answer the question. Do you mean that you do not acknowledge them?

Counsel for Defendant—I can only say that the dates and the number of cases as stated by Plaintiffs, are incorrect. But we cannot now find out whether all their statements and figures are wrong, even if we attempted to collect the documents.

The Judge—Counsel for plaintiffs asks whether you acknowledge the fact of delivering those cases on those days or not? Do you mean to refuse to

Original from

answer the question, or do you say that you don't recognise their figures and dates?

Counsel for Defendant—I cannot answer him item by item now.

The Judge—Did you mean you cannot answer? cannot you tell us whether certain cases were delivered on the orders signed by Akew or not?

Counsel for Defendant—In some cases I could answer yes, while in others it would be no, and there are mistakes as to dates.

The Judge—Then you mean that some portions of their statements are true?

Counsel for Defendant—Yes.

The Judge—Then Counsel for plaintiffs asked as to which were the wrong numbers? Did you say you did not know or that you refused to answer?

Counsel for Defendant—I said I refused to answer any question concerning document No. 5. We can ascertain how many cases were received into the store-house on such and such days, but we don't know in whose name they were delivered, as the orders were not kept. We shall be able to find out how many cases were received only after investigation.

Counsel for Plaintiff—If you cannot answer as to the correctness of one portion of our statement you can do so for another portion, I suppose?

Counsel for Defendant—But I have said that I do not intend to answer any question concerning document No. 5.

The Judge—The document is drawn up in a very simple way, but the question is, when and how did Akew received goods through orders signed by himself?

Counsel for Defendant—I don't wish to answer the questions relating to Akew in document No. 5.

Counsel for Plaintiffs (to the Judge)—I wished to know whether the names on the delivery orders were correct, and Counsel for defendant said that some of the delivery orders were lost. Therefore, I should like to question him as to which delivery orders were lost, and the nature of those which he still holds possession of?

The Judge—That is to say whether defendant made these deliveries or not?

Counsel for Defendant—I said before that I do not intend to answer those questions.

The Judge—Do you mean that you don't intend to answer them because you think them unnecessary?

Counsel for Defendant—Not only it is unnecessary, but we are unable to ascertain what plaintiffs ask of us.

The Judge—I want you to state whether you will not answer the question or whether you cannot do so?

Counsel for Defendant—As there is no necessity, I will not answer the question.

The Judge—And the reason of your refusal is that you think the question unnecessary?

Counsel for Defendant—Yes.

The Judge—Very well, then we shall proceed with the examination of witnesses, after the mid-day recess.

Counsel for Defendant asked leave to introduce the keepers of the Store-house as a witness, but the Judge said the application must be made in the afternoon.

The Court rose at 11.50 a.m.

The Court resumed its sitting at 2 p.m. on the 18th May.

Counsel for Defendant—I refused to answer the questions asked by Counsel for plaintiffs as to facts concerning document No. 5, because the total of cases mentioned in it did not agree with a former statement of his. I asked him for the number of kerosene oil cases alleged to have been lost, and he replied that it was some 40,000 cases only. But the document in question declares that they are over 130,000. Evidently some of these must be outside those for which he demands indemnity, therefore I don't think I am obliged to answer any questions unless he puts them item by item, and about such cases as he is able to account for. Then I may inquire into the accuracy of those items, but not otherwise.

Counsel for Plaintiffs—The figure contained in document No. 5 is the total number of cases deposited by the plaintiffs, therefore, if the remaining number of cases is ascertained, we are able to tell how many cases have been lost. If Counsel for Defendant does not wish to answer any questions concerning it we cannot help ourselves.

The Judge—I wish to look further into the various documents presented as evidence. What is the nature of document No. 1, presented by plaintiffs?

Counsel for Plaintiff—It contains copies of applications for depositing kerosene oil cases. The copies were made there.

The Judge—What do you mean by "there"? Do you mean the warehouse of the Kencho?

Counsel for Plaintiffs—Yes. It is like document No. 5.

The Judge—What evidence does it furnish then?

Counsel for Plaintiffs—It shows the total number of cases deposited. The number was also recorded by the defendant.

The Judge—Do the numbers correspond?

Counsel for Plaintiffs—I should like to compare the documents.

The Judge (producing another document)—What is this document for?

Counsel for Plaintiffs—That is a copy of the total number of cases deposited. We got it copied at the warehouse of the Kencho.

Counsel for Defendant—There are some slight mistakes in it.

The Judge—Is there any mistake in the number of cases?

Counsel for Defendant—Yes.

The Judge—Do you mean to say that it cannot be considered an exact copy of the document in the Kencho?

Counsel for Defendant—There are some correct items, but others are incorrect.

The Judge—How these mistakes arise I cannot quite understand myself. Now, for instance, what is the total number of cases imported by the *Anglo American*?

Counsel for Defendant—The number of cases imported by the *Anglo American* is correct, but those by the *Milerton* are stated in the Kencho's Books to be 64,312, and by the *Calyso* 32,504 cases. I mentioned these differences before.

Counsel for Plaintiff—Was the total number by the *Anglo American* 35,241 cases?

Counsel for Defendant—Yes.

The Judge—How have you ascertained the number imported by the *Milerton*?

Counsel for Defendant—That is the total number of cases received at first, but it is not the number mentioned in the application for deposit.

The Judge—Then does the number of cases deposited differ sometimes from the number of cases imported?

Counsel for Defendant—They are often different. Counsel for Plaintiffs (presenting a document to the Judge)—From that open page to where a page is doubled in the middle is document No. 2.

The Judge—What evidence does it contain?

Counsel for Plaintiffs—It shows the total number of cases sold and delivered to various Japanese merchants, but for which we have not yet received payment.

The Judge—Are these figures the market price at the time of concluding the contracts, or simply those of the agreements?

Counsel for Plaintiffs—The agreements.

The Judge—Then do you make these agreements without regard to the market price?

Counsel for Plaintiffs—They are the market prices.

The Judge—As the market price may vary sometimes, the price for the lost cases must be valued at the price prevailing at the time they were lost. Is it not so?

Counsel for Plaintiffs—I must explain to you fully from the beginning. Before answering any question on that document, I must ask you to look at the document I presented to you first. (Here the Judge put several questions in regard to various dates, and the Counsel for Plaintiffs replied by giving the names of ships by which certain cases were imported.)

Counsel for Defendant—From among the figures contained in document No. 2, can Counsel for Plaintiffs state how many cases from certain lots have been lost?

The Assistant Judge—We are now ascertaining the market price.

Counsel for Defendant—If the number of cases lost is uncertain, I don't see how you can estimate their market value.

The Assistant Judge—No, no. We are only ascertaining the relative market price at different times.

Counsel for Plaintiffs—In the account-book you will see the number is stated to be 1,700 cases.

Counsel for Defendant—But this does not explain anything to me.

Counsel for Plaintiffs—It is very plain.

Counsel for Defendant—I wish to ask another question. There is a name, Shin Ketchin, in document No. 2. Who is he?

Counsel for Plaintiffs—He is a *banto*.

Counsel for Defendant—A *banto* of whom?

Counsel for Plaintiffs—Of plaintiffs.

Counsel for Defendant—You say that he is only a *banto*, and yet he is authorized to conclude that kind of transaction. Is it not so?

Counsel for Plaintiff—Yes.

The Judge—You have explained document No. 2. Where is document No. 3?

Counsel for Plaintiff—Document No. 3 is taken from the bottom lines of the same book from which document No. 2 is compiled.

The Judge—What does it show?

Counsel for Plaintiffs—It shows the total number of cases we received.

The Judge—Do you mean the deposited cases which were re-delivered to the firm?

Counsel for Plaintiffs—Yes.

The Judge—Then if you deduct this number from the total number deposited, whatever remains is the number of cases lost?

Counsel for Plaintiffs—Yes, You will see—(presenting a paper)—in this document that the delivered cases are entered at the bottom; those cases that were not delivered are lost.

The Judge—Does Counsel for Defendant acknowledge this?

Counsel for Defendant—No.

Counsel for Plaintiffs—I have only shown Counsel for Defendant the entries of cases imported by the *Anglo American*; but there are others.

The Assistant Judge—If they are of a similar nature will not one suffice?

Counsel for Plaintiffs—They are of a similar description.

The Judge (Exhibiting a document to counsel for Plaintiffs)—What is this?

Counsel for Plaintiff—That is a translation of the minutes of the investigation held at the Chinese Consulate, where we sued our *banto* for doing various things for which he had no authority, and he confessed to them all. It bears the seal of the Chinese Consulate. His name is Shin Ketchin.

The Judge—He was a *banto*. Was Akew under him?

Counsel for Plaintiffs—Yes.

The Assistant Judge—Does Counsel for Defendant acknowledge this document marked No. 4?

Counsel for Defendant—I acknowledge the fact only.

The Judge—Then do you decline to acknowledge that the man has made such confession?

Counsel for Defendant—Quite so.

The Judge (to counsel for Defendant)—Your documents are so simple that I shall examine them all at once.

Counsel for Defendant—No. 1 to No. 5; No. 6 still requires explanation.

The Judge—Very well, explain from No. 1.

Counsel for Defendant—Document No. 1 shows the manner in which kerosene oil cases are deposited—through applications made by the owner of the goods; and of those applications many bear the names of Chinamen alone.

The Judge—And No. 2?

Counsel for Defendant—No. 2 shows the quantity of cases received by the official at the warehouse who, having counted the number, gives receipts for the same. This is the most important document, either in receiving or delivering; for without it no delivery is made.

The Judge—Who signs such documents?

Counsel for Defendant—The Official who has charge of the warehouse.

The Judge—What evidence does that document furnish in the present case?

Counsel for Defendant—If a portion of deposited goods is delivered, then the number is recorded on the original receipt, and this is returned to the owner; and if another portion is required, then the owner must present the original receipt, as a check; and when the whole amount has been delivered the receipt is given back to the Warehouse official altogether. Therefore, these receipts are most important as showing that the deposited goods are all delivered.

The Judge—What is document No. 3.

Counsel for Plaintiff—It contains applications sent by the owner of deposited goods requesting delivery of such deposits. Some of them are signed by Chinese, while others have European signatures. Thus it shows that the signatures on applications vary greatly.

The Judge—What is No. 4 then?

Counsel for Defendant—That only shows how many different kinds of signatures were used by the plaintiffs.

The Judge—Then documents No. 3 and No. 4 together exhibit the facts of the case?

Counsel for Defendant—Yes; as I said just now.

The Judge—What is No. 5?

Counsel for Defendant—It furnishes some instances in which firms, other than that of the plaintiffs, always allow their Chinese employees to make the deposits and take delivery of goods. In short, it shows that such is a common practice in Yokohama.

The Judge—It proves then, that according to common usage Chinamen are authorized to deposit or take delivery of goods?

Counsel for Defendant—Exactly so.

The Judge—What is No. 6?

Counsel for Defendant—It is an answer received from the Chinese Consulate to our Government's inquiry as to the suit instituted by the plaintiffs. As the suit was brought against the Chinese in November last, I am sure the plaintiffs then thought

that their Chinese were responsible for the loss. Such being the case, it is only on very vague grounds that the plaintiffs now sue the defendant. That document proves these facts.

The Judge—Was the suit against the Chinese a civil suit?

Counsel for Defendant—Yes.

The Judge—What kind of suit was it?

Counsel for Defendant—I know nothing about it beyond what is stated in that petition, a translation of which is appended.

Counsel for Plaintiffs—We do not acknowledge document No. 1.

The Judge—Did you say you do not acknowledge it?

Counsel for Plaintiffs—Yes. What is document No. 2?

The Judge—The process of delivery.

Counsel for Plaintiffs—That we acknowledge.

The Assistant Judge—Acknowledge, did you say?

Counsel for Plaintiffs—Yes. We don't acknowledge No. 3; and in No. 4 the first three names we acknowledge, but not the following three.

In Judge—Then you don't acknowledge any Chinese signatures.

Counsel for Plaintiffs—No. 5 and No. 11 we don't acknowledge. No. 6 is not the original document, so we cannot say whether the original is the same or not.

Counsel for Defendant—If the original is required, I can get it from the Chinese Consulate; but this is a copy of the one sent to us from the Consulate, and bears the seal of the Consulate.

Counsel for Plaintiffs—That document is only just presented, and we do not know whether there was such an enquiry or not; therefore we cannot acknowledge it.

The Judge—Counsel for defendant asked leave just now to introduce some witnesses—for what purpose does he require their testimony.

Counsel for Defendant—I should like to call the official who keeps the warehouse, and receives and delivers the goods, to ascertain from him the identity of the various signatures used by the plaintiffs' firm, and other matters relating to them.

The Assistant Judge—I think you can prove all those things.

Counsel for Defendant—But I never was in charge of the warehouse.

The Assistant Judge—Very well then, call him.

Counsel for Defendant—He is in the Court.

The Assistant Judge—It seems to me, on second thoughts, that it is not for the purpose of stating any facts in the case that you call him, so I fail to see any necessity for his appearance.

The Judge—As his statement does not assume the nature of evidence, at this stage, don't you think it unnecessary to call him?

Counsel for Defendant—It is not very important, as it can be stated in the pleadings.

Counsel for Plaintiffs—I wish to state some facts concerning the indemnity, which must be taken into account. The interest on the money is 7 per cent. per annum, and the premium of insurance required for explosives is 2 per cent. This 2 per cent. is agreed upon by the foreign merchants in Yokohama. Thus, 9 per cent. interest to the time of delivery will be asked for.

The Judge—Do you agree to that.

Counsel for Defendant—No.

The Judge—Very well, we will proceed with the pleadings now. Counsel for plaintiffs please open for your side.

Counsel for Plaintiffs—As the present case is very complicated, and has taken several months to investigate, I shall, in order to render it at all intelligible, have to go into it from the very beginning. First, I desire to explain the system of the management of kerosene oil in Japan. According to the Regulations expressly provided, we are compelled to store all imported kerosene oil in warehouses built and managed by the Government. According to Art. II of the Regulations, we have to present an application for its reception—the form of which is shown in the document marked "A." When the goods are deposited the official in charge of the warehouse issues a receipt for them, in accordance with Art. III. of the said Regulations. When any of the goods are sold, the owner sends in a delivery order signed by himself, and the original receipt accompanies it. Such is the process gone through when depositing or delivering kerosene. The present suit concerns a certain number of cases of kerosene imported by plaintiffs by the *Anglo American, Calypso*, and *Milverton*. They were landed at the Customs' jetty, and then were carried to the Government's explosives' warehouse for storage. There is not the slightest doubt as to the depositing of the cases there, and the Kencho, the defendant, acknowledges this fact. There has been, however, some dispute as to the number of cases so deposited, but the Kencho has already acknowledged ninety per cent. of the number which we have stated. Document No. 1 was

copied at the Kencho by Mr. Edwards, who is now in Court. When he went to make these copies the Kencho treated him with all courtesy, and lent him the original book, at the same time instructing an official to assist him, with whom Edwards afterwards read over what he had copied. Document No. 5 was copied in a similar manner; but I dare say the Kencho is not over-pleased at our putting in of these documents as evidence. If they are correct the number of cases deposited by plaintiffs is much greater than we can now account for. That is to say, these papers put the total of the cases at 132,006, but our certified figures show 128,285 cases only. There is some slight difference in our totals, but as I have said before, it is quite plain that the defendant received every case imported by the three ships; and the Kencho also acknowledged that they received such cases, and that they belonged to Mourilyan, Heilmann & Co. and to no other firm. Now we will turn our attention to the delivery of these goods. Document marked No. 5, which was copied from the original in the Kencho by Edwards, will show plainly at the exhibition of whose signatures the goods were delivered. No doubt defendant is placed in an awkward position, and his reply is therefore somewhat undecided. At first I thought he was going to acknowledge this document, with the signatures therein, to be correct, but I was mistaken, for in the end he refused to answer any questions put upon it. But he acknowledged in a previous examination that there were some delivery-orders signed by Chinese, and some the signatures on which were written in pencil, while others neither bore the stamp of the firm nor the name of the ship. Thus far he has himself confessed; yet, what did he say in answer to questions concerning this document, No. 5? He declared that there was no necessity to acknowledge it, so he refused to answer any questions based on its facts. Whether our questions were important or not is plain enough. As I said before, the total number of cases deposited by the plaintiffs, and the number stated to have been delivered on those orders correspond, and therefore some persons might infer that document No. 5 was drawn up by plaintiffs for their own convenience. But such cannot possibly be the case, for each delivery order bears its date, and no one can invent the dates or such a number of cases as shall correspond with the check or tally possessed by the Kencho. My argument shows plainly that document No. 5 was copied at the Kencho from the original delivery-orders. What did the defendant say in reply? He said that he did not know anything about it, or that he refused to answer. Now, according to Art. III., of the Code of Civil Procedure, such a refusal is considered to be a tacit acknowledgement of the charge. Therefore, I may conclude, that the defendant acknowledges that he delivered the goods to the Chinese who had signed the delivery-orders. Now the second question is, whether the Chinese who signed those orders possessed any authority to do so or not. This is the most important question of all, and the defendant is also aware of its importance, so he argues against it, and in doing so indirectly acknowledges that he delivered the goods to the Chinese who signed the delivery-orders. Whether the a Chinaman has a right to represent his firm or not was made plain by the evidence of the daily practice of merchants in Yokohama. By the evidence given by Mr. Middleton it is clearly proved that no merchant authorises any Chinaman in his employ to discharge responsible duties of his own motion. This rule is so common that any firm in Yokohama will affirm the statement I now have made. If the common usage alone is not sufficient to prove its validity, I must draw your attention to the method of appointing authorised representatives. They are of two kinds: one person is authorised by receiving a power of attorney in writing, and another is appointed by verbal contract. The former method is only resorted to when the matter is of very great importance; as for instance, when a head partner in a firm, on leaving the country, appoints some one to discharge all his business duties for him during his absence. As one of the witnesses stated, no power of attorney is needed for a person to be authorised to sign delivery-orders. It is not used even in commissioning a clerk to draw money from the bank. Such being the case, it is absurd to say that any man who is authorized to sign delivery-orders must notify the fact to the Kencho or advertise it in the local papers. Not only in a case like the present, but in various other cases, a man may be authorized to sign documents for the firm, and following common usage, it is not necessary for him to notify the fact to the public—rather must those who doubt his authority inquire into the facts and be definitely assured of them. They are responsible to themselves in the matter. Such is the case in the present suit. The plaintiffs authorized X. and Y. to sign kerosene delivery-

orders, and if the Kencho doubted their power to do so it was the duty of the Kencho to enquire into the facts. Therefore we hold the Kencho responsible for believing these Chinese and accepting their signatures. It is the common usage in Yokohama, and every foreign firm is ready to express the same opinion. Well now, to whose signatures were those deposited kerosene cases delivered? It has been proved that the signatures were those of Akew, Alai, Shin-Ketchin, and others. No doubt the Kencho believed that these men were properly authorized. But to believe such a thing against the common usage of the port is sheer negligence on the part of the Kencho. It is this which constitutes the ground of our suit for wrongful delivery. The defendant acknowledges the confession of the Chinese, at the Chinese Consulate, that they tore up the delivery-orders signed by Edwards and other Western employes of the firm, and prepared different orders to which they signed their own names. I wish to mention another instance of negligence on the part of the Kencho. There was a delivery order on which no signature was written, except the stamp of the firm. The defendant said that the goods were delivered by virtue of that stamp being upon the paper. But that stamp has no value at all. In every document the signature alone is of the greatest importance; and without a signature nothing is valid. The stamp under a person's signature is simply to show that that person represents such firm and nothing more. On the other hand, if there is only a signature without a stamp denoting the name of the firm, the Kencho can be charged with wrongfully delivering goods to some individual who has no authority to sign the name of the firm. If a stranger were suddenly to come to the warehouse and say that he represented Mourilyan, Heilmann & Co., would he be believed at once? The defendant may urge that the Chinese signed several orders on different occasions; but that is an untenable argument, for mere repetition cannot and does not endue anyone with authority if he has never possessed such authority. Again, it is argued that certain portions of the goods delivered were received by the plaintiffs, therefore the defendant cannot be held responsible for the loss. But, as I have said before, that does not alter the nature of the act, which was criminal to begin with. We may in the present case, if the money is refunded, not care to institute a further suit. But surely, if one discovers any wrong that has been done against him without his knowledge, he may sue for its remedy. I will conclude my general pleading now, and in conclusion must repeat, once more, that as we are compelled by the Prefectural Government to store our kerosene oil in their warehouse, so the responsibility of its proper delivery to the right person rests on the Prefectural Government and on no other. We demand an indemnity for the number of cases lost, as we are utterly unable to ascertain to whom they were sold, the transaction taking place solely between the Chinese and the Kencho. We only know that those cases were deposited in the Kencho's warehouse, and that we did not issue any order to the defendant to deliver them. Therefore, whichever way the argument may be twisted, the responsibility must rest on the defendant, and consequently the plaintiffs are entitled to an indemnity for their loss.

At 3.50 p.m. the Court adjourned for 30 minutes.

The Court resumed at 4.30 p.m. and Mr. Mitsuhashi, Counsel for defendant, addressed the bench as follows:—

Counsel for Defendant—The learned Counsel for the plaintiffs has argued his case very cleverly and divided the subject into many branches. I wish now to lay before you the facts of the case for our side, and will do so briefly, as I think a mere statement of them will suffice for the present suit. I do not intend to waste much of your time. The first subject I have to dwell upon in reply is the statement made by Counsel for plaintiffs, that they are compelled to store in our warehouse all large quantities of kerosene oil imported to this country. It is true that such is the case, but for what purpose is such a regulation enforced? It is for the sole purpose of preserving the safety of Yokohama, for which the Government is held responsible. The amount of kerosene imported into this country is increasing very rapidly, and the Government must be prepared to store it directly on arrival, as no private individual may store it in any quantity. The Government spent much money last year in building some new warehouses for explosives, but, as they are not always full, no profit can possibly be realised from their rent. It is for the welfare of the people residing in Yokohama that we take charge of this kerosene and the responsibility is very great indeed. Now we will turn our attention to the present suit. As I have said before, it is not necessary to store every case of kerosene imported,

nor is it necessary that all the cases imported should be mentioned in the application for deposit. Because the owner of the cases may complete transactions for their sale while they are still in the hands of the Customs for inspection. In that case those which are sold will be transferred to the buyers and taken away, and only the remaining stock will be sent to the government warehouse. Upon arrival at the warehouse some official in charge of the place will examine the number of cases, and then give a receipt for them to the owner. If the goods belong to a firm the receipt will be addressed to that firm. And in accordance with Art. XI. of Regulations for explosives, the original receipt must be presented with the delivery-order whenever the owner wishes to receive back any goods. If the goods are delivered in installments the number must be written on the back of the original receipt, and returned to the depositor, and when the whole have been delivered the deposit receipt must be returned to the official who issued it. This receipt is of great importance, but the signatures on the delivery orders are not so carefully observed,—for without the original receipt no kerosene can be delivered. As long as the receipt is in the hands of the depositor we have the responsibility of delivering the goods in exchange, and as soon as it passes into our possession we know that the goods have all been properly delivered. The importance attaching to the receipts may be seen by the express provision laid down about them in Art. V. of the Regulations. (At this point the Regulations, duly marked, were handed to the Judges.) The plaintiffs received back all the cases deposited in exchange for their receipts, but now they claim that certain cases of kerosene were wrongfully delivered. I fail to see the reason for it. Even if we allow that those delivery-orders are also of great importance, it has been shown that they are all signed by Edwards, Paterson, Piggot, and some Chinese in the firm's employ. They say that some are valid while others are invalid, but how can the Kencho distinguish between them? If they say that Edwards is the only man authorized to sign them, then those signed by Paterson and Piggot will also be invalid, but their argument runs otherwise. They say that the orders signed by European employes of the firm are valid, but those signed by the Chinese alone are invalid. Did they ever notify such a fact to the Kencho before? No. So far as the Kencho knows, if the one is valid the other must be valid too. Besides, according to the common usage in Yokohama, Chinese often represent their foreign firms in the transaction of business, and no distinction is made between the European employé and the Chinese. But this is not an important point in the present case. The provision in the Regulations simply says that a signature (署名) is required on delivery-orders or on applications. That signature, in the present case, is neither that of Edwards nor of the Chinese, but of Mourilyan, Heinmann and Co. Therefore, so long as that name is on the delivery-order,—whether it is countersigned by Edwards or Piggot, matters not,—we have to deliver the goods. Counsel for plaintiffs put great stress on the evidence given by Mr. Middleton, but Mr. Middleton himself stated that kerosene oil forms only a small portion of his business, in short an additional branch, as it were, of his trading connection, therefore his methods alone cannot be considered the common usage in Yokohama. I regret that I was not allowed to bring forward my witnesses, because they could have made statements entirely contrary to those given by Mr. Middleton. That is to say, they could have proved to your satisfaction that the practice in Yokohama is to allow a Chinese employé to act as agent for the firm by which he is employed, and to conclude various business transactions. In the plaintiff's firm their Chinese were authorized to complete transactions with Japanese merchants, and to issue, on behalf of the firm, receipts for money received. Again, Counsel for plaintiffs said that some delivery orders were written in pencil, and so on. But, as I stated before, the pencil used was not an ordinary one, but one that serves the purpose of copying-ink. Counsel for plaintiffs also argued at length about my refusal to acknowledge document No. 5 as a genuine copy of the original. I grant that we received a number of cases imported by the *Anglo American* and other ships; but the reason of my refusal to acknowledge that document as a true copy was that as the plaintiffs did not know which portions of certain cargoes were wrongfully delivered, his questions would be very vague, therefore I refused to answer any of them, as I could not tell to which portions he might be referring. Besides, the dates and the number of cases mentioned in that document differ considerably from ours. If he had simply asked whether we had ever delivered goods on presentation of delivery-orders signed by Chinese, I would have been quite ready to answer yes, but his other questions were too

vague. Again, Counsel for plaintiffs said that the responsibility of finding out who were the persons properly authorized to sign the delivery-orders devolved upon the Kencho. Such a statement is absurd. The Kencho has always regarded its receipt as the most important proof of ownership and authority; and to whoever brought that receipt we were always ready to deliver goods. Besides, we have applications for deposit signed by Chinese only. Those the plaintiffs recognize as valid. Then they must acknowledge the delivery-orders signed by the Chinese as being valid too. Whether a person is properly authorized or not we cannot possibly tell, for as one of the witnesses said, no notice is given of such fact to the Kencho nor is it advertised in the papers. If a firm only authorizes A. and not B. or C. that fact should be duly notified for the benefit of persons dealing with them. Surely it is only natural for the defendant to presume that if one is authorized others have the same power too, if no intimation to the contrary is brought to his notice. In short, since Chinese can sign the applications for deposit it may reasonably be taken for granted that he can sign the delivery orders too. Even if it is considered that he is without that power, that does not depreciate the strength of our pleading, for the most important document in these transactions is our receipt, when that receipt is produced we deliver the amount of goods mentioned upon it. Thus upon defendant lies no responsibility whatever, whether the cases were lost subsequently or not. As I fail to see that there was any wrongful delivery in this case, I don't think I need detain you any longer or dwell upon the differences in the number of cases as stated by either side or their alleged value. I will therefore now conclude, and in doing so must repeat that, as the delivery of the cases was properly managed the defendant has no responsibility for any subsequent loss, and therefore there is no obligation on him to pay any indemnity.

Counsel for Plaintiffs—In the course of the pleading of the learned Counsel for the defence I noticed that he said that the Kencho regarded its receipt as the most important document, and that the application for delivery might be signed by any person. But such a statement would make the merchants who deposit goods in the Government warehouse place very little confidence in the Kencho declaration of their safety or safe keeping. Even if the receipt was brought in, surely there would be no delivery of goods if the delivery order was not properly signed? Surely the defendant does not say that, even without any delivery-order, so long as the receipt is shown, delivery of the goods would be made? Besides, the Kencho knows very well who are the persons authorized to sign these documents, so that if some strange signature is upon any order presented to them they should ascertain whether the person is authorized to sign or not. For one cannot take, and does not take, the unsupported statement of any strange individual. Besides, the Kencho can always ask a firm whether they wish to receive delivery of all the goods deposited. The plaintiffs always signed proper delivery-orders, and naturally imagined that every thing was all right. The negligence is on the part of the defendant only, and arises from his delivering the goods to the Chinese without enquiring whether they were properly authorized to sign delivery orders or not. Even if fault was on both sides, the error of the Kencho must be considered the greater. For if the Kencho had been a little more cautious in their manner of business no such great loss could possibly have been sustained by the plaintiffs. As we consider the loss was simply due to culpable negligence on the part of the defendant, it is only natural for us to demand compensation. Counsel for defendant said that many people signed those delivery orders. Well, we did not state that we had authorized one individual only; what we did say was, that to those who possessed no authority for receiving them no goods should have been delivered. In other words, the goods may only be delivered to persons who are properly authorized. Again, Counsel for defendant said that the plaintiffs were unable to state exactly what portions of certain cargoes were lost. I have said before that plaintiffs know that the loss occurs among goods imported by the three mentioned ships only, and that the number of cases delivered corresponds with those deposited. Our accounts, which we put in, contain the number of cases that were properly delivered, what remains over were delivered to the Chinese. I don't see that there is any necessity to find out when those lost were delivered. Again, the defendant said that there have been some applications for deposit signed by Chinese. But since the defendant received the goods knowing that they belonged to the plaintiffs the matter was quite in order. To receive delivery-orders signed by the Chinese and act upon them is quite a different affair, however.

Surely the right to pay money into the bank is different from that of drawing money? In Europe little boys are often commissioned to pay money into a bank, but they are never authorized to draw it out. So long as the Kencho received the goods knowing them to be the property of the plaintiffs, it did not matter who signed the deposit note. We instituted a suit against the Chinese in the Chinese Consulate, and obtained their confession that they had received the kerosene. Knowing this for the first time we proceeded to investigate into the matter, and found that the delivery-orders were signed in their names. Then we brought the present suit, as upon the Kencho lies the responsibility of delivering the cases to non-authorized persons. Whether to demand an indemnity from persons who stole the cases or from the persons who delivered them wrongfully is I think the right of the proprietor to decide.

Counsel for Defendant—In my address for the defence I only said that the Kencho does not regard the delivery order as a thing of much importance. I did not say that the Kencho may deliver goods without a delivery-order, for such would be a violation of the Regulations. No delivery was made on a delivery-order alone, or in the absence of the original receipt. Again, according to the statement of the official who has been in charge of the warehouse ever since 1886, the goods were delivered many a time on the signature of Chinese only. Such being the case he naturally thought that though the signatures of European employes changed often, Akew and Alai who signed various delivery orders, did so with an authority unchanged. Some argument on document No. 5 took place just now. Well, defendant, I may say, is ready to give any answers if plaintiffs will state plainly on what dates so many cases were delivered, and out of which consignment so many were authorized to be delivered, or what number from the remainder were wrongfully delivered. Unless such clear questions are put I fail to see the necessity for answering queries on document No. 5. No doubt when we received those goods we were aware that they belonged to the plaintiffs, and as we also considered that the Chinamen who deposited them were empowered to take delivery, we delivered the oil to them. Document No. 6 concerns the confession of those Chinese in the Chinese Consulate, but, as Counsel for plaintiffs did not mention it in his pleading I did not think it necessary to say anything upon the subject. All I wish to say about it now is, that the plaintiffs instituted a suit against the Chinese first, and it was not till its conclusion that they brought the present action against the defendant.

Counsel for Plaintiffs—I wish to remark, further, that the Kencho is very careless in delivering deposited kerosene. The defendant says that so long as Mourilyan, Heinmann & Co. is stamped on the delivery order he delivers the goods to the bearer. But there were some orders which were signed in red pencil while others were written in blue pencil. The present case is as if a man deposited some money for me in some bank in my name, and then went and drew it out in his own name; afterwards, when I wished to draw the money, I am told that it was paid out to the man who had paid the money into the bank for me!

Counsel for Defendant—I think the mistake arose from the want of management in plaintiffs office. If the receipts we gave had been properly looked after, and the numbers upon them checked, no loss could have arisen. But the plaintiffs left these most important documents in the hands of their Chinese employes, and we are informed that when some money was wanted the receipts were taken to a bank, and an advance of money was asked upon them on. This fact was known to us, owing to the clerks of the bank coming to enquire at the Kencho as to the genuineness of the receipts. Is it any wonder then, that as these important documents were left in the hands of the Chinese for two or three years without any enquiry being made as to their condition such a mistake should have arisen? It is, in short, a gross piece of negligence on the part of the plaintiffs, therefore they ought to be held responsible for it.

This closed the pleadings, and the Court rose at 5:20 p.m.

The latest meteorological eccentricity reported from America is a shower of fish. Wisconsin was the favoured locality. The storm lasted for fifteen minutes, and when it had passed the ground was covered with fish.

In recent experiments on the action of metals on india rubber, copper has proven the most deleterious. Platinum, palladium, aluminum, and lead act but slightly; magnesium, zinc, cadmium, cobalt, nickel, iron, chromium, tin, arsenic, antimony, bismuth, silver and gold, not at all. Some metallic salts—including salts of copper and nitrate of silver—are very destructive.

HONGKONG AND SHANGHAI BANKING CORPORATION.

The following is the fifty-fourth report of the court of directors to the ordinary half-yearly general meeting of shareholders to be held at the City Hall, Hongkong, on Saturday, the 20th inst., at noon:—

TO THE PROPRIETORS OF THE HONGKONG AND SHANGHAI BANKING CORPORATION.

GENTLEMEN,—The directors have now to submit to you a general statement of the affairs of the bank, and balance-sheet for the half-year ending 30th June, 1892.

The net profits for that period, including \$30,996.58 balance brought forward from last account, paying all charges, deducting interest paid and due, amount to \$763,590.23.

It is with much regret that the directors have to recommend the withdrawal of \$3,000,000 from the reserve fund to credit of profit and loss account. This sum added to \$124,236.88 taken from the profits of the working account is required to make up a total of \$3,124,236.88 to be placed to contingent account in order to provide fully for bad and doubtful accounts. The reserve fund will then stand at \$3,300,000.

After making these transfers and deducting remuneration to directors there remains for appropriation \$620,353.35; out of which the directors recommend a dividend of one pound per share, which will absorb \$355,555.55.

The difference in exchange between 4s. 6d., the rate at which the dividend is declared, and 3s. 10½d., the rate of the day, amounts to \$102,989.90.

The balance \$70,807.90 to be carried to new profit and loss account.

DIRECTORS.

Mr. St. C. Michaelson, Mr. L. Poesnecker, and the Honourable J. J. Kewick having resigned on leaving the colony, the directors have invited Mr. J. J. Bell-Irving, Mr. Carl Jantzen, and Mr. Julius Cramer to join the board, which appointments require confirmation at this meeting. Mr. T. E. Davies has been appointed Chairman, and Mr. H. Hoppius Deputy-Chairman for the current year.

AUDITORS.

The accounts have been audited by Mr. A. G. Wood and Mr. S. G. Bird, who were elected at the general meeting of shareholders on 25th June last.

T. E. DAVIES, Chairman.

Hongkong, 2nd August, 1892.

ABSTRACT OF ASSETS AND LIABILITIES, 30TH JUNE, 1892.

THE MASON CASE.

This morning's *Shenbao*, says the *Shanghai Mercury* of the 4th inst., contains the text of a despatch addressed by the Chinese Minister to the Court of St. James's, to the Marquis of Salisbury, on the Mason case. The following is a very free translation of the document, which is dated from Paris, February 11th, 1892:—

THE CHINESE MINISTER TO THE COURT OF ST. JAMES'S, HSÛEH FU-CH'ENG, TO THE MARQUIS OF SALISBURY, MINISTER OF FOREIGN AFFAIRS.

In the ninth moon last year the Chinese Minister sent a despatch to the English Privy Council, in consequence of telegraphic advices received from the Tsung-li Yamen, informing him that a Foreigner employed in the Customs at Chinkiang had assisted the Kolao-hwei by purchasing ammunition and firearms. This man was detected and arrested, and on his effects being searched dynamite was found in his trunks. The case was investigated, and the man, whose name is Mason, was tried for having dynamite in his position, found guilty and sentenced for this offence, by the British Chief Justice at Shanghai, to 9 months' imprisonment with hard labour. Immediately upon receiving this telegraphic news, I, the Chinese Minister, informed you of it. On the evidence the case is a most serious one, and I cannot understand how the sentence could be so light. It is doubtful whether the decision was in accordance with justice. Judging according to Chinese law, the Chinese anticipated the sentence would be a severe one, whereas it has proved to be exceedingly light. The Chief Justice may not have been aware of the real gravity of the case; at all events he tried Mason simply on the charge of having dynamite in his possession without due regard to the attendant circumstances. In the Treaty between China and England there is a clause providing that all English people residing in China shall be subject to English law, and dealt with by the English authorities according to English law. Mason was proved at the trial to be connected with the Kolao-hwei at the time when he was employed in the Chinese Customs, a position of trust and responsibility under the Chinese Government. Why, when he was in this position, should he associate himself with persons of neither lawful occupation nor respectability, and stir up discontent and sedition in China? Not only did he join the Kolao-hwei himself, but he persuaded other employees in the Chinkiang Customs to do likewise. He tried to persuade the *weiyuen*s to become members of this unlawful association; he went to Hongkong and engaged nineteen foreigners to join him in the enterprise, with the intention of taking them up to Chinkiang to stir up rising against the Government among the Chinese, and he shipped at Hongkong 25 cases of firearms to be used in the rebellion. The manner in which these arms were packed was extremely clever; the packages were most innocent looking and were marked with false descriptions of their contents on the outside. On the arrival of these arms in Shanghai, Mason duped the Customs authorities, making the officials believe that the packages contained lawful merchandise. The men he engaged in Hongkong followed on to Shanghai in another steamer and he himself brought up the dynamite, intending to take it on afterwards to Chinkiang. He had in all 25 cases of arms and dynamite. From all this it can be easily seen that Mason committed not one offence, but several, and there are several clauses in the Treaty by which he might be adequately punished, and I respectfully beg you to have the case tried over again. Mason was only punished for carrying dynamite, under the 4th clause of the Treaty, instead of being dealt with under the 3rd clause, which was the proper one. In 1865 the English Prime Minister who revised the Treaties made with China and Japan, kept in mind the necessity of making them so that people who joined lawless associations organised for the purpose of stirring up rebellion, could be punished under their provisions. Mason could have been charged under several of the articles of the Treaty with China, and why he was only prosecuted for having dynamite in his possession is not to be understood. When the Chief Justice passed sentence on him he remarked that Mason's crime was punishable either by a light or a heavy penalty; why did he not consider the case one in which he ought to inflict the most severe punishment? There was nothing in the case to entitle Mason to any leniency, especially as it took place just at the moment when the Kolao-hwei were causing trouble and doing damage to property in China; anyone joining this society at such a time should be most severely dealt with. Another reason why he should not have been shown mercy is that he turned traitor to the Chinese Government, which employed him

as an honest man and treated him fairly; his return was to abuse the confidence placed in him. Had he confessed, as the Chinese authorities thought he might have done, they considered that some little indulgence might be shown him, but at the trial and throughout the whole investigation he stubbornly closed his mouth and refused to say a word. He would neither give the names of his accomplices nor say where he got the money for the arms or what they were intended for. Had he told everything China might now be free of rebels, but he would tell nothing. All he said was that when he joined the Kolao-hwei his intentions were to find out all about the association without taking part in the unlawful actions of the members, but if that were so why would he not tell all he knew to the Chinese authorities? His story is inconsistent and clearly shows that his intentions in joining the society were bad. China considers that the sentence passed upon him was inadequate, and I hope it is not too late to re-try and re-sentence him, and that your Excellency, when Mason's time expires, will have the case re-heard. The reason I ask that the new trial should be held in Hongkong is that the Shanghai Chief Justice should not try him again. This would be in accordance with the regulations laid down in 1865. China desires that Mason should be punished in proportion to the enormity of his crime, if for nothing else, to deter other Englishmen from following his example. I need not further dwell upon the case in detail; you know the facts quite well, but I tell you again it is the wish of the Chinese to have Mason more severely punished. Foreigners in China always desire to have the very best protection of the Chinese Government, yet they go and join the most dangerous association in the Empire.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, August 5th.

A Russian expeditionary force has entered the Pamirs. The Conservative papers remark that this invasion is coincident with the accession of Mr. Gladstone.

London, August 6th.

The *Times* says that England cannot treat the Russian advance into the Pamirs with indifference, but questions the entire accuracy of the Russian movement reported to be directed against China.

London, August 7th.

It is believed that the prorogation of Parliament will take place on the 20th instant.

Russia has formally proposed the negotiation of a commercial treaty with Germany.

London, August 8th.

In the House of Lords, the Duke of Devonshire said he required an assurance that the Liberals would take no steps to evacuate Egypt without consulting Parliament. In reply, Lord Herschell stated that the Liberals would continue the foreign policy of the Marquis of Salisbury.

London, August 9th.

Lord Herschell was incorrectly reported when made to say that the "Liberals would continue" the foreign policy of the Marquis of Salisbury. What he did say was that he hoped the policy of abstaining from criticism of foreign affairs at critical moments would be continued.

During the debate on the Address, Mr. Goschen said that the Unionists would oppose Home Rule to the bitter end.

Mr. McCarthy demanded an assurance that Home Rule would be placed in the forefront of legislation; and said if this were not done, the Irish would not support Mr. Gladstone.

London, August 10th.

Mr. Gladstone has intimated that the first duty of Parliament will be to repeal the Coercion Bill; and, in regard to Home Rule, the first business of the House will be based upon the full upholding of Imperial supremacy in conjunction with the effectual transfer to Ireland of the management of her own affairs.

It is said to be impossible to predict what position the Irish members of the House of Commons will take until a responsible government deals with the question.

Notes (abbreviated.)

- (a) First suggested and practised by Kieseritzky. The idea has been taken up a few years ago by Mr. Stone, one of the leaders of the Black party in the present game, in conjunction with the late Mr. Ware and this peculiar defence has been named after these two players, who have adopted it in hundreds of games against strong opponents, with a large balance of the score in their favour.
(b) The waiting attack, which was much in favour with the late Capt. Mackenzie.
(c) Messrs. Stone and Ware considered this essential to their defence. We doubt its special ability, and it is evidently contrary to general principles of development.
(d) Ill considered. P x P was certainly better.
(e) For the Black allies might have now obtained an overwhelming array of pawns by sacrificing the piece at once, e.g., 10... R x P; 11... Kt x R; 12... Kt x R; 13... R x Kt; 14... P to Q 4; followed by 15... P x P and then accordingly P to Q 5 or P to Q 6.

- (f) Withdrawing Kt to Kt 3, or K to B sq. would have given the adversaries another good opportunity of sacrificing a piece for pawns, and the game might have proceeded: 11... Kt to B sq.; 12... Kt x P; 13... Kt x B; 14... B x Kt; 15... R x B; 16... P to Q 3; 17... Kt to Kt 3, 18... P to B 3, followed by P to Q 4, etc.
(g) Much stronger was 14... B to Q R 3, with the probable continuation, 15... P to Q Kt 3 or 13... Kt to K sq.; 14... R to K sq. with an excellent attack; 15... Q x P; 16... R to K sq.; 17... R x R ch; 18... Q x R; 19... K to K sq.; 20... Q to Q sq.; 21... Kt to R 4, followed by Kt to B 5, with a powerful attack.
(h) This exposes them to a powerful attack. Q to B 5 would, however, have been insufficient to relieve them, as white would keep up pressure by Q to Q sq. followed by Q to Q 3 eventually in reply to Q 2 P.
(i) An interesting sacrifice.
(j) The adverse game becomes disintegrated after this effective move.
(k) There was no real remedy. If 30... P x R; 31... Q to Q 7 ch, 32... R to Kt 2; 33... Q x R, and wins. The rest explains itself.

REPORTS.

The Japanese steamer *Wakanoura Maru*, Captain Thompson, reports:—Left Otaru the 2nd August at noon; had moderate S.W. winds and rainy weather to Hakodate, arrived the 3rd at 8.13 a.m. and left the 4th at noon; had light variable winds and fine weather to Oginohama, arrived the 5th at 11.45 a.m. and left at 1.58 p.m.; thence to Noshima had light, southerly winds and overcast cloudy weather; thence moderate northerly breeze and fine weather to port. Time of arrival the 6th August at 5.25 p.m.

The Japanese steamer *Sagami Maru*, Captain Huxey, reports:—Left Kobe the 8th August at 4.20 p.m.; had light westerly airs and fine clear weather; passed Oshima Light the 9th at 1.50 a.m. had light winds from N.E. and fine clear weather, similar weather to Rock Island; passed Rock Island at 5.51 p.m. wind E.N.E. moderate breeze and fine weather; thence to port with light variable airs. Arrived at Yokohama the 10th August at 12.50 p.m.

The Japanese steamer *Sendai Maru*, Captain R. Tipple, reports:—Left Otaru the 6th August at 11.43 a.m.; had fresh S.E. wind with moderately clear weather. Arrived at Hakodate the 7th at 8.16 a.m. During the stay in Hakodate wind increased to a fresh S.E. gale with thick and rainy weather, which however moderated the next morning and left at Hakodate the 8th at 8 a.m.; passed Kinkasan the 9th at 7.16 a.m.; Imboye-saki the same day at 11.42 p.m.; experienced moderate and variable winds with cloudy weather throughout the passage. Arrived at Yokohama the 10th August at 11 a.m.

The Japanese steamer *Wakanoura Maru*, Cap-

tain J. Wilson, reports:—Left Kobe the 10th August at 5.50 p.m.; had light winds and hazy weather to Rock Island; from Sagami to port had foggy weather. Time of arrival 4.45 a.m. on the 12th August.

The British steamer *Belgie*, Captain Walker, reports:—Left San Francisco the 26th July; had light winds and smooth sea throughout the passage. Arrived at Yokohama the 12th August at 6 a.m. Passage, 15 days, 20 hours, and 32 minutes.

The German steamer *Nuernberg*, Captain B. Blanke, reports:—Left Hongkong the 6th August at 11 p.m.; had light variable winds and fine weather throughout the passage. Arrived at Yokohama the 12th August at 7 a.m.

The Japanese steamer *Yamashiro Maru*, Captain Young, reports:—Left Otaru the 8th August at noon; had fine weather with moderate N. to N.W. breeze. Arriving at Hakodate the 9th at 6.15 a.m. and left the 10th at noon; had strong E.S.E. wind to Shiriyasaki; thence to Yamada Head, light S.W. winds and fine weather; thence to Oginohama, fresh breeze and fine weather. Arriving at Oginohama the 11th at 11 p.m. and left the same day at 2 p.m.; had light breeze and fine weather with light haze until 4 a.m.; at 4.30 p.m. set in foggy and cleared at 10 a.m. on the 12th; thence to port light breeze and very hazy weather. Arrived at Yokohama the 12th August at 5.18 p.m.

The Japanese steamer *Yokohama Maru*, Captain Swain, reports:—Left Shanghai the 5th August at 8.40 a.m., detained at bar. Crossed bar at 10 p.m.; had fine weather to Nagasaki, where arrived the 7th at 5.30 p.m. and left the 8th at 6 p.m. Arrived at Shinonoseki the 9th at 7.30 a.m. and left the same day at 11 a.m.; had fine weather throughout the passage. Arrived at Kobe the 10th at 6.40 a.m. and left the 11th at noon. Arrived at Yokohama the 12th August at 6 p.m.; had fine pleasant weather.

LATEST COMMERCIAL.

IMPORTS.

In glb. Shirts a large business has been done at improved prices, but otherwise there has not been very much doing, and the market may be considered quiet, with holders firm by reason of a further decline in Sterling Exchange, whilst buyers seem for the moment apathetic. Yarns have been in very small demand, and Woollens quite neglected. Sterling Exchange is quoted 2/9½ and Bar Silver at 38½ pence per oz., showing a further fall during the week of ½ pence oz. Sales for the week comprise 75 bales English Yarn, 22,500 pieces glb. Shirts, 1,000 pieces Indigo Shirts, 1,000 pieces Turkey Reds, and 240 dozen Handkerchiefs.

COTTON PIECE GOODS.

Brown Canton	3.50 to 3.70
White Java and Penang	6.10 to 6.20
White Refined	5.50 to 7.50

EXPORTS.

RAW SILK.

Our last was dated the 5th instant; since then settlements on this market amount to 1,422 piculs, divided thus: *Hanks*, 96 piculs; *Filatures*, 664 piculs; *Re-reels* 418 piculs; *Kakada*, 188 piculs; *Oshu*, 56 piculs. Direct shipments for the week are 153 bales, so that the total business done for export is close upon 1,600 piculs.

Prices have been still further pushed up, buyers operating freely and paying long prices. The best qualities are still in demand, medium grades being comparatively easy. As might have been expected, the high rates ruling here have attracted supplies from the country, which holders are anxious to move off as fast as possible, so as to catch the good rates ruling.

A considerable amount of business has been done for Europe, and some long figures have been paid, one parcel of *Filatures* having notched the price of \$760.

Exchange has remained firm in spite of lower silver in London, bankers here complaining of scarcity of dollars.

There have been three shipping opportunities since we last wrote; the English mail steamer *Verona* left port on the 6th instant with 173 bales for Europe; the American mail steamer *Gaelic* on the 7th instant had 628 bales for the New York trade, and the Canadian steamer *Empress of Japan*, which left port on the 8th instant, also carried 449 bales for the same destination. These departures bring the present export figures up to 4,498 piculs, against 4,486 piculs last year and 2,030 piculs at the same date in 1890.

Hanks.—Demand has revived and a fair amount of business has been done, prices showing some advance in sympathy with other grades. One parcel *Shimonita* was booked at \$540, with good medium *Shinshu* at \$525; *Chichibu*, \$515; *Anzaka*, \$510; *Maibashi* \$495; *Hachiji* \$480.

Filatures.—The bulk of the trade has been in this department and some high prices have been paid. One parcel, fine size, said to be extra quality, has brought \$760; other European suits \$747½; 732½; \$730, running down to \$650 according to quality. In sorts available for America, high prices have been paid, and still higher ones are now asked. Business has been done as follows: *Taiyosha*, \$730; *Inasha*, \$725; *Tokushinsha*, \$717½; *Kaimaisha*, \$715; *Tokusha*, \$692½, but holders require \$10 advance on these prices for new business. *Koshu* sorts are very strongly held, \$730 being asked for *Yajima*, with \$700 actually paid for *Kusanagisha*.

Re-reels.—High grades have been pushed up in sympathy with *Filatures*; *Shinshu Kaplo*, \$690; *Five Girl* \$675; *Takasaki*, \$677½ and others at similar prices. Medium grades have been rather largely taken at from \$620 to \$630, *Bushus* \$630 to \$600 according to quality and clop.

Kakada.—Considerable business continues, chiefly for Europe. Good silks are somewhat dearer but ordinary parcels are the same as last week.

Oshu sorts. Some business in Hamatsuki at \$510 for good assortment and \$465 for common.

WASTE SILK.

The market is rather slow, sales for the week being 275 piculs, of which 45 piculs were *Noshi*, 230 piculs *Kibiso*. The market "hangs fire" sellers and buyers being wide apart. In the meantime, arrivals are plentiful and the present stock is very near 8,000 piculs. Holders try to be strong in their ideas; they fancy that Waste silk should follow Raw and go up in like proportion, but this does not always happen; the spinning industry in Europe does not seem to be flourishing, and consumers say they must have their Raw material at lower prices.

There has been only one shipping opportunity. The English mail steamer *Verona*, which left port on the 6th instant, carried 126 bales for various European ports. The total shipments to date are now 1,610 piculs against 137 piculs last year and 727 piculs to the same date in the previous year.

Pierced Cocoons.—The stock on the market is increased to 1,000 piculs, but there is no change in the situation, buyers holding off.

Noshi.—Some further business has been done in *Joshu* at \$68, with a few small parcels *Filatures* at from \$105 to \$115.

Kibiso.—Several transactions have been made. *Filatures* are noted at prices ranging from \$77½ to \$96, according to grade. One large parcel *Joshu Hira* has arrived from the country and is reported sold at \$30.

In other sorts, no business to report.

THE GREATEST WONDER OF MODERN TIMES.
HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!
HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulceration of all kinds. It acts miraculously in healing ulcers, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Cooper, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors the throughout Word.

Contractors to the British Admiralty, Foreign Governments, Leading Steamship Companies, & Yacht Owners in all parts of the World.

STEAM LAUNCHES & YACHTS

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
 2. First-class Workmanship.
 3. Moderate Prices.
 4. Greatest obtainable power for weight and space occupied.
 5. Quickness in raising steam.
 6. High rates of speed guaranteed.
 7. Absence of noise and vibration.
- We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 40 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. We are also sole makers of the

KINGDON PATENT LIGHT PORTABLE ENGINE

Stock sizes, 1½ to 6 H.P. Burns less fuel, and gives three times the power, weight for weight, of any other engine. Awarded First Prize by Royal Agricultural Society England, 1890, in competition open to all makers. Illustrated Catalogue in English, French, or Spanish. Send for Copy to

Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.

"THE REAL CUP O' KINDNESS."

Perfect blendings of the Choicest Brands of the Highest Classes of Fine Old Whiskies in their Native Purity, as produced in Scotland, absolutely untampered with.

MATURED IN SHERRY CASKS.

A LUXURY IN PURE SCOTCH WHISKIES.

The letters BOS are the Name, Brand, and Registered Trade Mark of this Matchless OLD SCOTCH WHISKY.

BOS

*** Gold Capsule.

** Blue "

* Green "

Exquisite blendings, possessing a flavour so rare, a character so novel and so entirely their own, that they may fairly claim the very first place among high-class stimulants. Clever Judges pronounce them *unique and unrivalled*.

BOS Whiskies are remarkable for their "delicious individuality of flavour," mellowness and softness on the palate.—"A very Nectar," in marked contrast to ordinary blended Whiskies, which are more or less dominated by one or other of the Whiskies used in blending.

BOS is sold in square white bottles, labelled and capped, the quality being notified by a small label on each bottle. The Proprietors are skilled blenders of Scotch Whiskies, but in all the experience of their Firm, extending nearly over the present century, they have never been able to accomplish anything so fully complying with the most exacting tests, as is now presented in these special blends of BOS.

Correspondence invited from Firms who desire to handle our Whiskies.

YOKOHAMA: SATURDAY, AUG. 20TH, 1892.

MARRIAGE

On Tuesday, August 16th, at Christ Church, and also at the Swiss Consulate, BESSIE, eldest daughter of John Goddard to HENRY LOUIS FARDEL.

DEATH.

On the 17th August, ARTHUR HEARNE, Manager, Club Hotel, aged 41 years.

SUMMARY OF NEWS.

A FIRE broke out on the 12th inst. at Mitomura in Korigami District of Gifu Prefecture, and before the flames could be subdued 21 houses were destroyed.

A TELEGRAPHIC message from Otsu reports that Their Imperial Highnesses Prince and Princess Arisugawa (senior) arrived there on the 15th inst., and proceeded to Maiko the following day.

MR. NAGAI MATSUTARO, a member of the House of Representatives for the seventh district of Hiroshima Prefecture, who had been suffering from inflammation of the lungs, expired on the 9th inst.

THE work of doubling the lines between Ueno and Omiya on the Japan Railway Company, has progressed considerably, and it is expected that the lines will be completed in October next.

THE total receipts of the Osaka Shosen Kaisha during the month of July last were yen 56,569,776, of which yen 29,474,961 was obtained from passengers, and yen 27,094,815 from freight.

ON the evening of the 13th inst., about half-past 9 o'clock, a fire broke out in a house at Susaki, Mukojima, Honjo, Tokyo, and before the flames could be subdued 6 residences were burnt, and 4 partly damaged.

DURING the five months ended May last, 81,514.60 tons of coal were obtained at Takashima mine, Nagasaki. The sales during the

period amounted to 82,302.04 tons, valued at yen 213,884.92. The number of persons employed was 25,539, to whom yen 120,649.69 was paid in wages.

H.I.H. THE CROWN PRINCE, who has been staying at Kamakura, proceeded to Yokosuka on the 11th inst., and inspected the Naval Shipbuilding Yard. He also visited the Japanese war vessels now lying in the port.

THE grand festival of the Futa-arayama shrine at Nikko, will be held during the three days ending the 23rd inst., and special trains will run from Utsunomiya for Nikko as follows:—4.20 a.m. and 9.35 a.m. on the 21st, and 5 a.m. and 9.35 a.m. on the 22nd and the 23rd.

MR. NAKAMA, Chief of Takaoka District, Kochi Prefecture, has been fined, by the Home Minister, a sum equal to two months' salary for the carelessness which resulted in the loss of votes and ballot boxes which were in his charge during the parliamentary general election in the second district of Kochi.

THE cost of repairing the damage caused to roads, embankments, bridges, etc., by the recent serious inundations in Okayama Prefecture, is estimated at yen 1,300,000, of which yen 300,000 will be defrayed from the Local Fund, and the remainder, yen 1,000,000, is to be granted from the Treasury.

A RETURN of telegraphic messages and receipts for July last gives the following figures:—Foreign messages 3,512, receipts yen 10,238.520; inland messages 442,401, receipts yen 94,556.520. These figures show an increase of 14,887 messages and yen 1,794,202 in receipts, as compared with the previous month.

COUNT ITAGAKI, Radical leader, says a telegram from Iwamura, Nagano Prefecture, delivered an address at a public meeting of the *Yiyu-to* held there on the 15th instant, which was attended by an audience of over three thousand persons. The message further states that the Count will return to the capital on the following day, passing the night at Karuizawa.

THE expenses of the public works and the relief of suffering in the inundated districts of Tokushima Prefecture are estimated at over yen 1,800,000. The people are able to defray yen 100,000 towards this amount. The total relief fund to be distributed among Okayama, Tokushima, and Hyogo Prefectures will be over yen 4,000,000.

ABOUT 8 o'clock on the night of the 17th inst. flames burst out of the upper storey of the Branch of the Tanko Railway Company at Tsukiji, Kyobashi, Tokyo. The whole building and the office was burnt, but the books were saved and no damage was done to the coal depôts. The company's business will be transacted at the residence of Mr. Okada Sauenori at Nichome, Tsukiji for the next few days.

A SOCIAL gathering of medical men in Yokohama promoted by Messrs. Tanuma, Secretary; Mitsuhashi, Councillor; and Aoki, Chief of the Sanitary Section of the Kanagawa Kencho. Sugei, Superintendent of Police in Kanagawa; Yamashita, Chief of the Yokohama Police Station; Sato, Mayor of Yokohama; Otunki, Chief of the Yokohama Foreign Settlement Police Office; Doctors Kondo, Miyajima, Shima, Ema, Asai, Sudo, Ninomiya, and Hyodo, will take place at the Chitoseru, Sumiyoshicho, on the 17th inst.

THE number of shares sold in the Tokyo Stock Exchange, and their average value during the month of July last, were as follows:—1,283

Sanyo Railway shares at 24 yen, 12,922 Kansai Railway shares at 38 yen, 4,932 Kiushu Railway shares at 35 yen, 101,322 Tanko Railway shares at 54 yen, 369 Japan Weaving Company's shares at 18 yen, 11,778 Kanegafuchi Cotton Spinning shares at 44 yen, 1,329 Yokohama Specie Bank's shares (new) at 115 yen, 353 Japan Railway (new) shares at 44 yen each, making a total of 134,373 shares.

THE distances between various stations on the Iwamizawa and Muroran line of the Tanko Railway Company are as follows:—Between Muroran and Horobetsu, 7m. 77ch., Horobetsu and Noboribetsu, 4m. 26ch., Noboribetsu and Shiraoi, 11m. 68ch., Shiraoi and Tomakomaki, 13m. 34ch., Tomakomaki and Oiwake, 22m. 07ch., Oiwake and Yoshihito, 9m. 55ch., and Yoshihito and Iwamizawa, 14m. 21ch., a total of 83m. 48ch.

THE export trade of *habutae* (a kind of silk goods) in Japan is growing larger every year. The following are the returns for the five years ended 1891:—1891, 83,617 *tan* (one *tan* = about 71 yards), valued at yen 1,445,639; 1890, 42,842 *tan*, valued at yen 811,538; 1889, 14,674 *tan*, valued at yen 250,743; 1888, 5,431 *tan*, valued at yen 95,975, and in 1887 1,206 *tan*, valued at yen 15,723 in 1887.

THE Osaka Shosen Kaisha has demanded yen 5,000 from the British Admiralty for damage sustained by the ship *Nishikigawa Maru*, while engaged in rescuing the British war-vessel *Pigmy*, which stranded on a rock off the port of Mihara in Hiroshima Prefecture on the 12th of January. Two members of the crew of the former ship were injured. After consultation with the British Consul at Kobe the Shipping Company have agreed to place their claim at yen 3,500.

THE Import trade is much the same as last reported. Whether there are or not heavy transactions pending it is difficult to say, but enquiries on a very large scale have been made, and an extensive business would have been recorded had holders accepted the terms offered. The latter, however, appear to be under the impression that before the orders can be filled to meet the requirements of the autumn trade current prices must be considerably advanced for most descriptions of Piece-goods, for which rates are very firm, and present all the appearance of remaining so. Yarns, on the other hand, though but sparingly dealt in are a shade easier, but probably a considerable demand would induce a proportionate rise in values. There has been more enquiry for Metals, and stocks being low an improvement may be looked for in this trade as soon as the heat of summer is over. Kerosene is firm, though transactions have not been on an extensive scale. The demand for Sugar has considerably reduced stocks of all kinds, but prices remain unchanged. The Silk trade has been brisk, and prices—especially for the higher qualities—have again considerably advanced, rates for all grades having also hardened. Waste Silk has not been largely dealt in, holders still maintaining an unbending attitude in regard to values. Sales having been small and arrivals heavy, the stock has largely increased, and this, together with advices from consumers to the effect that lower prices must be paid before transactions on a large scale can be hoped for, points to an inevitable come down in the present ideas of holders. The Tea trade continues on a moderate scale, and as the season advances quality declines. Prices, however, have not on this account undergone any change. Rates of exchange have remained but slightly.

EDITORIAL NOTES.

THE "MAINICHI SHIMBUN" AND THE YOKOHAMA WATERWORKS.

THE *Mainichi Shimbun*, one of the leading Tokyo journals, contains a singular paragraph about the Yokohama Waterworks. After alluding to the project now on foot to increase the works, it says:—"The Waterworks were originally constructed during the governorship of Mr. Oki Morikata after designs by Major-General Palmer. These designs were at the time opposed by a foreign engineer in the employment of the Home Office, who urged that the filter should be placed at the entrance to the tunnel at the intake so as to prevent the ingress of muddy water, and that the mouth of the tunnel should be more strongly built so as to prevent breaking down. But Major-General Palmer recommended that the filter be placed, not at the entrance of the tunnel at the intake, but at the reservoir at the exit of the tunnel. The Authorities, seeing that both plans presented advantages, finally adopted Major-General Palmer's. But practical trial shows that Major-General Palmer's design was very faulty. Not only would it have been more convenient to put the filter at the intake, but also, had it been placed there, inasmuch as filtered water would have been sent thence to the reservoir, the tunnel, though a distance of over three *ri*, would have been protected against the danger of fouling, and in rainy weather there would have been less muddiness of the water. But by following Major-General Palmer's design, and not placing the filter at the intake, muddy water flows into the tunnel in times of heavy rain, and, moreover, as there is danger of the brick-work of the tunnel giving way, an ample volume of water cannot be sent through it, and the consequence is that, the supply proving insufficient, the authorities have now come to understand the faultiness of the design. Of course this result must be laid at the door of the engineer's carelessness (*fuchui*), but the authorities concerned cannot escape a similar charge."

The *Mainichi* attributes this statement to "a certain person." Doubtless that is true. The story did not emanate from the *Mainichi's* office: it is evidently the composition of an ignorant paragraphist writing on hearsay evidence. But since it may possibly deceive readers who do not understand waterworks, we think it advisable to point out that it contains hardly a word of truth from first to last. Prominent among its errors is the assertion that a foreign engineer of the Home Department recommended that the filter-beds should be placed at the intake, and also gave some advice as to the manner of constructing the aqueduct tunnels. We happen to be in a position to say with certainty that the said engineer's report made no mention whatever of either the tunnels or the location of the filter-beds. The only expert who seriously considered the site of the filter-beds was the very engineer whom the *Mainichi* so lightly accuses of "carelessness." Unquestionably the filter-beds would have been placed by him as a matter of choice, at or near the intake, but the thing was impossible, as anyone acquainted with the locality must know, for the precipitous hill-sides of the Sagami-gawa valley offer no site anywhere for filter-beds. Under the circumstances, the best that could be done was done. Provision was made for sufficient clarification of the water prior to its entry into the aqueduct, as well as for thorough scouring out of the main pipe, by the simplest process, at all depressions where silt could collect. So long as the men in charge of the conduit do their duty properly, it is absurd to talk, as the *Mainichi* does, about inconvenient accumulation of mud in the aqueduct pipes. Still more ignorant and misleading is the assertion that owing to the defective construction of the aqueduct a sufficient quantity of water cannot be sent through it without endangering the brick-work. The *Mainichi* seems to be in a state of perplexity, not alone as to the capacity of the tunnel, but also as to the contingencies of a flood in the Sagami River. Evidently it does not know that the amount of the flow of water through the tunnels is absolutely

independent of the state of the river, and depends solely on the quantity of water delivered into the aqueduct by the pumping engines, which are themselves placed above the level of the highest floods.

What perplexes us about an article like that of the *Mainichi Shimbun*, is not altogether the singular absence it displays of anything like a sense of journalistic responsibility, though that, indeed, is striking enough, for our contemporary appears to think itself free to attack the professional reputation of an eminent engineer with just as little forethought or information as would be required in reproducing some way-side fable about anonymous individuals. But we are compelled to admit that the practice of Japanese journals has familiarized us with that kind of thing. They cry out for their "rights," freedom of speech, and so forth, but they allow themselves to abuse so flagrantly the freedom which they already enjoy that their fitness for a larger measure is more than doubtful. However, that, as we have said, perplexes us less than the origin of such an article, and the fact that it fails to elicit any official contradiction. How does the *Mainichi Shimbun* know that any report was prepared by a foreign engineer of the Home Department on the original design of the Yokohama Waterworks? And why are these false and injurious assertions allowed by the Japanese Authorities to circulate unrestrainedly in the vernacular press? The Departments of State owe something more to their foreign employés than the mere payment of salary. They owe them the common justice of protecting them against such libels as this of the *Mainichi Shimbun*; libels which an explicit official correction can always destroy, but which the unfortunate foreigner himself is almost powerless to refute. Will the *Mainichi Shimbun* reproduce our refutation of its ignorant and injurious errors? Not a bit of it. If it notices the matter at all, there will be simply some shuffle or quibble such as we have already seen in the case of the attack upon the Waterworks from another quarter. But the probability is that the *Mainichi's* libelous statement will go uncontradicted and uncorrected. This system of indifference reacts upon the newspapers. They lose all sense of responsibility and become as untrustworthy as they are reckless. And it is exceedingly hard on the foreigners whose professional reputation is at stake.

"S."

MR. LOUREIRO's assailant "S." returns to the attack in another long letter addressed to one of our local contemporaries. He is apparently indignant with us because, instead of dealing with "the general tenor" of the accusations preferred against Mr. Loureiro, we confined ourselves to rebutting the specific charges. To that rational course, however, we propose to adhere. From the outset we undertook to do one thing and one thing only, namely, to show that the Kobe correspondent, "One Aggrieved," had no grounds whatever for the specific charge formulated by him against Mr. Loureiro, the charge of having received, in his official capacity, an important diplomatic communication, and having suppressed that communication in his own private interests and in flagrant dereliction of his duty. Upon that alleged act of the Consul General's, the Kobe writer founded his accusation that Mr. Loureiro had been instrumental in bringing about the present state of affairs. Therefore, with that act alone we undertook to deal. "S." himself now admits that the assertion of "One aggrieved" was "untenable," but nevertheless blames us because we did not rebut the "general tenor" of "One Aggrieved's" letter, instead of simply exposing the falsehood of his categorical allegations. It is more amusing than annoying to be assailed in such a manner. So far as "S." is concerned, we desire to remind him that he entered the controversy at a late stage, and that the rudeness and irrelevance of his writing precluded us from noticing it at all until the *Japan Gazette* made it the text of a singularly misleading article. "S." has now enlarged, and assigned an interpretation of his own to,

the case previously advanced against Mr. Loureiro, and he actually has the assurance to speak as though we had dealt with that extended case from the outset instead of with the particular phase of it set forth by the Kobe correspondent. He also tells us that "the Portuguese are arranged (*sic*) in a solid phalanx against their late representative in Tokyo." If so, it is unfortunate that they cannot agree as to the nature of the charges publicly preferred by them against that gentleman. The first to open the campaign was "One Aggrieved." Now we have "S." in the field, who calmly tells us that the assertion of "One Aggrieved" is untenable. And yet another Portuguese, writing in the Kobe press, disagrees equally with "S." No wonder that outsiders fail to recognise the "solidity" of the "phalanx."

One point is worth noticing. "S." who, according to the *Japan Gazette*, is either an official or officially inspired, writes in quite a piteous strain about Portugal's financial embarrassments. He expresses astonishment that "the Foreign Office in Tokyo could have lent itself to be the tool of Mr. Loureiro in forcing the hand of an impoverished Government on the brink of bankruptcy to keep in their annual budget a heavy item for the sake of Mr. Loureiro and a handful of Portuguese in Japan." Now all this is so glaringly disingenuous that we are almost compelled to doubt the writer's honesty. Was there a shadow of necessity for the Portuguese Government to retain this "heavy item"—an item of about a thousand pounds sterling annually—in the Budget? Not a shadow. At any moment before the 1st of July they might have intimated an intention of transferring the Consular charge of their nationals in Japan to some of the Great Powers, England, France, or another. That method would have been less costly even than the system now actually in force, and would have secured the privilege of exemption from Japanese jurisdiction. Why did not Portugal resort to it? We cannot tell. But we do know that with such a simple and inexpensive alternative available, she is entirely beyond the pale of all commiseration in the matter of finance. She might have expunged the "heavy item" from her Budget, and yet preserved the treaty privileges of her nationals. But she was either too indifferent or too careless to do so. Pecuniary inability was not a necessary factor in the situation at all, and to assert that it was is merely to throw dust in the eyes of the public.

And how, in the name of the commonest sense, could Mr. Loureiro's interests have been furthered by contriving that his nationals in Japan should come under Japanese jurisdiction? Cannot "S." see that from a selfish point of view, such a consummation was the very last which Mr. Loureiro should have endeavoured to bring about? So soon as Japan, by Imperial Decree, abrogated the extraterritorial clauses of her Treaty with Portugal and assumed jurisdiction over Portuguese subject in this country, all possibility disappeared of the Consul-General's office in Tokyo being resuscitated. "S." may perhaps reply that Mr. Loureiro did not really desire such a result, but that he hoped the threat of it would prevent his own removal. The answer to that is that no threat of the kind was officially made until after Mr. Loureiro had been actually removed from office and had actually left Japan. Portugal, having finally abolished the Consulate-General and finding herself confronted by the prospect of some of her subjects' passing under Japanese jurisdiction, could have saved the situation at any moment before the 1st of July by asking one of the Great Powers to assume judicial charge of her people, a method already resorted to by other small States. Probably everybody at this side of the water—the Japanese Government included—expected her to take that step. Assuredly with such an easy and costless escape from the dilemma, no one supposed that she would either fold her hands helplessly or re-establish the Consulate-General in Tokyo. To

Original from

this moment Portugal's action, or rather inaction, remains to us wholly inexplicable.

A good illustration of "S.'s" method of argument is furnished by the following:—"The Mail asserts that Japan's intention to assume jurisdiction herself was not made (*sic*) until after Mr. Loureiro's departure." Of course we have never advanced any such assertion. Not being omniscient, we do not undertake to declare when or under what circumstances an "intention" began to be formulated in the minds of any officials. Japan's intention may have been conceived before Mr. Loureiro left Japan. Very likely it was. Mr. Loureiro may have known of it. Very likely he did. But it had not received official expression of any kind until after his departure from Tokyo.

One word more. "S." at the close of his letter writes thus:—

Having established the fact that Mr. Loureiro knew perfectly well the intentions of the Japanese Government, is it not pertinent to ask if Mr. Loureiro has not failed in his duty to his country, in not striving to obtain a *quid pro quo* for the rights that his nationals were about to be deprived of in an arbitrary manner? The Mail will perhaps say that the late Consul-General had no instructions to enter into any negotiations of that nature. It may be so, but was it not in that case, his clear duty to represent to his Government the necessity of making the best of a bad job. I am afraid Mr. Loureiro did not move a finger in that direction.

The Editor of the Mail has thought fit to treat this matter in a most flippant manner. He forgot perhaps that he was dealing with a people in whose country more blood has been spilt in the cause of liberty than in any other country in the world. It was only two years ago that the Mail praised Mr. Loureiro for a translation of the Portuguese Criminal and Civil Codes, which it asserted contained the most advanced notions of jurisprudence. The liberty the Portuguese enjoy under their laws has cost their great grandfathers a good deal of blood, and they will not surely surrender it without a hard struggle, despite the Mail's advice not to spend any more money in telegrams. Portugal did not cry *misericordiam* to Great Britain in the African imbroglio, much less is she likely to do so to Japan.

We find here the usual retreat from controversy to patriotism; the usual attempt, so familiar in Yokohama, to prove that unless a newspaper endorses and supports every baseless and slanderous accusation advanced in support of a certain cause, it must be an enemy of that cause. For vindicating the reputation of the Portuguese Consul-General and Chargé d'Affaires against irresponsible traders, we are charged with "forgetting that we are dealing with a people in whose country more blood has been spilt in the cause of liberty than in any other country in the world." Let us dismiss such fustian folly altogether. Any reasonable effort made by the Portuguese in Japan to improve the unhappy position in which they are now placed, would have our support and sympathy. We believe that they are entirely in the wrong route when they devote themselves to anonymously villifying their own officials in the public press and to misstating the facts of the case. But certainly we regret that they should have been deprived of a valued privilege without receiving any equivalent, and we heartily endorse the sentiment breathed at the close of "S.'s" letter. The Government in Lisbon has displayed singular carelessness about the interests of its nationals in Japan, and while every consideration should be extended to its pecuniary embarrassments, which we trust are only temporary, it should be moved by all possible means to obtain for its subjects some equivalent for the privileges which they have lost through its neglect.

THE ATTEMPT TO MURDER MR. FRICK.

SOME of the particulars of the attempt to murder Mr. Frick, Chairman of the Carnegie Steel Company, are very curious. The would-be assassin, Alexander Berkman, did not behave in a manner at all consistent with his design. He presented himself over and over again at the office of his victim, sending in his card on each occasion, and on each occasion disappearing before the attendants could convey a message to him. Such tactics ought to have

been excellently calculated to arouse suspicion, but they did not. Berkman commenced his manoeuvres on Saturday 16th of July and concluded them on the following Saturday. He began by trying to see Mr. Frick's private secretary, Mr. Bosworth. To reach the latter's office he had to go up to a fifth floor by an elevator. He was told that Mr. Bosworth would see him immediately, but he stepped into the elevator and took his departure. This performance he repeated on Monday and Tuesday, managing on each day to get clear away before the servant could inform him of Mr. Bosworth's readiness to see him. On Thursday he began to ask for Mr. Frick himself, whose office was on the second floor. Once on Thursday and three times on Saturday he did this, always—until the third call on Saturday—disappearing before a reply could be carried to him by the servant who had taken his card. It was noticed that when he called at 11 o'clock and 1 o'clock on Saturday he was in a state of great nervousness, but when he presented himself finally at 2 o'clock, all symptoms of nervousness had disappeared, and he acted with the greatest resolution. Admitted to Frick's office, he lodged two pistol bullets in the back of that gentleman's neck at a range of 5 feet, and stabbed him four times with a dagger. Yet of the six wounds none is likely to prove serious. Frick had received a number of threatening letters, and the Superintendent of Public Safety had been anxious to place a guard in his office, but the Chairman had said:—"No. If I can't live in America without constant police surveillance, I won't live at all." It certainly does seem very singular that, in the face of all this, conduct like that of Berkman should not have awakened any suspicion. Berkman, who is described as a young Russian Jew speaking broken English, made not the smallest secret about his doings. He declared that he had come to Pittsburgh from New York expressly to kill Frick, and that he bitterly regretted his failure. He is described as a thin and insignificant little man, with a small dark moustache and wearing glasses, who, during his five years' residence in the States, had worked in various factories, one of his employments having been that of a compositor on John Most's paper, the *Freiheit*. Here is an account of an interview with him in prison on the evening of the attempted murder, after he had essayed to blow himself into the next world by chewing a fulminate cartridge:—

"What did you shoot him for?"

"What did I shoot him for? That's a nice question to ask. Do you know any person in this world who is better or happier for his ever having lived? I can find you thousands whom he has made miserable. He is a dog. I wanted to kill him and I am ready to die for it."

Berkman began to walk excitedly up and down his cell. He stopped at the door again, drew his hand through his hair and smiled.

"I suppose," he said, "you are going to describe me as a red hot anarchist? Well, say what you like; it cannot affect me."

"Do you live in Pittsburgh?"

"Oh, no. I simply came here to kill Frick. It wasn't an accident. I have no hesitation in telling you this. It did not come into my head all in one instant. I thought over it a long time and I said to myself: 'If I kill, escape is out of the question.' Then I asked myself: 'Is it worth while to sacrifice my life to kill Frick?' I decided that it was. I was only one, and my death would be nothing at all compared with the happiness of the thousands of workmen who would bless my memory. You see, I understand what I have done and I know what my punishment will be, but as it is all in a great cause I do not mind it a bit."

"Are you a socialist, or an anarchist, or a nihilist, or all three?"

The prisoner laughed. "Those names, in your mind, sound very bloody." He grew serious in an instant and went on: "I believe in liberty and justice. I have only been in your country five years, but I know its Constitution. Who lives up to it? Does the capitalist consider that the working man is his equal? Every rich man is a traitor to his country. What work did Frick ever do to give him the right to hold in his hands the happiness of thousands of workmen? I believe that every man is a king and that every tyrant should die. What's the use of my telling this to you? I wanted to kill Frick. I came here to do so. I am sorry I did not kill him at once. Now I want him to die."

Berkman was unable to state how many shots he had fired or how many stabs he had inflicted. He

said he was too excited and nervous at the time to remember.

Several policemen came into the corridor at that moment and one of them said to the prisoner: "They say you had a crowd of confederates waiting for you outside the building. Did you?"

He laughed and answered in English: "Not on your life."

THE YOKOHAMA PRINTING AND PUBLISHING COMPANY.

The following circular has been addressed to the shareholders of the Yokohama Printing and Publishing Company, Limited:—

Notice is hereby given that An Extraordinary General Meeting of The Yokohama Printing and Publishing Company, Limited will be held at The Chamber of Commerce Rooms, No. 61, Yokohama on Thursday, the 25th day of August, 1892, at 4 o'clock in the afternoon.

The Meeting is called for the purpose of considering the financial position of the Company and the advisability of winding up the same.

At the said Meeting the following special Resolutions will be moved namely:—

(1). That in the opinion of this Meeting it is advisable that The Yokohama Printing and Publishing Company, Limited, should be wound up voluntarily and it is resolved accordingly that the said Company be wound up voluntarily.

(2). That two persons be appointed by this Meeting to be the liquidators of the said Company.

And the following Extraordinary Resolution will be proposed at the said Meeting:—

That it has been proved to the satisfaction of this Meeting that The Yokohama Printing and Publishing Company, Limited, cannot by reason of its liabilities continue its business and that it is advisable to wind up the same. And that a Liquidator be appointed.

The Company's career has been unexpectedly short, but of course it was not to be expected that the business men who direct its affairs would palter with a plainly hopeless situation. Presumably the *Japan Gazette* will be in the market. Like all Yokohama journals it has had a tolerably chequered career. But if a number of wide-awake folks were contented to pay fifty-five thousand dollars for it twenty months ago, it ought to have a substantial value still. At the best, however, there will be heavy loss.

THE KINGSIN LINER "SALATIGA."

A LARGE number of residents mostly belonging to the German community of the Settlement, accepted the hospitable invitation of Captain Hildebrandt to a "Fruehschoppen," on board his ship, the *Salatiga*, on Saturday forenoon. The vessel is a new addition to the fleet of the Deutsche Dampfschiffs Rhederei (Kingsin line), and was built in the Walker Shipbuilding Yard, by Sir William G. Armstrong, Mitchell and Co., towards the close of 1890, since which time she has made four trips on the company's Sunda line to the entire satisfaction of all concerned—owners, captain, passengers, and crew. Her principal dimensions are as follows:—length over all, 311 feet; between perpendiculars 300 feet; extreme breadth 41 feet; depth, moulded 24 feet 1 in.; depth of hold 21 feet 9 in. She has a cargo capacity of 144,070 cubic feet, carrying 1,640 tons nett, while the bunkers are built for 527 tons of coal, and her tanks for 437 tons of water ballast. Under ordinary circumstances her triple expansion engines, of the latest design and very compact, will drive her at a speed of 12 knots per hour; she has besides, two masts, the foremast being square rigged. The accommodation for passengers is extremely ample and in point of adornment and air-space the vessel is easily alongside a first-class mail-steamer. There are thirteen first-class cabins—nine fitted with two berths each, and four, extremely large and intended for families, with four berths—thirty-four in all, and all are situate on the main deck with a spacious alley-way running round, allowing of large ports and plenty of ventilation. The saloon is very handsome in its light elm carvings and mural paintings, while exactly above it is the music room, luxuriously furnished with velvet lounges and containing, within an alcove, a first class piano; the decoration is the same as in the room below, the paintings being chiefly allegorical representations of the Nine Muses. The officers' quarters are nearly amidships. The baths, of marble and elegantly fitted up with every variety of spray, douche, and

shower, lie right aft. The promenade deck is spacious, and at its extreme end is placed the steering bridge, chart-room, and Captain's room. Strong steam-winchs driven by a powerful donkey engine are employed for the transfer of the cargo from the hold to the shore, or lighters, and *vice versa*. The crew are accommodated forward in a raised top-gallant fore-castle, and their quarters are by no means cramped. Altogether the *Salatiga* is one of the best appointed passenger and cargo steamers which we have had in port lately.

BAILIFFS.

THE *Hochi Shimbun* urges the need of reform in the bailiff system as practised in Japan. Our contemporary observes that it is undesirable that this class of men should be dependent for a living on the money collected by means of distraint levied on the goods of private individuals. Desirous of pleasing their employers, they almost invariably err on the side of severity towards those whose property they attach. Their occupation resembles, to all intents and purposes, that of a trader whose profits are regulated by his ability to drive hard bargains. Though furnished with legal powers by the Court, they are not paid by the Court. Hence they are free to adopt what methods of attaining their ends they please, and, according to the *Hochi*, these are frequently cruel and violent. Two reforms our contemporary wishes to see effected; one being the pay of bailiffs and the thorough control of their actions by the Courts to which they are attached, and the other, the choice of a higher class of men to act in this capacity. The *Hochi* says that the men who act as bailiffs have neither education nor manners. Is not this drawing the point rather too fine? It is difficult enough to induce bankrupts and others to do their best to satisfy their creditors even now by means of the bailiffs of whose roughness the *Hochi* complains, but what would be the state of affairs if these officers were succeeded by polished gentlemen who would shrink from causing inconvenience, and who would bow apologies between every sentence uttered. The suggestion that bailiffs should be regularly paid officers of the Crown is certainly a good one, but it can hardly be expected that Courts should pay to such officers salaries that would satisfy men of education.

THE YOKOHAMA UNION ELECTRIC LIGHT COMPANY.

THE adjourned meeting of the above Company was held on the 9th instant, and fully maintained the reputation of the Company in respect of the noise and disorder by which the meeting was characterised. In anticipation of lively times, several *soshi* attended, shares which entitled them to be present having been purchased for them. The number of shareholders present was 53. The first question the meeting was called on to decide was, should the resignations of the former office-bearers be accepted. After considerable discussion an affirmative answer was given to this question. The two other items of business before the meeting were the election of new officers and the discussion of the revision of the Company's rules. Mr. Otsuka Nariyoshi was elected Chairman of the meeting. But he was unequal to the task of keeping it in order. A long and noisy discussion on the order in which the two above-named items should be taken took place, with the result that the revision of the rules was discussed first. The opposition to this measure was at first very great, but it was eventually agreed to. The election of officers followed: Mr. Kimura Riemon was chosen to be Chairman of Directors and among the Directors were Tanaka Heihachi and Takashima Kaemon. After passing a resolution to the effect that the Company's buildings should be insured the meeting dispersed.

FENCING BY BLIND MEN.

THE Japanese are often said to be lacking in originality. But careful consideration of the various methods of making a living devised by the lower and middle classes in this country

leads to an opposite conclusion. In being lovers of novelty the Japanese are like Occidentals. No student of western life and manners can deny that the desire to see, hear, and do new things is deep-seated in us all. The *Hochi Shimbun* relates that in a certain Japanese country town, in order to fill his empty coffers, a Japanese trader determined to hold a series of fencing matches in which the combatants should be blind men. He selected his fencers carefully, and hired a large theatre for the occasion. The entertainment took immensely. The combatants, some of whom were priests having a knowledge of fencing, created no end of diversion by the manner in which they stalked about the stage in search of their opponents and by the agility with which they avoided blows when actually fencing. The account goes on to say that the poor blind men who afforded the diversion were cheated out of their earnings by their employer. They were informed that the audience only consisted of about 100 persons, and hence was far too small to allow of the manager doing more than paying expenses. To this the blind men replied that the peals of laughter which greeted their ears were much too loud to be produced by 100 persons and that they were being deceived. But they were put off without payment from night to night, until eventually the manager absconded with the whole proceeds of the entertainment. Profiting by this experience the blind fencers have determined to manage the next fencing bouts themselves, with the aid of their friends.

THE HONGKONG AND SHANGHAI BANK RUMOURS.

WE refrained on Monday from making any reference to the rumours so industriously circulated in regard to this Bank, as we considered that, in face of the report just published, they were so wildly improbable as to carry their own refutation. The sequel proves the correctness of this view, for telegraphic information received from Hongkong yesterday states that transactions in Bank shares had been put through that morning at 80 per cent. premium—the last quotation published in Messrs. Bisset's circular being 70 per cent. This is a sufficient refutation of the rumours of the past two days in Yokohama. The manager of the Bank, however, requests us to say that the rumours "have not the slightest foundation."

* * *

It may not be uninteresting, however, at this juncture to compare the state of the Bank as shown in the report of the 30th June just published with its position two years ago when, if the inflation of the market value of the shares can be taken as any criterion, the Bank may be said to have been at the zenith of its prosperity. It will be seen by comparison that the institution, after the recent severe purging of accounts that has taken place, has probably never been in a more sound and solid condition than it is at the present moment. In the report for 30th June, 1890, the deposits amounted to \$93,101,200.47; on 30th June, 1892, they stood over \$100,000,000, notwithstanding that in the interval the rate of interest allowed by the Bank had been reduced; and Bills Payable, which amounted to \$19,778,786.45 two years ago, now amount to \$14,280,507.80. The increase of the deposits at reduced interest clearly shows that the credit of the Bank is even better than it was; whereas the falling off in Bills Payable shows that the Bank raises less funds than formerly on its own Bills, which is an indication, if of anything, of the soundness of its position. So much for liabilities. On the other side we find that the Cash Balance is nearly the same, being \$18,914,358.30 on 30th June, 1890, and \$17,251,506.84 on 30th June this year. Now the soundness of exchange banking depends largely upon the assets being kept thoroughly liquid, and the most liquid item in accounts is Bills Receivable. On the 30th June, 1890, these amounted to \$46,855,982.20, whilst on the 30th June, 1892, they stood at \$63,861,505.47, being an increase of over 35 per cent. in two years. On the other hand, Bills discounted, loans, and credits, which cannot be considered such liquid assets, including

as they do all advances, amounted on the 30th June, 1890, to \$63,880,323.06; whilst on the 30th June this year, after deducting \$3,124,236.88, the amount set aside to meet possible losses, they only amount to \$51,720,969.44, a decrease of \$12,159,353. Figures are facts, and the foregoing conclusively prove that the Hongkong and Shanghai Banking Corporation was never in a sounder and more liquid condition than it is to-day.

FOUR AND SIX-PENCE AND TWO AND TEN-PENCE.

It is interesting and very suggestive to note the large proportion of its profits which the Hongkong and Shanghai Bank is obliged to devote to making up the immenses appreciation which has taken place in the silver price of the Sovereign during the past twenty years. When the Bank was started in 1867—and well do we recall the first beginnings of its business and its first Manager in Hongkong—the dollar stood much nearer five shillings than four. The Bank, however, presumably for purposes of convenience of accounts, has shown the dollar at 4s. 6d. through all these years, and now, in allotting its dividend, it still reckons the dollar at that figure. Thus the £80,000 which it pays on its eighty thousand shares becomes, when converted into silver, \$355,555. But to purchase £80,000 in the market to-day one must pay \$558,544, and the Bank is consequently obliged to devote \$202,989 out of its profits to make up this difference. Of course, for all practical purposes, it is unnecessary to show the former and the present gold prices of the dollar. But since they are shown, we are at once led to reflect how immensely the task of such an institution is increased by the appreciation of gold. Stated briefly, the case amounts to this—that the Bank has to earn nearly twice as many dollars to-day, in order to pay a given dividend, as it had to earn when it commenced business. The number of dollars required to pay a dividend of only 10 per cent. in 1892, would have paid a dividend of 16 per cent. in 1872.

SAITAMA PREFECTURE.

THE Governor and Chief of Police of Saitama Prefecture, Messrs. Kubota and Arita, seem to have given much cause of offence to many of those under their jurisdiction. On the 14th instant a meeting of the "public-spirited" men of the Prefecture was held in the park in Omiya. From one to two hundred persons attended. The pre-determined subject of discussion was "a change of Governor," and the chair having been taken by Mr. Takashima Yasuji, it was resolved that three representatives should be chosen to present to the obnoxious officials a letter urging their resignation. The letter ran thus:—

We have the honour to address you in our capacity of representatives of the public-spirited men of Saitama Prefecture. We, the people of this Prefecture, find many causes to be dissatisfied with the manner in which you have administered the affairs of the Prefecture since you assumed office here. To quote a few examples, we may mention the disturbance at the Normal School, the failure to annul dishonest tenders submitted for public works, interference in the general elections and obstruction of the right of franchise, failure to attach due weight to the decisions of the Local Assembly, and want of integrity in dealing with estimates for public works. These are the most prominent grounds of complaint, and in consequence of them, we, the people of the Prefecture, cannot regard your continued administration of the affairs of the Prefecture as conducive to its benefit or peace. We therefore hope that you will resign your offices.

To Mr. Kubota Kwanichi, Governor of Saitama, and Mr. Arita Yoshisuke, Chief of Police in Saitama.

* * *

The people of Saga Prefecture are agitating in a similar sense against their Governor and Chief of Police. Last spring they addressed a memorial on the subject to the Minister of State for Home Affairs, but as it produced no result, they are now sending delegates to the capital to wait upon the Home Minister and all the Ministers of State. They come furnished, it is said, with a full statement of everything that happened during the elections, and everything that has

Original from

happened subsequently. Plainly we have not seen the last of this question. It speaks well for the perseverance and sense of justice of the Japanese people, as well as for the value they put upon their constitutional privileges, to find them standing so stoutly to their guns.

SILK.

RECENTLY, says the *Shogyo Shimpō*, the silk-market in Yokohama has assumed a more active condition. On the 1st instant No. 198 (Messrs. Otto Reimers and Co.) purchased 700 bales, so that the transactions on that day aggregated over 1,100 bales. On the 4th instant No. 209 (Messrs. Bayer and Co.) began to buy, and on the 8th No. 90-B. (Messrs. Sieber and Co.) also commenced to purchase Shinshu machine-made silk in considerable quantities, but no large transaction was subsequently concluded. Fine silk for France, however, is in great demand owing to the approaching departure of a French mail; and the Sanin silk has risen as high as \$760. But no transactions in coarse silk for the American market were made till Saturday last when suddenly No. 90-A. (Messrs. Sieber and Brennwald) began to purchase it, and at 3 p.m. the amount of Shinshu filatures bought by that firm was over 870 bales. Moreover, No. 164 (Mr. P. Douville), No. 95 (Messrs. Nabholtz and Osenbruggen), No. 206 (Messrs. Marius Girard and Co.), and No. 2 (Messrs. Walsh, Hall and Co.) bought over 1,200 bales. Messrs. Sieber and Brennwald send away nearly one-third of the total export every year, so that it is not strange for them to purchase a large quantity suddenly. But it is strange that they should have begun to purchase when the price is so high. It is said, however, that they have been competing with Messrs. Otto Reimers and Company for years, the best customer in America of both firms being one and the same person, and no doubt an order from him has just arrived. The transactions completed on Saturday showed an advance of about \$10 as compared with the price on Friday.

The *Fiji Shimpō* supplements the above with a list of the principal transactions completed by Messrs. Sieber and Brennwald, and the prices:—

Kind of silk.	Number of Bales.	Price.
Ryūjo-kan machine, Shinshu ...	32	at \$722½
Shinsei-sha machine, Shinshu ...	10	at \$710
Shinsei sha machine, Shinshu ...	24	at \$715
Saishū sha machine, Shinshu...	12	at \$730
Meiji-sha ...	22	at \$720
Kaimi-sha ...	49	at \$725
Kaiyo-sha ...	21	at \$720
Gako-sha ...	17	at \$730
Choshin-sha ...	42	at \$730
Tokushin-sha ...	13	at \$735
Kinze-sha ...	6	at \$717½
Obeisha ...	12½	at \$717½
Shunmei-sha ...	50	at \$690
Shunmei-sha (improved)...	60	at \$717½
Hakkaku-sha ...	11	at \$725
Tsuyi-sha ...	15	at \$725
Kaiboku sha ...	10	at \$717½

MR. HOSHI TORU AND THE NATIONAL UNIONISTS
It appears that Mr. Hoshi Toru, President of the House of Representatives, who is now making a political tour in the northern and eastern provinces, has been talking to some of his audiences about the National Unionists. Mr. Hoshi says that since the Ito Cabinet came into power, the connection between the Government and the National Unionists has been severed, and the latter are now entirely independent. The *Fiji Shimpō*, in recounting this incident, observes that Mr. Hoshi's position and reputation impart much force to his words, and that his hearers unquestionably interpreted him, to mean that the members of the *Kokumin Kyōkai* (National Union), are no longer allies of the Government. If that belief becomes current, Count Saigo, representing the *Kokumin Kyōkai*, will probably receive, says the *Fiji*, a hearty welcome in the districts visited previously by Mr. Hoshi Toru.

THE EPIDEMIC OF DYSENTERY.

LITTLE note has been taken journalistically of the epidemic of dysentery which has visited

Kiushu and Shikoku this summer, but the figures show a quite serious state of affairs. In Oita Prefecture, the number of fresh cases from July 31st to August 6th was 585, and the number of deaths, 116. In Kumamoto Prefecture, the same interval produced 502 fresh cases and 72 deaths, while, on the 10th instant alone, the fresh cases totalled 170. In this latter Prefecture the cases from the commencement of the epidemic to the 6th instant aggregated 2,733 with 372 deaths and 1,334 recoveries. In Miyagi Prefecture, the week ending on the 6th instant had a record of 75 fresh cases, and in Fukuoka Prefecture, the number of cases from the beginning of the epidemic until the 5th inst. was 2,111. Kochi Prefecture is also afflicted, and over ten fresh cases occur there daily.

THE KEROSENE OIL CASE.

We have been requested to make the following correction in the last paragraph of the report of this case as recently published in our columns:—

Counsel for Defendant—I think the mistake arose from the want of management in plaintiffs' office. If the receipts we gave had been properly looked after, and the numbers upon them checked, no loss could have arisen. But the plaintiffs left these most important documents in the hands of their Chinese employees, and we are informed that when some money was wanted the receipts were taken to a bank, and an advance of money was asked upon them. This fact was known to us, owing to the clerk of the bank coming to enquire at the *Kencho* as to the genuineness of the receipts. Is it any wonder then, that as these important documents were left in the hands of the Chinese for two or three years without any enquiry being made as to their condition, such a mistake should have arisen? It is, in short, a gross piece of negligence on the part of the plaintiffs, therefore they ought to be held responsible for it.

The lines in italic above should read as follows:—

and we are informed that when some money was wanted by some one of the depositors of the oil, the receipts were taken to banks and an advance of money was asked, using their receipts as the securities for the loan. This fact was known to us, inasmuch as certain banks had sometimes to send their messengers to the Warehouses to enquire whether the receipts which they brought were the genuine ones or not, as they had to advance some money, taking these receipts as the securities.

ZENDAI MIMON.

THESE two Japanese words signify something never seen or heard of in former times. They are employed by the *Choya Shimbun* with reference to the present Cabinet. During the first ten years of the *Meiji* era, says our contemporary, the great men of the State had serious differences, Mayelara, Yeto, and Saigo, one after another, died as rebels. But since the 10th year (1877) there has been no repetition of such spectacles. Harmony, indeed, has not been uninterrupted, but on the whole the tendency of Japan's principal statesmen has been to work together for the country. Never before, however, has there been such a combination of talent as the present Cabinet shows. We have resourceful talent represented by Count Ito; trenchant ability by Count Inouye; courage and resolution by Count Kuroda; loyalty and single-mindedness by Count Yamagata; power of calculation by Count Goto; talent for contrivance by Mr. Mutsu; directness of action by Count Oyama; sincerity by Viscount Nire; quick wit by Mr. Kono, and accuracy by Mr. Watanabe. Such an assemblage of able statesmen is without parallel in any era of Japan's history. And above them is a wise and enlightened Sovereign assisted by a gifted and benevolent Empress. If the nation does not progress, if the people do not become of one heart, under such an Administration, with whom will the fault rest? We have now before us the government *par excellence* of the *Meiji* era. Thus the *Choya Shimbun*.

GRANTS IN AID.

THE damages done by the recent inundations in Okayama, Tokushima, and Hyogo Prefectures are so great that each prefecture has sent commissioners to Tokyo to report the state of affairs, and to petition for a grant of money from the Treasury for public-works and the relief of suffering. It is reported that the Government has decided to grant relief, and that the Department of Home Affairs is now investigating the amount of damage done in the above prefectures.

According to the Finance Regulations, subsidies of this nature must be granted out of the Second Reserve Fund. But as the Fund has been reduced to not more than 500,000 *yen*, it cannot suffice to meet the need of the case. On the other hand, in a matter of such urgent importance the Government cannot wait till the opening of the next session of the Diet. Probably, therefore, as in the case of the funds granted for relief purposes in Gifu and Aichi Prefectures, a portion of the surplus in the Treasury will be employed. This question will be settled at a Cabinet meeting in a day or two, says the *Nippon*. It will be curious to see what procedure the present Government adopts. The action taken by Count Matsukata's Cabinet with regard to Aichi and Gifu was challenged as unconstitutional because of the Article of the Constitution cited in support of it. Count Ito's Cabinet must be credited with exact knowledge as to how the Constitution ought to be interpreted, and if the same procedure is followed as that adopted by the Matsukata Cabinet, the Opposition can scarcely challenge its correctness.

JAPANESE CHARACTER.

WHEN next anyone undertakes to write the character of the Japanese we recommend a preliminary study of the columns of some of the local newspapers, especially those edited by men who have been only a short time in the country. At present we should take the *Hyogo News* for choice in this respect. Its editor is admirably fresh, and the comprehensiveness of his conclusions loses nothing by the vigour of the language in which they are couched. During the two years of his residence in this country he has effectually disposed of quite a number of problems that used to puzzle old hands. It is quite comfortable to meet such assurance. His latest verdict is about justice and its administration. It settles the question beyond all dispute and is well worth recording: "The judges have not the slightest idea of what Westerners consider justice, the people have the most absurd opinions of what constitutes law. The fact is, both people and judges know nothing of right as Westerners understand the term, and until some perception of it has penetrated their befogged intellects, clouded with the haze of centuries of insularity, they will be totally unfit to deal with cases between foreigners." What enhances, if that were possible, the value of such a "sizing up" as this, is the uniform display of right, fairness, and justice made in the columns of the Kobe journal itself.

THE FIRE ON BOARD THE CANADIAN MAIL STEAMER.

FOLLOWING are the full particulars of the accident to the Canadian mail steamer *Empress of Japan* after leaving this port on Monday week, which necessitated Captain Lee's putting about and shaping a course for Hakodate in order to remove the cargo stowed in the after-hold which was found to be on fire. It became generally known that a fire had broken out on Wednesday evening after a somewhat erratic performance by the electric lights. As a fact, fire was discovered by the officers of the ship some time before it was suspected by the passengers, and when the combustion was definitely located in the after-hold the first means taken to extinguish it was by the introduction of steam from the boilers into the hold by an arrangement specially designed for that purpose. The steam process, however, which is sufficiently repressive in ordinary cases, proved in this instance to be ineffectual, and this demonstrated the fact that the fire had obtained a greater hold than was at first surmised. Captain Lee then resolved that to run for Hakodate was the best course to pursue, and the ship was consequently headed for that port. The introduction of steam proving insufficient to subdue the fire, it was found necessary to pump in water. How far this measure was needed may be gathered from the fact that the divisional steel bulkhead between the after hold and the engine-room had become red-hot. Holes were soon drilled, however, and water poured in in sufficient quantities

to drown the fire, and the immediate danger of an extending conflagration was averted. In the meantime, the ship rapidly approached the coast of Japan, and the astonishment of those in Hakodate on Friday afternoon who first made out the vessel was great when it was observed that an *Empress* mail boat was in the offing under full steam with the signal flying at the fore "I am on fire." Such preparations were at once made on shore as suggested themselves under the circumstances, and the steamer was soon in harbour at anchor. Before this, however, the cause of the outbreak had been fully ascertained, and this was found to be the wires from the dynamo that passed up through the after-hold. In the screw alley of an ordinary single screw steamer the shaft passes down the centre of the ship. In a twin-screw steamer of course the shafts are port and starboard, leaving in the centre a considerable space. This space in twin-screw vessels is occupied by oil tanks, ice-houses, and spare gear, and in the case of the *Empress* it was here that the dynamo was also placed. The dynamo being at the bottom of the ship, the wires had to be carried up to the lamps, and, on board the *Empress*, were led through the after-hold in a wooden casing. It was this casing that caught fire, and from top to bottom it was nothing but a mass of charred embers when the fire was extinguished and it was completely in view. The red hot condition of the bulkhead between the after-hold and the engine-room will be sufficient to indicate the strength of the fire in the hold; and beside the tea and sugar destroyed by fire a considerable quantity was damaged by steam and water. This was all discharged into lighters placed alongside, and a thorough examination of the hold made, when it was found that a portion of the deck had also been burned. Captain Lee ordered a survey to be held and this was accordingly done, after which the discharged cargo was reshipped, this being completed on Sunday morning. The vessel, however, had incurred a considerable expenditure of coal, the shipping of which was proceeding with all speed when our informant left, and, as we learned from the agents, the *Empress* sailed on Monday morning. As regards the silk, about which some anxiety has been expressed, it is not supposed to be damaged in the smallest degree, as being in a special room entirely shut off, it is stated that not even the fumes of the fire can have reached it. Captain Lee was very warmly eulogised by the passengers, who state that the most perfect order and discipline were maintained by the officers and crew without exception, and a letter, drawn up in handsome terms, was presented to Captain Lee by Sir Edwin Arnold after being signed by himself and every passenger on board. Thus ends happily what might have proved to be a terrible disaster in mid-ocean with aid no nearer than thousands of miles away.

* * *

A correspondent writes:—"We are just entering the harbour of Hakodate, after an occurrence which might have ended very disastrously. All went well with the *Empress of Japan* after leaving Yokohama on Monday the 8th, until the evening of the 10th, when, being over 600 miles from land, something went wrong with the electric light wires. Whether a wire had broken below, or latent fire had melted one, signs of a conflagration were soon perceived in the after hold, filled with tea, sugar, and silk. The hatches were opened, and the cargo broken out, steam having previously been let into the compartment, but when a few score of tea-chests had been lifted out, smoke issued in volumes from the hold, along with the injected steam, and flames were discerned at the bottom of the cargo while the loud crackling was heard of cases and boxes being consumed. It was determined to close up the hatches, and if possible smother the fire with steam, water, and patent annihilators. The hatches were therefore again battened down, the air excluded, and five large hoses set pouring water into the hold, but all that night the reeks and fumes increased and at 5 a.m. of the morning of the 11th it was plain that the ship was most dangerously on fire.

The engine-room bulk-heads were blistering with heat, the decks were burning hot, and the Captain came to the wise resolution, gladly accepted by the passengers, to turn back and run at full speed for safety and aid. Meantime, the boats had all been prepared and provisioned, life-belts got in readiness, and every proper step taken, in case the melancholy necessity should arise for resorting to the boats. It would have been a forlorn hope indeed for the passengers and ship's company with the nearest land five or six hundred miles away, and a strong current setting from Japan. There was, however, no panic or foolish fuss visible on board. Everybody behaved with commendable calm, due largely to the admirable discipline and manliness with which the Captain and his officers and crew faced the peril. A day of quiet sea enabled the ship to steam back at her best speed, and we are now safely entering Hakodate, with the hold still probably full of fire under our feet, but the vessel, her people on board, and the bulk of the cargo saved. Too much praise cannot, I think, be awarded to Captain Lee and his ship's company for discretion, courage, and judgment, and this feeling has been expressed by the passengers in a letter to Captain Lee, of which I am able to afford you a copy. A terrible catastrophe has in all probability been escaped, and there is no one on board who understands the dangerous condition of the vessel who is not glad to be within reach of help in these quiet waters." The following letter has been presented to Captain Lee by the passengers on board:—

R.M.S. *Empress of Japan*.
August 12th, 1892.

We, the undersigned passengers on board the *Empress of Japan*, upon her present voyage to Vancouver, desire to testify our sense of the skill, good judgment, and decision displayed by Captain Lee on the occasion of the disastrous fire which occurred in the after-hold of the ship on the night of the 10th instant. The measures taken by him were prompt and sagacious, but when the safety of his passengers and of the vessel was at stake he lost no time in doing his duty to them by returning. We wish to add the expression of our admiration of the good discipline and quiet courage shown by the officers and company of the ship, under very trying circumstances. At no moment was there the slightest panic or confusion on board; and the occurrence from first to last unfortunate as it was, and inconvenient to ourselves—reflects, in our opinion, the utmost credit on the Captain, officers, and crew of this splendid steamship.

[Here follow the signatures of the passengers.]

THE CHINESE IN AMERICA.

SOME of the episodes of Chinese life in America help us to understand why even people who are not interested in the labour question may object to the Celestial settlers. A San Francisco newspaper received by the last mail contains the following:—

Two Chinese slave girls made a sensational escape from bondage last evening with the assistance of two white men, who were roughly handled by a crowd of highbinders, who attempted to recapture the girls.

The white men were Nick Long, treasurer of Stockwell's Theatre, and S. M. Simon, an ex-inspector of customs. They were walking down Pacific street, and when about midway between Kearny and Dupont streets their attention was attracted by a woman's scream. At the same time they heard a commotion in the Chinese tenement-house at 641, Pacific street.

A crowd of Chinese gathered around the door, and hurrying quickly forward Long and Simon arrived just in time to see a Chinese girl dash out of the house and break through the line of Chinamen, some of whom tried to seize her.

Seeing the white men the girl ran up to them, and falling on her knees she clasped Long by the legs and begged him to take her to "Gibson." By "Gibson" Long knew she meant the Methodist Chinese Mission on Washington street, and he realized that it was a slave girl who demanded his protection.

He placed her behind him and faced an angry crowd of Chinese who advanced with threatening gestures, but their attention was attracted from him to another girl who ran out of the same house and hurried toward the white men.

Thinking she was the woman in charge of the girls Simon was about to push her away, but she desisted when she too, cried "Gibson," and the first girl made known by her cries and gestures that the second girl was her friend.

Once more the pack of excited male Chinese advanced, but the first one who stretched forth a hand was knocked into the gutter by a blow from Simon's fist. Then Long took charge of the girls and hurried them up the street, while Simon kept the crowd at bay.

There were about 200 Chinese, however, and they overpowered Simon and threw him into the street.

Then they made for Long, but he had made such good use of his time that, with his charges, he was half way between Dupont and Stockton streets when the crowd reached him.

The Chinese attacked him, but luckily they used no weapons. Long fought valiantly and the girls used their nails, teeth, and feet to good advantage.

In a minute Long was reinforced by Simon and as they were hitting out in all directions with their fists several white men hurried down Pacific street and seeing some of their own race engaged in a battle with an overpowering horde of Chinese they took a hand in the fray. This addition to the white force was too much for the highbinders, who, seeing assistance coming to their enemies from all directions, scattered like sheep and disappeared into the labyrinths of Chinatown leaving the girls in the possession of their rescuers.

Accepting the services of a number of the whites as a bodyguard, Long and Simon escorted the rescued slaves to the Methodist Mission, where Rev. Dr. Masters received them and made them comfortable.

Each of the girls, one of whom is 17 years old and the other 18, is worth from \$1,500 to \$2,500 in the Chinese slave market. The ladies who examined the girls at the Mission found their bodies covered with bruises from the effects of frightful beatings administered by their owners.

The girls say that they came here from Hongkong in May on the steamer *Oceanic*. They were induced to leave their native country by an agent of a procuress in this city, whose precise interest in them they did not discover until too late. The agent represented to them that they were to become the wives of wealthy Chinese merchants in San Francisco.

Nothing suspicious appearing to the girls or their parents, all arrangements were made, they state, for their transportation and their entrance into the United States. They were furnished with long letters of instructions as to the part they were to play upon landing, together with a plan of the city and Chinatown, that they might not be tripped up in their endeavour to prove prior residence. Return certificates were forwarded to them before they left, the certificates describing them as the wives of Chinese merchants residing in San Francisco. Thus prepared to slip past the customs officials they sailed in the *Oceanic* in May.

The youngest of the two girls, who is 18 years of age, was landed immediately upon her arrival, the certificate she possessed being considered *prima facie* evidence of her right to enter the country by the customs officials. The other, who is a little older, was retained aboard the steamer by the Collector of the Port until a writ of habeas corpus was sworn out, when she was landed by the commissioner after an examination.

Both girls say that they confidently expected to become the wives of wealthy merchants immediately upon their arrival, as proposed by the agent who engineered their entry into the United States.

In stead of finding a husband waiting to receive them, however, they were placed in a lodging-house at 739, Jackson street and afterward removed to a house of ill repute at 641, Pacific street, kept by a notorious procuress, Tai Cum.

Here, the girls assert, they were submitted to most cruel treatment by their keeper because of their refusal to lead the life that had been mapped out for them, and they endeavoured night and day to find some means of escape from the clutches of their mistresses.

About a month ago an inmate of the same house, a young Chinese girl, escaped to the Methodist Mission on Washington street and, learning of her escape, they determined to follow her example.

Accordingly early last evening, while Tai Cum was engaged in her daily pastime of beating them into submission, they forced their way out of the room and into the street screaming at the tops of their voices for assistance. How their cries were responded too and the story of their rescue is told above.

As an evidence of the cruel treatment they received one of the girls exhibited a badly bruised head and arm when she arrived at the Mission.

The two girls are both young, rather small of stature, intelligent and of a fair type of Celestial beauty. Both are more than anxious to return to their native country, and their cases will be reported to the Collector of the Port by the Rev. Dr. Masters this morning. The latter says that he will use every endeavour to have the procuress who was responsible for their importation into this country arrested and suffer the full benefit of the law.

THE "YAKKI CHIKI."

THE name now-a-days given to the stalwarts within and without the Government who are in favour of employing the strength and influence of officialdom to assist the convenient working of representative institutions, is *Yakki-gumi*, or the desperate section. Among local Governors no fewer than eleven are included in this category by the Opposition, because of their supposed connivance at official interference in the late general elections. They are Mr. Yasuda of Fukuoka, Mr. Matsudaira of Kumamoto, Mr. Kitagaki of Kyoto, Mr. Yamada of Osaka, Mr. Kubota of Saitama, Mr. Su of Hyogo, Mr. Funakoshi of Miyagi, Mr. Watanabe of Fukushima, Mr. Moriyama of Toyama, Mr. Kabayama of

Original from

Saga, and Mr. Suzuki of Ishikawa. Mr. Yasuda is reputed to be the head and front of all. He seems to be a man of great ability, remarkable strength of purpose, and the highest chivalry; just such a man as Japanese love. But being conservative to the backbone, he may possibly think that, after all, a *souffron* of the old methods of government is not out of place even in these modern days. He was placed recently on the Retired List, but he preferred to resign altogether, and except as a member of the House of Peers, he has now no connection with State Affairs. His removal from the scene of active officialdom is said to have greatly damped the spirits of the *Yakki-gumi*. Mr. Kitagaki, too, has been transferred to Hokkaido, and the *Yiyu* now says that the new Minister of State for Home Affairs, Count Inouye, whom it describes as the General of the Civil Party, is busily engaged investigating the whole question of official interference in elections, to the consternation of all the *Yakki* Governors and of not a few others also. We have always thought the charges of official interference were greatly exaggerated, but to believe them entirely groundless is out of the question. Count Inouye is precisely the man to take drastic measures if necessary, but he is also too prudent and has had too much experience to commit the fatal error of excessive zeal in either direction. In investigating the question of official interference, account will have to be taken of something more than the mere abstract question of right and wrong. It will have to be considered how far the Governors and local officials acted in accordance with the declared policy of their superiors, for there is an emphatic difference between initiating improper procedure and following it under instructions. Men's estimates of the dictates of discipline vary considerably.

There is a mysterious paragraph in the *Choya Shimbun* to the effect that Mr. Yamada, Governor of Osaka, and Mr. Matsudaira, Governor of Kumamoto, who came to Tokyo some time ago, presumably for the purpose of rebutting the charges brought against them of interfering in the elections, have now returned to their districts with easy minds. Naturally we want to know why their minds became easy, but it is precisely here that the *Choya's* information fails. Whether what they learned of the new Cabinet's policy pleased them, or whether they were merely gratified by the discovery that a path completely independent of political parties is to be trodden, our contemporary does not pretend to determine. Somewhat incontinently, however, it adds that having ascertained the views of the Central Government, these Prefects, who have hitherto been regarded as leaders of the *Yakki-gumi*, will abandon their "stalwart" policy and attend solely to the administrative affairs of their districts. Upon this happy result the *Choya* congratulates the country. We can make nothing out of the paragraph except that the *Yakki Chiji* are to be regenerated.

THE CARRYING OF SWORD-CANES IN AMERICA.

In the *Nichi Nichi Shimbun* it is stated that drastic legislation is contemplated by the United States Government to prevent the carrying of sword-canes, daggers, and so forth. Our contemporary's version is that this course has been suggested to the Administration chiefly by the conduct of Japanese immigrants, who frequently bring sword-canes with them, and use them so as to imperil life in drunken brawls or times of excitement. This is news to us. We have not found any notices in American journals of Japanese immigrants behaving themselves in such a truculent manner, and surely if instances of the kind occurred, the press would not fail to report them. However, the *Nichi Nichi Shimbun* is usually well informed, and we must assume that it has grounds for its statement. It gives in detail the draft of three regulations which Congress will be asked to sanction. The first is that officials at every port shall be required to examine the baggage of Japanese disembarking there, and to seize any swords, sword-canes, and so forth that may be found, forbidding the landing of an immigrant should

he oppose the seizure. The second is that the import duty on swords shall be raised from 35 per cent. *da valorem* to 120 per cent—a prohibitive rate. And the third, that all persons shall be entitled to arrest and hand over to the police any one, whether an American or an alien, who may be seen carrying a sword in the streets. It has often been suggested that strong legislation to prevent, or diminish, the habit of carrying lethal weapons might be enacted with advantage in the United States, but the last thing we should have imagined is that the reform would be brought about by the unruly conduct of Japanese immigrants, and we find it impossible to believe that the *Nichi Nichi* is truly informed.

DESPERADOES.

MR. J. R. SPEARS, writing in the New York *Sun*, gives some studies of desperadoes as they are to-day. We extract a pithy portion:—

The story of the trouble that led to the killing of John L. Pugh, commonly called Jack, is particularly interesting, in that it illustrates in detail the methods and habits of the ideal desperado of the mining camp. Pugh was born in a Columbus, O., family of culture and wealth. He abandoned his home and came to Colorado, eventually reaching Creede early in 1891, where he established the first livery stable. Here he deliberately began to cultivate the reputation of a bad man. He had lived with a woman of ill repute for some time, and two children were born of the association. In November last, no one having done more than get drunk to enliven the community, Pugh and Jack Fullerton went to the McLeod saloon which was run by John Ferris, and shot the glassware and bar to pieces. Ferris took to the hills, and next day waylaid Pugh and Fullerton. Fullerton got a ball through the shoulder that well-nigh ended his career, but the ball intended for Pugh merely grazed his skin. Then Ferris returned to Kentucky for his health.

After that Jack very often walked into the saloons of the Upper Creede with a revolver in each hand, shouting that he was King of Creede and that only his sweet disposition kept him from slaying every one in sight.

Meantime he had been working up a feud. In those days, the Willow Creek Gulch being Government land, rights to building space were held by laying so-called foundations for houses on any vacant plots. One S. M. Osgood and his wife had come to Creede, and Mrs. Osgood had caused foundations to be placed on two adjoining plots, intending to erect a saloon on the two. Then she went away for a short time. Now Jack had lived in a boarding-house kept by the Osgoods at Del Norte and had quarrelled over his bill. When Mrs. Osgood left town Jack jumped one of her lots and bought 1,000 feet of lumber with which to build on it. Mrs. Osgood was telegraphed for and came back. Workmen she hired threw Pugh's lumber from the lot and erected a house in which the Osgoods opened the Holy Moses saloon. Ever after that Pugh "had it in for Osgood," as they say here. Although Osgood is well nigh an imbecile through the excessive use of liquor, he afterward, probably on account of his wife's influence, was elected Mayor of Creede. Pugh, who had been assistant city marshal, resigned, and "Dutch Pete" Karg, one of Osgood's German friends, was made an officer instead.

Time ran on without any overt act on Pugh's part until Wednesday, May 4. Jack, as his mistress testified, had deliberately determined to murder Osgood, but up to that time had lacked the nerve to do so. On that morning he entered the Holy Moses saloon and called for a drink, which was served by Osgood. Jack had been in the saloon but once before and had avoided Osgood. Now he sat down at a table and began playing cards and drinking with some of the loungers. And there he remained the entire day, not even going out for luncheon or any other meal. As time passed Pugh drank more rapidly and gradually worked himself into a condition that presaged coming trouble. He was doing as Bob Ford did on the night he and Joe Fullerton were looking for Pugilist Johnson. It is the desperado's trick. By 5 o'clock Osgood buckled on his belt and revolver. It was plain that Jack wanted to create a row in which he could find some sort of excuse for killing the Mayor. But Osgood had wit enough to do more than get his gun on; in a shooting match with Jack Pugh he had no hope. He sent for Dutch Pete, the Marshal. Pete remained in the saloon, and his presence served to incense Jack greatly, but his remarks about the ancestry of the officer did not provoke even a remonstrance. Finally Pugh, in his efforts to create a fight, slipped his partner in the game (whist) they were playing, and all rose from the table. There was a tremendous outburst of noise on all sides, and Marshal Karg stepped up to Pugh and told him to go home or he would have to arrest him. That was what Pugh had been working so long for. He defied the officer in the most aggravating fashion, and then made a lunge forward, reaching for his revolver as he did so. Karg backed away quickly, drew his revolver, and fired one shot. Pugh dropped in fatally wounded. It was then about 10 o'clock at night, a little over twelve hours since he had entered the saloon to murder Osgood.

Pugh was of medium size, with sandy hair and

moustache and had a hard face. Having been well bred, he could assume the bearing of a gentleman when he would. For the rest he was a drunkard and a bully—a man in marked contrast with such men-killers as Masterson, Wolfington, and Creek.

In still further illustration of the character of the desperado he needed it can be found in the doings of Charles Creatch, who was drinking in the Holy Moses saloon on Feb. 6. Creatch determined to win fame by shooting somebody, so he deliberately aimed his revolver at a colored porter named Louis Bell. The aim was uncertain and the ball struck under Bell, who thereat awoke and fled. Then Creatch fired at William Keiser, who was asleep in a cot near a back window. The bullet cut the skin across Keiser's stomach. This done, Creatch was persuaded to go away. Next day he was put under bonds of \$100 to keep the peace.

Then there was the fight between Joe Fullerton and the New Orleans Kid. The Kid was robbed at a gambling table in Soapy Smith's saloon. Going outside he "did the lamb act," to quote the local phrase, until Joe Fullerton, an employé, came out. Both began shooting together. Fullerton lost his right thumb on the first round and changed his pistol to the left hand. When the smoke cleared away the left thumb was gone, too. The Kid's friends say he did not want to kill Fullerton, but only to teach him marksmanship. The rest of the citizens think Fullerton's loss of two thumbs was due to bad, instead of good shooting.

As for the desperadoes in their sober moments I found them invariably courteous, jovial, ready to treat and be treated, reckless in spending money, in a sense generous, and always ready to curse the vigilantes. There was in Creede more sporting women than the camp demanded. The old and ill favoured were in hard luck. On a score of occasions I have seen women of this class go to men-killers of whom mention has been made, and ask for money for food or lodging, and they invariably got it. Little John Ludford, a mining camp wail, who is dying of consumption and is the most pitiful specimen of humanity to be found in the camp, is supported by the sporting men. One Western reporter who came here wrote up the boy as the "Lucky Kid." With the habits he has contracted among his friends he is a most unlucky kid, for he cannot live a year. Besides, when he ventures the silver he gets by betting on any of the games, he loses nine times out of ten.

While nothing more need be said to illustrate the character of the desperado, the words of one of Creede's most expert gamblers may interest the tenderfoot about to visit a mining camp. He said:

"There isn't a chance in a million for a respectable man to run up against one of them if he don't try to."

"But suppose he happens to hit that chance?" was said.

"Then the best thing he can do is to size up the critter. If it's like Bat Masterson waylay it if it's one who has to get up courage with drink shoot it before it gets full—while it's drinking and making threats, see? Of course he can leave town, but that's a d—d poor way to get out of trouble."

A GHOST STORY.

In Yugada Village in Fukuoka Prefecture there is a large lake about two miles in circumference, and on its shore lies a rock. Tradition says that a certain beautiful girl called Princess Camellia (*Tsubaki Hime*), lives in the rock and that her apparition has often terrified the people. About 25 years ago, a whirlwind rose from the rock, and five dwelling-houses in the neighbourhood were totally destroyed. Moreover, Dr. Kaji, a highly reputable witness, saw the apparition on his way home from a patient's house near the lake, and was so overcome that he fainted on the spot. From that time no one dared to go near the rock after sunset. Late, however, the workmen of a firm called Idakumi, Contractors for Public Works, came to the neighbourhood for the purpose of obtaining stones to construct river-banks. Going to the shore of the lake, they noticed the mysterious rock, and concluded that it would serve their purpose very well. The rock has always gone by the name of Meoto-ishi, and the legend says that if any one touches it, the spirit of the lake raises a storm. The people, therefore, leave it severely alone. But as the workmen were ignorant of these things, they put a charge of gunpowder into the rock and blasted it into five pieces. Suddenly the sky became overcast with ominous clouds, and a fierce wind, rising from the mountains on the opposite side of the lake, tore up trees and levelled buildings, while sheets of rain, vivid lightning, and rolling thunder frightened the workmen so much that they ran for their lives, and returning home, narrated the events to Mr. Suyeda, their superintendent. After midnight that evening when Mr. Suyeda was lying half asleep, he suddenly saw

a beautiful girl approaching him. The strange figure came to his side and said:—"I, the Princess Camellia, have lived in that stone on the bank of the lake called Meoto-ishi for the last thousand years. During that long period no one dared to do any injury to my dwelling. For what reason have you ventured to destroy it now? Henceforth I am homeless and neglected." Thus saying her apparition vanished. Mr. Suyeda saw the same ghost for three nights consecutively, and being terribly alarmed, he went and told the story to Mr. Karai Rinzaburo, the Headman of the Village. The latter astonished at the tale, declared that he too had seen the same apparition thrice. They conferred together, and went to the stone in company. Mr. Karai stood beside the broken rock and cried:—"By the order of the Imperial Government we destroyed thee. By what right do you attempt to injure us?" Before this speech was completed, clouds once more obscured the sky, and such a violent storm arose that the whole district was enveloped in darkness and confusion. Thereupon they went and requested a certain *Shinto* priest to make offerings and say prayers to the rock. We need scarcely say that the source of this tale is the *Fumiuri Shimbun*, which journal, however, takes the excellent precaution of disavowing its belief in the story.

CHINA AND KOREA.

THE relations of China to Korea have for many years been a subject of investigation of which the Japanese never seem to weary. Every scrap of information bearing on the question is eagerly sought for and published in the vernacular papers. The *Jiji Shimpō* is specially earnest when dealing with this subject. In a recent issue it furnishes a resumé of a memorial addressed by a certain Chinese statesman, whose name is not given, to the King of Korea; which memorial appeared in a Tientsin paper at the end of last month. After expressing regret that Korea is so poverty stricken and that her King is so blind to the dangers to which the country is exposed, the memorial proceeds to proffer the following advice: (1) Neglect not to send your tributary offerings to China. (2) Do not abandon your native costume. (3) Allow your high officials to travel in foreign lands. (4) Let not their social rank alone induce you to place confidence in men. (5) Improve the state of your army. (6) Open up telegraphic communication in the interior of your country. (7) Concede no tariff rights to foreigners. (8) Forbid opium smoking. (9) Lighten your punishments for crime. (10) Establish schools for foreign study in your own land, and do not send your young men to Japan for study.

THE CARD-PLAYING SCANDAL AND COUNT YAMAGATA.

THE News Agency reports that Count Yamagata's time, when he is not in his office, is wholly taken up by callers who come to speak about the recent card-playing scandal. From six o'clock in the morning until office time, and after office time until late at night, these persons besiege the new Minister's house. They do not, apparently, bring any suggestions as to the settlement of the affair, but are only anxious to enlist the Count's sympathies on this side or on that, and so great is their importunity that his Excellency has come to regard the *roka-jiken* as the plague of his life. If the case were to be decided purely on its merits, there might be no great difficulty, but it is complicated by so much personal feeling and official jealousy that to discover a generally satisfactory solution has become an almost hopeless task.

THE NEW ISSUE OF CONSOLS.

THE average price at which the new issue—four million *yen*—of Consolidated five-per-cent. Bonds has been subscribed is 100.0947 *yen*. It seems a work of supererogation to carry the calculation to four places of decimals, but the Japanese are nothing if not accurate. Why, we have heard of a specification for iron pipes written by a Japanese engineer in which the diameter of the pipes was given to thousandths of an inch, and everybody knows that a Japanese

contractor, in sending in an estimate for works that costs thousands of dollars, will make his proposal extend to *sen* and *rin*; which is much as though an English contractor, tendering for the building of a cathedral, were to set down the fraction of a farthing that he expected to disburse. To return to the Bonds, however. It appears that some folks offered as much as 101.51 *yen* for these five-per-cent. Consols—a very remarkable offer, concerning which the *Shogyo Shimpō* is of opinion that these sporting people know nothing about finance, and are carried away by an extravagant estimate of the value of Government securities. Be that as it may, the Treasury sells its four million *yen* worth of Consols for 4 003,786.808 *yen*—the best showing ever made in a similar transaction in Japan.

CHINESE PHYSICIANS.

THE Hongkong College of Medicine for Chinese presented its first diplomas to two Chinese graduates on the 23rd of July. The fortunate students were Messrs. Sun Yat Sen and Kong Ying Wa. Referring to the event, the *Hongkong Daily Press* says:—

The ceremony which took place on Saturday in the City Hall is so far unique in the annals of the Colony. On that occasion two students of the Hongkong College of Medicine for Chinese received their diplomas as licentiates, the first diplomas ever granted in Hongkong. The College was established in 1887 on the most modest scale, without much fuss and with even less expenditure, and since then the work has gone on slowly and unostentatiously, no attempt being made to force on results. The students have been thoroughly and practically taught; they are not turned out mere sciolists with only a theoretical knowledge; they have had patiently to plod on as dressers, assistants, and dispensers in the Hospital for five whole years, until they have reaped the reward of their study and application by securing their diplomas. Thoroughness and not show is aimed at by the Board of the College, and this is unmistakably the right policy to pursue. The diplomas of the College, if they are to carry weight, must only be granted to properly qualified men. A little knowledge is a dangerous thing, especially of medicine, and the Hongkong College has no wish to swell the crowd of charlatans practising the healing art in the Far East. China presents a vast field for the labourer in the cause of medical science. It lies almost fallow. Chinese doctors possess a fair knowledge of simples and have the hoarded experience of generations of practitioners to guide them, but their knowledge of surgery is nil; they know nothing of anatomy, nothing indeed of medical science as a whole. The amount of suffering endured in China which might be mitigated by the skill of the West, the number of lives lost annually through the ignorance of the native doctors must be incalculable. The various Medical Missions do much good work, and save a great many lives; they have also done something to spread a knowledge of this beneficent science among the Chinese, but they can turn out at best medical assistants, valuable helps to the foreign doctor, capable vaccinators may be; but they cannot pretend to render their pupils qualified practitioners. This can only be done by a College equipped with a staff of professors, and such an establishment is of course beyond the modest means or time of the hard working missionaries. The Hongkong College of Medicine has therefore a great mission and a great future before it. The work it is undertaking is in a sense missionary work; to revolutionise the healing art among three hundred millions of people. It may be said that Hongkong is not called upon to spend time and money for such a purpose, but that would be taking a low and selfish view of our duty to our neighbour. The precepts of Christianity and the teachings of civilisation alike prescribe a higher course; it is our privilege, and should be our pleasure, to convey a knowledge of the blessings of science to those less happily circumstanced. That from its small beginnings the College of Medicine will grow into a great and useful institution renowned throughout the Chinese Empire as the principal source from whence her future medical practitioners have been drawn, is our earnest desire.

THE FINANCES OF THE WORLD'S FAIR.

CONCERNING the financial condition of the World's Fair the following is published by the Directors:—

Some ignorant or malicious person started the report that the World's Fair is bankrupt; that it had drawn its last cent and used its last postage stamp. And this false report has been published in hundreds and probably thousands of newspapers. It is still spreading, and naturally is doing the Fair harm. The fact is that the Exposition has now \$25,000,000 cash in bank and about a million more in sight. It has not had, at any time for a year and a half, less than a million dollars to its credit in cash, and has had as much as \$5,000,000 at one time. During the last six months the money has necessarily been expended

rapidly for constructing the great Exposition buildings. About three-quarters of a million a month has been paid out for this purpose. A like expenditure will be necessary for several months to come, and more money will be needed by October. The bulk of the receipts of the Fair from admissions, etc., will not begin to come in, of course, until the Fair opens. It is in order to tide the enterprise over until that time that the Government has been asked to advance \$5,000,000. The most conservative estimate of the Fair's receipts and expenditures places the former about \$4,000,000 in excess of the latter. There need be not the slightest fear of the Fair being bankrupt, or even of its becoming "hard up" if the Government gives the aid which has been asked and which is confidently expected. Should such aid not be given, the public can rest assured that Chicago itself, though it has raised almost \$11,000,000 and ought not to be expected to do more, will put its hand deeper into its pocket and will provide enough money to carry the Fair through to the grand success which it is determined it shall be and which it certainly will be.

The Fair is not bankrupt and will not be bankrupt. The only foundation for the injurious report referred to is the fact that the National Commission, or supervising body, has expended all of the money which the government appropriated for its expenses for the current year. That body does not provide the money for constructing the buildings, gathering the exhibits, or otherwise putting the Fair in complete condition for the inspection of the public. This is done by the "World's Columbian Exposition," or local Chicago corporation. The Fair will be dedicated and opened on time, and all bills will be paid.

PLAYING CARDS IN RUSSIA.

Public Opinion has the following:—"There is only one factory in Russia for the manufacture of playing cards. It has a monopoly of the business and belongs to the Founding Hospital. It is figured that there are 30,000,000 people in Russia who play cards, and to supply the demand this factory puts out 6,000,000 packs of cards annually. In order to make this enormous quantity of cards, only 329 wot men, aged from 15 to 20 years, and sixty-eight men are employed. And they are chosen amid the sisters, wives, and daughters of the workmen at the factory. Both exteriorly and interiorly the factory is a model of cleanliness. This is one of the essential conditions of this branch of production. All the employees live at the factory and earn \$5 to \$15 a month. They work from 6 in the morning to 6 at night, and are allowed two hours a day for their meals. Besides the ordinary playing cards of different qualities, the factory produces annually 120,000 packs of figured cards for the German colonies, besides 12,000 packs of miniature playing cards as toys. The annual profit of the factory amounts to about \$800,000. The cardboard is supplied by the Neva paper mill."

FUNERAL OF MR. A. HEARNE.

AMID many tokens of deep regard the mortal remains of the late Mr. A. Hearne, manager of the Club Hotel, were laid to rest in the Cemetery on Thursday afternoon. It is scarcely three weeks ago that he left Yokohama to seek relief from a painful attack of erysipelas among the hills at Hakone, and at first, indeed up to the very last two days, it was hoped that he would successfully shake off the insidious disease. But on Tuesday, Dr. Munro, who had been called in on Sunday, telegraphed to Dr. Wheeler, the deceased's medical attendant, to come up without delay. An operation was performed, but after a slight rally the patient grew gradually weaker, finally passing "across the bar" at two o'clock on Wednesday afternoon. The large assemblage of all nationalities which gathered silently into the sad procession as it wound its way to the Cemetery, via the Creekside, past Christ Church, Water Street, and Yatozaka, testified more eloquently than words can describe the high esteem in which the deceased was held by all classes in the community. Mr. Hearne was Wor. Master of the Otentosama Lodge of Freemasons, and many members of the craft took part in the obsequies, while several of the older residents attended to pay a last tribute to the memory of one who had been the first to welcome them when landing on these shores—he had lived here for twenty years, the whole of his active life in fact. The plain black casket, with silver fittings, was immediately followed by Mr. Geo. Blake-way, Mr. John W. Hall, Mr. G. S. Booth,

Original from

Dr. Wheeler, the Masters Hearne (2), Mr. H. Coulson, and Mr. H. A. Scheuten as chief mourners. In front were borne the floral tributes sent by the Japanese servants at the Club Hotel, other hotel managers in Japan, and the jinrickisha-men who plied in front of deceased's hotel; the coffin itself was covered with beautiful wreaths from European and American friends, the sorrowing widow and children, and other immediate relatives, and his late lodge. The service at the grave side was conducted with impressive dignity by the Rev. E. C. Irvine, who at its close addressed a few words to the mourning friends. He said that it would not be well if he consigned to the grave the remains of Arthur Hearne without some word of brotherly regret for his untimely end. Those who stood around him at that moment had been bound to the departed by bonds of sincere fellowship. He had been a man who had filled a distinct place amongst this community. If they would allow him (Mr. Irvine) to speak of his own experience of their late brother, he could say that he had always found him to be full of kindness, readiness, obligingness, always ready and willing to assist in any project of help for those who required his sympathy. Alluding to the early age of the deceased, the rev. gentlemen said that Mr. Hearne had died at a time which should have been the full prime of his youthful manhood—he was 41 years of age. Around the grave stood men approaching to their three-score and ten, but their friend had been taken while yet he seemed strong, earnest, and vigorous. The memory of his last hours of bitter suffering had drawn forth the tear of sympathy, he hoped that this sympathy would be extended to the widow and fatherless in their hour of deepest grief, for although the sorrowing wife would have the balm of the memory of a good and faithful husband that was little compensation for the loss she had sustained. He hoped that health and strength would be given to her and her children, and that the sympathy of friends would follow them to the end of life.

GRANTS IN AID.

THE damage caused by the recent inundation was so great that the *Kaishin-to* commissioned Messrs. Morino, Hashimoto, Uozumi, Kashima, Naito, and Kurada, members of the House of Representatives, to investigate the matter, and the reports of these gentlemen having been completed, a meeting of the Party was held on the 15th instant. According to the account submitted by these commissioners the greatest injury was wrought in Tokushima prefecture, while Okayama and Hyogo Prefectures also fared badly. The repair of public works in Tokushima alone is estimated at two million yen, but at the present moment a sum of about five hundred thousand yen is required to meet urgent requirements. From the local taxes it is not possible to raise more than one hundred thousand yen in the Prefecture, and the necessity of a large disbursement from the Treasury is therefore imperative. In the second session the Popular Party proposed that a sum of two million yen be kept as a Reserve Fund, but owing to the dissolution of the Diet the proposition did not become law, and the fund remained at the original amount of one million yen. Out of that total large sums have already been disbursed, and there remains in the Treasury not more than one hundred thousand yen. At the same time any payment from the surplus revenue is regarded by the Popular Party as unconstitutional. Therefore the only method which presents itself to the *Kaishin-to* is to address a petition to the Government, praying for the opening of a special session. The members assembled at the above meeting passed a resolution in that sense, and the petition is to be presented as soon as possible.

The National Union also despatched Messrs. Yumoto, and Ota to the three prefectures to investigate the damages, and Mr. Ota has completed his inquiry. So soon, therefore, as Mr. Yumoto's report is presented, the Union will hold a meeting to discuss the subject. The *Fyū-to*, on their side, consider that the recent

inundations were as serious a calamity as the great earthquake of last year, and are of opinion that the Government ought to grant subsidies at once. But they are opposed to the principle of disbursing any sum beyond the amount provided in the Budget, and are also against the idea of opening a special session. They hold that at present it will be sufficient to disburse all the remainder of the second Reserve Fund to meet urgent requirements, and as soon as the Diet meets in November further sums can be voted. Some members of the Tameike (Independents) Club also assembled on Wednesday, and a report from Mr. Kawamata having been read, a long discussion followed, and a resolution was finally adopted in the sense that fuller information being required, fresh investigations should be undertaken, and that, in the sequel of any action taken by the Prefectural Assemblies, the Government should be moved to disburse the sums required for needed work.

The above particulars are taken from the *Hochi Shimbun*, the *Kokkai* and other journals. One impression conveyed by them is incorrect, namely, that had the Opposition's programme been carried out, there would now be plenty of money in the Reserve Fund to meet the need of the moment. In point of fact it was owing to the Opposition's attitude towards the Budget in the first session that a sum of one million yen had to be deducted from the appropriation from the Reserve Fund, and as the Budget thus altered came into operation again this year, owing to the dissolution of the House of Representatives, the diminished Reserve Fund is now a source of embarrassment. It is curious, for the rest, that this important question should present itself so soon again for practical solution. The Opposition hold that the Constitution does not empower the Government to employ for emergency purposes any monies other than those constituting the Reserve Fund. The surplus revenue, they assert, cannot be constitutionally disbursed without the consent of the Diet. The Government, on the contrary, maintains that the nation's urgent needs may be met by any funds nationally available, under whatever heading they appear in the Budget, and that the Emperor is empowered by the Constitution to provide for urgent public wants to the limit of the Treasury's capacity, without previous reference to the Diet, being only required by the Constitution to seek the subsequent approval of that body. The Constitution, of course, contains no definite statements limiting the Government to a particular fund in the face of a public emergency. It is a question of interpretation, and there is some difficulty in believing that the Opposition's interpretation has been based upon an unbiassed study of the text. At all events the position now is that nearly three months must elapse before the consent of the Diet, in ordinary session, can be obtained for a substantial grant in aid of the distressed Prefectures, and in the meanwhile, if the Opposition's creed be adopted, there are apparently no sufficient funds available to relieve the suffering. Perhaps, however the *Fyū-to*'s programme may serve to tide over the difficulty until November. The Government will naturally endeavour to avoid provoking a collision, if any reasonably efficient method presents itself.

LIVING BY ROTE.

IN Kumamoto Prefecture there lives a Mr. Kodama Koichiro, an official, who last year married a beautiful young damsel. From their wedding day the husband laid down the following routine, and it would seem that he and his wife have been following it conscientiously ever since:—Rise at 5.30 a.m. and immediately perform ablutions—*shintai wo fuku* is the exact phrase, more precise than polite; at 5.50 a.m. clean out the apartment; at 6 say a prayer at the family altar, and when it is over, give a conjugal kiss (*seppun*), engage in conversation and drink tea; from 7 to 8 o'clock, the wife shall receive literary instruction from her husband, who, in his turn, will study on his own account from 8 to 8.45; then another con-

jugal kiss, and at 9 the husband proceeds to his office; at 3.30 p.m. the husband returns from his office; a kiss at once; from 3.30 to 4, again the *shintai-wo-fuku* performance, and at its close, a kiss; from 4 to 5, instruction of wife by husband; at its conclusion, a kiss; from 5 to 6, bathing; at its conclusion, a kiss; at 6, the evening meal; from 6 to 7, the husband carries on his own studies; from 7 to 8, a walk in the town; at its conclusion, a kiss; from 8 to 9, music—*gekkin, koto, shakuhachi*, and so forth; at 9, to bed. During the period of the husband's absence at his office, the wife must instruct the maid, must see that the house is thoroughly cleaned, inside and outside, and must practise needle-work, calligraphy, flower arranging, and the tea ceremonial.

H.M.S. "FIREBRAND" IN THE TYPHOON.

THE Formosa correspondent of the *North China Daily News* gives the following account of the manner in which H.M.S. *Firebrand* rode out the terrible typhoon that visited South Formosa on July 23rd:—

Were I to go on for columns I could but inadequately describe to you the awful injury and misery which this terrible storm has caused, so I will now pass to an incident connected with it which I am sure will prove more agreeable reading, and vary the dull monotony of perusal inseparable from an unchanging record of woe such as this communication has hitherto necessarily been. I allude to the splendid seamanship and consummate skill by which Lieutenant-Commander Lionel Tufnell saved H.M.S. *Firebrand* from what appeared inevitable disaster. The gun-vessel had arrived on the previous Saturday (16th), and although we were all pleased, and somewhat surprised at the masterly way in which she was brought into harbour, the navigation of which could only have been acquired from verbal information, picked up as best her captain could on being ordered here, we were as little prepared to see such a display of seamanship, and exquisite judgment, as the equally unexpected opportunity afforded by the storm was presently to demonstrate. I should mention that the only pilot the port boasts of happens to be away; so Captain Tufnell had all through to depend on his own resources, and any local information he could scrape together.

Soon after arrival, this officer, realising the gravity of barometrical signs, certainly busied himself in getting as much information about the harbour, its risks, and capabilities as was available in the short time at his disposal. He took counsel as to the berth for typhoon anchorage, the position of the various spits, and oyster-beds, etc. Having determined these, and secured his vessel by all necessary anchors, shore moorings, etc., nothing more was to be done than wait events. I enter into all these particulars to show that the *Firebrand* started, as, no doubt, any other vessel would, with all the advantages that average skill and intelligence could secure for her. Centres of typhoons, up to this date, have travelled to the eastward of us, and so the longest, and often the strongest blow comes from the north. Thus it is, all ships moor with special reference to this contingency. When the *Firebrand* was secured (on Monday the 18th) we had no reason to suppose that this typhoon would follow the course it did, and subject the ship to southerly wind force during the time the centre was coming up. The fastenings against such consisted of an anchor laid out on the port quarter, and the ship's two bows on the same bow; all unavoidably laid in bad holding ground, though the best the harbour affords. The ship was lying parallel with the Bund, under lee—for N. wind—of the hill and houses. She was secured to the Bund (N) side by several chains, and hawsers, round mooring posts and buried anchors, while right astern was a wire hawser fast to an enormous anchor deeply imbedded in the mud with rubble driven in, and piled over it. The *Firebrand* had not long been subjected to the force of the S. wind before the N. fastenings, severely tried by the surge of the ship, began to show signs of weakness, until early on Thursday afternoon every mooring post had snapped, and anchors buried ashore, were drawn. The gunboat was now in the very height of the hurricane, left to ride by her southern anchors and the stern wire rope. Of course so long as the wind was from the S., and these moorings held, she was all right. If they dragged the boat must go broadside on to the Bund, and with the sea that had sprung up would have gone to pieces. If she went too far astern, in a northerly direction, she must fetch up on the stern anchor heap; if too far on a southerly line, the innumerable oyster-beds suggested serious risk. The southern anchors were slowly but per-

ceptibly dragging, and then came in the splendid display of coolness and professional skill that seems, even under such unlikely conditions to have attracted universal attention. Mounted on his top-bridge, exposed to the full force of the storm, and the blinding spray, Capt. Tufnell stood; his waterproof, cut into strips as though done with a penknife, gave him the appearance of a porcupine as they blew out straight in the howling blasts. With accurate, almost mathematical calculation, Captain Tufnell kept moving the engines, now easing this cable, now slackening the other, all the while so pointing and placing the ship that, at last, when the centre passed, and the wind veered to the opposite quarter, the little craft first gently worked astern then with a rush in the only clear, but narrow channel behind her, slowed out and as her bows got the full force of the wind, swung into apparently the only bit of free water, and riding to her bows with the support of the wire-hawser off her starboard quarter, stood the butt of that dreadful night, until, to the joy of all, the *Firebrand* appeared, as daylight broke, the sole victim of the night's proceedings that had escaped perfectly and entirely uninjured. I feel that my powers of description necessarily fall short of conveying in full a true idea of the remarkable display we witnessed that day, a display not only of judgment and courage, but of grand endurance, for no one who has not passed through a typhoon can realise what that long strain, on the exposed bridge from two p.m. until long after darkness had set in up to midnight, entailed on the captain and officers subjected to it. Keen indeed was the relief, midst all our own anxieties, when daylight dawned and we saw the *Firebrand* with wrecked junks and other craft to right and left of her, proudly riding, safe and sound, at her anchors, we began even more fully to realise the excellent display of seamanship and skill that had been demonstrated to us that night. I have heard even junk captains speaking of it with wonder, for it appears that they too, like all Takaoites expected when her northern attachments gave way, that little would remain next day of the gallant little gun vessel, apparently bereft of all means for defending herself from the northern wind's fury which we knew must break over her.

However, there she is, leaving us, as soon as the bar smoothes down, as safe and pretty as she came; a very pleasant reminiscence of association through a period of dire trial and misfortune attaching to her stay, our envy, if any, of her immunity from damage quite neutralised by that pride and admiration we all feel in, and for the means by which the brave little ship has gained her happy and unshared condition.

A FAREWELL.

MR. TAKAGI, a Police Inspector of the Tera District in Ishikawa Prefecture, enjoys the distinction of having inspired a couplet. The place where his sway was exercised during the recent general elections fell into a state of much riot and confusion, and the Radicals thenceforth pointed him out as a conspicuous sinner in the matter of official interference. Whether on that account, or for what reason, we cannot tell, his transfer to Kanazawa was ordered, and now we read in the *Fiji* that not an individual went to see him off when he left his former post. A few of the wives of the policemen assembled to bid adieu to Mrs. Takagi, but for the rest everybody kept severely away, and in order to point the significance of their absence, many of them indulged in drinking bouts at which they loudly sang this verse:—

Saki-michishi
Yushino no yama no
Sakurabana
Tubagi wa saki ni
Chiri-jome ni keri.

The couplet loses everything in translating, but will doubtless be intelligible as it stands to many of our readers.

WATER POWER FOR ELECTRIC LIGHTING.

AN interesting improvement has recently been made at the Fujiya Hotel, Miyano-shita, by its enterprising proprietor, in the adoption of water power for the electric lighting in place of the steam plant at first installed. A 40-h.p. turbine, constructed on Mr. James Thomson's well-known vortex principle, by Messrs. Gilbert Gilkes & Co., of Kendal, England, has now been erected. This turbine was made especially to suit the particular conditions existing at Miyano-shita, from plans sent to them by Mr. L. J. Healing, of No. 75, Yokohama, under whose superintendence the plant has been erected.

On account of the self-governing propensities of the vortex principle, this machine is admirably adapted for electric lighting purposes and is found to work satisfactorily without a governor. The shaft is placed horizontally, and the dynamo is belted directly to the wheel-shaft, thus saving loss of power and avoiding noisy gearing. It works under a head of 60 feet and takes 471 cubic feet of water per minute, indicating 40-h.p. By its use, we believe, the proprietor saves a monthly coal bill of \$120, besides dispensing with the skilled labour necessary to attend to a steam-engine.

THE KEROSENE OIL CASE.

MESSRS. MOURILYAN, HEIMANN AND Co. have addressed the following correspondence to a local contemporary:—

Sir,—You will oblige us by publishing in your columns, the accompanying correspondence between Mr. Mitsunashi, Councilor, Kanagawa Ken, and ourselves, and from Mr. Mitsunashi's courteous response it will be seen at once that the report of the case between the Superintendent of the Government Kerosene Warehouses and our firm, as given in the *Japan Mail*, is very misleading.

Throughout the whole report there are a number of inaccuracies which, however, we presume are partly due to the difficulties of translation.

We are, Sir, yours faithfully,

MOURILYAN, HEIMANN & Co.

Yokohama, August 17th, 1892.

[ENCLOSURES.]

Yokohama, 12th August, 1892.

N. S. MITSUNASHI, Esq., Secretary, Kanagawa Kencho. DEAR SIR,—We were much surprised to read in the *Japan Mail* of the 10th inst., the following paragraph purporting to be a verbatim report of your remarks on the 18th May last,

"But the Plaintiffs left these most important documents in the hands of their Chinese employees, and as we are informed that when money was wanted, the receipts were taken to a bank, and an advance of money was asked upon them. This fact was known to me owing to the clerk of the bank coming to enquire at the Kencho as to the genuineness of the receipts," &c., &c.

As the statement is without foundation (as can be ascertained by reference to the Hongkong and Shanghai Banking Corporation), we can hardly believe that the *Japan Mail* has reported your remarks so correctly, and shall be obliged if you will authorize us to contradict them.

We are, dear Sir, yours faithfully,

MOURILYAN, HEIMANN & Co.

No. 268.

Kanagawa Kencho, August 17th, 1892.

MESSRS. MOURILYAN, HEIMANN & Co. DEAR SIR,—I beg to acknowledge receipt of your note of the 12th inst., referring to a paragraph of the translated notes of my statements made at the Yokohama Local Court on the 18th May last, which appeared in the *Japan Mail* of the 10th instant.

In reply, I beg to say that the remarks extracted in your note were not made by me particularly in reference to your firm, but only to point out a custom generally prevailing.

I have therefore communicated to the *Japan Mail* Office, and requested them to make a correction by which the above meaning may be clearly understood.

I am, Sir, your obedient servant,

N. S. MITSUNASHI,

Councillor of Kanagawa-Ken.

We reproduce this correspondence, because, if the report contained in our columns was in any respect misleading, it becomes a duty to correct the error. So far as translation is concerned, however, our version was absolutely accurate. We are not aware whether more than one stenographic report of the case was prepared. If not, it would be interesting to know upon what grounds Messrs. Mourilyan, Heimann & Co. assert that "throughout the whole of our report there are a number of inaccuracies." Under any circumstances the statement is an unwarrantable exaggeration. It condemns our report *in toto*—"throughout the whole report there are a number of inaccuracies"—whereas the report having been prepared by competent stenographers, must be accepted as at least as good a record of the case as any in existence. We regret also to observe that Messrs. Mourilyan, Heimann and Company's action in this matter has not been in accordance with the ordinary dictates of courtesy. The report which they condemn appeared in these columns and in these columns only. To these columns, therefore, they should have addressed their complaint, not merely because the etiquette everywhere observed among candid persons dictated that course, but also because it is a principle of very simple justice that the accused should be heard before the public is asked to pass judgment. If one of the leading firms in Yokohama does not think it worth while to observe these honorable rules, we cannot wonder that anonymous slanderers should persistently follow the evil course of attacking one journal in the correspondence columns of another—a disgraceful abuse in respect of which Yokohama's notoriety is preëminent among all settlements in the Orient.

A MYSTERIOUS TRANSACTION.

On the 12th instant at 3 p.m. the occupants of Mr. Tanaka Heihachi's house, located in Ni-

chome, Tsukiji, were alarmed by the arrival of a man called Fukita Shiro, a lawyer named Wadamori Kikujiro, and two bailiffs. Fukita said that he had come to levy a distraint on Mr. Tanaka's household property for the recovery of the sum of 13,715 yen due to him (Fukita). The clerks of the Tanaka Bank were at once communicated with, and though not a little surprised that Mr. Tanaka should have contracted such a debt without communicating with them, yet, since the bailiffs had a Court order and Fukita was accompanied by a lawyer who backed his claim, they advanced the sum of money demanded, in order to save the credit of the Bank. The next day the Bank sent a clerk to the Kojimachi District Court and to the Kyobashi District Court from which the two bailiffs professed to have come, and asked permission to substitute bonds and other forms for the ready money that had been advanced the previous day. The Court officers informed them that they were entirely ignorant of the transaction. The Bank then telegraphed to Mr. Tanaka who was staying at Konuma, and he returned to the capital the same day. He pronounced the whole proceedings fraudulent and at once placed the case in the hands of the police. It seems, however, that Fukita has some kind of claim on Mr. Tanaka. The following facts are furnished by the *Hochi Shimbun*. "The great Ito Hei, Mr. Tanaka's father, and Fukita's father were close friends, and at one time they used constantly to lend each other large sums of money without exchanging documents. Gradually, however, Ito Hei grew richer and Fukita grew poorer, until finally Ito Hei paid back to the latter all the money he owed him. But while discharging his liabilities, he seems to have omitted to demand from Fukita (senior) the bonds to which he was entitled, and Mr. Fukita Shiro, who professed to be acting as a substitute for his brother Kikujiro, succeeded in procuring a document which declares that the sum of 13,715 yen is still owing. As a son of the creditor he applied for the payment of this money, and he persuaded the lawyer and the bailiffs who accompanied him that it was really due. It is further asserted that Mr. Tanaka has compromised with Mr. Fukita, accepting 7,000 yen of the money taken and allowing the rest to be retained by the Fukita family. Probably the whole story has not yet come to light. At any rate the police are of opinion that fraud has been practised and are diligently investigating the matter."

The latest phase of this strange affair is that all the parties have been arrested. At first Nakamura Masamoto, the bailiff, was missing, but on the 14th instant it was discovered that he was hiding in the house of Wadamori Kikujiro, the counsel for the alleged creditor. Mr. Nozu, the Chief Bailiff, in whose office Nakamura had been serving, sent two men to watch Wadamori's house, and these reported that Wadamori and Nakamura were busily engaged packing something in the upper storey at 12 p.m. Presently Wadamori went out, and Nakamura also, proceeding to post a letter, was accosted by the watchers who requested him to come at once to the office of Mr. Nozu. He refused, however, alleging that he must follow Wadamori who had gone to the house of Suita. Thither, accordingly, he was escorted, but, before he could enter, the police arrived to arrest him and Wadamori. The latter, meanwhile, had escaped from the back door, but was apprehended on the 16th instant in the Hisayoya, Tsukiji. Furukawa, the other bailiff, and Suita Shirozo have also been arrested. The supposed *bona fides* of Mr. Wadamori, the barrister, is considerably compromised by his flight.

COUNT OKUMA ON THE NEW CABINET.

THE *Mainichi Shimbun*, a *Kaishin-to* organ reports the following dialogue between Count Okuma and its reporter. Reporter—What do you think of the Cabinet? The Count—There is nothing to think. History revolves in its own orbit. The present Cabinet may be called new, but it is simply a collection of old *Satcho* statesmen—those who held the portfolios

at different times during the last few years, have re-appeared on the administrative stage. They have dug out some treasures, however—Mr. Mutsu and Mr. Watanabe. These are both able and young, and they have no clan influence or feeling. If the Cabinet were composed of such men alone, we might hope to see progress in the political world. Reporter—Do you not feel sorry for Viscount Sano? The Count—Sorry, no! Viscount Sano was once Minister for Finance, and now he has added another honorable item to his biography by holding the portfolio for Agriculture and Commerce. He is an energetic man. Had he remained in office long, he would surely have commenced some new enterprise, and if he had then been obliged to retire before completing it, I should sympathize with him. But his tenure of office was so short that he cannot have essayed anything, and he must be satisfied to return to the Privy Council.

COUNT SAIGO AND VISCOUNT SHINAGAWA.

ILLUSTRATING the interest taken by the public at present in the probable relations between the National Union and the Government, a story has been going the round of the Tokyo newspapers, to the effect that, at a recent meeting in Count Kuroda's residence, when Counts Ito, Yamagata, Kuroda, Inouye, Saigo, Yamada, and Oyama and Viscount Shinagawa were present, the expediency of withdrawing from the National Union was strongly urged upon Count Saigo and Viscount Shinagawa. Curious to ascertain the truth of this tale, a reporter of the Tokyo News Agency waited on a certain Count, who had formed one of the distinguished party, and ascertained from him that no such advice had been tendered to the leaders of the *Kokumin Kyokai*. It was true, indeed, that one of the party had laughingly expressed the hope that the Count and Viscount would not foment any extreme form of agitation on the political tour which they were about to undertake; whereupon they had replied, in the same jesting spirit, that inasmuch as they had discovered many faults in the Government since their own withdrawal from its ranks, they should be under the imperative necessity of exposing those faults. They proposed, however, to limit themselves to that. For the rest, the evening had been spent in general conversation.

FOREIGN MEMBERS OF THE TREATY REVISION INVESTIGATION ASSOCIATION.

THE *Kokkai* says that Mr. Alfred Curtis of Kobe and several foreign residents of Yokohama, have applied for admission to the Association formed for investigating the subject of Treaty Revision. The application seems to have caused some surprise, in view of the fact that the avowed programme of the Association is hostility to mixed residence. For our own part, we are disposed to doubt whether any such application has been made, but even admitting that it has, we do not share the surprise felt on the subject. There are no valid grounds for assuming that all the members of the Association are pledged to oppose mixed residence, or that their investigations will be devoted entirely to demonstrating its inadvisability. At all events, a person desiring to join is not required to make any previous declaration of sentiments. Perhaps the foreign applicants are bent upon bringing the members to a more rational frame of mind. And perhaps, also—a hypothesis not so extravagant as it may seem at first sight—some of these would-be foreign members are in sympathy with the conservative views of the leaders of the Association. Who knows?

THE OSAKA RAILWAY COMPANY.

WITH regard to the construction of a railway between Takata and Sakurai, the people of Imai in Nara Prefecture have expressed their disapproval for the following reasons:—Running through the town is the river Asuka which, in the spring and autumn, often overflows. It was proposed that the railroad be carried near the mouth of the river, and for that purpose the Railway Company contemplated raising the land on both sides of the river to the

height of 20 feet. The people, however, complained that if such banks were built the water would be checked in its flow, and consequently much more serious inundations might be expected in future than those experienced in the past. They therefore wished that the road be made to the south of the town so as not to disturb the stream. The Company despatched some engineers to inspect the ground suggested, and they found that, as it is higher than the land near the mouth of the river, a considerable economy might be effected by using it. But unfortunately in that case no railway station could be made at Yagi, as had been originally intended. Mr. Horinouchi, Chairman of the Prefectural Council, and others acted as mediators, and arranged that the railway should be constructed about 50 *ken* (300 ft.) north of the place originally chosen, and that to facilitate preparations against inundation a certain sum of money should be paid by the Company. Matters were nearly settled on this basis when some people found fresh grounds of disapproval and the negotiation fell through. The Kencho then ordered that an auxiliary outlet 500 feet long be constructed at once, and intimated that if any one should decline to sell his land for the use of the railroad, the Law relating to the Purchase of Land for public purposes would be enforced. The Railway Company, however, expressed their intention of negotiating with the people once more, and in the meanwhile, although it had been hoped that the works would be finished by the end of September next, a petition was sent up asking permission to extend the period by one year. We take these particulars from the *Fiji Shimpō*.

MR. P. SOPER ON JAPAN.

"MR. P. SOPER," writes an American journal, "Secretary of the Spanish Legation in Tokyo, Japan, is at the Grand Pacific on his way home to Spain on a vacation. Mr. Soper is a sprightly young gentleman of affable and agreeable manners, and talks English with considerable fluency. He is greatly taken with Japan and its people, but says he has been simply astonished with what he has seen since landing at San Francisco. Speaking of his experience in Japan he said: 'I have now been two years in Japan and am greatly pleased with the people. Japan is the country of beautiful scenery, and everything that pleases the senses. The people are very courteous, affable, and agreeable, and will put themselves to no end of trouble to please strangers. Since the revolution in Japan their system of government is more representative of the people, and the progress that has followed has been something wonderful. Even in the two years that I have been there the progress has been almost incredible. Japan is now sending her young men to the military schools of Germany to learn the best and newest systems of warfare on land and sea, and schools for this purpose have been opened in Japan. Other branches of education are displaying similar activity. As to Japan's interest in the exposition, I believe they don't fully understand its importance, but they will doubtless have a fair show of their handiwork. They are adepts in embroidery, silk, porcelain, and cabinet and enamel work. 'America, I think, is a great country. Since arriving in San Francisco it has been a series of surprises to me the greatness of American undertakings.' Presumably the gentleman referred to is Mr. Saler.

A MILKING MACHINE.

CONSIDERING the progress that has been made in various methods of pumping, it is somewhat singular that until last year no successful way of milking cows by machinery should have been devised. But it is the characteristic of most really good inventions that they appear very simple to the uninitiated. To Messrs. Nicholson and Grey, of Stanraer, a Scotch firm, belongs the distinction of inventing a milking machine which is considered a great success, and for the supply of which the firm has received more orders than by night and day work they are able to execute. The machine is worked by an air pump (vacuum), and it is as near Na-

ture's plan (calf-sucking) as mechanism can get. After the first or second milking the cows take to it kindly and stand chewing their cuds as if their calves were sucking them. The machines are very simple, easily cleaned and can be got in any size, to milk 2 or 100 cows. A man can work the pump for machines up to 30 cows, for machines over that size an engine is necessary. The milk pails used register the quantity of milk given by each cow, a matter of considerable importance to the dairyman.

COSTS OF THE HYOGO HOTEL CASH.

ACCORDING to the Kobe *Chronicle*, the unfortunate shareholders of the Hyogo Hotel are in a condition not uncommon among parties to a lawsuit—mourning over the bill of costs. The "demnition total," as Mr. Mantilini would say, amounts to no less than \$7,000, and whereas the object of the action was to get rid of a business which did not pay, the result is that another heavy item is added to the wrong side of the account. There is a remarkable resemblance between the histories of the Yokohama Printing and Publishing Company and the Hyogo Hotel Company. In each alike a barrister was the moving spirit as promoter; in each alike the severance of connection with an employé imposed an irksome liability; in each alike, a lawsuit added another nasty debt; and in each alike, no one ever reaped any benefit but the original vendors and the barristers.

THE "HOCHI SHIMBUN" AND KOREA'S AFFAIRS.

THE *Hochi Shimbun* has a peculiar paragraph about General Le Gendre, who is at present in Japan in the capacity of Commissioner for the Korean Government. The facts embodied purport to come from Korea, and are to the effect that the Government of that Kingdom, having become extremely impatient about General Le Gendre's failure to complete the negotiations with which he was entrusted, talks, not of recalling him, which would be an ordinary course of procedure, but of removing him from office altogether. We find it impossible to believe that the Korean Government's conception of the exigencies of a difficult negotiation is so very crude. The *Hochi's* informant justly remarks that the tardiness or rapidity of international negotiation does not depend on the zeal or ability of one side only.

THE MINISTER OF THE IMPERIAL HOUSEHOLD.

THE residents of the Hokkaido have long expected that His Majesty the Emperor was about to pay them a visit. The ground for this expectation being the choice of a site for a summer palace at Kawakami. It is stated in the *Fiji Shimpō*, that since the Emperor has shown no disposition to take a journey northwards, a special request that a member of the royal family will honour the Hokkaido with a visit, has been forwarded to the Imperial Household Department from the Hokkaido. It not being convenient for any member of the Imperial House to comply with this request, the Minister of the Department has decided to make a Northern tour, and will set out on his journey about the 15th instant, remaining away about a month.

OFFICIAL APPOINTMENTS.

MR. HARA KEI was Private Secretary to Mr. Mutsu when the latter held the portfolio of Agriculture and Commerce. On Mr. Mutsu's resignation, Mr. Hara also left the Government, and occupied himself writing for the Kobe *Yushin Nippo* and in delivering addresses in the Kwansei region. He has now, however, returned to office, and become Director of the Commercial Bureau in the Foreign Office. Mr. Ando Taro, hitherto Director of the latter Bureau, applied, some time ago, for permission to resign on account of his eyesight, which requires rest and treatment, and his application has now been accepted.

TEMPERATURE.

AFTER the curiously cool weather of the close of July and the opening days of August, the sudden change subsequently made into great

heat has been very trying. But no one murmurs, for without these hot sunny days the rice crop would fare badly. A week of such temperature at present is worth many millions of yen to the country. From the records kept at the Central Observatory, as telegraphed to it daily from the interior, it appears that Tuesday last, the 16th instant, was the hottest day we have had this year; or rather, that the thermometer ranged highest on that day, for it does not always follow that a high thermometer means oppressive heat. In Tokyo the mercury registered 93° 2' F., but in Hamamatsu it rose as high as 98° 42' F., which represents the maximum reading throughout the empire. We may yet see worse things in Tokyo, but Hamamatsu has probably put its troubles behind it.

WRECK OF A STEAMER.

THE *Yamashiro Maru*, which arrived here yesterday, reports that on passing Rock Island a steamer was observed in a little bay between two piles of rocks and sunk in water so deep that nothing but her top-masts and fore-stay were visible. She was stranded stern-on, and was judged to be a vessel of between four and five hundred tons register. She was lying perfectly quiet in smooth water, and there were no boats about the wreck or persons visible in the neighbourhood of the vessel. No other report of a wreck in this district has reached us, but on searching the vernacular papers we find that a vessel belonging to Niigata, the *Hokuroku Maru*, has been wrecked in the vicinity mentioned, and that the crew and passengers were saved. The steamer was making the round trip from Niigata, and was bound to this port, last from Kobe, her destination being her home port, via the northern route.

HARMSTON'S CIRCUS.

HARMSTON AND SON'S circus and menagerie will arrive here by the *Saito Maru* on Friday and commence the season Saturday. Mr. Chas. B. Hicks has been able, through the courtesy of the Directors of the Company, to secure a spacious lot on the Nippon Yusen Kaisha's ground at Yoshihama-cho. This circus is said to have the largest company ever seen in the East, numbering 78 artists from the principal circuses of America and Europe. The stud of horses and ponies has been selected from Australia, England, and America, and a menagerie of interesting animals is included in the show. The circus has an equipment capable of presenting all they advertise, and has met with immense success in the cities of the old and new world, and in two rings they will introduce to Yokohama many features entirely new.

DYSENTERY.

VERY evil returns as to the progress of the dysenteric epidemic continue to reach Tokyo. The News Agency says that in the Morino Division of Yamaguchi Prefecture 38 fresh cases have occurred, and in the Uchihi Division of the same Prefecture, 50 fresh cases. On the 11th instant, there were 167 fresh cases and 27 deaths in Oita Prefecture, making 2,251 cases and 398 deaths since the outbreak of the epidemic. In Saga Prefecture on the same day there were 40 fresh cases and 4 deaths, bringing the totals up to 587 cases and 92 deaths. Finally, in Fukuoka Prefecture in the week ending the 5th instant, there were 90 fresh cases, the aggregate from the commencement being 2,111.

MAGAZINE RIFLES FOR JAPANESE TROOPS.

SOMEWHAT confusing figures were lately given by a vernacular newspaper with reference to the manufacture of magazine rifles for the Japanese army. We presume that the statement now made by the *Mainichi Shimbun* is correct, namely, that the number of rifles to be manufactured in 81,800, and that the operation is to be spread over five years, commencing with the current year and ending in 1897. The total cost is to be 2,507,000 yen, of which 1,630,000 yen has been specially granted by the Diet, and the remainder is to come out of the regular appropriations. The

former figure includes a certain sum for accoutrements and ammunition. These arms are to be served out to the troops serving with the colours.

THE MONGOLIAN REBELLION.

A CORRESPONDENT of the *North China Herald* gives a new version of the Mongolian Rebellion which perplexed the public so much last fall: it is again a case of *cherches la femme*—

A few days ago I had a visit from a friend who has heard the story from the lips of one of the Generals after his return from Mongolia, and his story is as follows:—One of the mandarins on the borders of Mongolia saw a handsome woman belonging to the household of a Mongol prince close by, and falling in love with her, waited for an opportunity when the prince was not at home, and sent his yam-drunners to carry her off to his yam-dun. The prince returning finding what had happened during his absence was very angry, but he also hid his time, and endeavoured privately to enlist the sympathy of the Mongols and his Chinese friends. He was a great lawbreaker, and had been in the habit of selling, managing, and renting his land to Chinese cultivators for many years. Although he sold his land he would often tell it as if he were the perpetual owner, after using the money. In consequence of this, a great many disliked him intensely, especially as he was a hard landlord; besides even in years of famine exacting the full rent, and in some reduction. In the same district there was a Chinaman named Yang who bought land and sublet it to his fellow-countrymen. He was a just man, keeping strictly to his agreements, but when famines came, and the farmers were in distress, he always remitted freely large portions, or even the whole, of their rents. He was very popular. He was a member of one of the religious sects of China, and as such according to Chinese tradition and usage considered almost as good as a traitor. So the Mongol prince nursed his revenge against the mandarin and also against this good man Yang, because Yang's popularity made it impossible for the prince to act as he pleased without the people drawing unpleasant comparisons between him and Yang. Thus he incited all the people he had influence over to beware of the apparently kind deeds of Yang, as they all were only thin masks for treason in which he and his followers would be soon engulfed,—a red flag which will infuriate the mandarins almost at any time. The opportunity now he had to visit some part of his district, when the Mongol prince, with a large number of followers came to the yam-dun, carried off the young woman, and murdered all the rest of the mandarin's family. Then there arose the cry that the people had risen in rebellion, and that Yang was the chief, and that all the religious sects would be put to death. The Mongol prince led his forces against the rebels. Wild telegrams were sent to Peking and Tientsin about the rebellion of the religious sects. Armies were despatched, and the innocent people who had never dreamt of rebellion, were killed by the thousands, and great honour conferred on generals for battles which were never fought—butcheries of the innocent could not be called battles. Yang was taken to Tientsin as the rebel chief. According to Chinese law the rebels' families are all destroyed. But when the Viceroy saw the supposed rebel chief he was deeply moved, as a mere glance at Yang was enough to convince any one that he was a good man. To finish up the unfortunate matter, the usual sign was reluctantly given for his execution, but his sons—strange clause—were not to suffer, but on the contrary were to be brought up at the expense of the general who recommended Yang's execution! I make no comments further than this, that the reasons given in the *Peking Gazette* are often far from being the true ones, and that the account given of the Mongolian rebellion in the *Peking Gazette* may also have to be considerably modified before being accepted as true account.

GOLD AND SILVER RATIOS.

THE *Official Gazette* gives the following table of comparative values of gold and silver coins and of the pound sterling for the week ended the 13th inst. as derived from the returns of the Bank of Japan and the Yokohama Specie Bank:—

Day	Gold Coin. (Per yen 100)	Pound Sterling (Per £1)
8th	149.300	7.1848
9th	143.500	7.1848
10th	143.500	7.1848
11th	143.000	7.1588
12th	143.000	7.1848
13th	143.500	7.1848
Averages	143.133	7.1761

The above averages show for gold coin an increase in value of yen 1.083 per cent., and for the pound sterling an increase of yen 0.0345 as compared with the previous week.

THE BANK OF JAPAN.

THE amounts of convertible notes and reserves in the Bank of Japan for the week ended the 13th inst. were as follows:—

Convertible Notes.	Reserve and Securities.
Yen.	Yen.
Notes issued..... 107,549,133	Gold coin and bullion, 22,740,200
	Silver coin and bullion, 44,680,699
	Public Loan Bonds..... 14,500,000
	Treasury Bills.....
	Government Bills..... 22,000,000
	Other securities.....
	Commercial Bills..... 3,628,333
107,549,133	107,549,133

Of the above total issue of notes, the sum of yen 3,669,956 is in the treasury of the Bank, yen 16,000,000 has been transferred on loan to the Government, and yen 87,879,176 is in actual circulation, the latter showing an increase of yen 1,677,187 as compared with yen 86,201,989 at the end of the previous week.

JAPANESE CORAL.

CONCERNING Tosa coral which is found in considerable quantities off the coast of Kochi Pre-

fecture, the *Kokumin Shimbun* says that the number of places where dredging for it had hitherto been carried on was 32, but that a new bed was discovered last year at Asaji to the west of Kashiwa-zaki. Every day subsequent to the discovery some three hundred boats congregated at the spot and engaged vigorously in dredging, the result being that 54 kwan of coral was obtained, the total value of which was 8,672 yen. This made last year's take double that of any preceding year, and had the effect of cheapening coral so much that the present price is 20 yen per 100 me (2 of a lb. avoird.) of pink coral, 8 yen for the same weight of red, and 1 yen for the white variety.

THE "JIYU."

It is stated that the *Jiyu*, hitherto regarded as the organ of Mr. Hoshi Toru, one of the Radical leaders, is henceforth to be supported from another quarter, Mr. Okazaki Kunisuke, member of the House of Representatives for Wakayama Prefecture, having become its treasurer and capitalist. The personnel of the management is to be completely changed, but presumably this does not involve any alteration of editors or policy. Meanwhile there is talk of starting another Radical organ on humbler lines. It is to be called the *Yeri Shimbun*, and the persons connected with its inception are Messrs. Nakaye Tokusuke, Kurihara Ryoichi, and Yeguchi Sansei.

THE TOKYO COURT OF APPEAL.

The Tokyo Court of Appeal seems to have got through a considerable amount of business during the first half of the current year. From January 10th until July 15th the number of criminal cases heard by it was 124 major offences and 553 minor offences; of which the appeals were rejected in 270 cases, and the judgment of the lower court was reversed in 184. The number of civil cases that came before the court in the same period was 2,735, of which the appeals were rejected in 506 cases, and the decisions of the lower courts reversed in 250.

ORDER OF MINISTERIAL PRECEDENCE.

THE *Official Gazette* gives the following list showing the order of Court precedence of the Ministers of State and others:—

1. Count Ito Minister President.
2. Count Yamagata..... Minister of Justice.
3. Count Kuroda Minister of Communications.
4. Count Oki President of the Privy Council.
5. Count Inoue Minister of Home Affairs.
6. Count Oyama Minister of War.
7. Viscount Hijikata Minister of the Imperial Household.
8. Count Goto Minister of Agriculture and Commerce.
9. Marquis Tokudajiri..... Lord Keeper of the Seals.
10. Mr. Mutsu..... Minister of Foreign Affairs.
11. Kono Minister of Education.
12. Viscount Kato Minister for the Navy.
13. Mr. Watanabe Minister for Finance.
14. Count Matsukata Attendant in the Incense Chamber.
15. Lieut.-General Count Saigo.
16. Count Yamada Privy Councillor.
17. Count Okuma.

JAPANESE WOOD-CARVERS FOR SIAM.

THE *Mainichi Shimbun* reports an interesting fact. It says that the Siamese Education Department has engaged the services of two wood engravers and a painter in this country. The engravers are Messrs. Shimada Tenmin and Ito Kinnosuke, graduates of the Seikokan of Hongcho, Sakurada, Shiba, and the artist is Mr. Oyama Suisho. The salaries are to be 840 yen per annum, and they go for a term of three years certain. Our contemporary claims that this is the first example of Japanese artistic experts being engaged by a foreign country. But certainly it is not the first example of their being engaged by foreign firms abroad.

THE HONGKONG AND SHANGHAI BANK.

It is to be sincerely hoped that the Hongkong and Shanghai Bank may succeed in discovering and making an example of the person who for speculative purposes attempted to set on foot a rumour adverse to the Bank's credit. Such a conscienceless individual deserves no mercy, and should not receive any.

MR. NAKAMA HAYATE.

ONE of the curious episodes of the general elections last spring was the loss of a voting-box and other documents kept in the local offices of

Takaoka District, in Kochi Prefecture. Great capital was made by political agitators out of this singular circumstance, and it must be confessed that they had much reason for their excitement. The case has apparently taken a considerable time to investigate, but the *Official Gazette* now at last announces that the loss is attributed to want of due care on the part of the District Headman, Mr. Nakama Hayaya, and that he is condemned to lose two months' salary by way of fine.

UNITED STATES CITIZENS IN CHINA.

We take the following from the Hongkong *Daily Press*:—"According to an official statement by the United States Minister to China there are at present in China only 1,022 citizens of the United States, nearly half of them women. Of this number 400 reside at Shanghai, 186 at Tientsin, and 75 at Canton. Nearly one-half, 506 in all, are missionaries, 28 are in the diplomatic and consular service, 6 are mining engineers, 23 are in mercantile occupations, 28 are in the Chinese Customs service, 72 are seafaring men, 7 ministers, 7 machinists, 2 professors, and 345 are "unclassified."

THE SILK CROP.

The *Mainichi Shimbun* alleges that owing to the inclement character of the early summer the business of sericulture has not prospered this year in Gumma, Nagano, or Fukushima Prefecture, the only place where a really good result was attained being Kiushu. It is consequently expected that the crop will be only seventy-five per cent. of an average yield. It is to be remarked, however, that rumours of this character are circulated every year with unvarying regularity. Hence, while reproducing the *Mainichi's* estimate, we regard it with suspicion.

ROBBERIES IN TOKYO.

We do not desire to alarm our readers, but it is right to warn them that precautions should be exercised at present against thieves in Tokyo. Two instances of robbery occurred within the past fortnight. One was in Tsukiji, the other on the night of the 16th instant—at the residence of a German gentleman—whose transliterated name we fail to identify—in Nagatacho, Tokyo. The thief, in the first case, carried off a quantity of wearing apparel; in the second, fifty yen in money and two swords.

THE BRITISH BUILDING AT THE WORLD'S FAIR.
The illustrated supplement of the *Inter-Ocean*, for July 17th, contains a picture of the British Building at the World's Fair as it will be when completed. It is a handsome and imposing structure, reminding one rather of a very large country mansion than of a hall for exhibiting industrial and agricultural products. Evidently the World's Fair will justify the predictions which have been freely uttered about it for the past few months: it will be incomparably the biggest thing of the kind that has ever been seen.

EXAMINATIONS FOR BARRISTERS.

A CHANGE in the regulations to be observed by those desirous of offering themselves as candidates for the periodical Barrister's Examinations held in Tokyo, has resulted in the decrease of the number of applicants by one half. The new rules require that all applications for permission to compete at the examinations shall bear a 5 yen stamp. This condition has debarred all but the most earnest students from applying.

THE "MAINICHI" AND THE WATERWORKS.

We observe with pleasure that a Japanese correspondent addresses to the *Mainichi Shimbun* an able letter completely disposing of the mistaken criticisms recently published by that journal with respect to the Yokohama Waterworks. It is re-assuring to find a Japanese expert—for the writer is evidently conversant with his subject—stepping forward publicly to defend the professional reputation of a foreigner.

THE "JIYU"

We published, on the 15th instant, a statement that the *Jiyu*, hitherto regarded as the organ of

Mr. Hoshi Toru, was henceforth to be supported from another quarter, Mr. Okazaki, member of the House of Representatives for Wakayama Prefecture, having become its treasurer and capitalist. The *Jiyu* requests us to correct this statement—which, we need scarcely say, was merely copied by us from the vernacular press—and explains that it has no connection whatever with Mr. Okazaki, that it is not the organ of Mr. Hoshi, and that it remains, as hitherto, the organ of the Radical Party.

NATAL AND THE POSTAL UNION.

THE following Notification has been issued by the Department of Communications:—

The British Colony of Natal having joined the International Postal Union on July 1st, 1892, postal matter despatched from this country to Natal will be charged in accordance with the rates determined by the Union Postal Regulations.

(Signed) KURODA KYOTAKA, Count,
Minister of State for Communications.
(Dated) August 16th, 1892.

SOAP.

THE total quantity of soap imported into China annually, says the *Yomiuri Shimbun*, is valued at 270,000 yen, and of this quantity Japan last year supplied 40,000 yen, or about one-fourth of the whole. The soap of Japanese manufacture now in the market comes chiefly from Nagoya and Osaka, and costs from twenty to thirty sen per dozen cakes. The Japanese Consul in Hongkong reports that the reputation enjoyed by this soap is not good.

COUNT SAIGO AND VISCOUNT SHINAGAWA.

COUNT SAIGO and Viscount Shinagawa, leaders of the Popular Union, have at last left Tokyo on a political tour. Count Saigo started from Ueno yesterday, his immediate objective point being Morioka, and Viscount Shinagawa set out from Shimbashi for Kyoto, whence he intends to make the tour of Kiushu, Shikoku, and Chiukoku.

UTSUNOMIYA AND NIKKO RAILWAY.

It is announced that from the 21st instant, during an interval of three days, special trains will be despatched from Utsunomiya to Nikko for the accommodation of pilgrims to the shrine of Futa-ara. On the 21st these trains will leave Utsunomiya at 4.20 a.m. and 9.35 a.m. On the 22nd and 23rd the hours of departure will be 5 a.m. and 9.35 a.m.

THE CHIEF SECRETARYSHIP OF THE PRIVY COUNCIL.

MR. ITO MIYOJI, having resigned the office of Chief Secretary of the Privy Council, in order to devote himself entirely to the duties of his new post, Chief Secretary of the Cabinet, has been succeeded at the Privy Council by Mr. Hirayama Shigenobu.

CHOLERA.

THE News Agency reports that the total number of cases of cholera which occurred in Tokyo, Osaka and 26 prefectures of Japan from January 1st to July 31st of the current year, was 305; of which 111 proved fatal. They were all sporadic. This total is 212 less than the aggregate for the corresponding period of last year.

THE PRINCE IMPERIAL.

We read in the *Jiji Shimpō* that the Prince Imperial, who is now on a visit to Kamakura, will visit the Kanagawa Normal School on the 21st instant, and after inspecting the classes, will witness exercises by the pupils in the playground.

PILRIMS TO NIKKO.

THE annual pilgrimage to the Futa-ara Shrine at Nikko commences on the 22nd instant and continues for 7 days. Several special trains are to be run, and as the crowd of worshippers will probably be very great, intending visitors to Nikko and Chusenji had better avoid those days.

THE RICE CROP IN SIAM.

THE rice prospects at Patiew, Siam's most important agricultural district, says the *Bangkok Times* of July 30, were reported to be extremely promising early this week. A Siamese who

returned from there yesterday, however, says that much of the crop is lying under water.

AN EMPEROR'S BIRTHDAY.

ON Thursday morning the Austro-Hungarian corvette *Fasano* dressed ship and fired a royal salute in honour of the Birthday of the Emperor Francis Joseph; officers and men then attended high mass at the Roman Catholic Church.

VISCOUNT TANAKA.

VISCOUNT TANAKA, who held the portfolio of Justice in the Matsukata Cabinet, and who resigned in consequence of the card-playing scandal, has been nominated a Privy Councillor.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The attention of the journalistic world has been occupied during the present week, with the position of the new Ministry and the status of the *Kokumin Kyokai* (the National Union). It had been generally supposed that Count Ito would seize an early opportunity to make public his political programme. This expectation seems to have been principally based on the reminiscence that a similar step was taken by him in 1885 when he re-constructed the Cabinet. But the inference on the present occasion is evidently erroneous, for there is no indication of any enunciation of policy. Indeed, such a course at the present moment would probably be unnecessary, as the Diet is to meet in a few months, and then the Ministry will have to define its position pretty clearly. As to the *Kokumin Kyokai*, that party is in a critical state. There is no longer any doubt that the new Cabinet has repudiated every bond of connection, direct or indirect, with the National Unionists. Rumour alleges that, at a meeting of the leading statesmen of Satsuma and Choshu at Count Kuroda's residence on the 12th instant, those who have seats in the Cabinet distinctly gave Count Saigo and Viscount Shinagawa to understand that their mutual political relations must henceforth cease altogether, and that the Cabinet would regard the Count and Viscount in the same light as it regards the leaders of the *Jiyu-to* and the *Kaishin-to*. The *Yomiuri Shimbun* was the first to publish a circumstantial account of what transpired at this memorable meeting, and the version has not been denied altogether, though some exception has been taken to its details. Even the Tokyo News Agency, which is regarded as favourable to the Cabinet, admits that words fell from the lips of the leaders of the National Union to the effect that they should be compelled to attack the Government in some respects since they had detected mistakes on the part of the new Ministers of State. It is of course impossible to foretell the future attitude of Count Saigo and Viscount Shinagawa towards their former colleagues and friends. But so far as the bulk of the National Unionists are concerned, we may safely predict that they are destined to split up into several antagonistic factions. For instance, men like Mr. Watanabe Hiromoto, Mr. Ota Minoru, Mr. Hayakawa Ryusuke, and others, are sincere admirers of Count Ito and will be his staunchest supporters in the Diet. But Mr. Sone Arasuke and his section, though not antagonistic to Count Ito, are more intimately connected with Count Yamagata and Viscount Shinagawa than with the new Minister President. Mr. Furusho Kamon, Mr. Sassa Tomofusa, and their followers, the most conservative portion of the National Union, will be more or less opposed to Count Ito, and may even adopt ultimately a radically hostile attitude. They are men of uncompromising character, and in the near future may prove to be the most dangerous political element of the day. Their possible combination with the *Fakki-gumi* of local Governors and such *soshi* leaders as Mr. Tōyama Mitsuru of Fukuoka and Mr. Endo Hidekage of Ishikawa, is the most disquieting cloud on the present political horizon.

Every careful reader of the vernacular press cannot fail to have been struck by a sudden

change in the tone of the Opposition papers towards the Ito Ministry. Perhaps in their excessive joy over the defeat of the Military Party, these journals temporarily lost their balance of mind, and carried beyond lasting limits their sympathy with a Cabinet which represents the Civil or Constitutional party. Indeed, they are beginning to manifest a disposition to revert to their old unfriendly tactics. Their altering mood has probably been greatly accelerated by a trenchant article in the *Nichi Nichi Shimbun* on the inconsistency of the Popular Party, the members of which, while professing incorrigible antipathy to Clan Government, have been weak enough to pay court to a Cabinet purely clannish in composition. It may be, says our contemporary, that the Opposition journals have found out the absurdity of attacking Clan Government as such, and the senselessness of making opposition to Clan Government their political platform so long as clan statesmen continue to be the ruling spirits both in the Government and out of it. This article seems to have touched a rankling wound in the minds of the Opposition journalists, they indignantly repudiate the charge that they have paid homage to the new Cabinet. At the same time, they admit that they have manifested more or less sympathy towards it, because they think it better worthy of confidence than the Cabinet it replaced, or than the Cabinet which might have replaced the latter. When hungry, one is not scrupulous as to one's choice of food. Count Ito's Ministry has been comparatively well received, because, say these journals, it was born when the public had long been desiring a strong Cabinet. The Popular party, we are told, may have some hope in the Ito Cabinet, but not much. Moreover, these journals now profess to see an indication that the new Cabinet is not likely to last long, inasmuch as Count Ito has committed a vital mistake in bringing together discordant elements. Why did he not courageously avail himself of the present unique opportunity to form a Ministry solely out of statesmen willing to follow his direction in all essential points? The Radical and Progressionist papers express strong fears that the Ito Cabinet may prove a failure. These utterances are made with some cautious reservations, and in the case of the Radical papers at least, it is not difficult to see that they are unusually guarded in their criticisms of the Government.

The *Kokumin Shimbun* can express itself more freely, as it is not an avowed organ of any party, though entirely in sympathy with the Popular Party. It very much doubts whether the new Ministry really intends to pursue the policy of standing aloof from parties. Count Ito, for instance, is said to be connected with Mr. Suyematsu's section, Count Yamagata with the National Unionists (indirectly), Count Goto with Mr. Inouye Kakugoro and certain Tosa politicians, and Mr. Mitsu with the members of the Diet from Wakayama. Possibly the intention of the new Cabinet may be to maintain its position by secretly controlling these small parties. But such a course of policy would, in our contemporary's opinion, be injurious to the interests of the Cabinet, for it must inevitably lead to the revival of the Military Party's influence. The Ministry is advised to pursue a strictly neutral (*chozen*) Policy, but to adopt the programme of the Popular party. In that case, the Popular party, without becoming partisans of the Cabinet, could give it independent support.

It is interesting to turn to the *Nippon*, for with all its faults that journal is conscientiously independent in its political opinions. It observes that the new Cabinet has received a degree of respect and sympathy altogether beyond the expectations of the Ministers of State themselves. But this circumstance ought not to be taken as a sign that the new Cabinet enjoys the confidence of the people. The public is only comparatively well disposed. The *Nippon* further thinks that the Popular party is inclined to place more or less faith in the Ito Cabinet. That is a good sign, for it shows that party spirit is now

less strong among the Opposition politicians than formerly. Our contemporary uncompromisingly condemns journals which ridicule this new tendency of the Opposition and call it a surrender to the Government.

The disastrous inundations in the Prefectures of Tokushima, Okayama, and Hyogo arrest the public attention. Discussions as to the method of giving relief to the sufferers have brought out a curious difference of opinion between the Radicals and the Progressionists. The Progressionists are reported to be in an awkward position. They cannot afford to lose votes in the devastated localities. Hence they are forced to adopt a course hardly compatible with their attitude on the Ai-Gi Relief question. They advocate an immediate grant of relief from the Treasury, a method of procedure which, when it suited their purpose, they condemned roundly in the case of the Prefectures of Aichi and Gifu. The fortunes of a party forced to resort to such contradictory conduct in order to retain the favour of its constituencies cannot be called flourishing. The Radicals, on the contrary, are more consistent and considerate. They have at least as much interest at stake as the Progressionists; but they feel themselves strong enough to risk the displeasure of voters by adhering to the course of action which they maintained in the case of the Ai-Gi earthquake disaster. Their organ, the *Jiyu*, regrets to hear a report that the Government is disposed to grant relief to the sufferers of the three localities by an Urgency Ordinance, and that certain politicians of the Opposition are urging the Authorities to take such a step. Whatever procedure other parties may recommend, the *Jiyu-to*, says its organ, cannot deviate from its avowed principle for the purpose of currying favour with the people. Our radical contemporary admits that the recent inundations were of an exceptionally disastrous description, and that some grant of relief is necessary. But before aid is given from the Treasury, every available assistance should be sought from the local resources. The Hyogo Local Assembly has already voted a sum of 200,000 yen; and its example is about to be followed by the Assemblies of Tokushima and Okayama. Not till after these local efforts have been found insufficient should disbursements be made from the Treasury. And in case the Treasury has to come forward, its payments should be limited to the Second Reserve, as may be done without resorting to an Urgency Ordinance. Should that Reserve prove insufficient, an extraordinary session of the Diet ought to be convened to make due provision for the needs of the case. Such is the course recommended by the Radical organ.

The *Nichi Nichi*, apparently well informed, states that the new Minister of Home Affairs will not hesitate to make proper provision for the sufferers, but that he will not take any step until full investigations shall have been made into the actual requirements of the case. It is erroneous, says our contemporary, to compare the present catastrophe with the earthquake of last October. The damage done by the recent inundations, though doubtless great, are for the most part confined to embankments, loss of life and destruction of habitations being comparatively small. Consequently there is time enough to make full investigations before deciding on the measures to be taken. At the same time, the *Nichi Nichi* appeals to the generosity of private individuals to come to the rescue of the unfortunate sufferers.

The Opposition journals continue to urge upon the Government the importance of taking some decisive measures against the Governors who made themselves conspicuous by interference in the general elections of February last. They write as if this were the only important question of the day, and as if they could forgive many another mistake did the Ministry only mete out chastisement to the obnoxious officials. The manner in which the

Cabinet deals with this question is regarded as a test of its general policy. The new Minister of Home Affairs is advised not to suffer his proverbial spirit of chivalry to interfere with the discharge of his duties, and is further recommended to act promptly.

The new Minister of Justice is expected by the press to introduce drastic reforms in his Department. The *Nichi Nichi Shimbun* ventures to observe that discipline has to be restored in the judiciary, factious contentions having hitherto been allowed to continue unchecked. The recent Gambling Case is but a ripple caused by a great under-current of evil. The evil state of affairs is in some measure owing to the defective system of promotion introduced by the Law of the Constitution of the Courts. In itself the system embodied in that Law is far from defective; but it does not suit the present stage of judicial progress in this country. For the higher ranks of the Judiciary being filled by men of the old school, who are not well versed in the principles of Western jurisprudence, the enforcement of the above mentioned rigid system of promotion has had the pernicious effect of causing young men of capacity and knowledge to turn their backs on the Judiciary as a career, and has thus delayed the regeneration of the service. The Law in question was promulgated while Count Yamagata was Minister President of State, and he is advised by the *Nichi Nichi* to make such alterations in it as are demanded by the present state of affairs. In another article the same paper recommends Count Yamagata to settle the question of the Codes as quickly as possible. There is to be no course open to the Cabinet except to obtain the Emperor's sanction to the Bill for the postponement of the operation of the Codes, and to organize a Revision Commission.

Agitation among the students of the Western school of painting is still going on. They have published a document tabulating their complaints against the Authorities, especially Mr. Kuki, the Director General of the Imperial Museum. Five points are enumerated, namely: first that Mr. Kuki has several times declared on public occasions that Western painting must be exterminated in Japan in order to secure the development of the pure pictorial art of the country; that the Authorities have caused all paintings in Western style to be removed from the Imperial Museums; thirdly, that while allowing the *Nippon Bijutsu Kyokai* (an Association of Japanese artists) and the Fine Art School to occupy ground in Ueno Park, the Government has driven out the *Meiji Bijutsu Kyokai* (an Association of Artists of the Western school); fourthly, that while every encouragement and every protection has been given to artists of the Japanese School in connection with the Chicago Exposition no attention whatever has been paid to artists of the Western school; and fifthly, that not only has the course in Western painting been struck out of the curriculum of the Fine Art School, but also the students of that institution have been prohibited from associating with artists of the Western school. The *Choya Shimbun* does not pretend to believe in every word of the document containing these allegations; but at the same time it cannot suppose that such strong agitation has arisen out of nothing. It urges a strictly impartial official attitude towards all schools of art, inasmuch as nothing can be more fatal to the development of art than a spirit of bigotry and exclusiveness. The pictorial art of Japan has doubtless many excellent points, but its profoundest admirers are the first to admit its defects; defects of precisely such a nature as can be best remedied by a careful study of European painting. The *Tokyo Asahi Shimbun* writes in a similar strain. It entertains no doubt that Japanese students of Western painting will be able in time to nationalize the new art, just as their forefathers were able to nationalize the art imported from the continent of Asia. No alarm need be felt, therefore, by conservatives about the study of Western painting in this country.

MR. LOUREIRO ONCE MORE.

WE must ask permission to abandon the controversy about Mr. LOUREIRO. Our reason for retiring from the arena is simple, and shall be briefly stated. The original accusation, which we undertook to refute, was that Mr. LOUREIRO had been the official recipient of an ultimatum from the Japanese Government with reference to the placing of Portuguese subjects in Japan under Japanese jurisdiction; that, instead of forwarding the ultimatum to his Government with all speed, as he was in duty bound to do, he put it into his own pocket and carried it away with him from Japan; and that by thus culpably suppressing a document highly important to the interest of his nationals, he contrived that they should forfeit the privilege of remaining under Portuguese jurisdiction. This accusation was categorically preferred by a correspondent of the *Kobe Herald* signing himself "One Aggrieved," and our very emphatic refutation elicited a letter from a correspondent of the *Japan Gazette* signing himself "S," who endeavoured to throw discredit on our demonstration. "S's," letter, being at once rude and irrelevant, was left unnoticed by us, whereupon the *Japan Gazette* came to the rescue of its correspondent, and in a leading article headed "Mr. LOUREIRO and Japan's Ultimatum," made use of the following words:—"Accusations have recently been brought against Mr. LOUREIRO in Kobe, and the *Mail* has undertaken to refute them. The accusations have been endorsed in Yokohama and the *Mail* has not replied to them. . . . The *Mail* asserts that Mr. LOUREIRO was never in receipt of an ultimatum from Japan. Our correspondent "S," asserts, on the other hand, that . . . it was quite certain Mr. LOUREIRO did know Japan's intentions." Now it is impossible that there can be the smallest doubt about the position taken by the *Japan Gazette* up to this stage of the controversy. One accusation and one accusation only had been preferred against Mr. LOUREIRO in Kobe; namely, that he had deliberately and with evil purpose suppressed an ultimatum officially communicated to him. The *Gazette* having read our refutation, understood thoroughly what the accusation had been. Its own words betray its knowledge:—"The *Mail* asserts that Mr. LOUREIRO was never in receipt of an ultimatum from Japan." Further, with equal explicitness it interpreted its own correspondent's letter as an endorsement of the Kobe accusations which we had undertaken to refute. Its words again place this beyond all question:—"The accusations which the *Mail* undertook to refute have been endorsed in Yokohama." Very well, then. Thus far everything is plain and intelligible. But see what follows. It having been shown by us that "S's" arguments were irrelevant and that the *Gazette* had allowed itself

to be betrayed into supporting a charge without a tittle of foundation, our contemporary now writes:—"We were under the impression that the real point under discussion was not so much whether Mr. LOUREIRO had been the official medium of Japan's ultimatum as that he was cognizant of that ultimatum, and of the events which would follow his departure, and was in some way responsible for the step which was actually taken after he left Japan. The assertion that Mr. LOUREIRO was the recipient of Japan's ultimatum and suppressed it has been made we believe, but we never made it, nor have we laid any stress on the point at all, regarding it only as a side issue and improbable." These words appeared in an article published on August 12th, the words quoted previously appeared in an article published on August 6th. Exactly six days sufficed for the *Japan Gazette* to perform a complete pirouette. On August the 6th the ultimatum, its receipt, and its suppression were alone in question: "The *Mail* asserts that Mr. LOUREIRO was never in receipt of an ultimatum from Japan;" the accusations that he had received and suppressed the ultimatum "have been recently brought against Mr. LOUREIRO in Kobe;" "the *Mail* has undertaken to refute them;" "the accusations have been endorsed in Yokohama and the *Mail* has not replied to them." "But on August the 12th the *Gazette* finds itself under the impression that the real point at issue was not so much whether Mr. LOUREIRO had received the ultimatum officially as whether he had been cognizant of its probable issue and of the events which should follow his departure. Nay more, on August 12th, our contemporary actually professes to have only a belief, a vague notion, that some such accusation—the accusation stated by itself in the plainest terms only six days previously—had been preferred. And then it goes on to plead:—"But we never made it, nor have we laid any stress on it at all, regarding it only as a side issue and improbable." We cannot wonder that in the preface of the article containing this really remarkable recantation our contemporary should speak of the "*Japan Mail's* customary inconsistency." Introspection generally discloses very vivid failings in others. But although we have no assurance that the *Japan Gazette*, six days hence, may not perform another pirouette, and revert to its attitude of August 6th, we must rest content for the nonce with its latest explicit assertion, namely, that it has no faith in the ultimatum accusation. We never addressed ourselves to anything but that accusation, and since our opponents thus publicly abandon it, we are entitled to retire from the contest. But, by way of adieu, we desire to notice one other circumstance and to offer one other explanation. The circumstance is this:—In its leading article of August 12th the *Japan Gazette* writes thus:—"The accusation which we said had been

brought in Kobe and supported in this port was the charge that Mr. LOUREIRO was responsible to a great degree for the present position of Portuguese nationals in Japan." Our readers can judge for themselves how far this version of what the *Japan Gazette* intended to say could be reasonably inferred from what it actually did say on August 6th. That point needs no further analysis. But will it be believed that up to August 9th the *Japan Gazette* had never even seen the Kobe accusation which, on August 6th, it declared had been "endorsed in Yokohama," and of which it now undertakes to repeat the definition given by itself six days ago. It had never even read the letter preferring the accusation. Of this we have its own confession. Writing on August 9th about the Kobe letters of "One Aggrieved," in which letters the accusation had been made, it says:—"We have not seen either of the letters referred to in the *Mail's* note." Having thus neglected the not unusual preliminary of previously reading what one undertakes to discuss, our contemporary's notions of the points of controversy might have been expected to lack lucidity.

This explanation which we wish to offer has reference to the archives of the Portuguese Legation. We have said that we neither know nor care whether Mr. LOUREIRO was instructed to hand over the archives to the French Legation, and whether he did or did not do so. This confession of combined ignorance and indifference seems to shock the *Japan Gazette*. Nevertheless we must repeat it. We do not know, simply because we possess no information as to the instructions which Mr. LOUREIRO may have received from his Government. We do not care, simply because his action with regard to the archives is wholly irrelevant to the original accusation about the suppression of an ultimatum. Having addressed ourselves entirely to that accusation, we have a right to abstain from being led off into unconnected byways.

THE HONGKONG AND SHANGHAI BANK.

THE publication of the semi-annual Report of the Hongkong and Shanghai Bank for the period ending June 30, 1892, is very welcome, for the figures show that despite the extraordinarily unfavourable times through which we are now passing, the great local institution stands practically as firm as ever. It is not too much to say that the Hongkong Bank represents the foreign trade of China and Japan. Such a catastrophe as the Bank's collapse would mean nothing more or less than paralysis of that trade for a long, a very long, period. Already, indeed, the prudent reserve which the Bank has thought well to exercise of late has not a little affected a commerce that depends, to a considerable extent, on the accommodation obtainable from such

an institution. In an era when exchange fluctuations introduce into international trade a large factor of gambling, confidence becomes steadily undermined, and the chances of financial crises are greatly increased. The extraordinary experiment made by the United States two years ago, the consequent fictitious appreciation of silver, the panics that ensued, the failure of the great house of Baring Brothers, and the now utterly untrustworthy character of the medium in which the trade of the Orient with the Occident has to be carried on—all these things have combined to subject banking business to unprecedented embarrassments. The Hongkong and Shanghai Bank has not escaped scathless. Three years ago its shares were quoted at 250 per cent. premium. Now they may be obtained at 60 per cent. This means that scrip which was worth 35 million dollars in 1888, represents only 16 millions to-day; a tremendous shrinkage, more than sufficient to account for the uneasy feeling that prevailed at intervals during the past ten months as to the Bank's condition. There is no solid basis for such depreciation. It is evidently due, in great part, to the general sense of uncertainty and peril that has been engendered by a medium of exchange subject to fluctuations far exceeding any sound or normal margin of commercial profit and loss. The Bank's semi-annual Report does indeed show that nearly one half of the Reserve Fund has to be taken to provide for bad and doubtful accounts; in other words, to cover losses. Of course that is a great misfortune. The Reserve Fund had attained the very handsome figure of \$6,300,000, and it is now reduced to \$3,300,000. But if, as may fairly be assumed, the Bank has looked its position fairly and squarely in the face, and has boldly provided for the bad features of its affairs, its large constituency may now be satisfied that the trouble is past and gone. The volume of its business shows no appreciable shrinkage; its deposits still stand at the great figure of over a hundred million dollars, having been reduced by only fourteen millions throughout the panics and embarrassments of the half year; and the Directors are in a position to recommend the payment of a dividend at the rate of 10 per cent. per annum. This is a state of affairs eminently calculated to inspire confidence. It is not such a flourishing account as the Bank has hitherto been able to lay before its shareholders, but it is an account which, if it stood by itself and did not suffer by comparison, would be distinctly satisfactory. We sincerely trust that the feeling of confidence which the publication of the Report should inspire, may inaugurate a more prosperous era of trade in the East.

THE LABOUR QUESTION IN JAPAN.

IN the annual Report of the American Board Mission we find the following:—

Among the pressing questions which await legislative action, none is of more importance than that of limiting the hours of labour. To the casual observer, the life of the Japanese mechanic or day labourer seems relatively easy. Those who are in the habit of employing labourers often complain of their leisurely habits, of the lateness of the hour at which the labour is begun, the long rests at noon and the small amount of work accomplished. These criticisms are not without foundation as regards those who work by the day, and yet even these men do not always finish their task with the close of the nominal working day. Excessive labour is most conspicuous in the small factories, or in the villages where the so-called house industries are carried on. There are towns in the north-eastern part of Joshi where thousands of operatives are to be found, working in groups of from twenty to forty, chiefly engaged in spinning and weaving. According to an accomplished Japanese statistician, such operatives often labour from early dawn till after ten in the evening. The testimony of intelligent men in daily intercourse with these poor people places the average period of daily labour as high as seventeen hours. Such observers further state that in times of special pressure these hours are very much exceeded. Allowing for some exaggeration in the testimony of these untrained observers, it still adds emphasis to the statement of the expert above referred to. The effect of this excessive labour is seen in the fact, that in such manufacturing towns it is rare to find operatives, either men or women, over thirty years of age. They become incapacitated for labour through nervous disorders of various kinds, even if death itself does not intervene. This evil which is not new in Japan has been greatly intensified by the rapid growth of foreign trade. It is probably seen at its worst in connection with the manufacture of silk. It is not found merely in the spinning and weaving factories, but also in the many thousands of homes scattered all over Japan where hankchiefs are hemmed and embroidered for the export trade. In some of the more remote provinces the pittance of three *sen* (2½ cents U. S. currency) a day is all that many an able bodied woman can earn.

It is gratifying to know that the Government in its model filatures* has arranged to guard the interests of the operatives. These establishments merit much praise. In the large cotton and other mills, too, which have been erected in several of the great towns, the hours of labour are less excessive. In the private filatures, probably, the evil will gradually right itself, for the value of the material is so great that a slight deterioration in the reeled silk means serious loss to the proprietors. The work demanded of the operatives, mostly young girls, is not in itself difficult. There, is, of course, a certain knack essential to success, but after all the great requisite is attention. The power of attention rapidly fails when the hours of labour are excessive. One of the managers of a small filature has recently stated that all work done after the sixth, or seventh, day of consecutive labour means loss to the company, because of the uneven quality of the silk due to the failure of the power of attention on the part of the operatives. There is good reason to believe that this gentleman's observation is correct and that the self-interest of the employers will in time bring great relief to their dependents, very many of whom in the busy season labour from the first daylight until ten at night, with very inadequate hours of rest during the day, and too often, with only two or three rest days in a month. Still the hope based upon self interest is rendered somewhat remote when the large supply of such labourers is taken into account. Nearly all the women of Jōshū, for example, have by hand reeling at their homes gained a certain amount of preparation for filature work and stand ready to take the places of those dismissed for inefficiency. It is believed that the Government is ready to do all that public opinion will sustain it in doing for the relief of these overburdened men and women. However, it is to be feared that public opinion is not yet on the side of the labouring classes. Indeed, a gentleman in public life not long since remarked to the writer that any labour regulations which could be secured at present would be of little value and might even do more harm than good, because of the lack of sympathy on the part of the law makers with the unintelligent workers.

However this may be, the necessity of creating a healthy public opinion on this subject is every day increasingly evident. The Christian community

* Filatures are the establishments where silk is reeled from cocoons and made up into bunks, generally for the foreign trade.

is already interested in it, and we believe it will soon prove a most valuable ally to the small body of scientific men, who have studied social economics abroad and are working earnestly for the benefit of their countrymen. The visit last year of the Rev. Mr. Barnett, of Toynbee Hall, London, and his valuable counsels on social reform will not soon be forgotten. Many a man has the last twelve months moved about with a keener sense of his duties to the poor and down-trodden because of his helpful words.

The paradox that one can do more work in six days than in seven begins to find acceptance among working men. A manufacturer of lacquer ware, in the province of Aizu, testifies that the Sunday rest in no loss either to him or to his workmen. He says that the more experienced men acknowledge that, working by the piece, they can earn more by resting on Sunday. A charcoal burner in Jōshū gives the same testimony and attributes the new vigour in which he rejoices, and to which his employers testify, to his weekly day of rest. It means no letting up in our appreciation of the religious value of the Christian Sabbath when we plead the great social gain sure to result from a day of rest so fully recognized by public sentiment that the rest of one shall not even seem to make him the prey of another's greed.

With Sunday as a day of religious worship, Government has nothing to do; but to the question of limiting the hours of labour, especially of those who have not learned how to protect themselves, and perhaps do not yet recognize the greatness of the evil from which they suffer, every Government may properly give earnest attention. Considering the present state of public opinion, the question of what to do is a difficult one to solve. It seems, however that a central board of labour, with local boards in each prefecture, whose duty it should be to collect facts bearing upon the subject and gradually educate public opinion, might accomplish great good. In this way solid preparation for necessary legislative action would be secured and in the meantime, more by the weight of their intelligent counsels than by the exercise of definite authority, these boards could undoubtedly accomplish much in the way of relieving extreme cases of hardship. The duties of such boards would be analogous to those of the Railroad Commissioners of Massachusetts who almost solely by their strong moral influence have brought about great reforms.

More than once during the past few years allusion has been made in these columns to the severe labour performed by young people in Japan. It may probably be said with truth that toil of this unrelenting character is a feature of Japan's new civilization. In one branch at any rate such is the case. We allude to the embroidery and hemming of handkerchiefs. Young girls may be seen occupied in this manner from early dawn to late evening. They sit crowded together, generally under very insanitary conditions, and always with inadequate provision of light. Medical men have often commented on the inevitably fatal consequences of this system which cannot fail to cause defective vision, thus depriving the unfortunate toiler, probably in middle life, of the faculty of self-support. Match-making is another trade which furnishes similar examples. It is stated, on authority commanding trust, that children in match factories in Kobe work from 3 a.m. to 7 p.m. with only two recesses of 30 minutes each. The thought of such hardship is terrible, involving, as it does, results that must be felt by the next generation as well as by this. We do not know how it fared with the artisan in Old Japan. Probably he had to suffer hardship enough after the fashion of the time. But there were no factories in those days, neither was there any tyranny of competition such as has been inaugurated by contact with the

Original from

West. The new civilization brings with it new problems, and they have to be faced. We have as little faith as any in official interference. Besides, this labour question has not yet come before the Japanese public in a definite form. That there are excessive pain and suffering among some sections of the working population, is perhaps understood vaguely by many observers. There has not yet, however, been any audible remonstrance from the workers themselves. They submit to their hard toil quietly and uncomplainingly. We hear of hand silk-reelers in Joshi who begin their day at 4 a.m. and end it at 11 a.m. For them the toil of one day is carried into the next. But that is an exceptional effort, made for a season only: it does not continue all the year round, as is the case in the factory. Comparable with it is the toil of the tea-house waiting girl. The story of her daily life is almost incredible. Rising with the first streak of daylight, she cannot rest until the last guest has ceased from his carousals. Three or four hours of sleep represent her entire respite from toil. Yet she is always bright, cheerful, and willing. Neither her health nor her happiness seems to suffer materially. In fact, there appears to prevail among the Japanese lower orders a spirit of patient endurance which fits them to be the victims of suffering. They are absolutely without any consciousness of the rights and titles which in the hands of the Occidental socialist have been moulded to such dangerous dimensions. They protest against nothing that fate brings to them, but seek only to make the best of it. This disposition is very admirable in its way, and its exercise affords us many spectacles most worthy of praise. But its contact with the new order of things suggests misgivings. On the one hand, it offers a dangerous opportunity to the employer of labour; on the other, it incapacitates the employed to resent despotic exactions. The children in the match factories and in the embroiderer's shop, the silk-reeling girls, and so forth are the first outcome of the struggle to which Japan pledged herself when she entered the international race. It is well that the problem should be considered in time. Its neglect in the West has involved results so ugly that they now constitute the embarrassment of the age. There is as yet, perhaps, no occasion for any drastic measures in Japan, but these are evils that can be easily manipulated in their early stages, whereas, if suffered to grow without restraint, they may ultimately defy the skill of the ablest administrators.

THE NEW BRITISH MINISTRY.

MR. GLADSTONE has formed a Cabinet. We publish elsewhere a list of the portfolio-holders. All who are interested for the prestige of Great Britain must regard with something akin to dismay Mr. GLADSTONE'S return to power under existing circumstances. We ourselves are sincere admirers of Mr. GLADSTONE. We deem him a man of whom his country may well be proud, and we read with disgust the glaringly prejudiced and bitter railing persistently indulged in by certain English journals at his expense. But apart from the general fact that the radicalism of the nineteenth century has far outstripped the growth of intelligence and of learning, so that power is passing into the hands of men neither morally competent nor educationally equipped to exercise it discreetly; apart from this fact and from the conservative tendencies which it necessarily begets, we find it impossible to agree either with Mr. GLADSTONE'S Irish programme or with his foreign policy. The Irish people have been for centuries tried in the balance and found wanting. If nothing else could be advanced in proof of this except the striking contrast between the state of the north and that of the south of the green island, there would still be enough to convince us. Nature endowed the north far less richly than the south. She withheld from the former many of the advantages which she showered with such lavish hand on the latter. Neither did the English Government ever discriminate in favour of the north when it enacted measures intended to hamper Irish industry and agriculture—measures against which though long ago revoked, so many bitterly accusing voices have been raised during the past thirty years. In every respect the north was less favourably situated than the south for purposes of prosperity and wealth-earning. Yet the north is rich, happy, contented, and loyal, while the south is indigent, dissatisfied. The difference is in the people. The men of the north are seven-tenths Scotch; the men of the south are seven-tenths Celts. The responsibility for the south's condition does not rest with England: it rests with the unthrift, the laziness, the impracticality and the improvidence—to omit any worse qualities—of the people who inhabit the south. To make these men self-governing because they have consistently shown themselves deficient in all the qualities that justify such a trust, is an experiment that no one can view without misgivings. We know what part the Irish play in the politics of America where they have every opportunity to exhibit the better side of their character, and from that knowledge it is easy to infer what part they would play in home politics with freer hands and under the influence of far stronger passions. We are not accustomed to associate England with any half-hearted surrenders in matters

of national administration. Resolute patience and instinctive tenacity in the practical application of sound Governmental principles, have enabled her to solve problems far more complicated and perilous than this Irish perplexity. That she could solve it also by continuing to apply those principles as Lord SALISBURY'S Government was applying them, little doubt can be entertained. That she will solve it by shifting the difficulty to Irish shoulders, and by pandering to a semi-rebellious, semi-romantic sentiment which finds stronger expression the lower we descend beyond the strata of educated intelligence, industrial energy, and respectable independence, is beyond sober credence. Mr. GLADSTONE'S conversion to faith in this experiment was too sudden to command the confidence that would otherwise belong to the views of a man so marvellously gifted. It is hard to avoid an uneasy suspicion that the sentimental element of his character rather than the judicial is now in the ascendant. His foreign policy has always seemed open to the same criticism. Living habitually far above the arena where the fight is waged, his hasty struggles to climb down, at crucial moments, to a practical, common-place level are often catastrophic. The bombardment of Alexandria and the expedition to Khartoum illustrate this. We believe that he is more likely than Lord SALISBURY to plunge England into war, and in which of the two statesmen's keeping her prestige has hitherto fared best, there can scarcely be much difference of opinion.

Japan will naturally be interested to forecast the course of events in Great Britain under the new Ministry. Perhaps we may venture to predict. There will be an interval of a couple of months' quiet until Parliament meets, and then Mr. GLADSTONE'S Irish Bill will be produced. He cannot postpone it. His tenure of office depends entirely on the support of the Irish members. He is absolutely at their mercy, and any attempt to palter—even supposing, which we do not for an instant believe, that he is inclined to palter—would at once put him in a minority. The Bill, after a debate of immense length, will be carried to a second reading, and every clause of it will be fought untiringly by the Unionists. Should it survive all the perilous chances of this ordeal and find its way to the Upper House, it will be rejected there unceremoniously, for certainly the Peers will not pass the measure in deference to a majority consisting solely of Irish agitators. It has been hinted that, in such an event, Mr. GLADSTONE, accepting the verdict of the Peers, may seek to remain in office. But the Irish members will not allow that. They will be hard taskmasters. Another appeal to the country must be made. There is however, one contingency which may disturb all this forecast: Mr. GLAD-

STONE may not be able to support the terrible ordeal involved in carrying such a Bill through the Lower House by the aid of a majority so small and so exacting. Should he break down, Irish Home Rule will fall with him. No other pair of British shoulders are capable of carrying the burden to the winning post.

THE JAPAN SOCIETY.

THE first annual dinner of this newly formed but flourishing Society appears to have been a great success, according to the fuller accounts that have now reached us. Over one hundred ladies and gentlemen filled the well-known Whitehall Rooms of the Hôtel Métropole on the 23rd of June to inaugurate what promises to be a series of most interesting réunions of those who have at one time or another lingered or lived in this country. The five long tables were beautifully decorated with flowers which reproduced the Japanese national colours, and in front of the President, H.E. Viscount KAWASE, who was in the chair, were placed three dwarf *matsu* lent by Dr. E. HART, a memento of the country which was much appreciated by the many who understood its significance, and was the cause of some mystification to the reporters present. The menu, which we append, is a curiosity in its way; we fancy that this is the first time that anyone has had the courage to tackle "devililled whitebait" and "cailles rôties sur canapes" in the vernacular. Viscount KAWASE having proposed "The Queen," Professor ANDERSON, the Chairman of the Council, in an eloquent speech proposed "The Emperor of Japan" a toast which was received with the greatest enthusiasm and drunk with strains of the Japanese National Anthem rendered by the band in attendance. Sir TREVOR LAWRENCE, M.P., followed with the toast of the evening "The Japan Society," and, in a speech which was much applauded, referred to the good effect that was bound to result from the establishment of the Society in making the people of England and Japan understand one another better. The energetic Hon. Secretary, Mr. DIOSY, having replied, there followed several speeches not down on the toast list, some of which, though obviously born of the enthusiasm of the moment, contained political allusions which were felt by many of those present to be out of place at such a gathering. Apart from this slight *contretemps* the meeting was a very great success, and the Society, which now numbers close on three hundred members, may congratulate itself on its successful celebration of the inauguration of what has been a long felt want. Amongst those present in addition to H.E. the Japanese Minister, were Lord DE SAUMAREZ, one of the Vice-Presidents of the Society, Sir TREVOR LAWRENCE, Bart. M.P., Vice-Admiral D'ARCY IRVINE,

C.B., Sir E. J. REED, K.C.B., M.P., General RAINES, C.B., Mr. J. G. KENNEDY, C.B., H.M. Minister in Chili, Captain ROLLESTON, Mr. A. J. TRENDALL, C.M.G., Captain KAWARA, I.J.N., Professor WM. ANDERSON, Mr. ALFRED EAST, Mr. H. KRAFFT, Mr. SHOGOMATSURA, Dr. TSUBOI, Professor ELGAR, Messrs. HIROSAWA, SOYESHIMA, INABA, Professor GOLDING BIRD, the Rev. F. A. ELLIOT, Mr. W. S. SCULL of Philadelphia, Messrs. W. BLAKENEY, R.N., A. B. WALFORD, A. H. DARE, T. JACKSON, J. R. CLAYTON and G. GULLY, Consul-General and Mrs. OKOSHI, Mr. and Mrs. BEVAN, Mr. and Mrs. BOND, Mrs. ESSERY Mr. and Mrs. HERON ALLEN, Mr. and Mrs. PIGGOTT, Mr. and Mrs. NAKAI, Mr. and Mrs. J. P. REID, Mr. and Mrs. D'IFFANGER, Mr. and Mrs. JONAS, Messrs. WATANABE, WILLIAM STOTT, BAGGALLAY, F. A. SATOW, SCOTT ELLIOTT, VARLEY, KIYOOKA, ROKUZO, M. MUTSU, the Rev. H. CART, Dr. BELL, Dr. PHENÉ, Dr. HICKMAN, Messrs. R. G. FORSTER, A. C. MITCHELL, A. L. LIBERTY, A. G. ANGIER, A. SATO, A. C. BRUCE, LITTLETON, LARKIN, TAYLOR, A. C. BRUCE, BAILEY, HASLAM, W. WHITE, AKABA, COLLS, ULOTH, KAULLA, BREISACH, T. B. HARBOTTLE, W. S. HALL, F. ELGAR, GRAINGER, T. C. VENABLES, CORNES, J. W. SCOTT, JOHN WILSON, J. S. SALAMAN, A. DIOSY, and DAIGORQ GOH.

"The Queen."

"The Emperor of Japan."

"The Japan Society."

We may mention, as showing the enthusiasm that animates the Society, that the average attendance at the ordinary meetings has been 166, an altogether exceptional figure, we should imagine, in the history of Societies of this kind. The next paper, by Mr. GOWLAND, on the "Naturalistic Art of Japan" is certain to attract a large audience, and an exhibition of over 100 Kakemono, from Mr. GOWLAND'S collection, illustrating the lecture, is to be in view for two days.

THE DAIGAKKO OF THE TOKUGAWA ERA.

THE Shohei-ko, the college which in the Tokugawa era bore the name of *Dai-gakko* (University), was founded in 1690, in the days of the fifth Tokugawa Shogun, TSUNAYOSHI. It bore no resemblance whatever to the present University. Like so many of the educational establishments of the Tokugawa era, its objects were political and ethical rather than scholastic. IEYASU and his successors were thoroughly convinced of the fact that a despotic government is only secure when it guards jealously the minds of the rising generation against the adoption of notions calculated to promote the subversion of authority. The Shogunate could never have maintained its preëminence for two and a half centuries had the youth of the land been allowed freedom of thought. The studies of the young were all so arranged that unquestioning obedience to the higher powers should acquire all the force of habit. The present government is feeling the results of the growing liberty of thought prevailing throughout the country, which modern education has done so much to foster. The instability of modern cabinets is no fault of the ministers who compose them: it is an unavoidable characteristic of the transition from despotism to constitutionalism.

But there is one particular in which modern statesmen would do well to imitate their predecessors; they should pay more attention to the education of the rising generation. The present undue forwardness and conceit of Japanese youths is undoubtedly owing to defective or unsuitable education. Lads imbibe at school ideas on democratic government and the rights of subjects which are incapable of being acted on in this country at the present time. By ceaseless agitation they keep the country in a ferment. Under the old system of education no such results of academical training showed themselves. We do not cite this as an argument for despotism, but simply to show that if the Tokugawa rulers erred in the direction of over strictness, modern statesmen lay themselves open to the charge of undue leniency in the matter of education.

To return to our subject. In accordance with Chinese notions, when the Shohei-ko was established it was deemed necessary to endow the institution with an air of sanctity, and thus deepen the students' feeling of reverence for the college authorities. In order to effect this, the shrine of CONFUCIUS, China's great patron of learning, was removed to the school, and once a year the most imposing of all Japanese ceremonies was performed there, being attended by the great lords of the land. The teaching staff of the College were invariably *hatamoto* or their dependents. The office of President was hereditary. HAYASHI NOBUATSU was the

first President (*Sosai*). HAYASHI DOSHUN may be said to have been the founder of the HAYASHI House. His superior abilities were recognised by IYEYASU, and he was appointed tutor to the Shogun's family. So great was the confidence placed in this scholar and his descendants by the early Tokugawa Shoguns that the control of the whole of the higher education of the country was entrusted to them. To HAYASHI NOBUATSU, the first President of the Tokugawa College, belongs the honour of having obtained a status for Confucian scholars independent of Buddhism. Up to that time no distinction was drawn between the learned and the religious recluse, and the scholar who wished to devote his life to study was required by custom to shave his head before retiring from the world. The personal influence of the HAYASHI family, and the teaching carried on in the Shohei-ko, by giving an immense impetus to Confucianism, account to a great extent for the prominent position that cult held in the minds of leading Japanese at the opening of the Meiji era. Under the president was the *Sokyo* or head of the teaching staff. The teachers were denominated *jusha*, a word which, though originally applied to Confucianists exclusively, grew, as a result of the preëminence of Confucian teachers, to be a synonym of *shikisha*, *gakusha*, and other equivalents for our term scholar.

The text-books used in the Shohei-ko were carefully chosen from the Chinese classics. Books calculated to develop the reasoning faculties of the students, such as the works of *Kampi* 韓非, *Junshi* 荀子, and *Soji* 莊子, were not allowed.

The motto of the institution was well expressed in words often used to describe the whole government policy of the Tokugawa Shoguns: *Tami wo shirashimu bekarasu yorashimu beshi*, "not to make people know, but to make them follow"—not enlightenment but obedience. Discussions with teachers, such as may be heard in any of the modern schools of Tokyo, were not allowed, and a tendency to persist in altercation with a teacher often led to the expulsion of a student. When the school was first opened, the expositions of the various teachers differed in some minor details, and the students enjoyed some lively debates in their rooms over the discrepancies between the views expressed. This was reported to the College authorities, who at once issued orders that in expounding text-books all teachers were to follow the commentator SHUSHI, 朱子, and not give expression to their private opinions on the meaning of the passages expounded. Thus was the thralldom rendered complete.

The school was supplied with students from two distinct sources. First, the sons of *hatamoto* and other Government officers were required to attend the institution. Secondly, provincial schools were allowed to

send up their best graduates to complete their education there. The former class of students entered the school without much preparatory training, and regarded their attendance in the light of an arduous task. The country graduates had a natural taste for learning, and consequently progressed rapidly. The *hatamoto* students were gentlemanly and refined, and were allowed the privilege of keeping attendants while passing through the course. The provincial students were rough in their manners and very poor. Hence there was little love lost between the two classes at any time. During the early days of the school they had no dealings with each other. Verse-making was at its height at the time, and many were the lines penned to caricature the pompous ignorance of the *hatamoto* students. Not until the *hatamoto* ranks had produced such graduates as NAKAMUKA MASANAO and TANABE TAICHI, did the relations between the official and the plebeian students improve.

Some of the lectures were open to the general public, and differed little from the moral discourses of Buddhist priests. They were attended by people of all classes. The names of such persons as had attended every lecture during the year were recorded, and their diligence was held up to the public as an example, much in the same way as is done in Christian countries, where punctual attendance at Church is included among men's virtues. There were other lectures, which officials were only privileged to hear. So strict were the class distinctions in those days that it was considered beneath the dignity of high officials to listen to moral discourses in company with plebeians, to say nothing of the fact that the official palate had to be tempted with choicer food than would content ordinary folks. The college course extended over five years and the periodical examinations were very severe. The examiners had to swear to a document, which stated that no favouritism would be practised, and to seal it with their blood. The examination papers were prepared by the teaching staff and submitted to the Shogun by the President. The number of questions sent in had to be largely in excess of what were required, so as to give the Shogun a choice of subjects, the object of this being to prevent favouritism, certain students being better acquainted with some subjects than with others. The answers to most of the questions consisted of (1) the orthodox exposition of the meaning of a passage chosen from the classics; (2) the meaning of the ideographs of which it was composed, and (3) the views of the student thereon. The sons of *hatamoto* were not obliged to pass these examinations. The discipline of the college was very strict, and punishments were meted out to teachers and students alike, the only difference being that they were made heavier for the former. The penalty for

drunkenness, attended by disorderly conduct, was 15 days confinement to the college in the case of teachers, and 3 days in the case of students. Repetition of this misconduct three times was punished with expulsion from the college. Excuses for wrong-doing never obtained a hearing, and to question the wisdom or justice of the rules of the institution was deemed a heinous crime. The college officials had the right to imprison students who persistently disputed with their teachers and refused to submit to their authority. To students who passed their examinations prizes were given, which consisted of books stamped with the Government stamp.

The expense of maintaining the College, estimated at about 1,000 *koku* of rice (say 5,000 *yen*) a year, was met by the produce of seven villages in the Kuraki district, Kanagawa. This regular source of income was supplemented by handsome presents made to the institution on the occasion of the annual Confucian festival.

In addition to its ordinary functions, the College served the purpose of a Stationers' Hall. All learned works on general subjects, that were not translations, had to be submitted to the College authorities before being published. For the examination of translations of Western books there was a special bureau called the 蕃書取調所 *Bansho-torishirabe-jo*—"Office for the Examination of Barbarian Books." The copyrights issued by the Shohei-ko, unlike those of modern times, were perpetual. This august establishment did not deign to take cognisance of the vulgar *Kana* literature which was produced in such large quantities in those days, much of which was extremely indecent. It was considered to be lowering to the dignity of the *samurai* to be seen reading books written in *Kana*. The early Protestant missionaries, when using the *Kana* translations of the Bible, were often reminded of this fact.

Notwithstanding its numerous defects there is no denying that the Shohei-ko turned out some very fine men. Many of the leaders of thought during the present Meiji era were trained there. The habits of self-control and deference to lawful authority cultivated in the establishment proved a most valuable preparation for the duties of life. Those fine moral instincts and courteous manners, whose decay in certain quarters is so much deplored in modern times, were nourished and developed in the Shohei-ko. From it were derived the tone of polished circles at the beginning of the Meiji era, as well as many of the influences which lessened the evils attending the revolution and accelerated the reconstruction of the fabric of society, in a word, the very back-bone of Japanese morality. We are not alone in deploring that among all the new educational agencies at work there is no institution which in that highest of all desiderata, moral training, can compare with the famous Tokugawa school.

CORRESPONDENCE.

"ADULTERATED" TEAS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As it may be of interest to shippers of tea from Japan, in view of the law in the United States prohibiting the importation of Adulterated Teas, I furnish you with the following extract from the *New York Shipping and Commercial List* of date, July 15th ult.:—"Dr. H. W. Wiley, of the Agricultural Department, has recently submitted a report of his investigations into the adulterations of tea and other products. The treatment of teas with various colouring matters, a process termed facing, comes properly under the head of adulteration. Facing consists in treating the prepared leaves with mixtures containing Prussian blue, turmeric, indigo, or plumbago, to impart some favourite colour or gloss to the leaf, and always has a fraudulent intent."

He states that 51 per cent. of the teas imported into the U.S. are of Chinese origin, and 42 per cent. from Japan.

Yours respectfully,
X.
Yokohama, August 15th, 1892.

THE RELIGIOUS PLATITUDE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I remember, once upon a time, reading of a certain very flippant clergyman who declined to preach upon the speaking of Balaam's ass, on the ground that such occurrences were not sufficiently uncommon at the present day to justify reference to the special case in question from the pulpit. The satire, however, of this most reprehensible person loses all its edge when we remember that the ass is generally thought to have spoken better sense than Balaam; that it actually saw what Balaam was for some time not allowed to see; and that no less than fifteen hundred years later it was honoured with most favourable mention by the writer of the Second Epistle of St. Peter, who compares the ass with the prophet to the great disadvantage of the prophet. To my own mind, Sir, I confess, Balaam is one of the most interesting and picturesque figures in the Bible; a God-fearing and conscientious man placed in a position of peculiar delicacy and temptation, a great poet, a seer of far-reaching fame, a warrior who died fighting bravely in the field. A most interesting figure, I say; and one who, like Saul, Cain, Esau, the Prodigal's Elder Brother, and a few more, has received scant justice at the hands of the orthodox, from apostles to Sunday-school teachers. It has always seemed to me that there was something rather priggish about that ass; her self-complacency is irritating, and I do not wonder that when, after backing, bolting into a field, and crushing her rider's foot against a wall, she finished by falling down with Balaam on her back, he should have been provoked into retaliation. At the same time, I freely confess the error and the wickedness of such views, which are doubtless the mark of a perverse and unenlightened mind. The goodness, the patience, the wisdom, and above all the implied orthodoxy of the loquacious animal have received the imprimatur of the entire Church, and I am sure that there is no really sound and humble-minded preacher at the present day who would not rather be compared to Balaam's ass than to the ass's master.

Fortified, therefore, by this conviction, but still adhering to my own opinions, I need not hesitate to point out one or two small matters in which a few—just a few—of our modern clergy would be well advised not to imitate the ass too closely. Now the ass, no doubt, believed herself to be divinely inspired; or, if she did not, others have believed it for her. But, apart from the fact of her loquacity, which of course was startling enough, there was really nothing startling in what she said. All that she uttered was a Platitude; and I think it ought to be laid down as a necessary and universal truth that the Religious Platitude is never divinely inspired. There is, in fact, an instance in the Gospels of the utterer of a Religious Platitude being divinely snubbed; and O, how many congregations have had reason, since then, to wish their clergymen would accept the hint! Sir, the vitality of churches and congregations everywhere is being sapped, annihilated, and destroyed by the persistent and unrelieved utterance, Sunday after Sunday, of the Religious Platitude. One would think, to listen to the preachers, that their minds were as empty as a barrel without top or bottom, as sterile as the sea shore sand, as incapable of original ideas as the sounding board of their own pulpits. Often, as I have listened, withering and mutely indignant, to some hopelessly childish and illogical discourse, full of impossible assumptions and self-complacent sophistry, have I wondered

to myself, "Does this amiable man look upon us all as uneducated and ignorant children, and is he, therefore, trying to preach down to the level of our understandings; or, is he incapable of anything better himself?" And I have once or twice reluctantly concluded that the second supposition was the true one. One would think, to hear some men preach, that they were absolutely untouched by, if indeed not ignorant of, the great discoveries, the intellectual progress, the magnificent march of thought, which constitute, in this nineteenth century, the latest of the revelations. But with their congregations it is not so; the intelligent layman is fully alive to the triumphs of research—in science, in literary and historical criticism, in comparative religion,—which have illuminated the last fifty years. What, then, must be the effect upon the mind of a man more or less familiar with Darwin, Herbert Spencer, and the less famous writers of their schools, of a silly discourse based on the infantile theology of "Line upon Line," "The Peep of Day," or some such Sunday-school authority? Impatient and contemptuous disgust!

I write as a constant church-goer. But there are few things better calculated to dissuade a man from church-going than the well-meaning, vapid twaddle that one so often hears in churches. I remember one youth, hot from Oxford; he was an ardent Evangelical, and played lawn-tennis all day long; and I remember that youth informing his congregation one Sunday evening that although the Devil was, of course, a very wicked monster, there was one sin we had no reason to suppose he ever committed; he probably never got drunk. And I remember another youth, an ardent High Churchman; he was preaching to a congregation of very hardworking, poor folk, small shopkeepers mostly, in a slummy portion of the town; and all he could think of to tell them about was the continuity of Church history, and the wickedness of being a Dissenter. And since then I have heard a sermon upon the graces and the virtues of the Virgin Mary—based apparently upon some mediæval legends; another, in which it was taken for granted that the creation of the Universe was begun one Sunday morning and finished on the following Friday afternoon; a third, in which the bloodthirsty and domineering Samuel was represented as an embodiment of every God-like virtue, and his worst acts were praised as the very noblest heroisms; a fourth, in which the preacher described the joy and awe with which he had been wont to take rather unsavoury babies from their mothers' arms, and restore them with their natures changed. I had never realised before that infant baptismal regeneration was still actually held by educated persons. Why, Sir, I imagine that nine-tenths of the women who tramp the Haymarket every night, of the murderers hung in England during the last hundred years, of the inmates of our prisons, of the criminal classes generally, and of the thousands of betting-men, men about town, gamblers, and fashionable fribbles who never think of religion from one year's end to another, were baptised in their infancy; in what sense, pray, are they "regenerate"? A definition of terms is sadly wanted here. A man may be a swearer and a drunkard; never mind! The parson regenerated him when he was a baby, and "changed his nature" in the orthodox fashion. One is tempted to ask what his nature would have been like if it had not been changed. Scarcely worse than it is, one would imagine.

No—such subtleties of an exploded theology, such puerile and trivial dissertations, are not suited to the present age. Mankind have outgrown their swaddling-clothes, and pap is no longer their fit nourishment. The clergy may shut their eyes, but the eyes of the laity are open. A man who reads his Bible devotionally but not critically, prepares for himself countless pitfalls. A man who blindly assents and consents to a book which, though of high and true merit, is but a compromise between Calvinism and Popery, can never be an exact thinker. I do not hesitate to say that a familiarity, however deep, with scholastic theology is not sufficient equipment for a religious teacher. I hold that every clergyman should make himself acquainted with the great leaders of modern thought; that a knowledge of scientific literature, of advanced theories, of anti-Christian systems, is indispensable to every man who aspires to teach his fellows; and that the religious teacher who neglects thus to equip himself—who remains wilfully blind to all those great influences and forces which are remoulding the minds of men to-day—deprives himself of more than half his opportunities for usefulness, and shirks a most serious duty towards the people committed to his care.

I am, Sir, your obedient Servant,

A LAYMAN.

August 12th, 1892.

LETTER FROM BOSTON.

(FROM OUR OWN CORRESPONDENT.)

Boston, Mass., July 18th.

The celebration of the Fourth of July, it is reported from all parts of the country, was attended with unusual interest, and, it may not be necessary to add, with an unusual number of casualties. In Boston the public celebration was marred by a balloon accident. A balloon containing the aeronaut and two volunteers ascended from the Common, and over Dorchester Bay collapsed and fell into the water, the occupants of the balloon, except one picked up by a boat, losing their lives. A balloon ascension usually makes a part of 4th of July celebrations, and this year the balloon and parachute contingent appeared out of gear, for in several other places there were frightful accidents, and the question is asked, "Ought not the Government to put a stop to such foolhardy recklessness? Ought not law to interfere to prevent a woman from ascending in a balloon to the height of two miles and then jumping out, trusting to an umbrella (parachute) to get safely to earth again?"

As every one who is acquainted with the United States understands one of the great problems of the country is the labour problem, or the solution of complications that arise between capital and labour. An unusual event in the labour world has stirred the country from one end to the other and shows or suggests many things not pleasant to contemplate—phases of industrial life that refer more or less to our foreign population.

At a place called Homestead, near Pittsburg, Pennsylvania, are the great steel works of the Carnegie Company, lately closed owing to a disagreement between the corporation and the workmen whom numbered about 5,000. The Company proceeded to hire other workmen. The old workmen were determined to prevent the new men from working and guarded every approach to the works with picked men. Frick, the chairman of the Carnegie Company, called upon the sheriff of the county for protection of the new men to be employed by the Company. The sheriff after trying to force his way into the works, found that he could not do it without bloodshed. With no force that he could summon could he make headway against 5,000 men armed with anything from a hammer to a musket. Frick then called upon the Pinkerton Detective Bureau, and several hundred of these detectives came up the Monongahela River, on which the works, or the town is situated, on barges and attempted to land. The strikers gathered in great force to prevent the detectives from landing. It is not known which fired the first shot but firing began in earnest and an all-day battle was the result. The Pinkertons were obliged to give up the fight and surrendered, and as they were on their way to a place of imprisonment, they were set upon by those who had charge of them—an angry mob of the victors—and treated with great barbarity. Late at night the captured Pinkertons were conducted out of town, under the supposition that they would be mobbed to death if they remained. Sixteen men were killed, 65 wounded, of whom a dozen may die. The workmen, still holding the works, fortified them, and apparently defied the world, the owners of the works not being allowed to enter, the strikers declaring that they would blow up the works if they were not employed again on their own terms. This was a little too high-handed to submit to, and the State was called upon to maintain order and restore the works to the owners. A part of the State militia, about 8,000 men, appeared on the scene and took possession of the works, and of the town. Martial law was proclaimed. The strikers lost their fiery spirit when the loaded arm of the law was brought to bear upon them. They had the choice of submitting quietly or of being shot in their tracks, and they decided to live a while longer. The event has created much excitement throughout the country, and a resolution has been introduced into Congress calling for a full investigation. The Pinkerton detectives referred to, are so called because a man called Pinkerton organized a "Detective Bureau" years ago to supply detectives to private corporations or to any requiring their services. They have been introduced many times before on like occasions, being often prominent in mining strikes. Whether deserved or not, they have a bad reputation, and are said to be recruited from the lower classes—or from that class that has failed in everything and turns to the service as a last resort. However that may be, their ill-fame has increased to such an extent that their presence excites and inflames. Probably the Pinkerton detective has seen his best if not his last day. At the same time, there has been riot and bloodshed in Idaho among the miners of the Coeur d'Alene district. To quell the disturbance, the

President of the United States has sent an armed force from the regular army. The trouble there was the same as at Homestead. The miners took possession of the mines and refused to allow new men to enter them. Before the United States force reached the scene, several non-union workmen willing to take the place of the strikers, were shot. The trouble was soon over, however, on the arrival of the troops.

Cyrus W. Field died on July 12 at Dobb's Ferry, New York. He was born in 1819. He began life as a poor boy, with little education, but amassed a fortune before he was thirty-five years of age. He was best known as the originator of and the chief factor in the laying of the first Atlantic cable. For his part in laying the cable Congress voted him a gold medal. John Bright in Parliament called him "the Columbus of modern times, who by his cable moored the new world alongside the old." New York has never had a more prominent or better citizen, and no man in the United States was more respected and honoured. He was a man of wealth, but he was man for a' that. It was a pathetic incident in the life of Cyrus W. Field that just before he set sail on his last voyage, his thoughts turned in delirium to the vessels which assisted in the laying of the Atlantic cable. The early experiments troubled the brain that long ago solved the problems.

Two-thirds of the city of St. Johns, Newfoundland, was destroyed by fire on the 8th of July. For three weeks before no rain had fallen, and the fire once started was soon beyond control. The buildings where the fire started were of wood, and before the people realized their danger a terrible conflagration was in progress. So rapidly did the flames spread that the people, many of them, had barely time to escape. A few saved only what they could snatch and run with; the majority saved only the clothing in which they stood.

The fire began in the afternoon, and when the people gathered on the highlands the next morning and looked for their city, two-thirds lay in ruins. Great distress, and hunger, followed, and neighboring cities began at once to dispatch relief. In this city and in other New England places the people, unasked, sent clothing and food. The population of St. Johns was about 35,000, and at least one-half is homeless and practically without shelter. Many persons are missing, and it is known that life was lost but to what extent is not yet discovered. The money loss is estimated at \$20,000,000; insurance about \$3,000,000. Fires like this test the stability of insurance companies, but it is reported that all losses will be paid promptly.

There has been a notable gathering in New York—the convention of the Christian Endeavour societies. The members of these societies are young men and women, Christian workers, who have banded together for the promotion of the general good. They may be called the salt of civilization, and it is a "goodly pinch." There were thirty thousand of these workers present, earnest, enthusiastic, determined that to some extent, as far as their power will permit, good shall prevail. This organization has been called the "Church of the Future." All evangelical denominations are represented, and work together in harmony. Denominational differences are forgotten in the general aim and purpose. Madison Square Garden, capable of seating 14,000 persons, was filled and crowded at every session, some of the large churches were filled at the same time, and then the meetings overflowed into the open park where a thousand met. One of the papers said that these thirty thousand members were like thirty thousand pieces of clean soap thrust into the dirty face of New York. The Christian Endeavour movement is supported by 21,080 societies, having a membership of 1,370,200. During the year, five thousand societies and 250,000 members have been added. It is a great movement and its influence is already great and rapidly growing bigger.

The Homestead riots, already referred to, have led to one result which is called a "danger signal." In this city and in Chicago, a movement has been started looking to the organization of working men into militia or quasi-military companies bearing arms. It is said that the majority of the strikers at Homestead were not citizens of the country, a large number being Poles and Hungarians. But it is not probable that foreigners of this class or of any class will be allowed to bear arms to protect their own interest. The Democrats will make use of the Homestead riots in the Presidential campaign against the tariff and the McKinley bill, which the Republicans claim is doing so much for the labouring man.

The bill introduced into Congress for the free coinage of silver has been defeated, and that is the last of the matter as far as this Congress is concerned.

The World's Fair is looming up in gigantic proportions. It promises to be the most extra-

ordinary exhibition ever held in any part of world. The man who misses it will keep company with a life long regret.

LETTER FROM GERMANY.

(FROM OUR OWN CORRESPONDENT.)

Berlin, July 1st.

Since my last letter there have passed a number of events which have not failed to cause considerable excitement in nearly all the spheres of the political world.

First of all we must record the visit of their Majesties the King and Queen of Italy to the Emperor, who received them as old friends at his Potsdam residence. The King was accompanied by his new Minister for Foreign Affairs, M. Brin, who is reported to have had serious and detailed *pour-parlers* with our foreign secretary, and also with the German Ambassador at London, Count Hatzfeldt, who happens to be here on a prolonged leave of absence; ostensibly for the sake of his health. The object and character of these conferences has not transpired, but is evidently closely connected with the objects of the Triple Alliance. Whether Germany is, through its Representative at the Court of St. James's, to support by its influence the special Italian desires for naval coöperation by England in case of need, has not yet transpired, but may be considered as not improbable; however so much the present moment may seem inopportune for asking Lord Salisbury to fix more definitely the future action of Great Britain, in case of the coming conflagration. It is evident that the present British Cabinet will hesitate to undertake any further engagements in this direction until after the elections, which, it is hoped by all parties interested in the Triple Alliance, will bring the present British Government back with renewed vigour and popularity.

The next great event was the wedding of Count Herbert Bismarck at Vienna to Countess Hogos. Why the marriage was celebrated at Vienna is not quite clear, considering that the Hogos family resides at Fiume, but anyhow it gave Prince Bismarck an opportunity to proceed there, and the journey turned out a perfect triumphal procession for the ex-Chancellor. On his touching Berlin great ovations took place at the Railway station; also at Dresden the enthusiasm was great; and in Vienna his entry not only gave an opportunity for the masses to show their appreciation of his great work, but an occasion for a rather disgraceful street brawl, in which the Anti-semitic and German nationalist party did not by any means cover themselves with glory, while the police showed want of discretion and forbearance by acting with undue vehemence and brutality. The old statesman had kept in the beginning a discreet silence in Berlin, but he began gradually, on receiving unmistakable tokens of popular favour, to warm up to the conviction that the opportunity might be used with advantage to let out a few of those bitter shots at his enemies which he had hitherto with difficulty restrained. Unfortunately a representative of the *Neue Freie Presse* arrived at this moment to interview him, and unto him were confided a series of complaints, criticisms, and recriminations, which in a few hours the cable conveyed all over Europe. What Bismarck said was neither new nor surprising, but what pained almost everybody who had personally esteemed him, was the severity and indiscretion of the expressions in which he condemned the policy of the present Government and tried to prove the incapacity of his successor in office. Whether, for instance, his belief is correct that he himself did enjoy greater confidence on the part of the present Emperor of Russia, or whether he is in this respect labouring under an delusion, as the most prominent Russian papers have hastened to assert, or whether really the German negotiators of the new Austro-German treaty sacrificed the commercial interests of their country and the prospects of home Agriculture, has at the present moment scarcely any but academical or historical value. But a fact sad enough is established beyond doubt, that henceforth the reconciliation of Bismarck with his sovereign is beyond the reach of all those well-intentioned mediators who hoped to establish, not perhaps full harmony, but at least an outward patching up of the relations between the Kaiser and the old servant. It may be even surmised that the impulsive nature of the Emperor was at one time inclined to pardon and shake hands, but henceforth the cloth is unfortunately cut between them, perhaps for ever. The subsequent popular demonstrations at Munich and all through the ex-Chancellor's route to Kissingen, spontaneous as they were, could only confirm this determination on both sides.

It would be, however, a mistake to attribute these

Bismarck ovations to a premeditated desire on the part of the Southern populations to demonstrate against the present new course. In the German character, so different from that of the Latin and Celtic races, enthusiasm is difficult to kindle into a strong emotional feeling, and still more difficult is it to evoke an expression thereof. If once raised to this pitch, however, the sensation will continue up for a considerable time, regardless of consequence or better judgment. Thus Bismarck, who was once the best hated man in Berlin, and not less in Bavaria and Austria after 1866, became a popular hero after 1870. With a feeling of compassion that he had to a certain extent been harshly treated, is coupled the thought that he is the only surviving actor of that great period which created German unity, and in fact one of the principal agents in the conclusion of that great historical event. In this respect the reminiscences of that period, awakened by the personal appearance of Bismarck, can only be said to have produced a happy effect on the strength of German Consolidation, which unfortunately, had been to a certain extent shaken by attempts at reactionary legislation, especially the new Prussian School Law. But the papers which now exaggerate the possible effect of Bismarck's criticisms do evidently so for purposes of their own. There cannot be the slightest doubt that even if Bismarck himself should really try with all his might and ability to destroy his own work, a perfidy which he does not dream of, he would fail, because of the simple fact that he did not alone make or create German unity and the Empire. It becomes more and more clear that the idea was to a great extent that of others, for instance the work of Crown Prince Frederick, the Grand Duke of Baden, even of men like Lasker. But Bismarck was the artist who cleverly moulded the form into which the German Empire was cast. Having been once cast and finished, however, the thousands interested in its existence and welfare will certainly take care to preserve it against perils—whether the controversy announced by the semi-official papers to take place against Bismarck, and even the slightly veiled threats of a repressive and coercive action against him, will be really carried into effect may be justly doubted. Notwithstanding that the precedent of an Armin Trial under the Régime Bismarck is on record, I seriously doubt whether the representatives of the "new course" will condescend to any measure of this sort, unless it be actually forced upon them by the pressure of circumstances.

MARINE COURT OF INQUIRY.

THE GROUNDING OF THE "OMI MARU."

The Marine Court of Inquiry attached to the Mercantile Bureau (Teishinsho) delivered its finding in the above case on Monday morning. Below will be found the minutes of the captain's statement and the full text of the judgment.

Minutes of the proceedings of the Court of Inquiry, held at the Marine Bureau, in the Department of Communications, on August 2nd, 1892, for the purpose of inquiring into the circumstances of, and attendant upon the stranding of the steamer *Omi Maru*, which took place at 0.30 p.m. on July 5th, 1892, on the coast of Hokkaido, at White Cape, 8 miles S.W. by W. ½ W. from Cape Yusan, during a dense fog.

The Court consisted of the following members—President; Mr. J. Ito, Assessor Mr. J. M. James, Mr. T. Yokoi, Mr. Iwasaki.

Frederick Devenish, Certificate, No. 230, sworn, stated:—I was in command of the *Omi Maru* at the time of the accident, and have previously been in command on the coast of Japan for one year, having commanded the steamer *Tsuruga Maru* for eleven months until I joined the *Omi Maru* on the 8th of June last.

To the President—This was my second voyage in command of the *Omi Maru*. The last time I was running in these waters was six years ago as second officer in the *Satsuma Maru*. The log in use was Walker's Clerub Patent log, and from Yamada to Shiriyasaki the log had been tested on several occasions, and found correct with distances by bearings. The position of the ship when passing Kurosaki was ascertained from 4 point bearing. I considered I was well clear of Shiriyasaki when I hauled up, from the distance on the log and from the soundings. My experience has been that the currents between Kinkawan and Shiriyasaki would be against the ship when going to the northward. From my experience on the previous voyage there was little or no current to the eastward between Shiriyasaki and Hakodate. But at times, so I was told by experienced ship-masters in this trade, the currents are very erratic, running strong to the Eastward on the Northern side of the Straits.

Original from

To Mr. James—There was no wind at the time to affect the current one way or other.

To the President—When rounding Shiriyasaki there was no indication of land visible, and the Syren was not heard. The steam whistle was kept going at intervals, in accordance with the Regulations. I was personally on the Bridge from 5.0 a.m. until 11.0 a.m. when the fog lifted so that one could see to a distance of 4 to 5 miles. The chief officer was on watch from 8.0 a.m. till noon. The second officer relieved the deck at noon, but had been relieved by the 3rd officer in order to get his tiffin about one minute before the accident. The chief officer attended personally to the taking of soundings. The weather being comparatively clear, I imagined I could see 4 or 5 miles, and I did not think it necessary to take any more soundings. After sighting the land and starboarding the helm, the ship's head was turned from W.N.W. to W. by S. before she struck the rocks. I don't remember the name of the Quartermaster at the wheel at the time. According to my dead reckoning calculation, at the time I sighted the land the ship should have been 7 miles or so off the land. I should imagine the ship was about $\frac{1}{2}$ mile off the land when I first sighted it. The steam whistle is one of medium sound power. I was listening very carefully in case I should hear the echo of my steam whistle, but did not hear anything. On my previous voyage to Hakodate the weather was fairly clear, and I passed Shiriyasaki within $\frac{1}{2}$ miles and got good hearings. I steered more to the Northward on this present voyage in order to sight Shiwo Kubi-saki, the shore being bold close too. I did not think that the current would have set me over to the north side of the Straits. I felt almost confident of my position.

To Mr. James—I did not deem it necessary to take any more soundings after 11.0 a.m., as the weather was partially clear, and when it became thick again I was hesitating as to taking further soundings when the ship struck: previous to the ship striking I did not notice any change in the colour of the water. The fog did not lift actually until the following day. I did not hear any sound of breakers, or other noises from the shore indicating proximity to land. Whilst on shore at this place I found the current, say $\frac{1}{2}$ mile outside of ship, running strong to the eastward, and in shore a tidal stream running to the N.W. and eastward.

To the President—After the ship had struck, I landed the second class and steerage passengers, about 50 to 60 in all, in the ship's boats, in the small bay near the ship; the first class passengers remaining on board as there was no immediate danger of further damage. The other passengers eventually returned to the ship, and proceeded to Hakodate in the *Tugonoura Maru*. I had full confidence in all the officers of the ship both of the deck and engine room departments. I wish to mention that Mr. Matsumoto, the purser of the ship, rendered me most valuable assistance on this trying occasion. I never saw any land sufficiently clear to get a bearing for fixing the ship's position after passing Kurosaki up to the time of the accident. When passing the locality of Samesaki its estimated distance was from 6 to 7 miles, but it was not sufficiently seen to get a bearing.

To Mr. James—The boats were carried swung out in the davits except two, and four were cleared away for use within 10 minutes after striking.

(Signed) **FREDERICK DEVENISH.**

FINDING OF THE COURT.

The *Omi Maru* is a full powered iron screw steamer of 1,533 tons net register, and of 261 nominal horse-power, owned by the Nippon Yusen Kaisha of Tokyo. The Master was Frederick Devenish. She sailed from Ogino-hama at 2.12 p.m., on July 4th, 1892, on a voyage to Hakodate; and on passing Yamada Head (Rikuchiu) at 10.52 p.m. the same day, the course was altered to N. by W. magnetic; at 1.35 a.m. on the 5th Kurosaki was ahead, distant 5½ miles. The ship proceeded on this course at a speed of about 12 knots towards Shiriyasaki. At about 5.0 a.m. the weather became thick and foggy. At 7.57 a.m. the fog became so dense that the speed of the engines was reduced to half speed, and then to slow. At 9.30 a.m. sounded, and got 52 fathoms. At 10.0 a.m. sounded, and got 50 fathoms. At 10.39 a.m. sounded, and got 51 fathoms. At 11.0 a.m. sounded, and got 100 fathoms. The captain, calculating that he had now passed Shiriyasaki at a distance of from 5 to 6 miles, hauled the ship up, and set his course N.W. by W. $\frac{1}{2}$ W. magnetic, and put his engines at full speed. At 0.22 p.m., the fog coming on dense again, the engines were slowed, and the course altered $\frac{1}{2}$ point to the Westward. At 0.30 p.m. the land was suddenly sighted off the starboard beam; the engines were immediately reversed to full speed astern and the helm put hard-a-starboard, but the ship took

the ground almost immediately. The fore hold compartment was found to be leaking, but the others were all intact. Took soundings and found the depth of water to be 10 feet under the stem, and 16 feet at the stern. Taking these soundings, lowered the boats down and landed the passengers, and then laid out two lower anchors astern to prevent the ship changing her position further inshore; also commenced discharging cargo and coals to lighten the ship. At 2.0 p.m. on the 8th July the steamer *Miike Maru* succeeded in towing the ship off, after which she steamed alone to Hakodate. The facts above mentioned, and the amount of damage caused to the ship's bottom are described in the Captain's report and evidence. The Court is of opinion, that, at the time of entering Tsugaru Strait the ship was navigated with great care and caution; that when the fog came on, due precautions were taken, and soundings were frequently obtained; and the speed of the ship reduced to within a limit of safety. When the fog partially cleared off the speed was increased to full speed; but, when the fog again set in thick, although the Master altered his course and slowed the engines, he neglected a most important part of his duty, in thus proceeding on without taking soundings. However, after stranding, the measures which he took for the safety of the passengers, and to prevent further damage to his ship, were prompt and seamanlike. Taking all the circumstances of the case into consideration, the Court is of opinion that the Master was to blame, and therefore recommends that his Certificate be suspended for a period of two months.

(Signed) **J. ITO, President.**
S. YOKOI } Assessors.
K. IWASAKI }

I hereby approve the decision arrived at by the Court, and order that the Master, Mr. Frederick Devenish's Certificate be suspended for 2 months.

(Signed) **KURODA KIYOTAKA,**
Minister of State for the Department of Communications.

The President, in answer to Capt. Devenish, said that the finding took effect from that day.

A SPANIARD'S TALE.

The dark, wasted face—the searching, hollow eyes—I thought, as I glanced at him, of Dante, who, the Florentines said, had “been to hell and come back again.”

A reserved, distinguished, middle-aged man, whose life-experience I fancied must have involved something out of the common. On the boat we had exchanged a few polite phrases, and now chance had conducted him to the same compartment of the train.

Sitting opposite, and talking about the “market,” were two men I knew—one the editor of a London journal, and the other the Paris correspondent of the *Daily Twaddler* returning, after a fortnight's holiday on the British side of the “streak,” to the duties of his post. Also three persons of the genus that might be called “the travelling nonentity,” for you come across any number of such people in your journeying, and they never have a single distinctive trait by which you might remember them if you were to meet them again. These had distributed themselves and their belongings variously and lavishly about the place; so altogether my sombre visaged Spaniard (he must be a Spaniard, I thought, with that attenuated wiry frame, proud air, and punctiliously courteous manner) was seated as uncomfortably as one always must be who comes the last of seven—and those Britons—into a railway-carriage—and that French.

“If you don't mind coming over to this side,” I said, as the train started, “I think I could make more room for you.”

He thanked me, and acted on the suggestion. He spoke English well, with just a *souppçon* of the Spanish rattle.

Long before we were half-way to Rouen, George Bevis, the editor, and Tom Barker, the *Twaddler's* “Our Own,” had exhausted even the topic of finance. Perhaps the question didn't come home quite so nearly to little “Tommy,” with his six hundred a year *pour tout potage*, as it did to the lordly, gorgeous Bevis, exhibiting a profusion of costly rings on fingers with their nails bitten down to the quick, and glorious in a fancy waistcoat. Well may the subject of money investments in general have an interest (no pun intended) for a gentleman owning a paper that nets him from ten to fifteen thousand a year. George was going to Monte Carlo, and took good care to let all of us know it; and while relaxing on those sunny shores, intended to combine business with pleasure in a manner at once practical and Hebraic.

It was perhaps by way of immediately inaugurating this system that, after an interval during which no sound was heard save one of the nonentities' snores, Bevis breathed on the midnight air the magic word “Nap”—the game I mean, of course, and not the other thing, which I, for one, must confess I have never been able to compass in an ordinary first-class railway carriage under any circumstances whatsoever. To Bevis's gentle hint there was no response from any one except Tom Barker, who, after a ten-years' course of petty punting at “bac” at the Cercle de la Presse and other Paris *tripots*, had taken gambler's habits in such a desperate form that he would play, as the French have it, “with his feet in the water.”

Two not being a Nappable quantity, *écarté* was the game to which Messrs. Barker and Bevis resorted, for what they gracefully denominated “a quid the go.” From the depths of a splendid bag Bevis produced a most professional-looking folding green cloth board, with a new and ingenious contrivance for making the points, and my Spanish friend and I were now afforded an opportunity of watching Barker drop close upon a pony, through a series of games, rising gradually from one-pound stakes in accordance with a mode of progression well known to every one who has ever touched a card, in railway carriages more especially.

The great Frederick, was it not, said something about hanging any man with ten words of his hand-writing. I am not the great Frederick, but speaking from personal experience, all too extensive and varied, of gaming and of gamblers, I may say: “Let me, for five minutes, see any man looking on at other people gambling, and I will tell you whether that man is, ever was, or ever will be, himself a gambler.”

'Tis an even more certain test than actually to be playing. One may not be playing from taste; but if one has it in one to look on—! There is a certain gleam of the eye, a certain restlessness in the manner—symptoms slight but unmistakable of that passion fiercer than love or hate, strongest of all human passions, because founded in the universal lust never slaked or sated—lust for gold. Yes, gambling, as all true gamblers know, is the sole appetite that can never fade or fail, but grows still by what it feeds on. To it most aptly may be applied the line:—

Age cannot wither, nor custom stale,
Its infinite variety.

Within ten seconds after Bevis had produced his board and pack, before the first game was well over, with its rapid “proposals” and “refusals” and announcements of, “the king,” I had seen enough to be certain that the Spaniard at my elbow was one of those who have, or have had, gambling blood in their veins. His nostril dilated, his eyes were fastened on the glittering cards, as the yellow light from the lamp in the roof gleamed fitfully across their painted surfaces. Not a word did he utter, but I observed him purse his lips when “Our Own” of the *Daily Twaddler*, after hesitating just one moment, led the wrong one of the last two cards he was holding, and in consequence lost the trick and the point.

“Do you see, sir,” the Spaniard remarked *sotto voce*, turning towards me as if he had divined that I, too, took an interest in questions of play; “do you see the importance of the *carte anglaise*? Now, there was a case in which the point depended upon it. Some people say it is a meaningless refinement, but undoubtedly it does give a slight advantage. How few people play *écarté* well!”

To discuss the delicacies of card-playing is, to some, quite as agreeable as actually to be handling a pack. And it certainly is much safer. I remarked, therefore, not unwillingly, upon a short *écarté* disquisition with my neighbour. The train plunged on through the night, and so did Barker and Bevis, absorbed in their game, with the two waking nonentities drawn nearer to study its progress—what time nonentity No. 3 still peacefully, though stertorously, slumbered. Our conversation, conducted in undertones, was therefore not heard above the ejaculations of the players, the usual notes of the sleeper, and the crackling of the crisp new cards as at every other moment they were taken up and rapidly shuffled in the approved “American” manner.

It was not long before our talk approached the topic of bacarat at the Paris clubs. Recent experience and observation at the Presse, the Washington, and the Betting had enriched my mind with a quantity of new and original facts and anecdotes in this connection, which I proceeded to retail to my companion. Enwrapped in an ample fur cloak—the night was rather chilly—he sat silent, forming an interested audience of one.

“But you yourself—no doubt you have seen much more of play than I have?” I insinuated at length, tentatively.

His face darkened, and beneath his thin drooping moustache his lips met and were tightly compressed.

Original from

He paused before replying, then said slowly, with a grave and somewhat melancholy dignity that sat well upon his wasted features, "I think I have seen more of play, and under more extraordinary circumstances, than almost any other man in the world. I have seen as much of play as I should ever wish to see, though I should live to be a thousand. For years I have not touched a card, and I shall never touch a card again. A series of events, which I still look back upon with amazement and horror, have filled me with such an aversion to gambling and wagering in their every form, that I merely to sit in this train, as I have done to-night, and watch two men whom I have never seen before playing for sovereign stakes, impresses me as it might do to see children dancing on the edge of a cliff. This trifling game—may, for all we know, be the opening scene of some future tragedy, as dreadful as imagination can conceive! And yet I can find it in me to sit and talk about vicissitudes of play. Ah! the old spirit is not entirely dead. Yet I feel that henceforward I am safe, for I would sooner put this right hand into the flames than let it ever tamper again with those accursed pieces of pasteboard that so nearly ruined and destroyed me—so nearly led me down to hell!"

With surprise I heard him. This sort of thing, in our banal days, was unusual. Such a confession, made in such a strain, to a total stranger, in a train speeding towards Paris of all places in the world—the Paris of the Boulevards and the Bois de Boulogne! Decidedly Talleyrand was right—*four arrive*. Anything may happen, anything and everything may be uttered, even a tirade like the above in the year 1890, at 1 a.m. in an overcrowded carriage on the Chemin de Fer du Nord.

"You are surprised at the tone of my remarks," my companion said, after a pause. "I think you would feel as I do in the matter if you had had my experience."

"I should at all events be deeply interested in hearing something of the same—if the desire on my part is not too great an indiscretion?"

The Spaniard hesitated, bending on me a rather questioning glance. Then, with politeness: "If you are willing," said he, "to listen to a very singular story, I do not see why I should not relate it to a gentleman, even though I have not the honour of his personal acquaintance. Allow me to introduce myself. I am—"

For the life of me I could not restrain a start. I was speaking to a man whose name, five-and-twenty years before, had been more famous in every great gambling centre than that of Garcia or the Marquis of Hastings. It was M—, the former *trente et quarante* king, who had thrice in one day broken the Homburg bank, and in Paris had won fifteen hundred thousand francs at a sitting against Narischkine at the Cercle de la rue Royale. How often had I heard the broken-down old punters dilate at club suppers upon the "march" and the "method" and the "martingale" of the renowned M—! And once, I remembered, the *Figaro* critic, Albert Wolff, had somewhat startled them by declaring, with one of his well-known grating laughs, that M—, whom he, Wolff, had seen at play a hundred different times in twenty different places, had never practised any method or march or martingale whatsoever, but simply bet at random, and always won. To us players of the younger school, however, M—, the legendary M—, had been as a representative of the greater men of a foregoing generation; we were degenerate now, but there were giants in those days. Had I not heard, too, of M—'s having come to some tragic and sensational end? Yet here he was now beside me.

An hour had elapsed, and the Spaniard was still speaking. In low tones, but distinct and occasionally thrilling, he was relating a succession of scenes of excitement and strange adventure in various lands, and I realised as I heard him how different, how almost opposite from our own is the Latin nature, with its infinite capacity for eager and passionate emotion. What vitality in this man over sixty! A world of force and ardour in the mere sound of his voice, and in his deep expressive eyes a sombre gleam.

"I am a native of Cadiz"—in those terms it was that he had begun his story—"and while still young was left an orphan. At my majority I obtained possession of the few thousand piastres left me by my father, and I determined to seek my fortune in the New World. I embarked on a Spanish war vessel for Cuba, intending to repair from thence to Mexico, where a friend of my earlier days was engaged in a lucrative business. On the third day out a game of *monte* was started among the officers of the ship, and I, for want of any better occupation, took a hand. I was at first extraordinarily lucky. To my twelve thousand piastres of capital, the amount of my father's legacy (which, by the way, I was carrying about

my person), nearly three thousand within a few days were added. At length my luck changed utterly, and on the last day of the voyage, just as we were in sight of the More Castle, I rose from the table a beggar. The whole of my patrimony was gone. In one week's fierce and crazy play I had squandered the sum which was to have brought me affluence, after a term of honest labour. With a fevered brow and aching heart I paced the deck while awaiting the hour of landing, and wished that the frowning rock towering above might fall and crush us. 'You shall have your revenge,' said the officers who had won my money. They little thought I was a ruined man.

"Thus I found myself in Havana without a friend, and without five pounds in my pocket. Of course, it was useless for me, under the circumstances, to think of going on to my destination. All I could do was to procure a lodging at the cheapest hotel I could find, and write to a relative in Spain, asking for a loan that would enable me to return to my native land. But some time must elapse before I could receive a reply, and one afternoon, during the course of my rambles about Havana, I found my way into a cockpit, guided towards the spot by the large crowds all going in the same direction, outside the walls surrounding the old town. A very important match, I was told, was to be decided. When within a quarter of a mile of the building, I heard a noise that increased as I neared it. Upon entering, the yelling was absolutely deafening. Some two or three thousand persons were piled upon benches graded round an amphitheatre, and in the ring were seated four men—the two noblemen, owners of the cocks, and two individuals who might be styled the seconds of the combatants, their sole duty seeming to consist in a careful attendance upon the latter, adorned respectively (as I soon gathered from the conversation of those around) with the names of Concha and Santa Anna. In a small stand at the side of the ring sat three judges.

"At the appointed hour the birds were fitted with strong, sharp, steel spurs, and were held for a moment face to face by their attendants. Then they were released, and a most determined combat began.

"To my amazement the spectators from this instant seemed all to go absolutely mad. Shouts such as I had never heard before rang out unceasingly, while the crowd swung wildly back and forwards as the fiercely fighting cocks pressed from one side of the ring to the other. Frantic bets were yelled forth by men some as red as though on the point of apoplexy; others, their eyes fastened upon the cocks, as pale, if not as as still, as death. The sums named all around me were so great as to make me question whether these people were not speaking in jest. Old men, with hair as white as snow, elbowed boys of twelve, and bet and fraternised with them; rank and distinction were forgotten as well as age, for even negroes were there wagering with their masters. Altogether a scene of crazy, indescribable excitement, such as must be beheld to be thought possible, and as can be beheld only in Cuba.

"And now occurred an incident, which I cannot help ascribing to Fatality.

"Calm in the midst of the extraordinary agitation around me, I stood waiting patiently for the termination of the encounter. An elderly gentleman near me, from time to time as the fight progressed would gaze at me till he caught my eye, and then smile and nod with a gesture of the hand. Supposing he was merely expressing approbation of the efforts of one of the cocks, to which he had unmistakably directed my attention by pointing at it soon after the beginning of the fight, I politely nodded in return. Three or four times in succession, at quite close intervals, did this dumb show take place. At last a shout arose more ear-splitting than any that had yet been heard. Santa Anna, the black cock, had given his rival a cut in the head that put apparently an end to the fight. Several seconds elapsed, and the judges were about to give their decision, when the man attending upon Concha, the prostrate bird, rushed forward, and with a malignant '*Caramba!*' kicked it almost to the ceiling. As with fluttering wings it alighted, it seemed to have taken a new lease of life. Running furiously at Santa Anna, it made a plunge at him, and fell back with both its long steel spurs transpiercing his skull.

"This time the fight was over. After the prescribed five minutes' delay, Concha was loosened from the dead body of his victim, and the prize duly awarded to Concha's owner. The scene that followed beggars description, and well-nigh defies imagination. A score of fights broke out in as many different spots; knives and pistols were drawn, notwithstanding the presence of the police. I was not long in making my escape.

"As I rushed out into the open air, I was seized

from behind. Turning round I recognised the old nodder. He handed me a thick roll of notes, and said: 'The four thousand piastres I owe you. Please see that it is all right.'

"Too surprised to speak, I merely pushed the money back into his hand, and gazed at him.

"Ah, you think the fight was not a fair one. But you must take my money all the same. You have won it. You would have paid me if the other bird had won, and I cannot think now of allowing you to refuse your gains."

"And before he had well done speaking he had forced the money upon me, mounted into a handsome volante that stood waiting for him, and was being whirled away.

"For a time I stood bewildered. For thousand piastres! A third of my former capital came back to me as if it had dropped down out of the clouds. I now saw what method there had been in the old man's nodding madness. At each movement of his hand and head he had thought we were wagering a thousand piastres. My looks had probably inspired him with confidence in my honesty. But I could not help thinking with a shudder how near I had come, never suspecting what was at stake, to losing instead of winning, and how sorry a figure I should have cut if called upon to pay instead of receive!

"For months after this adventure," resumed the Spaniard, "I remained in Havana, gambling night and day; for now a sort of conviction had come upon me that I was destined to win back all I had lost during that fatal voyage, and more besides. So I was not only chagrined, but surprised when one night I lost all, save a few hundred piastres I had left at my rooms for current expenses. The next day the yellow fever seized me, and I lay for days between life and death. I recovered, but my last penny had gone, swallowed up owing to my illness. And now once again I was at the lowest ebb. What to do I knew not; true, I might write to my friend in Mexico and request him to give me a position in his firm; but in the meanwhile—there was nothing for it but to pawn my few jewels, relics of a mother I had never known."

"I found the pawnbroker a hard man to deal with. He was a Jew, named Isaac, and a peculiarly repulsive specimen of his class. Not content with offering me a sum ridiculously beneath the value of the jewels, he did his best to make me take, in lieu of coin, several tickets of the forthcoming Havana lottery. 'These,' he said, showing me some of them, 'I have had by me for several weeks past, and I don't want to keep them for myself, for I can't afford to have more than one ticket; here it is, you see, safe in my waistcoat pocket. But a dashing young fellow like you—you ought to have a score of them, and then you'd be sure to win a prize.' I refused the offer, insisted on having ready money, and, bidding Isaac no hearty farewell, turned my back upon his gloomy den.

"That very day, a few hours later, the lottery was publicly drawn. A crier, shouting through the streets, made me aware that the chief prize of one hundred thousand piastres had been won by No. 4,008, and that search was everywhere being made for the missing proprietor of the lucky ticket.

"Any one who has ever known what it is to gamble will readily believe me when I say that that evening—spite of my resolve not to wager a farthing of the money that the miserable Jew had lent me on my rings and other objects, but to keep it intact till I received a reply from my friend in Mexico—I could not resist the temptation to go once more and try my luck. I repaired, with a beating heart, to a clandestine roulette table, sat down in front of the board, and carefully drew out of my pocket Isaac's little roll of notes. Detaching one from the rest, I was about to stake it on the 'last dozen,' when a thin piece of paper that had been folded up along with it fluttered out and fell slowly to the ground. I stooped to pick it up, carelessly opened it, and exclaimed aloud in inexpressible amazement. It was a ticket in that day's Havana lottery, and it bore the number 4,008!"

"Some time passed before I quite recovered from my feelings of overwhelming surprise. As I did so my first move was to leave the gaming-house and return to my hotel. Four thousand and eight—there could be no doubt as to the number; I looked at it again and again to 'make sure.' But how—how—how could it have come in my possession? Here a light broke in upon me, and I came suddenly to a dead stop in the middle of the street. Isaac's solitary ticket, which he had taken from his waistcoat-pocket to show me while he was endeavouring to make me purchase the others—I remembered now that it had been folded in four, like this one, with something—the date, no doubt, of its purchase—written across the back. It must, somehow, have got among the bank-notes the Jew subsequently gave me, although I could

Original from

have sworn that he put it back into his pocket as he had taken it out.

"And now what to do? Should I go at once and knock up the old usurer to return him his lost property, and put him out of the misery he must be in, hunting for it high and low and not finding it? In justice to myself, I must say that I never for one moment thought of keeping the ticket; but I bore the old bloodsucker a grudge for the hard bargain he had driven with me that morning, and I finally went to bed, thinking, 'To-morrow will be quite time enough to give the miserable old scoundrel his ticket. It is only people like him that have the luck to win. If it had been I, I might have taken five thousand tickets, and never won a penny.'

"The next morning I rose late, read the papers, and leisurely breakfasted. It was not till close upon noon that I set out for Isaac's shop, thinking, as I went, that on the strength of the good news I was going to impart, I should insist upon his advancing me more money on the jewels.

"The shop was closed, and I vainly rang and knocked. Out on business, I supposed, and I went away to return several hours later. Again I found the shutters up, but this time a cluster of Isaac's neighbours were gathered round the door. 'Here comes the *alcalde*!' they shouted, as that officer, accompanied by several men, came up and ordered the premises to be broken into. 'He hasn't been seen since yesterday afternoon,' said a bystander; 'he must have run away, or perhaps he's dead in his bed.'

"The strong outer door creaked and groaned on its hinges as they battered and hammered it. At length it gave way, and the *alcalde* entered, along with myself and half a dozen others. The first room—vacant; the spider was not in its web, the man of money not among his safes and ledgers. Another door forced, and we were in the Jew's sleeping room. In the dusk a strange object met our eyes, obstructing the view of the window—Isaac hanging by the neck to one of the iron bars, his head drooping to one side, his tongue horribly protruding! A man rushed forward and cut the body down; then, after a moment's examination: 'Stone cold!' he exclaimed, 'and ready for his coffin.'

"I was shocked beyond expression; for I knew, though no one else did, what had been the cause of this wretched man's act. It seemed to me that I could see him, during his horrible last moments, searching frantically for his lost treasure in every nook and cranny, every hole and corner, and searching over and over again; till at last, mad with fury and despair, he tied the cord round his throat and took that last dread leap into eternity, with hell already in his heart and blasphemous curses on his lips. I trembled.

"Isaac's relations? said somebody, as I was going thoughtfully out: 'he hasn't a relative or a friend in the world. All his money will go to the State.'

"All his money will go to the State!"
"And the lottery ticket? The hundred thousand piastres? That would go to the State too! But, since its lawful owner was not alive to claim it, why shouldn't it—why shouldn't I—By heavens! wasn't it as much mine now as anybody else's? Hadn't I a perfect right to keep it?"

"Keep it I did; and two days later I was on my way to Europe with the hundred thousand piastres.

"By nature I am a fatalist," the Spaniard continued. "You will readily understand that such an event as the above must have confirmed me in this tendency. Brooding constantly over the incidents that had marked my career, I gradually became convinced I was the sport of some evil power, which, through the means of my accursed passion for play, was leading me on to eternal destruction. I, a man of upright conscience and honour—I had come to do a base thing; and this money I possessed was stained with the blood of a self-murdered man. This money . . . I must free myself from it, — be for ever lost. But—you may think it a strange aberration—it seemed to me that in order to be well rid of the fruits of my dishonest deed, I must lose the sum at gaming—make it go back the way it came—and not spend it or bury it away (to do this I could not have the right, the dross not being really mine to dispose of); and, above all, not give it away to any one, for that would be bringing the curse on him.

"Into every form of gambling and speculation—the wilder and madder, the better—I plunged: rushing headlong from one great capital to another, and everywhere attracting attention by the extraordinary nature of my play. I lost I must do; but, somehow, lose I could not. I won, and won, and won, till I possessed a sum of money that I dared not count, and could hardly bear to think of. Those were years of madness! Always to win, and always to be congratulated on my luck, and envied and flattered, by people whom I loathed

and dreaded; for I saw that they, too, bore the fatal mark, and were evermore the slaves of Play. To win was their constant pursuit and longing; to lose, mine. There was otherwise no difference between us.

"Oh, this hideous gift of Fatality! Would it never fall away from me? Was I cursed more deeply than the Ancient Mariner with his albatross; was I never to be released?"

"And so the round went on. At Paris, London, Vienna, St. Petersburg, Madrid; on race-courses, at gambling clubs, at resorts of private play, even on the Stock Exchange, where everybody loses, and only the brokers win—my wonderful luck remained in the ascendant. The saying became proverbial among the gamblers of Europe: 'The devil's luck; or M—s.' I smiled grimly whenever I heard the phrase; for, from the bottom of my soul, I was convinced that his luck and mine were identical.

"Nearly ten millions of francs were my winnings from the original five hundred thousand in less than three years' time. But now the last scenes of the tragedy were at hand.

"Homburg had become my favourite gaming-place during the summer season, the play being so much higher there than at either Wiesbaden or Baden. The month of June came round, and to Homburg I repaired, accompanied by a young Hungarian whose acquaintance I had made in a Paris *cercle*. I had so often before broken the Homburg bank that my name had become a word of terror in the ears of the directors. And this year I resolved on a new method of play. I would recruit a dozen young men, having lost their all at the tables, and have them bet for me, each one staking the maximum at the same time on the same colour. Thus, if I lost, nearly a hundred and fifty thousand francs would go at each coup. With only a few days' success, even ten millions of francs, at this rate, would melt away.

"Within the first forty-eight hours of my applying my system, I won upwards of half a million. The directors of the Kursaal were beside themselves, and offered me a million of francs down to leave Homburg and play elsewhere. I smiled, and said I should insist upon my privilege of wagering against the Homburg bank as long as I pleased and had any money left. People pointed me out as I walked through the streets. I was the byword and wonder of the place. 'The Jew,' I thought, 'is well revenged.'

"My Hungarian friend, who had been blindly following what he called my luck, had won some hundreds of thousands of francs, and was intoxicated with delight. But he rebuked me for not accepting the directors' offer.

"It is tempting fortune too far," he said; 'you will see now that we shall lose.' I fervently prayed we might.

That very afternoon I did lose, and largely; the Hungarian, faithful to his conviction, looking on without staking a coin. I lost again the next day, and again the day after that, and yet again, until only a tenth part of my former capital remained. The eager hope began to possess me that all was now destined to go. I felt equal to getting rid single-handed of the entire amount left me, and disbanded my bodyguard of young men. People said I thought they had brought me bad luck; but I, had it not been for my inward oath never to bestow upon any one the slightest portion of that accursed gold, would willingly have divided between them what I still possessed.

Great was the excitement on that last afternoon when I appeared at the rooms and took my accustomed seat at the table of *trente-et-quarante*. The players crowded round me, all seeming to foresee that my long duel with the bank was coming to an end.

Maximum after maximum I lost, till at length I had but a handful of thousand-franc notes left. And then suddenly my fortunes changed and I found it as impossible to lose as I had previously found it impossible to win. The Hungarian bent over and whispered excitedly in my ear:—

"Now you are going to get it all back again. For Heaven's sake, go on."

"Yes, I died as much myself. Often before had I sunk almost to the last bet, and then had encountered a 'run' which would make me richer than when I sat down. Was this again to be the case?"

"The pile of notes before me rose higher and higher as I still won every bet. At length I stopped and counted.

"It seemed an awful mockery, in which I recognised the hand of Satan. There was exactly five hundred thousand francs—exactly the equivalent of a hundred thousand piastres—exactly the amount I had stolen from the accursed Jew!

"Just then, while I wiped the cold perspiration from my brow, a bowed and tottering old man elbowed his way to a seat precisely opposite. He

fastened his glassy eyes gloatingly upon the notes I was still fingering; then he gingerly placed a piece on the black. I started and trembled like a leaf. Isaac, by all that was holy! Isaac came up from hell to get back his gold! Wonder-stricken, I sat and gazed, and felt a superstitious awe benumbing my senses.

"Isaac! I called out at last. The old man did not stir.

"Abandoning my place, I walked over to where he sat.

"Isaac! Isaac!" I repeated. The old man looked at me vacantly.

"*Nein, nein,*" said he, smiling at my bewildered air. It was not Isaac; but, great Heaven! what a resemblance. I returned to where I had been sitting, and the croupier began his deal. Mechanically I bet the maximum on red, all the while looking fixedly at the old man; and I noticed that my Hungarian friend, who had again begun follow me, staked a maximum likewise. Black, I and my friend repeated our performance. Black again. A third time black—four times—five times—and still the old Jew, Isaac's living image, staked a florin each time and won it.

"Black again—black, black, black. There arose a hum of voice. I was jostled where I sat. Eagerly, ferociously, the crowd watched the croupier weeping in, time after time, my bundles of notes. How dearly do vicious, ill-conditioned mankind love to see what they consider the ruin of a fellow-being.

"A few moments later, I pushed my seat away from the table, and rose to my feet with a deep, suppressed ejaculation—of joy. At last the accursed hundred thousand piastres were gone. I had not a penny left in the world!

"A low groan from some one at my side struck on my ear as I was moving blithely out of the rooms. I stopped and turned—it was the young Hungarian, pale as death, in his eyes a look of wild despair.

"I am ruined," he hissed; 'ruined. Following your luck has done for me at last.'

"Well," I replied, 'I am ruined too.'

"What! Nothing left at all? Ha! You, too! You, too! Well, I cannot really say I feel sorry. Misery, you know, loves company. But what are you going to do? How are you going to manage? How are you going to pay debts here?"

"My debts! I had never thought of that. Thousands of francs I must owe in Homburg; in the time of my great fortune the hotel-keeper and tradesmen had never been willing to let me have a bill.

"The Hungarian had kept his eyes fixed upon my face. 'What do you say to following my example?' he abruptly asked me.

"What do you mean?"

"Why, blow your brains out—that's what I mean. Only that. . . . How it may be with you I don't know; but I haven't a friend, or a relative, or a penny, or even any prospects. I have been playing with the fire for years, and now I am scorched. My father shot himself after losing all his fortune at play, and so did one of my cousins. I see now that I am destined to follow their example."

"I paused, in some perturbation. In my mad longing to be rid of the Jew's piastres, I had never thought of this. Ruined—not a penny—and thousands of francs in debt. To earn a living, even the simplest—could I do it? After these years of fevered excitement and the most demoralising existence, could I submit to the drudgery of some miserable occupation, which would mean but a long, dull struggle against starvation? Under such circumstances, was life really worth living? A curse, I felt, had been upon me from the first. So why not make a quick and easy end of it now?

"A revulsion of feeling had come over me—the natural reaction after months and years of morbid brooding and of frenzy. I did not think of regretting the money I had lost; I only considered it was better to be out of existence.

"Very well, then," I said suddenly to my friend, 'I am quite as ready to get rid of life as you can be.'

"Hurrah!" he shouted. 'I knew you would think so. Come, let us go back to the hotel.'

"We hurried back into the large sitting room we were occupying in common. The Hungarian disappeared, and returned a moment later, a pair of pistols in one hand and a dice-box in the other.

"Ha! ha!" he said, with a horrible laugh, 'we will have one last gamble before we go! The one who makes the highest throw will shoot the other man first, and then himself.'

"Good!" And I snatched up the box and shook it. The dice rolled upon the table: 'Six—five!' The Hungarian smiled.

"Lucky to the last!" he said, as he gathered up the dice and prepared perfunctorily to cast them. The next instant we both gave utterance to a shout of wild surprise. 'Sixes!' had been his throw.

Original from

"With his eyes fastened full upon mine, I felt, rather than saw that he was slowly raising his hand towards my head. Then of a sudden a light flashed in my eyes.

"When I opened them I was lying upon a bed in a strange room. Bandages were around my head—I suffered agony.

"I remained in that bed for weeks. At last I gathered sufficient strength to be able to demand an explanation. I was then informed that the Hungarian, true to his word, had first shot at me, and, thinking me done for, turned the second pistol against himself. The reports brought a dozen people to the room. The physician pronounced the Hungarian dead, and myself mortally wounded. He was mistaken, as you see. He attended me, was kind enough to take a friendly interest in my case when I recovered, and obtained for me a position, which I was afterwards able to improve. And now I think you will understand the reason why, since that last day at Homburg, I have eschewed all forms of gambling as an angel would fly from sin."

A loud yawn from the man who had been slumbering in the corner—the clink of gold pieces as Bevis slipped his *carte* winnings into his right-hand waistcoat pocket. Behind the clouded panes a dull, dirty gleam widening over the horizon and gradually on either side revealing an arid stretch of land with hovels dotted here and there. The November day was breaking; we were not far from Paris; twenty minutes more would see us at the Gate du Nord.

I thanked my Spanish acquaintance for his tale, which I told him, not untruthfully, had held me a spellbound listener; and then, for a moment reverting in mind to certain recent baccarat adventures of my own in the city where we soon should alight, I reflected that, in order to win vast sums at cards it was evidently necessary one should be desperately anxious to lose. As such would never be the case with me, there was not much likelihood of my ever rivaling the extraordinary career of Señor M.—— *Whitehall Review*.

LATEST TELEGRAMS.

["REUTER" SPECIAL TO "JAPAN MAIL."]

London, August 12th.

The House of Commons adopted a vote of want of confidence by 350 against 310. The House has adjourned till Thursday next.

London, August 13th.

The Marquis of Salisbury has gone to Osborne to present his resignation.

The vote of want of confidence was taken amidst the greatest excitement, hats being waved with loud cries of "down with coercion."

London, August 17th.

A Ministry has been formed, which is composed as follows:—

Right Hon. W. E. GLADSTONE—Prime Minister, First Lord of the Treasury, and Lord Privy Seal.

Lord HERSCHELL—Lord High Chancellor.

Earl of KIMBERLEY—President of the Privy Council and Secretary of State for the Home Department.

The Right Hon. HERBERT H. ASQUITH, Q.C.—Chancellor of the Exchequer.

Earl of ROSEBURY—Secretary of State for the Foreign Department.

Right Hon. H. CAMPBELL-BANNERMAN—Secretary of State for the Indian Department.

Marquis of RIPON—Secretary of State for the War Department.

Sir WILLIAM VERNON-HARCOURT—Secretary of State for the Colonial Department.

Earl SPENCER—First Lord of the Admiralty.

The Right Hon. ARNOLD MORLEY—Postmaster-General.

The Right Hon. Lord BRASSEY—Lord Lieutenant of Ireland.

The Right Hon. A. J. MUNDELLA—President of the Board of Trade.

The Right Hon. H. H. FOWLER—President of the Local Government Board.

Lord HOUGHTON—Chief Secretary for Ireland.

Right Hon. JOHN MORLEY—Vice-President of the Committee of the Council on Education.

The Cabinet includes Sir George Otto Trevelyan, who will be Secretary for Scotland, but Lord Houghton and Lord Brassey are not in the Cabinet.

29—Kt (K 2) to B sq. 29—Kt to Q 4
30—K to Kt 2 (f) 30—P to Kt 5 (g)
31—Kt takes P 31—Kt to K 6
32—R to K sq. 32—Kt to B 5, ch.
33—B takes Kt 33—R takes R
34—B takes P 34—R to Kt 8
35—P to Kt 3 35—R to Kt 7, ch.
36—K to R 3 36—R takes R P
37—Kt to K 2 37—R to Kt 7
38—B to Q 3 38—P to Kt 4
39—Kt to B 2 39—B to B 7
40—K to Kt 4 40—P to R 4
41—P to R 4 41—P to B 4, ch.
42—K to Kt 5 (h) 42—B takes Q Kt P
43—P to R 5 43—P to Q B 5

44—B takes Q B P 44—B takes Kt
45—P to R 6 45—B to Q 8
46—Kt to Q 4 46—B takes Kt
47—P takes B 47—B takes P
48—P to Q 5 48—B to K 7, and wins

(a) The temporary sacrifice of a pawn with 21—B to Kt 5 would have given White a fine game, and should have been tried. The text-move only frees Black's game, and leaves him with the better position thus early in the opening.

(b) In order to play Kt to B 4, which he could not do now because of 18—Kt to R 3.

(c) Intending to reply Kt to Q 5; should White advance either Kt to Q 5.

(d) Having the same object in view as stated in note (c). If now 24—Kt (B 3) to Q 5, then 24—P to Kt 4 would win a piece; and if 24—Kt (B 4) to Q 5, then 24—P to Kt 5 would win a piece.

(e) In anticipation of the threatened 26—Kt to R 4 and B 4. (f) It is remarkable that with even forces, and apparently no immediate danger, since black's pieces are all at a distance, White's game should be so utterly defenceless. Black's pieces are so well posted, that the knight entering into play at Q 4 decides the game.

(g) A very beautiful move; it wins the exchange by force. If 31—P takes P, B to Q 5, ch; 32—K to R 3, Kt to K 6, &c. If 32—Kt to K 3, P takes P, ch; 33—Kt takes P, B to Q 5, &c.

(h) A last but hopeless attempt to save the game. 41—K R 3 would have been continued with 41—B to Q 4; 42—P to K B 4, P to Kt 5; 43—P to R 5, P to R 5; 44—P takes P, R to R 7, and wins.

PASSENGERS.

ARRIVED.

Per British steamer *Ancona*, from Hongkong via ports:—Mr. W. J. Dawson, Mr. J. B. McCue, Mr. J. Robertson and servant, Lieut. Carey, R.A., Mr. J. B. Livingstone, Mrs. Bird and amah, Mr. D. Logan, Hon. J. M. Vermont and servant, and Mr. J. Kirby in cabin; one passenger on deck.
 Per Japanese steamer *Nagato Maru*, from Kobe:—Mrs. D. R. Churchill, Rev. F. C. McCallum, Mr. C. Kurotaki, and Mr. Kubo in cabin; 37 passengers in steerage.
 Per French steamer *Yangtsé*, from Marseilles via ports:—General Kodama Gentaro, Mr. Tamano, Mr. J. Gugerle, Mrs. Herzl, Mr. J. Van Schmid, Mr. M. Van Schmid, Mrs. Laurette, Mrs. and Miss Assi, Mr. A. Gregory, Surgeon Colonel C. Sibthorpe, Lieut. A. Lennox, Mr. and Mrs. T. Webber, Mr. and Mrs. Leiddell, 2 infants, and boy, Mr. Tageo, Mr. Rosenzweig, and Mr. F. Goring in cabin, and one Chinese in steerage.
 Per Japanese steamer *Yamashiro Maru*, from Kobe:—Messrs. J. Otori, F. Thisaka, and Emil Rehders in cabin; 5 passengers in second class, and 34 passengers in steerage.
 Per Japanese steamer *Saikio Maru*, from Shanghai and ports:—Miss C. E. Sterling, Miss Annie David, Mr. and Mrs. Harmon and 2 children, Madame Zoodia, Mr. and Mrs. Feeley and 2 children, Miss Blonde, Mr. and Mrs. Sherman, Mr. Geo. Harmon, Miss Kubig and child, Messrs. A. J. McGlen, A. E. McGlen, Robert Love, W. S. Stone, Koa, E. H. Gill, W. H. Parkes, L. A. Lyall, C. A. Foster, Captain A. Booth, Mrs. Shigashiyama, Miss Virginie, and Mr. Miyashima in cabin; Messrs. C. Morgan, Fred. Rose, Rhees, T. Date, and 18 Harmon Circus troupe in second class, and 69 passengers in steerage.

DEPARTED.

Per French steamer *Yarra*, for Shanghai via Kobe:—Mr. M. Levy, Mr. M. Macgregor, Mr. and Mrs. de Lanesan, Mr. Levasseur, Dr. Boutin, Messrs. Sakata Ichinosuke, C. L. Giffard, L. Shimaasuki, K. Oyama, K. Ito, and Doguy in cabin.
 Per Japanese steamer *Yokohama Maru*, for Shanghai and ports:—Mrs. L. Bavis, Mrs. S. D. Miller, Mrs. E. J. Winstington, Miss L. Haygood, Mr. and Mrs. Yamada and 4 children, Dr. Sanger, Rev. and Mrs. O. E. Brown, Rev. J. A. Ingle, Captain Furber, Captain F. J. Brown, Captain F. Devenish, Messrs. G. W. Brown, F. H. Lefavor, Sakaki, G. W. Brockhurst, and C. W. Collier in cabin; Mr. and Mrs. A. Nedetzky, Mr. and Mrs. Nagai, Mr. and Mrs. Nakamura, Mr. Hirano, Miss Nakamura and child, and Mr. and Miss Kamoshita in second class, and 67 passengers in steerage.

CARGOES.

Per Japanese steamer *Saikio Maru*, from Shanghai and ports:—Treasure, \$200,000.00.
 Per French steamer *Yarra*, for Shanghai via Kobe:—Raw Silk for France, 663 bales; for England, 18 bales. Waste Silk for France, 13 bales. Treasure for London, \$44,000; for Manila, \$1,600.

REPORTS.

The Japanese steamer *Yamashiro Maru*, Captain Young, reports:—Left Kobe the 17th August at 3 p.m.; had light N. and N.E. winds and fine weather throughout the passage. Reports a sunken steamer laying to the westward of Rock Island with nothing below her lower mast heads projecting out of the water.

The Japanese steamer *Saikio Maru*, Captain Conner, reports:—Left Shanghai the 12th August at 1.10 p.m.; had light S. and S.W. winds and fine weather to Nagasaki, arriving the 14th at 5.25 a.m. Left Nagasaki the 15th at 5 p.m.; had gentle S.W. winds and fine weather to Shimonsaki, arriving the 16th at 6 a.m. Left Shimonsaki the same day at 10.55 a.m.; had light S. and S.W. winds and fine weather to Kobe, arriving the 17th at 8.34 a.m. Left Kobe the 18th at noon; had light variable winds and fine weather to Oshima; thence to Rock Island gentle northerly winds and fine weather; thence to port light variable winds and fine, clear weather. Arriving at Yokohama the 19th August at 3.12 p.m.

LATEST COMMERCIAL.

IMPORTS.

The past week has not produced any large transactions, though there have been enquiries afoot of considerable extent, and if holders were disposed to accept the offers a large business might result, but with a low exchange holders are very firm in the belief that the requirements of the autumn trade will warrant an advance on current prices for most descriptions of Piece Goods, as in addition to poor prospects offering in the market when indents are usually transmitted for execution, the financial facilities have lately been so much modified as to curtail operations generally, and it is expected a more healthy condition of the market will follow. Meantime there is little change in prices to report, though Yarns have been offering for arrival at easier rates. Sterling Exchange is quoted 2/10 for Bank on demand, and Silver 37½ per ounce, a farthing below last week's record. Sales for the week comprise 150 bales English Yarn, 5,000 pieces 9lb. Shirtings, 250 pieces Washed Shirtings, 420 pieces 7lb. T. Cloths, 300 pieces Velvets, 1,100 pieces Turkey Reds, 2,300 dozen Handkerchiefs, 500 pieces Cotton Italians, 90 pieces Silk-faced Satins, and 1,000 pieces Italian Cloth.

COTTON PIECE GOODS.

METALS.

There has been more enquiry during the week, especially for Wire Nails. With the low exchange ruling sellers have been able to hold their own, and buyers have had to improve their recent offers

or go without stock. As the end of the hot weather draws nearer, more buyers will no doubt be found in the market and prices must then further improve.

	PER PICUL.
Flat Bars, 4 inch	\$2.85 to 2.90
Flat Bars, 1 inch	2.95 to 3.00
Round and square up to 1 inch	2.85 to 3.00

Sheet Iron	3.55 to 3.80
Galvanized Iron sheets	6.60 to 6.90
Wire Nails, assorted	4.70 to 4.90
Fin Plates, per box	5.00 to 5.20
Pig Iron, No. 3	1.25 to 1.30

KEROSENE.

Holders are still firm in their views, the low exchange helping them to maintain their position. Transactions have not been large, but the Oil which has changed hands has brought full prices.

QUOTATIONS.

Chester	\$1.57½ to 1.60
Comel	1.52½ to 1.55
Devoc	1.52½ to 1.55
Russian Anchor	1.50 to 1.51½
Russian Moon	1.50 to 1.51½

SUGAR.

A fair demand from the interior has set in, considerably reducing stocks on hand, which were not over-abundant. Quotations, however, remain as before noted.

	PER PICUL.
Brown Takao	\$4.15 to 4.25
Brown Daitong	3.30 to 3.40
Brown Canton	3.50 to 3.70
White Java and Penang	6.10 to 6.20
White Refined	5.50 to 7.50

EXPORTS.

RAW SILK.

Our last issue was of the 12th instant. Since that date settlements on this market are 1,350 piculs, divided thus: *Hanks*, 159 piculs; *Filatures*, 767 piculs; *Kereels*, 251 piculs; *Kakada*, 171 piculs; *Oshu*, 2 piculs. Direct shipments are this week nil, so that the total business for export does not exceed 1,350 piculs.

Prices have still further advanced, sellers having the market all their own way. The best grades and qualities are fully \$20 up from last week, medium grades showing an advance of about one half that amount. Supplies still come in freely, reellers doing their best to hurry their produce to market, but this does not seem to have any effect on prices.

A week ago we had a comparatively quiet market, but the serenity was disturbed on the 13th instant by one large operator investing freely in high-class Filatures. This at once put the market up, and the comparatively small sales which now take place are at a steady and regular advance.

A large amount of business has again been done for Lyons, and it is worthy of note that this year to date the export to Europe exceeds that to the United States, in strong contrast with recent years.

Exchange has fluctuated slightly, and bankers have managed to maintain rates.

There have been two shipping opportunities since we last wrote. The German mail steamer *Nuernberg* on the 13th instant carried 118 bales for Italy, and the French mail *Yarra* on the 14th had 681 bales for Lyons. These departures make the present export figures 5,270 piculs, against 6,796 piculs last year and 2,106 piculs at the same date in 1890.

Hanks.—Considerable enquiry for Europe has resulted in purchases of 160 piculs. The quality this year is by no means first rate, and the chief business has been done in Low *Hachioji* at \$490 per picul. Some *Shinshus* of medium grade are on offer at \$540, and one parcel has been settled at \$535. This, with the rate of exchange now ruling, seems a long price. One small lot of *Foshu Shimonita* has been weighed up at \$550.

Filatures.—As in previous weeks, the bulk of the trade has been in this class. Recent transactions give the price of \$752½ for *Sakishima*, \$750 for *Shofokan*, and others in proportion. Holders now ask an advance of \$10 even on these figures. In fine sizes suitable for Europe, considerable business has been done at prices ranging from \$760 to \$680, according to quality.

Re-reels.—Considerable business in this department also, *Foshu* sorts equal to *Five Girl* chop being freely done at \$690. Other kinds of *Foshu* at \$650, \$630, and \$610, with some very low *Bushu* stock at \$570. Parcels of undoubted quality are in great demand and very firmly held.

Kakada.—At last there has been a rise in this department, No. 1 *Horsehead* being entered at \$680, with other grades in proportion. Fine silks of good colour and quality are much wanted, and buyers seem prepared to pay good prices for the right article.

Oshu.—Not very much done, but as we write, Original from

negotiations are in progress for a parcel of best *Hamatsuki*, the price mentioned being \$545.

WASTE SILK.

The market continues much as last advised. The stock is greatly increased and sales are few. Settlements for the past week are 283 piculs, of which 97 piculs are *Noshi* and 186 piculs *Kibiso*.

Advices from consumers seems to demand lower prices, while holders do their best to keep firm and, if possible, to obtain a rise on present values.

There have been two shipping opportunities during the week. The German mail carried 34 bales for Milan, and the French mail took 13 bales for Marseilles. The total shipments to date are 1,750 piculs, against 277 piculs last year and 750 to the same date in 1890.

Pierced Cocoons.—The stock is further increased, but no transactions are reported as yet, buyers and sellers apparently being wide apart on the question of price.

Noshi.—A small business in *Hachoji*, prices ranging from \$75 to \$115, according to quality.

Kibiso.—The business done consists entirely of *Filatures*, many small parcels being taken up at from \$74 to \$91, according to quality.

In other sorts no business to report.

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

THE GREATEST WONDER OF MODERN TIMES.
HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!
HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors the throughout World.
May 2nd, 1890.

AWARDED GOLD MEDAL L'POOL INTERN'L EXHIBITION, 1886.

ENGLISH MANUFACTURED TOBACCOS RICHMOND CAVENDISH CO., LIVERPOOL

Established a Quarter of a Century.

Contractors to the British Admiralty, Foreign Governments, Leading Steamship Companies, & Yacht Owners in all parts of the World.

STEAM LAUNCHES & YACHTS

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High speeds of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 40 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. We are also sole makers of the

KINGDON PATENT LIGHT PORTABLE ENGINE

Stock sizes, 1½ to 6 H.P. Burns less fuel, and gives three times the power, weight, of any other engine. Awarded First Prize by Royal Agricultural Society England, 1890, in competition open to all makers. Illustrated Catalogue in English, French, or Spanish. Send for Copy to

YARROW & CO., POPLAR, LONDON, E.

Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.

"THE REAL CUP O' KINDNESS."

Perfect blendings of the Choicest Brands of the Highest Classes of Fine Old Whiskies in their Native Purity, as produced in Scotland, absolutely untampered with.

MATURED IN SHERRY CASKS.

A LUXURY IN PURE SCOTCH WHISKIES.

The letters BOS are the Name, Brand, and Registered Trade Mark of this Matchless OLD SCOTCH WHISKY.

BOS

*** Gold Capsule.

** Blue "

* Green "

Exquisite blendings, possessing a flavour so rare, a character so novel and so entirely their own, that they may fairly claim the very first place among high-class stimulants. Clever judges pronounce them unique and unrivalled.

BOS Whiskies are remarkable for their "delicious individuality of flavour," mellowness and softness on the palate.—"A very Nectar," in marked contrast to ordinary blended Whiskies, which are more or less dominated by one or other of the Whiskies used in blending.

BOS is sold in square white bottles, labelled and capped, the quality being notified by a small label on each bottle.

The Proprietors are skilled blenders of Scotch Whiskies, but in all the experience of their Firm, extending nearly over the present century, they have never been able to accomplish anything so fully complying with the most exacting tests, as is now presented in these special blends of BOS.

Correspondence invited from Firms who desire to handle our Whiskies.

YOKOHAMA: SATURDAY, AUG. 27TH, 1892.

BIRTH.

On Thursday, August 25th, at Nikkō, the wife of Dr. L. BUSSE, of a daughter.

DEATH.

On the 24th August, at 43, Bluff, DRUMMOND ANDERSON.

SUMMARY OF NEWS.

COUNT ITO's father is seriously ill.

COUNT ITO, removed to his official residence at Nagatacho on the 21st inst.

H.I.H. PRINCESS FUMI, who is staying at Miyashita, is expected to return to Tokyo about the 1st prox.

Two small steamers have been lost in Japanese waters, the one by fire, the other by striking on a sunken rock.

MR. TSUJI, Vice-Minister for Education, who had been staying at Ikao for some time, returned to the capital on the 22nd inst.

THE 15th of September being the Birthday of the King of Korea, a congratulatory entertainment will be given at the Korean Legation.

A GREAT general assembly of the Tokyo Association of Medical men will take place during the three days commencing on the 1st prox.

THEIR Imperial Highnesses Prince and Princess Komatsu have returned to Tokyo from Numadzu, where they had been staying for some time.

IMPORTANT changes have been effected in the personnel of Local Governors. The Chief Public Prosecutor, the Chief Judge of the Supreme

Court, and the Vice-Minister of Justice have resigned.

MR. NAKAJIMA, ex-President of the House of Representatives, and Mrs. Nakajima, have left Yokohama on an excursion through Hokkaido.

A TELEGRAM has been received from Hakodate stating that Viscount Hijikata, Minister for the Imperial Household, arrived there on the 22nd inst.

TELEGRAPHIC intelligence from Akita dated the 23rd inst. announces that the Prefecture has been visited by a heavy rainfall, and that the rivers have overflowed.

MR. HARUKI YOSHIAKI, Chief Procurator of the Hiroshima Court of Appeal, was promoted on the 22nd inst. to be Chief Procurator of the Supreme Court.

A FIRE broke out on the 16th inst. at 7.30 p.m. in a house at Asakuracho, Kochi, destroying 22 dwellings and 2 godowns; 4 residences were partly damaged.

A FIRE broke out on the 12th inst. at 11 p.m., in a house at Komatsucho, Nomi-gun, Ishikawa Ken, destroying five dwellings, and partly damaging two. Six men were injured.

MR. UTSUMI, Governor of Kanagawa, is mentioned as among the candidates to succeed Mr. Watanabe, Vice-Minister for Home Affairs, who it is said will shortly be appointed to another position.

COUNT SAIGO, who left the capital on a political tour for the month, arrived at Kurosawajiri on the 20th inst., whence he proceeded to Hachinohe the following day. The Count arrived at Sambongi on Monday.

DURING a severe blow on the 19th inst. a fire occurred in a house at Tokiyama-mura, Kamiishi-gun, Gifu Prefecture, and before the flames could be subdued 36 dwellings and 1 temple were burned. No lives, however, were lost.

THE steamer *Fokkaichi Maru* (456 tons), says a telegram from Kobe, took fire on the morning of the 21st inst. off the Kishimayeki in Kishu province, and was totally destroyed. The officers and crew of the ship were rescued by the *Hyogo Maru*, and arrived at Kobe the same night.

H.I.H. THE PRINCE IMPERIAL returned from Kamakura to the capital on the 23rd inst., arriving at the Shimbashi Railway Station at 10.05 a.m., where His Highness was received by Their Imperial Highnesses Princes Kanin and Kuni, Prince Tokugawa, and Mr. Hanabusa, Vice-Minister, and many other officials of the Imperial Household.

MR. OMORI, Chief Commissioner of the Bureau for the Management of Prefectures in the Home Department, who was despatched to inquire into the sufferings in the inundated district of the Sanin provinces, returned to the capital on the 19th inst. He has reported fully the results of his mission to Count Inouye, Minister of State for Home Affairs.

THE Estimates of the Educational Department for the coming fiscal year are as under:—Department proper, yen 150,300; expenditure for the investigation of questions relating to the prevention of earthquake disasters, yen 3,500; expenses for libraries in various Government Schools, yen 888,600; expenses of the Normal Schools throughout the Empire, yen 35,970; expenses for the repair of school buildings, yen 361,750; and funds to be granted in aid of various

technical schools, yen 30,000. The above is an increase of about yen 394,850 as compared with the previous year.

THE following alterations in Police Appointment were made on the 19th inst.:—Messrs. N. Tatsuoka, Chief of Police in Shiga, to Saga; K. Iwashita, Chief of Police in Fukushima, to Tochigi; S. Suzuki, Chief of Police in Toyama, to Shiga; S. Tanaka, Chief of Police in Saga, to Miye; K. Yoshimi, Chief of Police in Fukushima, to Toyama; and K. Tanaka, Chief of Police in Tochigi, to Fukushima; Mr. S. Kadooka, Chief of Police in Miye, has been placed on the Retired List.

THE foreign trade of Japan during July last amounted to yen 12,501,512.910 in value, of which yen 6,903,322.480 represented exports, and yen 5,598,327.690 imports. The above is an excess of yen 1,805,132.050 in sales. The amounts of Custom Duties collected at various ports during the month were as follow:—Yokohama, yen 233,641.246; Kobe, yen 149,401.682; Osaka, yen 12,227.535; Nagasaki, yen 14,866.431; Hakodate, yen 1,094.682; and other ports, yen 2,164.259: total yen 413,395.835.

WE regret to learn of the death of Mr. Fujita Mokichi, a distinguished *Kaishin-to* parliamentary representative for the fourth district of Tokyo, which event took place in the capital on the 19th inst. at 6.55 p.m. while in the 41st year of his age. The deceased was a native of Saiki in the province of Bungo, Oita Prefecture. After graduating at Mr. Fukuzawa's institution, he became chief editor of the *Hochi Shimbun* in 1875. He had been for a long time a member of the Tokyo City Assembly representing Nishimbashi. In 1888 he proceeded on a tour through Europe, and on his return, the following year, he was elected a member of the House of Representatives. The Funeral will take place on the 28th inst. at 3 p.m. the place of interment being the Honganji Temple, Asakusa.

THERE has been a good movement in the Import trade, both for spot and arrival, the sales of Yarns amounting to 1,500 bales English and 20 Bombays, an extensive assortment of Piece-goods having also been taken. In many cases holders refused to part at recent rates, but for Grey Shirtings concessions on current quotations were made. Woollens were bought in fair quantities, including 10,000 pairs Blankets. Crop reports are excellent, and buyers look forward to a good autumn trade. The Metal market is much as last reported, namely, very dull; Wire Nails, however, continue in good request. There is a good demand for Kerosene, and stocks are being rapidly reduced. Holders are firm, however, and, given no fresh arrivals for the next week or two, values must harden. The demand for Sugar has continued, and certain classes of Browns are about cleared off. Whites are also in fair demand, and prices for all kinds are steady and firm. There has been a large business in Silk—2,287 piculs, and prices have advanced daily till the figures are now about \$200 per picul higher than those paid in August last year. Exchange, of course is lower, but making allowance for this the difference is remarkable. There is nothing to indicate any fall in values, indeed good crops are more likely to be higher than not a month hence. Small business in Waste Silk, and arrivals coming in freely the stock has further accumulated. Holders appear content to wait, but nothing from consuming quarters indicates that much business is likely to ensue at present prices. No change in the Tea trade. Exchange has fluctuated slightly, and closes a shade higher.

EDITORIAL NOTES.

THE LEADERS OF THE NATIONAL UNION.

THE movements of Count Saigo and Viscount Shinagawa, who started a few days ago on a political tour, are reported with evident interest by the Vernacular press. A telegram from Osaka, dated 7.40 a.m. on the 20th instant, announces that Viscount Shinagawa had just set out for Kobe attended by twenty or thirty persons. Another telegram despatched from Hananaki, in Rikuchu, on the evening of the 19th instant, says that Count Saigo and his friends held a political meeting that day at 2 p.m. in the theatre. An audience of over fifteen hundred assembled—such a meeting, the telegram adds—as had never before been seen in the town—and was addressed by Messrs. Furusho Yoshikado, Ooka Ikuzo, Kamura Jun, Yamana Jiro, and Arai Go. Count Saigo himself does not appear to have spoken. He is not addicted to oratorical efforts, and will probably confine himself, throughout the tour, to organization and encouragement.

The News Agency has a good deal to say about the National Union. Partly owing to people's perplexity on the subject, partly out of a desire to injure the association, rumours unfavourable to its reputation and prospects have been circulated. It was said to be the nucleus of a great political party; to be the creation of the Matsukata Cabinet; to be supported by Government money; to be opposed to the new Cabinet, and so forth. All these allegations the News Agency stoutly denies, though how there can be any doubt about the political character of the *Kokumin Kyokai* we fail to perceive. However, it is not to this point that the News Agency chiefly addresses itself, but rather to the pretence that the Union serves any particular Cabinet or receives any pecuniary aid from the Government. It did not support the Matsukata Cabinet and it does not oppose the Ito Cabinet. Measures not men are the objects of its approval or condemnation. It claims absolute independence in a pecuniary and a political sense alike, and declares that, without regard to public praise or censure, it will pursue the impartial programme mapped out by its leaders from the outset.

THE PORTUGUESE COMMUNITY.

It is stated that the Portuguese Community in Yokohama have addressed to the Governor of Macao a memorial charging Mr. Loureiro, lately Consul-General and Chargé d'Affaires for Portugal in Tokyo, with having left his post in Japan without making proper provision for the judicial control of his nationals after his departure. The memorialists pray that Mr. Loureiro's conduct be officially investigated. It would seem that Mr. Loureiro's nationals in this country are determined to fix the blame of their misfortunes on his head by some means or other. How the much abused man could have effected the arrangements they desire, we fail to perceive. His own post was abolished in the fall of 1891, and he remained here until June 1892, vainly awaiting some instructions of a practical character from his Government. Finally he was ordered to hand over the archives of the Portuguese Legation to the Legation of France "for safe keeping," and to proceed himself to Macao. He had no choice, as we understand, but to comply with these directions, and certainly he had no authority to invest anyone with judicial competence in his place. What the steps may be which he failed to take, we are unable to guess. Do the Portuguese residents really imagine that it rested with him, of his own authority, to invest some one with competence to exercise jurisdiction over his nationals?

An interesting phase of the action said to have been taken by the Portuguese Community, is its bearing upon the arguments hitherto advanced with so much assurance by the critics of the Japanese Government's procedure. The uniform contention of these persons has been that Mr. Loureiro's removal did not, to any appreciable degree, affect the efficiency of the

arrangements in force for exercising jurisdiction over Portuguese subjects in Japan. But if that contention be correct, how does it happen that Mr. Loureiro's alleged failure to provide a substitute for the judicial functions exercised by himself, is now declared to be the cause of the transfer of the Portuguese residents to Japanese jurisdiction? The accusation advanced by Mr. Loureiro's nationals, and the charges hitherto preferred against the Japanese Government are entirely irreconcilable. If, as has been declared in the plainest terms over and over again, the Portuguese Vice-Consuls in Japan remained perfectly competent to discharge judicial functions after Mr. Loureiro's withdrawal, how can it be possibly pretended now that Mr. Loureiro went away without making any proper provision for the discharge of such functions after his departure, and that to his neglect is attributable the transfer of his nationals to Japanese jurisdiction? Such pleasant little dilemmas are always to be dreaded by persons who commit themselves to propositions based on ignorance and maintained without reference to truth.

DEATH OF MR. FUJITA MOKICHI.

THE death is announced of a distinguished *Kaishin-to* politician, Mr. Fujita Mokichi. Formerly joint editor with Mr. Yano Fumio of the *Hochi Shimbun*, Mr. Fujita was regarded as a man of exceptional literary ability, and his name was always included among those of the ten leaders of the *Kaishin-to*. Three years ago he took a trip to Europe, and on his return offered himself as parliamentary candidate for the Fourth Electoral Division of Tokyo. He was returned by a considerable majority, and similar success attended his candidature for the same District in the general elections of February last. He expired on the 19th instant, but the newspapers, in mentioning his death, say nothing as to the malady that carried him off. Mr. Fujita must have been a young man—forty-two or forty-three at most—and his untimely decease will of course be a serious loss to his Party. He did not specially distinguish himself as a speaker in the House of Representatives. It is very frequently the case, we believe, than men who are ready with their pen do not succeed as orators.

BANK INTEREST.

THE *Yiji Shimpō* has a note, founded on a report of the Bank Inspecting Bureau attached to the Department of Finance, referring to the rate of interest realised by 102 Japanese banks during the months of April, May, and June of this year, as compared with that realised during the same period last year. To give an idea of prevailing rates we quote the figures given by the *Yiji* for the month of April:—The highest interest charged for money but was 13½ per cent. and the lowest 8.6 per cent. this year as against 14.3 per cent. and 9.2 per cent. last year. The highest interest paid to depositors this year was 5.4 per cent. and the lowest 3 per cent. against 5.7 per cent. and 3.1 per cent. last year. From these figures the *Yiji* concludes that money is plentiful and in a liquid condition. The report quoted further states that the places in the whole of Japan which pay the highest interest for borrowed money are Niigata, Nagano, Iwate, Awomori, and Yamagata in the East and North, and Fukuoka, Oita, Saga, and Miyazaki in the South.

LOCAL GOVERNORS.

THE bolt has fallen among the local Governors. No less than four of them have been placed on the Retired List; namely, Mr. Kabayama Suke-take, Governor of Saga; Mr. Watanabe Kyoshi, Governor of Fukushima; Mr. Hirose Shinichi, Governor of Akita; and Mr. Moriyama Shigeru, Governor of Toyama. These, with Mr. Yasuda, Governor of Fukuoka, whose retirement was announced some days ago, constitute the principal figures among the Governors against whom charges of interfering in the general elections were brought by the Opposition. Count Inouye, immediately on assuming the portfolio of Home Affairs, seems to have taken the matter up and investigated minutely the accusations preferred

against the Governors, the result being the very drastic action represented by the above gazette. To be placed on the Retired List means not only loss of office, but also total loss of salary. It differs from final dismissal only in the fact that the officials whose names are borne on the List remain eligible for re-appointment.

This very unequivocal step must of necessity be interpreted to mean that in the judgment of the present Cabinet justification exists for the Opposition's charges of undue official interference in the elections of last spring. Of course there cannot be any doubt that the conduct of the local officials was greatly exaggerated by the Opposition. The speech made by Mr. Tatekawa Umpei on the memorable day when the proposal to memorialize the Throne was under discussion, betrayed an amount of prejudice and credulity which plainly indicated that he and his colleagues were determined to patch together a case out of any materials however questionable. Still there is no smoke without fire, and it was impossible to conceive that so much agitation could have been fomented unless some grounds for it existed. Local officials undoubtedly interested themselves in the elections, and within limits they assuredly had a perfect right to do so. But the question that suggests itself as particularly pertinent is whether they exceeded their instructions. There are certain instructions which every conscientious and honorable official should decline to observe. We cannot suppose for a moment that any such instructions were issued by the late Cabinet. The necessary inference is that the condemned Governors exceeded their instructions, and on that hypothesis their punishment by the present Cabinet reflects unfavourably on the indulgence of its predecessor. Without entering into these details, however, the broad principle asserts itself that every Governor of a Prefecture most contrive to administer the affairs of his district in such a manner as to avoid creating strong discontent and serious friction. In this prime desideratum of good administration the discredited Governors appear to have failed signally. Their condemnation will be welcomed with acclamation by the Opposition, and will be regarded, we should hope, as an evidence that the present Cabinet means to rule constitutionally or give up altogether the idea of ruling.

The removal of the above four Governors, and other changes previously announced, entail a considerable number of new appointments. They are as follow:—

- To be Governor of Saga Prefecture, Mr. Nagamine Yakichi, hitherto Governor of Miyagi Prefecture.
- To be Governor of Miyagi Prefecture, Mr. Hagiwara Hirochika, hitherto Secretary of Tottori Prefecture.
- To be Governor of Fukushima Prefecture, Mr. Kusaka Yoshio, formerly Governor of Nagasaki.
- To be Governor of Akita Prefecture, Mr. Hirayama Yasahiko.
- To be Governor of Ioyama Prefecture, Mr. Tokuhisa Tsunenori, hitherto Secretary of Hyogo Prefecture.
- To be Governor of Shizuoka Prefecture, Mr. Komatsubara Veitaro, President of the Criminal Law Bureau.
- To be Governor of Aichi Prefecture, Mr. Tokito Tamemoto, hitherto Governor of Shizuoka Prefecture.

We have little knowledge of any of these gentlemen except Mr. Kusaka Yoshio, who is certainly one of the ablest among rising officials. Fukushima is very fortunate to come under the administration of a man so competent and conscientious.

In reporting the various changes in the personnel of local Governors, the *Nippon* says that the step is obviously a punishment for official interference in the last general elections. It strongly approves of the dismissal of four Governors, and says that Count Inouye's action is commendable in that he has removed these Governors as well as several superintendents of police. It is only just to inflict the severer punishment on those higher in authority. Our contemporary also praises Count Inouye's choice of Mr. Hirayama, M.P. as Governor of Akita. If he will take some

more members of the Diet, no one will disapprove: nay, everybody will applaud, and the policy of the Government can easily be carried out. But the *Nippon* wishes to know what Count Inouye intends to do with the Governors of Kumamoto, Gifu, and so forth. They cannot be left as they are. It is rumoured that Count Inouye sent for Mr. Yamada Kinosuke, Barrister, M.P., and offered him a post, but he refused to accept it. Again it is reported that the new Cabinet intends to punish not only the Governors who interfered in the last elections, but also any other local officials who have made themselves obnoxious to the people. The number of changes immediately contemplated are some 17 or 18, and Mr. Kosaki, Governor of Gifu is on the list.

MR. WATANABE KOKI AND THE RYOMO RAILWAY COMPANY.

SOME weeks ago there were rumours that certain prominent shareholders of the Ryomo Railway Company had expressed their intention of amalgamating it with the Japan Railway Company, owing to financial difficulties. After much discussion the proposition was defeated, and the Company remained independent. Then the election of a Director was made, and Mr. Watanabe Koki, M.P., who has not much interest in railway affairs, was suddenly installed in the chair. It seemed rather strange that he should be chosen. But now report says that a good reason existed for the selection. A majority of the shareholders hope to complete the Joyetsu Railway at once by his aid. At present the Ryomo Railway Company is not favourably situated: its lines serve as branches of those of the Japan Railway Company, and it is consequently placed in a position of dependence on the latter. Prosperity cannot be secured under such circumstances. Now, in the newly proposed system of railways, the Joyetsu road is to be constructed so as to join with the main line at Niigata. If that project were carried out, both the passengers and the goods of the Joyetsu line would pass over the lines of the Ryomo Railway Company, and it is, therefore, greatly in the latter's interests that the Joyetsu road be built speedily. Mr. Watanabe warmly supported the idea of constructing it when the question came upon the *tapis* some years ago, and as he is supposed to have close relations with the Government, it was hoped that he might influence the latter favourably were he elected Director of the Ryomo Railway Company. This is the *Kokkai's* story. We reproduce it for what it may be worth.

THE GLADSTONIAN CABINET.

THE intelligence that Mr. Gladstone has formed a new Ministry, has led many of the vernacular journals to publish leading articles about English politics. Among their comments some are worth quoting. The *Kokumin Shimbun* gives a short history of the general election and its results, and the fall of the Salisbury Ministry. "Now the Liberals are in power," it says, "Mr. Gladstone must introduce his Home Rule Bill, in order to keep the Irish members under his banner and to fulfil his promises to his constituents. But what will be the probable result? He has a majority of 40 only; so the Bill may pass the House of Commons with difficulty, but the House of Lords, which is known to consist chiefly of Conservatives, will be sure to reject it. Will he then venture to create new peers for the purpose of controlling the Upper House, as was done in the case of the Reform Bill? Were popular opinion strongly in favour of the Bill, and were it carried by a large majority in the Lower House, he might adopt such an extreme measure. But his majority in the House is not more than seven per cent. of the whole number; and the bulk of the upper and middle classes in England are opposed to the Bill. We may predict, therefore, that the Bill will be rejected, and that Mr. Gladstone will be obliged to dissolve Parliament. Will he then return again with an increased majority? That is very doubtful indeed. At any moment there may arise some disagreement between the Liberals and the Irish members, or among the Liberals themselves, as some of the latter have already expressed their

desire to give to the Labour Question precedence over the Home Rule Bill." In conclusion the *Kokumin* remarks that the English characteristics are self-complacency, self-seeking, and hero-worship. By granting Home Rule to Ireland the two former sentiments would be wounded. But Mr. Gladstone owes his majority to the third characteristic. Therefore were Mr. Gladstone to die or to quit the political arena, the career of Home Rule would be at an end.

The *Nichi Nichi Shimbun* congratulates England on the accession of Mr. Gladstone, and says that the Grand Old Man is still full of spirit, but that his victory was not altogether satisfactory, for the people had simply become tired of the Ministry, and only desired to see a new Cabinet. They did not return Mr. Gladstone in order to pass the Home Rule Bill. In point of fact the majority of the nation shrink from anything tending to weaken the foundations of Imperial unity, and Mr. Gladstone, did he consult the wishes of the English nation, should shape his policy in accordance with that feeling. But if he did so, he would lose the support of all the Irish members. The *Nichi Nichi* cannot help sympathizing with Mr. Gladstone's troubles in his great old age of over 80. The men who were once his warmest political friends, the Duke of Devonshire, and Mr. Chamberlain, are now strongly opposed to his Home Rule Bill, and Sir Charles Dilke has not yet lived down his disgrace sufficiently to be a valuable supporter. The loss of these three coadjutors is very serious, nor can any one acquainted with English politics doubt that Mr. Gladstone is acting against the popular tide. His indomitable spirit and his wonderful prestige have brought him back to office, and the fourth Gladstonian Cabinet is now formed, but to maintain his position for any length of time will be more than even his strength can achieve.

The *Yiui* has a short note on the same subject. "The Liberals" it says, "having obtained a majority of 40, a vote of want of confidence was at once carried, and Lord Salisbury, Prime Minister of the Conservative Party, went to Osborne the following day, and placed the resignation of his Cabinet in Her Majesty's hands. The Queen thereupon sent for Mr. Gladstone and commanded him to form a new Cabinet. After consultation with his followers, he himself became Premier and Lord Rosebery took the portfolio of Foreign Affairs. How superior are the minds of English statesmen, and how easily Cabinet changes are effected. In such procedure the beauty of a constitutional government is realised. Who then will venture to say that Party Cabinets are impracticable? We have a good example before our eyes!" Excellent, but superficial *Yiui*, have we not also the example of your precipitancy to show how little fitted your country is for the exotic system which you advocate?

TREATY REVISION COMMITTEE.

SOME months ago, as our readers doubtless remember, a number of statesmen were appointed to form a Committee for investigating the subject of Treaty Revision. They only held a few meetings, however, and the public heard little of their proceedings. The *Nichi Nichi Shimbun* now states that since Counts Kuroda, Ito, Yamagata, and Inouye are in office and Mr. Mutsu is Minister for Foreign Affairs, there will be no need for a Committee. Our contemporary adduces, as additional evidence of the truth of this view, the probability that a man of Mr. Mutsu's great ability will prefer to achieve the difficult task of his own unaided strength. On the other hand, the "Chuo Dempo-sha," a news agency, reports that though Mr. Mutsu has become Minister for Foreign Affairs, and though it is rumoured that Viscount Enomoto's qualification to be a member of the Committee has thus become *de facto* invalid, such is not the case. In his capacity of Minister of State, Mr. Mutsu may of course be present at the Committee's meetings, but since Viscount Enomoto was specially appointed a member of the Committee, he remains a mem-

ber until his services are specially dispensed with by an Imperial Rescript. It is further rumoured, however, that in a few days Mr. Mutsu will be nominated in lieu of Viscount Enomoto, and that the meetings of the Committee will be resumed. Which of these two accounts is true, the *Yiui*, from which we quote, does not pretend to determine, but for our own part we see no probability of Viscount Enomoto's remaining on the Committee.

A SCHOLASTIC SCANDAL.

A SPECIES of novelette appears in the *Yomiuri Shimbun*. It opens in the poetical style usually adopted by Japanese writers of works of fiction, but when we read on we find that the purpose of the story is not to deal with fiction but to set forth facts. Very painful facts they are, too. The scene is laid in a school in Tokyo. There is no mistaking the school, though its name is not given. Neither is there any difficulty in identifying the male characters of the tale. They too appear under disguised appellations, but the disguise is so cleverly devised that a misconception is out of the question. The story turns upon that old, old pivot, woman. One of the students was a girl so beautiful that the youths of the neighbourhood used to wait in the street in order to catch a glimpse of her as she passed on her daily way homeward. This lovely girl, we read, fell a victim to the wiles of a foreign teacher. Apparently she returned his affection. Discovery came, and she was expelled. But the foreigner who had wrought her ruin remained, undisturbed, at his post. The other students naturally rebelled against this partiality. They did not see why the girl alone should suffer and the man go scot-free. But the Principal turned a deaf ear to their remonstrances, and then, forfeiting their confidence, began to be himself watched, with the result that his own conduct towards another student furnished grounds for more than suspicion. Such is the tale. It appeared several days back in the columns of the *Yomiuri* and it remains to this moment unnoticed. If it be untrue—which is highly probable—some step should surely be taken to contradict it, and to punish the publisher of the scandal. The nationality of the foreigner is given. His name also may be said to be given, for though changed into two Japanese words, it remains perfectly recognisable.

THE LAST ISSUE OF CONSOLIDATED BONDS.

THE applications for the last issue of Consolidated five-per-cent Bonds aggregated 5,776,450 *yen*. The amount of Bonds to be issued was originally fixed at three million *yen*, but after the applications had been received, it was announced that another million *yen* worth would be issued. Of the applications, no less than 3,894,750 *yen* were put in at prices above par; the remaining 1,881,700 *yen* being at par. It will be seen, therefore, that the lucky applicants who obtain the Consols at their face value only get 115,250 *yen* worth altogether between them. Looking at these figures, we can scarcely wonder that the Treasury increased the issue at the eleventh hour.

THE TOKYO RICE EXCHANGE.

We explained recently that a compromise had been effected in connection with the trouble on the Tokyo Rice Exchange, and that after the sellers and buyers had been brought as near as possible to each other by means of mediators, the officials of the Exchange had finally cut the Gordian knot by making themselves responsible for the irreducible difference. We also stated that the difference amounted to a sum of six thousand *yen* only, and we expressed surprise that so paltry a sum should have involved such a fracas. But it appears that the figures which we quoted from the vernacular press were erroneous, and that the difference really aggregated 64,493 *yen*. This large sum the officials of the Exchange undertook to pay, and, in consequence of their undertaking, the Exchange was reopened. But how was the payment to be effected? There appears to have been some difficulty in originating the point, for not until last Saturday

was the account closed, the money being paid out of the Reserve Fund of the Exchange. This Reserve Fund is accumulated by levying a percentage on the commissions received by the brokers of the Exchange, and is apparently held as a provision against exceptional emergencies. Much discussion occurred as to the propriety of applying it to the recent dilemma. The sellers of the rice—i.e. the debtors—were of course, willing enough, but the buyers, the creditors, having themselves borne their part in amassing the fund, felt not unnaturally that the money due to them was, after all, about to be paid to them out of their own pockets. However, everybody seems to have been anxious for a peaceful settlement, and so the matter was arranged in that way on Saturday.

A CIRCUS IN FORMOSA.

ACCORDING to a correspondent of the *Amoy Gazette*, circus business in Formosa is neither pleasant or profitable:—The weather over here seems to be getting hotter and hotter, and there is no cessation of it. Woodyear's Circus has of late been absorbing considerable interest amongst the Chinese, and the poor people have suffered from the rowdy roughs of Banca, who came down and forced their way into the tent. To prevent this occurring again a fence was put up, but the roughs broke this down; a still stronger one was put up and the roughs finding this too much for them, threw showers of stones over the top into the tent. Mr. Fernandez received a stone in his mouth, and two of the others received several on their legs. The Band (it was always the funniest thing in the show) is now composed of one instrument, namely, a hand organ lent by one of our local gentlemen. I have not heard much news (continues the correspondent) about the savages lately, as I have not been up to Twa-tutia for some time, but I believe the fighting is going on as merrily as possible. If it isn't it is not the savages' fault, as they love fighting. A curious story is reported which may be doubted by many. The Chinese were storming a village and were just getting the worst of it, when the savage leader suddenly appeared with his flag or token of truce; when confronted he said he could not go on fighting unless the Chinese sold or lent him some more gunpowder as theirs was all finished. I leave you to guess what the result was, for I do not know.

EXHIBITION OF LACQUER.

It is announced that from the 19th of September to the 9th of October an exhibition of lacquer manufactures will be held, under the auspices of the *Shikho Kyogi-kai* (Lacquer Manufacturers Competitive Union), at the Nishi-hongwanji, Tsukiji, Sancho-me, Tokyo. All kinds of lacquered article will be exhibited, as well as decorative designs for workers in lacquer, the tools employed, and the materials as prepared for the various processes of the industry. Prizes are to be given, and purchases may be made, but no article is to be removed before the close of the Exhibition. It seems rather remarkable that the Union should find itself in a position to organize such an affair just now. We should have thought that its energies were entirely devoted to preparations for the Chicago World's Fair.

THE "NORTH CHINA HERALD" ON JAPANESE POLITICS.

It is pleasant to find the leading Shanghai journal writing in the following sympathetic spirit of Japanese politics, despite the constant sneering and contemptuous criticism which the same subject elicits from the majority of the foreign local newspapers in Japan:—

It is not fair to treat these struggles in Tokyo as no more important than battles of kites and crows. We may think that Japan has gone ahead too fast, and that the political situation is not inaptly illustrated by the vast rows of unfinished public buildings, with nobody working on them, that disfigure that city of magnificent distances, the present capital of Japan. But it is better to go ahead too fast than not to go ahead at all; and throughout Japan is going ahead. The majority in the Diet wants to go faster than the Government thinks prudent, and it may be necessary to pull it up for a time, but this should not destroy our interest in the great experiment that was begun with the promulgation of the present Constitution. It is no easy task to evolve and establish in a few years a representa-

tative institutions suitable to an Oriental people only just rescued from feudalism. If mistakes have been made in the process, they are excessively trivial as compared with the progress that has been made. The solidity of that progress strikes the visitor from China more and more every visit he makes. Granted that the Japanese are naturally the most Occidental of all Oriental peoples, the transformation that has been effected in less than thirty years is still bewildering. To no two men is this transformation more due than to Counts Ito and Inoue, and the numerous friends of Japan may well feel full confidence that the difficulties of the present situation will be satisfactorily surmounted with these two leaders in command.

The Shanghai journal reminds us opportunely of something which seems to be persistently forgotten by Japan's critics on this side of the water. The latter's one note is disparagement. They talk of the frequent changes of Cabinet, of the want of cohesion shown by political parties, of the obstructive attitude of the Diet and so forth, but they never recall the fact that Japan is grappling with the greatest problem of civilized government under circumstances of unprecedented novelty. If she succeeded in solving it without friction, her success would be miraculous. That some friction is set up, must be considered inevitable, and certainly does not justify the unappreciative condemnation of certain writers.

THE BANK OF JAPAN.

THE Bank of Japan held its semi-annual general meeting on Saturday last. Some 35 principal shareholders were present. Mr. Kawada, Director of the Bank, took the chair, and read the Report of the business during the first six months of the present year. The depressed state of the market caused the Bank much loss, and the Report showed that the profit during the half year had been 318,849,886 yen less than that during the preceding period. The following are principal items of the Report:—

	YEN.
Total profit on business.....	1,305,841,544
Purchase of land	22,000,000
Expense of printing Notes	30,000,000
Buildings and Repairs	70,000,000
Net Profit	1,183,141,544
Dividend (at the rate of 15 per cent. per annum)	750,000,000
Reserve Fund	150,000,000
Rewards to officers and Sundry Expenses	67,500,000
Special Reserve	80,000,000
New Building Expenditure	50,000,000
Balance.....	86,341,544
	1,183,841,544

SILK.

THE silk market in Yokohama says the *Shogyo Shimpo*, become it more and more active daily. On Friday last over 1,100 bales were sold, and on the following day Messrs. Walsh, Hall and Co. begun to purchase fine silk for the French market in considerable quantity. Among the of transactions concluded Uzen Uyoken silk was sold at \$785, which is the highest price recorded this year. Messrs. Siber and Brennwald also bought some Shinshu and Koshu silk of the best quality, and Messrs. Otto Reimers & Co. purchased some more *Zaguri* silk. According to what we have learned, the reason of the purchase of *Zaguri* is that machine-reeled silk being very scarce this year, Messrs. Otto Reimers & Co. foresee that *Zaguri* will soon appreciate. However this may be, the fact is that prices have risen to 20 yen, and there is little doubt that 800 yen will be reached ultimately.

THE OFFICE OF CHIEF PUBLIC PROSECUTOR.

MR. HARUKI YOSHIKAKI has been appointed to the post of Chief Public Prosecutor *vice* Mr. Matsuo Koki, whose resignation has been already announced. Count Yamagata's policy is apparently to make a clean sweep of all the officials who were primarily responsible for the card-playing scandal. It is difficult to see what other course could be adopted. The result of the judicial investigation confirmed rather than weakened the opinion expressed by us at the time, namely, that the whole agitation was eminently discreditable to those who fomented it, and that to arraign the Chief Judges of the empire on such a charge betrayed a singular

absence of sobriety and common sense. It is quite true that in view of the strong efforts made by the Administration to check the vice of gambling—a vice to which the lower orders in Japan seem particularly prone—too much care cannot be exercised by officials themselves to avoid setting a bad example. From this point of view, the Judges who engaged in games of cards at restaurants with *dansesuses* for audience, were undoubtedly most reprehensible. If they possessed no higher sense of the dignity of their position and the obligations of their office, their continuance on the Bench could not conduce to public interest. But to organize an Administrative Court for the purpose of solemnly trying a number of Chief Judges on such a charge, the witnesses for the prosecution being keepers of *machi-ai-jaya* and dancing girls, was little short of a national disgrace, and we doubt whether any one will be found to pity the discomfiture of the officials who were principally instrumental in pushing matters to such an extreme. Little wonder that Viscount Tanaka, who was Minister of Justice when the agitation—or shall we not call it the intrigue?—began to assume serious dimensions, resigned his portfolio rather than be indirectly a party to proceedings of which an official so upright and sensible could not possibly approve, but which he nevertheless found himself unable to check. At the same time, it is to be hoped that if any of the Judges were really guilty of the conduct ascribed to them, they too will soon cease to preside in Courts of Law. They cannot, indeed, be removed from office without their own consent, but they must be well aware of the disgrace which they have brought on the Judiciary, and it is not in the nature of Japanese officials to cling to offices which they have dishonored.

Since writing the above we learn that Chief Judge Kojima Iken, President of the Supreme Court, has tendered his resignation, and that it has been accepted. It is also stated that Mr. Ito Miyoji will probably succeed Mr. Ozaki Saburo as President of the Law Bureau in the Cabinet.

MR. TANAKA HEIHACHI'S CASE.

THE latest news concerning the fraudulent appropriation of the sum of 13,715 yen belonging to Mr. Tanaka Heihachi, is that Mr. Tanaka has agreed to a compromise, whereby he is to receive 7,000 yen, and, out of consideration for the feelings of the Fukita family, with the members of which the Tanaka family has always been on intimate terms of friendship, Mr. Tanaka has consented to take no legal proceedings against any of the persons who figured in the transaction reported in these columns a few days ago. The conduct of Mr. Fukita Shiro was strongly condemned by the other members of the Fukita family, and since Shiro has hitherto shown no tendency to behave dishonestly, it is thought that he fell into the hands of sharpers and acted without duly weighing the probable consequences of his procedure. Opinion is divided on the case: some pronounce the whole transaction fraudulent; others assert that the Fukita family has a pecuniary claim on Mr. Tanaka and cite the compromise which the latter has accepted as a tacit acknowledgment of the validity of the claim. The case is of far too serious a kind to be hushed up in the manner suggested by Mr. Tanaka. It is stated that the investigations already made disclose the fact that the plot was promoted by persons whose names have not yet been made public. Mr. Nozaki, the Public Prosecutor, has taken the case in hand, and we shall no doubt have the results of further investigations in due time.

The comments of the *Yiji* on the case are worth quoting on account of their impracticability. As a rule the *Yiji* is nothing if not practical, but the following observations verify the proverb that even a monkey sometimes falls from the tree. The Tanaka affair, says the *Yiji*, should be a lesson to us in four different ways. (1) It suggests that barristers should consult those against whom they are taking action in refer-

ence to the validity of the documents on which they rely. (2) It suggests that courts of justice should control the action of the bailiffs to whom they issue orders. (3) The object of levying a distraint on property being to secure the payment of money which otherwise would not be paid, a Court of Law, before serving an order for attachment, should take the trouble to ascertain whether the party against whom action is taken is able and willing to satisfy the claims. That for the sake of recovering 7,000 yen, bailiffs should be empowered to levy a distraint on the property of a company whose capital amounts to 10,000,000 yen, as in the case of the Yusen Kaisha last year, is a public scandal for which a remedy ought to be found. In this Tanaka case we have the reputation of the Director of a bank and one of the largest shareholders in a public company seriously damaged by a set of men who gave no guarantee to the Court beyond the payment of 1,000 yen security money. (4) The shares of the Tanko Tetsudo Kaisha fell seriously in consequence of the report that Mr. Tanaka was unable to satisfy his creditors, and the Tanaka Bank depositors were thrown into a state of alarm. Such consequences ought to be foreseen and provided for by the administrators of justice.

These objections to prevailing legal methods sound very plausible, but they are all based on one-sided considerations. Taking the suggestions in their order, it would be impossible in most cases to carry out the first without involving a client in serious loss. Any intimation beforehand of intended action would enable dishonest persons to conceal their property and evade their obligations. As to the second, we fail to see what effective control a court can exercise over a bailiff who receives authority to act on the strength of documents which, as far as the court is able to judge, are in perfect order. With regard to the third point, against what the *Fiji* urges has to be placed the fact that laws are enacted to prevent dishonesty, and that it is impossible to preclude their occasionally becoming the source of unpleasant consequences to the thoroughly honest. The law, as it now stands, is severe against the debtor, and hence, judging by long experience, we should say that it is severe on the right side. To relax its provisions because in a couple of cases persons well able to meet their liabilities have been inconvenienced by its application, would be short sighted policy. As to the last objection, it seems to us that the duties of a Court do not involve anything more than a scrupulous administration of the laws as they stand. The suggestion that before issuing an order Court officials should balance remote possibilities of good and evil consequences is singularly impractical. The *Fiji* seems to us to have here indulged in the kind of theorising which it is usually persistent in condemning. No system is without its weak points, and a few inconvenient consequences, such as constitute the basis of the *Fiji's* criticism, are surely inadequate to necessitate a radical reform.

We have omitted to mention one amusing phase of the case. The usurer, Adachi Jun, who supplied Mr. Fukita Shiro with the 1,000 yen security money required by the Court, received 600 yen as a reward, but when summoned before the Court to answer for the part he had taken in the shady transaction, he was so alarmed by his situation that he begged the Court to accept the sum of 1,600 yen as a present and allow him thus to wash his hands of the whole affair.

ELI PERKINS.

THE account of Japanese and Chinese women given by Eli Perkins is worth reproducing, such a long and courageous bow does he draw:—

Yokohama, Japan, June 2, 1892.—[Special Correspondence.]—In complying with the invitation of the editor of the woman's page to describe the present condition of woman in Japan and China, I will say reluctantly that there is no change in the status of woman in China. This is because the Buddhist religion teaches that woman should simply be a slave to her husband. The state of woman is so low in China that a mother prays that she may have no female child. The birth of a female child throws the whole family into the deepest grief. Not only is medicine given to kill the child, but when born it is often put out of the way, and a boy adopted in its place. The killing of a

girl baby in China is a crime never punished. There is a Catholic missionary founding asylum in Canton with not a boy baby in it. Mothers bring their little girl babies and abandon them on the asylum steps.

In Foochow I saw this sign on the banks of the Yuen-Fule river:

"DO NOT DROWN FEMALE INFANTS HERE."

This sign is read by 750,000 Foochowans, causing no blush and no comment.

"Why is this?" asks the loving American mother.

It is because in all heathen countries woman and girls occupy low positions. The Chinese boy succeeds his father. He alone inherits his father's property. It is the law and custom in China that a mother shall obey her eldest son, and when a Chinese girl marries she not only obeys her husband and son, but also her father-in-law. A Chinese father is allowed to kill a child for disobedience, and he often does so, and no law ever convicts him, while custom honours him. If a child strikes his father and that father does not kill him on the spot, then the authorities will take that child and not only consign it to an ignominious death, but to slow and awful torture. But if a boy should strike his mother, the father would look on with a sort of pride.

The Chinese mother is not educated. Few of them can read. It is common for Chinamen to have two or three wives. When you go to his house you do not see his wife. She does not come to his table. She is a servant.

A gentleman friend of mine was invited to a Chinese dinner in Shanghai. He was greeted by four Chinamen and what he thought to be their wives. They were pretty, painted, and silly. They even begged presents of rings and breastpins from the guests—teased them for trinkets. The next day he spoke of meeting some Chinese gentlemen and their wives.

"Wives!" exclaimed his friend. "No, they were not wives. They were playthings—polygamous wives, taken into their own families with the consent of the dowry-giver. Such Mormonism is customary among rich Chinese in Shanghai, Canton, and Hankow, and other large Chinese cities."

There is no caste now in China except the caste caused by small feet. So every woman who pretends to respectability must deform her feet. The fashionable husband countenances this deformity because it makes his wife too helpless to walk "and it keeps her out of mischief."

I saw a poor fashionable woman's foot in the English hospital at Shanghai. When the doctor unwound it he found the ankle shrivelled as thin as a chicken's drumstick. The skin was purple. The four toes were rolled under the foot, stunted and buried in the bottom of the foot—about the size of the second joint of a turkey—a chunk of withered flesh ending in one poor, puny toe! That foot represents the moral and intellectual status of the Chinese woman of 1892.

Now compare with the sad state of the Chinese woman the evolution and advancement of the Japanese woman. Her civilization, language written characters, literature and religion came from China. Thirty years ago Japanese women ranked with the Chinese women. The Mikado was worshipped unseen as a god. His wife was a myth. He was the sun in daily intercourse with Jehovah. He only spoke to the Yacoon, the visible ruler, from behind a wall, while the Yacoon, priests and nobles knelt to the floor. Then men wore queues and shaved their heads. They worshipped Shinto and Buddha, and ate no animal food. Mothers shaved their children's heads and their own eyebrows, painted their faces and rode horseback astride. Mothers bathed naked with husband, children and the neighbours, paradoxical simplicity was everywhere. Servants (musumes) in the country went naked in the summer. "Bashfulness," says Rousseau, "came with civilization." The Japanese that Commandore Perry saw in 1853 when he landed at Yeddo were as innocent as Eve. They did not know what shame was. As Sir Edwin Arnold says "They were modest and yet immodest."

The women all greased their hair like gipsies. They all smoke, and when they get married degrade themselves by painting their teeth black. Many girls of the lower classes had their arms and backs tattooed, and showed them proudly as marks of beauty. Husbands could have as many wives, and could divorce any of them for disobedience to her husband's parents, barrenness, drunkenness, talkativeness, and could and did sell daughters and consign them to lives of shame.

In 1867 a great social and political change came to Japan. The young Mikado, so long shut up to commune with Jehovah in the old feudal castle at Kyoto came to years of discretion. Light struck him all at once. He saw that Tokugawa, the old Yacoon or Shogun, had usurped the rulership and was running the country from his feudal castle in Tokio, surrounded by his military Daimios. He deposed him in a day, and sent 20,000 Daimios to their plows or workshops or gave them new government positions. Their swords became plowshares or were auctioned off in the curio shops of Tokio. With one stroke he declared himself "Emperor, and his wife an empress—his equal." This act freed every woman in Japan. Every wife in the emperor's court was declared equal to her husband.

She could sue for divorce, ride in a carriage with her husband and appear at the court ball in full French costume with low neck, short sleeves and a long train! When the emperor left feudalism behind him, he rode into the old castle of the deposed Yacoon in an open brougham, dressed in a full general's uniform, and with his empress proudly sitting on his right hand, dressed in a costume from Worth's. He organized a court out of his own friends, and the best blood of the deposed Daimios. Many of these courtiers selected foreign wives. The wife of Count Oyama graduated at Vassar College. Countess Tsuda, a graduate of Vassar, is now in the United States studying our American Normal school system. That great system will soon be established all over the empire. Four hundred students were sent over the Canadian Pacific line to American colleges in one year. Colleges and seminaries have been founded, and these students are now teaching all over Japan. Japanese girls are being educated the same as boys.

In a private mission school in Kyoto I saw 400 Japanese young ladies. Miss Pool, the daughter of the well known bibliographer of Chicago, was hearing a class of young ladies recite in grammar and physiology, and they recited like a class of Vassar College girls. Ten years ago the fathers of these girls looked upon a girl as a slave, or at best an upper servant of her father, brother or husband.

Now they are straining every nerve to give them a liberal education. Even young husbands are sending their young wives to school. The craze to learn English is universal. The coolie will offer to work for an American for two pounds of rice a day if the American will occasionally talk to him.

Buddhism did not grant immortality to women. It made her allegiance to her husband stronger than her allegiance to morality and God. A Japanese maiden as pure as a vestal virgin would at the command of her father allow herself to be sold to a brothel keeper for money. This under the teachings of Buddha.

This has all changed now with the educated Japanese. The emperor and empress have licensed Christianity, and the question has already come up in cabinet meetings as to whether Buddhism is harming or blessing Japan.

At the last court receptions no one has been admitted unless dressed in simple full dress clothes, the same as would be worn by a lady or gentleman in Washington or New York. When the reader goes to Chicago in 1893 and examines the Japanese department he will see, presiding over their \$1,000,000 exhibit, Japanese ladies and gentlemen dressed in European costume.

The emperor and empress have no children, but years ago, they, in the old Japanese fashion, selected Majame Yanazawari, a court lady, as a wife by proxy, and she has borne the emperor a son, now called Prince Huro. He is now 13 years old, looks like an American boy, and can be seen any day in the grounds of the Noble's College jumping with the other boys in the most domestic fashion.

Already there is a furor all over Japan for education. Japanese girls and boys swell the schools and colleges in America, England, and Germany. The better classes no longer shave the heads of their children and paint their teeth black.

If the 90,000 Christians in Japan, how they have free press and free speech, and how the old mossback Japanese Buddhism and the civilized agnostic still praise Buddha and denounce Christ, I will write later; and also show the Japanese women eat, work, flirt, worship, and nurse their children.

ELI PERKINS.

COUNT OKUMA ON THE NEW CABINET.

COUNT OKUMA'S alleged criticisms of the new Cabinet have been often reported in the vernacular press, but in every case they differ more or less. The *Kokkai* now publishes a much fuller account. It runs as follows:—One day a man called on Count Okuma and asked his opinion of the new Cabinet. He replied thus:—"The new Cabinet consists of all the renowned statesmen of the Empire, as well as of a few statesmen who are known to be the most able. Externally therefore it looks extremely strong, but who can say how feeble it is internally. Count Ito, however, is very clever at elaborating administrative policy, and Count Inouye is an expert in enforcing it. In short, their abilities may be compared with those of Mokuami and Danjuro: the former composes a play and the latter puts it successfully on the stage. If therefore Count Ito and Count Inouye work harmoniously, and if, without any clashing of personal interests, they set themselves to correct old abuses, the foundations of the Government cannot be easily disturbed, even though other members of the Cabinet disagree. Count Inouye is especially anxious to reconstruct and improve the local administration so as to obtain popular confidence. He will no doubt dismiss all the useless Governors without hesitation, and appoint young and able politicians in their stead. I was informed that Count Inouye lately sent for certain young barristers and offered them governorships. He should dismiss the incompetents without regard to their personal interests. I hope that he will carry out his resolutions, and by sweeping away accumulated abuses, attain the object contemplated in forming the present Cabinet. Further, if the local administrative policy were to change every time there is a change in the Cabinet, the people would suffer greatly. Therefore the new Cabinet should at once determine upon a policy which still stand upon its own merits and be quite independent of changes in the personnel of the Government. Again, considering the members of the Cabinet individually, it was an excellent choice to appoint Mr. Mutsu Minister for Foreign Affairs and Mr. Watanabe Minister for Finance. When Mr. Mutsu occupied the chair for Agriculture and Commerce, he was doubtless dissatisfied, being unable to display his full talent; but the new arrangement cannot fail to please him, for among the statesmen of the day no one is better suited than he to hold the portfolio of Foreign Affairs. Yet Mr. Mutsu can spread his wings only by the assistance of Count Ito and Count Inouye. Unless they assist him, his talents must remain locked up. Mr. Watanabe again, is one of the country's most competent officials. He can well take his stand by the

Original from

side of the renowned statesmen with whom he is now associated. At first, perhaps, he will not be valued by his colleagues on account of his sudden promotion, but very soon he will earn respect by the display of his ability. He has no reason to shrink from figuring as a Minister of State under a constitutional government. The new Cabinet was formed by Count Ito, but it was completed by Count Inouye becoming Minister for Home Affairs. Therefore the responsibility of the latter is very great, and I sincerely hope he will assist the Minister President of State and maintain the harmony of the Cabinet, thus enabling the other Ministers of State to accomplish their respective tasks."

MR. UTSUMI, GOVERNOR OF KANAGAWA PREFECTURE.

RECENTLY all the representatives of Saitama Prefecture in the Diet, except Mr. Yumoto, together with certain members of the Prefectural Assembly and delegates of the people, have been urging the Minister for Home Affairs to remove their Governor Mr. Kubota Kawanichi, but no step of that nature has yet been taken. It is now reported by the *Kokkai* that some days ago a petition from the Prefectural Assembly of Kanagawa Prefecture was presented to the Minister for Home Affairs, requesting the removal of Mr. Utsumi Tadakatsu, Governor, and Mr. Sugai Naruyoshi, Chief Inspector of police. Further, the Headmen of Wards and Divisions in 15 Districts of the Prefecture are said to be about to present petitions in the same sense. The documents have been prepared and are in process of signature. In some places where signatures have not yet been obtained, emissaries have been despatched to hasten the process. The following is the text of the petition as given by our contemporary:—

The condition of administrative affairs in our Prefecture is becoming more and more difficult, and the people begin to regard Mr. Utsumi Tadakatsu, the Governor, as their enemy. If such a state of affairs be left unnoticed, it is impossible to predict what disorder may ensue, and that the peace and good order of the Prefecture cannot be secured, goes without saying. We earnestly beg, therefore, that the Governor be changed without loss of time. It will give us pleasure to submit full particulars when we have the honour to obtain an interview with your Excellency. In our great anxiety we venture to present this petition.

(Signed) by HEADMEN of *Cho* and *Son*, and others.

TROUBLES IN THE YOKOHAMA TRADERS' UNION.

AMONG the members of the Traders' Union in Yokohama, some two or three influential men formed an association to which many others gave their adherence. Outsiders call this association a despotic affair. Mr. Ono, President of the Traders' Union, is its head. Whatever trouble occurs in the Union, is generally attributable to the acts of the association. Lately two rather serious difficulties presented themselves. Messrs. Kashiwagi, Nakashima, and three other silk merchants, who are members of the Union, interviewed Mr. Ono, and requested him to convene a special meeting of the Union. They stated that the commission hitherto paid by the members had been required to defray the expenses of the Union, but inasmuch as the revenue now derived by the Union from its warehouse and so forth had greatly increased, the payment of commission was no longer required, and that, consequently, a special meeting ought to be convened to abolish the impost. At first sight this request seems natural enough, but it has, in truth, a deep meaning. The members preferring it declare that the accounts of the revenue collected from commissions are never prepared satisfactorily, and that the warehouse realises a comparatively scanty revenue, all of which they attribute to the mismanagement of the President. Hence, at the special meeting, they purpose introducing a vote of want of confidence, and changing the President. The total number of the members of the Union is 48, and as Mr. Kashiwagi, the agitator, has only 16 or 17 followers, there would be no hope of his measure passing were it not for the fact that many members of the Union are now away from Yokohama spending the summer in the country. Mr. Ono at once saw through this design. He

gave no immediate reply to the request, but hastened to despatch telegraphic summonses to the absent members. What the result will be cannot be foretold. The second trouble also is connected with Mr. Ono's association, and is fomented by the members of the Silk Merchants' Union. According to the regulations of the union, any one desiring to become a member must pay a sum of 2,000 yen as security. When this provision was originally discussed, it was opposed on the ground that such a regulation would exclude many from the Union, but the objection was over-ruled. Recently, however, the Kanagawa Kencho issued regulations relating to the Superintendence of the Silk Merchants' Union, and according to these regulations, the Union was required to amend its existing regulations within the space of 15 days. For that purpose the members assembled at the Traders' Hall on Friday last. The majority of those present were on the side of Mr. Ono, President of the Union. A motion was brought forward that the sum of 2,000 yen paid as security is not sufficient, and that it ought to be raised to 5,000 yen. Such a proposition, if carried, would involve the retirement of many members. It encountered strong opposition, and led to an excited discussion. Its fate is not yet known, but the affairs of the Union are in anything but a harmonious condition, says the *Nichi Nichi Shimbun*, from which we quote.

NEWSPAPER TONE.

THE *Fiji Shimpō* once more offers outspoken advice to its fellow journalists. It says that lately the tone of the vernacular press has sunk to the lowest level. Yet journalists allege that they are the mirror of society. No paper is at present edited properly, in the *Fiji's* opinion. Everyone of the Tokyo journals contains some low abusive words worthy of the meanest class of the community. In Japan there is a certain vocabulary of polished expressions which are always used among the upper and educated classes. But in discussing the politics of the day, journalists use the least refined language. It is as though a low tramp had the assurance to converse with a family aristocratic and erudite. All the writers are not equally blameworthy, and some of them may perhaps plead that they write down to public taste. But assuredly they should not degrade their *mitter* so recklessly if they think themselves the pioneers of modern civilization. Not less reprehensible is their careless use of words in reporting foreign affairs. In this respect they astonish the readers. For instance, when they allude to the policy of Russia, they say that "the double-headed eagle spreads its wings;" and with reference to England, they write "the Lion King of Europe is sharpening its teeth," or some equally offensive form of expression. Nothing is more delicate than international relations. Words used in alluding to them ought to be very carefully chosen. Russia and England are Japan's best friends, and she ought to show her own good will towards them as much as possible. But instead of contributing to that result, these careless journalists speak of "the fierce lion," or "the greedy eagle" and so forth. Such language is totally unsuited to the intercourse of friends, and writers employing these outrageous terms seem incapable of distinguishing between rudeness and courtesy. The *Fiji* urges upon them the necessity of greater caution.

EARLY DEVELOPMENT.

A RATHER unusual case of theft is reported in the vernacular papers. A lad of 12 was sent to an exchange shop in Tokyo in order to obtain 170 yen worth of coppers. He only succeeded in procuring 40 yen in that form. Placing the coppers in the box of the little cart which he drew, he laid on the top of the coin the remaining 130 yen in paper wrapped in a cloth. He had not proceeded far on his way home when a lad of 15 years of age began to push the cart behind. The latter was told that his services were not needed, but took no notice and still walked behind the cart. Presently the boy in charge of the money perceived that the lid of the box was open, and that the *satsu* were

gone. In the meanwhile, the boy who had been pushing had taken to his heels, and being hotly pursued by the other, was overtaken. While the two were struggling the thief threw away a bundle, and the smaller boy, thinking that the package contained all the lost money, allowed the thief to escape and snatched up the parcel, but found that it contained only 30 yen, and that the rest had been carried off apparently beyond hope of recovery. The police were communicated with and in the meanwhile the rogue made his way to Shinagawa. Here he was subjected to inquiry on suspicion, but by clever answers he managed to deceive the police, and had proceeded as far as Shiba when something about his looks suggested to a policeman that he might be the culprit in request. He was arrested, and in the lining of his coat was found the sum of 80 yen in paper money, which had evidently been secreted there during his first flight. The remaining 20 yen he had disposed of on the way.

NOTICE TO MARINERS.

THE following notice to mariners in reference to the North Channel Entrance to the Yangtze, in the Shanghai District of the China Sea, has been issued from the Coast Inspector's Office of the Chinese Imperial Maritime Customs:— Notice is hereby given that, on account of alterations which have taken place in the North Channel Entrance to the Yangtze, as disclosed by a recently completed survey extending from Bush Island to Shawsheishan, the following additions and alterations to the buoyage of this channel have been made. A six-foot conical red Buoy, surmounted by a black spherical cage, to be known as the Ch'i-yao Bank Buoy, to mark the starboard side of the channel, entering. This Buoy bears S. 34° W., true distant 1 $\frac{1}{2}$ miles from Drinkwater Point Beacon. A six-foot conical black Buoy, surmounted by a black inverted frustum cage, to be known as the Middle Island Buoy, has been moored off the northern elbow of the banks which lie to the northward of Middle and Blockhouse Islands, to mark the port side of the channel, entering. This Buoy bears N. 13° W., true, distant 6 $\frac{1}{2}$ miles from the Surveying Beacon on Blockhouse Island. The Tsungming Bank Buoy has been shifted to a position where it marks the south-eastern edge of Tsungming Bank and the starboard side of the channel, entering. From this Buoy the "High Dark tree" on the south-western shore of Tsungming bears N. 56 $\frac{1}{2}$ ° E., true, distant 4 $\frac{1}{2}$ miles.

THE DYSENTERY EPIDEMIC.

IN addition to the returns of fresh cases of dysentery published among our notes from Japanese papers, the News Agency reports that there are 213 patients in Hyogo Prefecture and that 43 deaths have occurred there. We learn that although the epidemic is attracting so much attention this year, it was worse last year though little notice was taken of it. A greater number of cases occurred in corresponding periods, and the death-rate was higher. Medical men say that the disease is entirely due to unwholesome diet. This is conclusively proved by an incident which happened last year in Kumamoto. A man who was on a visit to the place died, and at his obsequies a number of persons—over twenty—partook of a plentiful dinner at which various kinds of fish and vegetables were served. The following day the whole of the participants, without exception, were attacked with dysentery, the only person escaping in the household being a maid-servant who had been too ill to join in the feasting. From this centre of propagation the disease travelled outward in directions that could be easily traced, a plain connection with the origin being invariably preserved.

THE FOUR CONSTELLATIONS.

THE *Mainichi Shimbun* has rather an amusing note about the present Cabinet. It says that the Four Constellations in the new Ministry are Counts Ito, Inouye, Yamagata, and Kuroda, and that revolving about each are the following Satellites:—Count Ito's Satellites, Messrs. Ito Myoji, Inouye Ki, Suyematsu Kencho, and

Original from

Kaneko Kentaro. Count Inouye's Satellites, Viscount Nomura Yasushi, Viscount Aoki Shuzo, and Messrs. Furusawa Shigeru and Saito Shuichiro. Count Kuroda's Satellites, Messrs. Orita Heina, Suzuki Daiyo, Komaki Shogyo, and Tokito Tamemoto. Count Yamagata's Satellites, Messrs. Komatsubara Veitaro, Kioura Keigo, Shirane Senichi, and Yoshikawa Akinasa. With regard to the orbits of the Constellations, our contemporary says that the Ito-Inouye Constellation travels in a path little removed from the globe; that the Kuroda Constellation partakes of the nature of a comet, and occasionally exhibits very eccentric motions; and that in respect of the Yamagata Constellation, astronomers predict its gradual recession from the earth, and ultimate invisibility except by the aid of a telescope.

THE "SOSHI" AND A GENERAL.

AN unpleasant incident is reported from Nagoya. Mr. Hoshi Toru, President of the House of Representatives, being on a visit to that town in connection with some legal business, his admirers determined to organize a friendly *r  union* in his honour. Great preparations were accordingly made for a wine party at the *Shukinro* on the 21st instant. Among those present was Major-General Aoyama, who belongs to the Government Party. His presence appears to have offended some *soshi* of the *Yiyu-to*, and finally their leader, Kato Yoshiyasu, accosted the General in an insulting manner, asking what business he had to be there, and charging him with treachery. The General, not too long-suffering by nature, replied by knocking down his rude interrogator. Thereupon Kato attacked him with such murderous violence that had not the bystanders interfered, serious results would probably have ensued. It is a thousand pities that these rude truculent *soshi* do not occasionally fall in with somebody capable of administering to them a really sound thrashing and ready to do it.

SILVER.

THE Chambers of Commerce in the East are at last bestirring themselves in respect of a question which has the most vital interest for them. Just eleven years ago we remember conversing with a leading merchant of Yokohama on the subject of silver—a subject which, at that time, many people were disposed to regard as a mere hobby of financial faddists. Our observations were listened to with a kind of languid tolerance the only comment they evoked being a statement that really the question had very little practical interest for the world of commerce. "Very little practical interest for the world of commerce"! A short eleven years ago men of intelligence were actually so short-sighted as to look with half contemptuous indifference at a problem which was destined soon to reduce international trade to mere gambling. However, a mood of juster appreciation begins to prevail now. The Bombay Chamber of Commerce took the lead, and has been followed by the Shanghai Chamber, the proceedings of which are thus reported in the *North China Daily News* of the 18th instant:—

Yesterday afternoon a general meeting of the members of the Chamber of Commerce was held for the purpose of taking action upon the Silver Question.

Mr. J. G. Purdon (Chairman) presided, and those present were Messrs. H. R. Hearn (Vice Chairman), F. Anderson, D. M. Moses, John Graham, A. Korff, W. McDonald, W. D. Little, J. C. Bois (Committee) J. Macgregor, F. Rinkel, C. W. Wrightson, W. Brand, M. Adler, C. J. Dudgeon, J. M. Young, J. E. Haskell, C. M. Dyce, E. B. Skottowe, R. M. Campbell, T. Wood, E. Shellim, H. J. Such, Drummond Hay (Secretary), and others.

The Chairman in opening the proceedings said—The matter of the great depression of Silver has been engaging the attention of the civilised world for a long time past, and as we are all aware, a Convention is to be held before long in Europe in which all the Great Powers, it is expected, will be represented for the purpose of settling upon some International Agreement that will have the effect of bringing about a steady and uniform relation between the values of the two precious metals, Gold

and Silver. How and to what extent this can be done is, as I have said, the very purpose for which the Convention is called, and as the question will undoubtedly be debated by the greatest authorities on finance and commerce, it is not with any idea that we can put forward any scheme or furnish any new argument on the subject that this meeting is called. The wide-spread depression we see in all our business relations, however, brings the matter very decidedly home to us, and when we know that the question whether some remedy cannot be found for this evil is to be debated in such a Convention, it becomes us to show by every means in our power that the subject is of vital importance to us, and to record our earnest hope that some international measure may be adopted that will put an end to the present deplorable state of affairs, and therefore this meeting of this important commercial community has been called for the purpose of giving its support to any scheme that will achieve that desirable result. With the object therefore of obtaining the opinion of this meeting the Committee has prepared the resolution I am about to offer. Should it be carried, copies of it will be forwarded to the Chambers of Commerce in London, Manchester, Hamburg, and New York, and to the China Association in London. A resolution to this effect will be submitted. The resolution I which propose is:—

As it is the opinion of this Chamber that the great and sudden fluctuations in the exchangeable value of gold and silver, are highly detrimental to the foreign trade with China, and as there is every prospect of a continuance of the evil unless some remedy is applied, therefore—

Resolved, that this meeting hereby accords its hearty support to any International action directed towards remedying the present unsatisfactory state of affairs.

Mr. John Macgregor in seconding the resolution said—The Chairman has so clearly and succinctly placed before you the object of this meeting that there is very little that it is necessary for me to add. The course of fluctuation which has characterised the relative exchangeable values of the so-called precious metals in the near past has been very erratic, but on the whole decidedly adverse to silver. It is, I believe, the universal experience of those engaged in the foreign trade with China that the result has been not only always to perplex, but too often to inflict loss, and the outlook is so uncertain, that trade is more or less paralysed; people who consider themselves prudent confining their transactions to the most moderate limits. The very violent fluctuations have taken place in the price of silver, in which our transactions with China are conducted, are I am sure only too present to your minds. The rise in 1890, which a great part of the world considered, to their discomfiture, to be justified and permanent, culminated in September of that year with silver at 54½d. per oz. It has been followed by a violent reaction, relieved by intermittent attempts at rehabilitation, until the other day when we saw silver at 37½d. per oz., or a decline of over 30 per cent; all this in the space of 23 months. The foreign trade with China emanates almost entirely from countries which regard gold as the standard of value, and under the conditions I have just mentioned it needs no words, from me to prove that foreign trade must be, as it has been, and is, injuriously affected by these abnormal fluctuations in the relative values of the metals. This Chamber does not propose to suggest, or submit, out of such wisdom as is in us, any particular course which we think should be followed in obviating the mischievous uncertainty which has hitherto prevailed, and which of late has become so acute. In the bustle and worry of business, as it has to be conducted here, many of us have not the time, even if we had the inclination, to consider and weigh this great and clamant question in all its bearings, and study the manifold interests which are bound up in it and surround it. This we may leave in able hands, and with those who are making the subject their special study, and I most heartily second and support the resolution proposed by the Chairman.

The resolution was then put to the meeting and carried, with one dissentient.

Mr. R. M. Campbell enquired whether the gentleman who dissented would not like to explain his views.

The Chairman pointed out that though it was somewhat irregular, seeing that the resolution had been adopted, no doubt the meeting would willingly hear what the gentleman had to say.

Mr. J. C. Bois—I would like to explain briefly why I am opposed to the passing of the proposed resolution. By passing it, although we do not commit ourselves to any particular form of legislation, yet we are undoubtedly casting our vote in favour of some sort of international agreement for the purpose of artificially raising and keeping up the price of silver. Now the question is,

is it not a mistake to do this? I think that any interference with the natural laws which govern the rise and fall of all articles is a mistake. What we are, and have been, suffering from for the last few years is not so much the fall in silver as the rapid and violent fluctuations in its value. Had silver been left to itself we would have seen a gradual and constant fall in value until it reached a point at which it would not pay to produce it, such gradual fall could easily have been provided for by brokers and merchants, and trade generally would have gradually adjusted itself to the new state of things. Now what has caused the rapid and violent fluctuations we complain of? It cannot be said that the position as to the supply of and demand for gold has altered in any way in the last three years. It is not that metal therefore that is responsible; but the whole trouble has arisen from the desperate attempts made in the United States to bolster up the price of silver. This legislation has not been successful, but it has given rise to hopes which have led to speculation, and it is this speculation which has caused the violent fluctuations we are suffering from. No doubt I shall be told that this legislation did not go far enough, but I think that the farther we go the worse we shall fare, and that we would have been much better off if nothing had been done. What should be sought for is the quickest and best way of undoing the mischief that has already been done by legislation, and of getting back to the state of things when the natural laws which govern prices will have full scope. Any international agreement for the purpose of keeping up the price of anything can only work mischief, and I am therefore, opposed to any support being given to those who wish to bring about such an interference with the natural course of things.

Mr. F. Anderson then proposed that a copy of the proceedings of the meeting, and the resolution should be sent to the Chambers of Commerce of London, Manchester, New York, Hamburg, and Bremen, the China Association in London, and the Chambers of Commerce of all the important centres of trade in the East.

Mr. F. Rinkel seconded and the motion was carried.

* * *

Concerning the remarks of Mr. J. C. Bois there are two obvious comments to be made. In the first place he speaks of "artificially raising the price of silver." By whom is that intention entertained, unless it be by the American mine-owners? No responsible European financier has ever proposed that international steps should be taken to raise silver to a price out of proportion with its market value. The object of international action is simply to fix the white metal at a price approximating as closely as possible to what appears to be its real market price, and to set in operation a factor which would preserve it at that price, namely, the factor of remonetization. The second criticism suggested by Mr. Bois' speech is that while he lays upon the shoulders of American legislation the violent fluctuations of recent years, and while he objects to fresh legislation as unnatural and factitious, he appears to forget altogether that meddling legislation is the very *fons et origo mali*. The whole trouble has its roots in laws demonetizing silver; laws which were first enacted by England at the time of resuming specie payments, and which were copied subsequently by other nations with equal thoughtlessness and precipitancy. What the bimetallic advocates is the repeal of all such unnatural laws, and the inauguration of a system of absolute free trade in respect of the precious metals. Silver would not be left to find its own level, as Mr. Bois suggests, merely by abstaining from further legislation; for an impassable dam has been constructed across one of its principal channels of demand by the laws that demonetized it, and until those laws are repealed, it is idle to talk of reverting to a natural and unrestricted state of affairs.

TROUBLE A BLESSING.

So argues the *Fiji Shimpo*, apropos the new Japanese Cabinet. The country is to be congratulated on the possession of such a Cabinet, says our contemporary. With such men as now hold the reins in office, there is no fear of mismanagement. Home and Foreign Affairs are secure in such hands. But there is one cloud on the horizon. One serious trouble has to

be dealt with—the Diet. “These Diet rascals are not to be feared,” say some statesmen. “There is a way of stopping the mouths of the 300 *geijōgi*,” say others. But there is no denying, observes the *Fiji*, that the young politicians who, after the manner of youthful barristers quoting law books, are ever referring to this and that article of the Constitution as sanctioning certain acts and interdicting certain others, are a constant source of annoyance to experienced and well-informed statesmen. Yet our contemporary would not alter this state of affairs. In the fiction that exists between the Diet and the Cabinet lies the strength of the latter. To illustrate its meaning the *Fiji* refers to a neighbouring household. In prosperous times the members of this family are always at loggerheads with each other. But when disease invades the dwelling or the bailiff arrives to sue for debts, the family forthwith becomes united. All combine to stem the tide of adversity which has set against them. The trouble with Japan's Cabinets in the past has been want of union. Only in the presence of common foes can men of diverse views on a variety of questions act in harmony. A turbulent Diet, the clamour of aspirants for political power, such are the agencies by which the disintegration to which all Cabinets are liable may be avoided. Thus it proves to governments as to individuals that troubles are blessings in disguise.

THE KANAGAWA SILK GUILD.

We stated in a recent issue that general rules for the control of the silk-dealers in Kanagawa Prefecture had been issued by the Local Authorities. The rules provide that merchants and brokers desiring to engage in the silk trade with foreigners, must form themselves into a Guild, and be guided in their transactions by regulations which they are required to frame for themselves, so far as concerns the organization of the Guild, the nature of the security deposited by members, and the method of punishing violations of contracts. A certificate of membership is furnished, and this is to be regarded as a sort of business passport, being always carried by members when engaging in operations of trade. The rules are evidently framed with the view, amongst other things, of effecting improvements in the manner of preparing parcels of silk, for it is provided that:

- (1). No bale, or smaller parcel, of silk in which good and bad qualities are mixed, shall be sold; unless the difference of classification is distinctly stated.
- (2). No silk which has been rendered heavier by dishonest means shall be sold.
- (3). Neither *sage-sukuri*, *shimada sukuri*, nor *ori-kayeshi*, the skeins of which have been re-twisted or re-bundled in the guise of re-reels, without having undergone the process of re-reeling, shall not be sold.
- (4). No silk shall be sold which does not bear a trademark duly registered in the Department for Agriculture and Commerce, unless it carries a stamp showing the name and residence of the sericulturist or agent.
- (5). Cocoons of different seasons or different colours (yellow and white), mixed together, shall not be sold.
- (6). Silk-worm's eggs affixed to cards with starch, instead of being deposited there by the moth itself, shall not be sold.

A small fine—from 20 *sen* to 1.95 *yen*—or minor confinement for from one to ten days is provided against infraction of any of the above rules.

To these rules the silk merchants of Yokohama take very strong exception. They have held a meeting and raised a number of questions. In the first place they claim that a perplexing and inconvenient distinction is now made between silk-dealers and sericulturists. In the regulations issued six years ago, provisions applying to both classes were embodied, and the query now is whether the old regulations become invalid on the promulgation of the new, or whether both are to be in operation together. Further, they point out that Yokohama is merely a mart for the sale of silk, not a place for its manufacture. The dealers who handle the staple at this port cannot possibly provide against abuses on the part of the sericulturists in the interior. Are the regulations intended to interdict all transactions in silk which does not satisfy the prescribed conditions, even though buyers are fully cognizant of the fact and willing nevertheless to do business? According to the custom of the trade at present,

foreign buyers inspect silk before purchasing it. Suppose that mixed parcels come from the interior, is it interdicted to submit them for inspection even though their condition be duly notified? Again, with regard to cocoons of different seasons or colours, how is the rule to be observed in the case of *fama-mayu* and *degara-mayu*, to which no such interdiction has any useful or practicable application? The provisions of the third rule quoted above are declared to be incomprehensible, and the framers of the regulations are asked for a clearer definition. Another objection made has reference to the affixing of trade-marks. At present neither these marks nor the name and address of the manufacturer or broker are attached, so that the provision introduces a wholly new system, and the Yokohama folks claim that a special rule of this kind applicable to one market only will amount to unfair discrimination. Other difficulties also are raised, but we need not enter into them in detail, since they refer chiefly to the organization of the Guild. What we have noted suffices to show that the regulations are received most unfavourably, and it certainly seems as though grounds for objection existed.

ANOTHER TALL STORY.

THE *Yomiuri Shimbun*'s power of invention has been developed to such an extravagant degree that it becomes a nice question whether the police should not interfere to check the flow of its demoralizing mendacity. Recently it told us of a man who killed his wife in order that he might roast a portion of her liver to give as eye-medicine to his mother, and now it recounts an equally monstrous yarn about a phthisical patient who believed that roasted baby would cure the degeneration of his lung tissue. In each case the names and localities of the parties concerned are duly given, and every detail capable of enhancing the verisimilitude of the story is added. But it is easy to see that the same romancer is responsible for both falsehoods. In the case of the filial assassin, the man was represented as a particularly pious and single-minded person, and before he conceived the notion of killing himself, his child, or his wife in order to obtain the desired medicine, he is described as having visited various druggists in search of a modicum of human liver. So, too, the consumptive individual becomes, in the hands of the same mendacious and clumsy chronicler, a simple, credulous kind of man, who, having been told that the roasted flesh of a fellow-mortal would restore him to health, went to all the apothecaries in the district asking for that delicacy, and even tried to strike a bargain with households which death had just visited. Finally, he found an *eucinte* widow in desperately penurious circumstances, who, seeing no chance of rearing her child, agreed to kill it immediately after its birth, and to hand the body to the lunatic Ugo Tokusaburo. This being done, Tokusaburo is made to carry it to the hills and bake it in a jar, but after all his pains the viand is too revolting, and he ends by falling, phthisis and all, into the hands of the police. If the *Yomiuri Shimbun* must invent, if its inevitable destiny is to be a propagator of lies, why not give us some pretty, exciting, or artistic fable instead of these revolting romances, the products of a diseased, inhuman and illiterate mind?

A MANIA IN NEW YORK.

In reference to the Japanese Decorative mania in New York, an American contemporary publishes this:—

“The Japanese decorative craze is rampant among the ladies of New York, said G. H. Hanover, a dealer in art pottery in Gotham, at the Tremont yesterday. ‘There are several ladies in New York who have collections designed and painted by themselves. There is one vase modelled after a Japanese creation that has attracted a great deal of attention, and to my way of thinking is a more artistic piece of work than the original. It is not for sale, and I doubt if the lady who made it could be induced to part with it for any price. Her husband is very proud of her skill, and although the parlour of their home is so cluttered with jars, vases, etc., that the room is useless except for show, he has no word of complaint. ‘There are potteries over New Jersey which do a

rushing business selling material to ladies who have contracted the pottery craze. After the jugs are shaped they are brought to the pottery to be baked, and it would do you good to see the smiling and happy faces of the fair artists when their work comes out of the oven without a blemish.

“The decoration of pottery is by no means the only artistic part of the business, and the lady who can model something new is envied by her associates. I have a customer in Brooklyn who could make several thousand dollars a year if she cared to sell the jugs and vases she creates. I tell you they are fine examples of the art. But she has plenty of funds and does the work for love of it.

“Not long ago she contributed a number of allegorical pieces to a church fair and they sold for a sum almost sufficient to pay the expenses of the undertaking.”

CONTRACTS FOR STEEL HOOPS.

We published, some time ago, the intelligence that Messrs. Vickers & Co. had obtained a contract for supplying steel hoops to the Arsenal in Osaka. Previously orders of this character had gone to Germany, British firms being apparently unable, or unwilling, to produce the hoops at the prices for which they are manufactured in Germany. We now learn that the last contract for hoops has gone to another English house, Messrs. Firth and Sons of Sheffield, Messrs. Firth and Sons enjoy the reputation of being among the best manufacturers of steel in Great Britain. It was they who obtained the contract for supplying sword-bayonets to replace the defective weapons about which so much scandal occurred a few years ago in England. The fact that Messrs. Firth and Sons have beaten Messrs. Vickers and Co., and the latter beat the Germans, seems to show that the era of German success in this kind of business is at an end for the present in Japan. The last order for hoops amounts to about a hundred and thirty thousand dollars.

THE PRINTING AND PUBLISHING COMPANY.

YESTERDAY afternoon at 4 o'clock the Yokohama Printing and Publishing Company held the extraordinary meeting which had been advertised for some time. Newspaper reporters were not allowed to be present, as was very natural, for the Company is in no wise bound to lay its affairs before rival journals which have shown a disposition to criticise it in a very biased manner. We shall therefore respect this desire for privacy by limiting ourselves to a statement that the proposal to go into voluntary liquidation was adopted; that a liquidator was appointed, and that anticipations as to the demise of the *Japan Gazette* are not likely to be realized.

A MISSTATEMENT.

THE *Kobe Herald* of Monday last has a paragraph on the new British Ministry commencing thus:—“The East is indebted to Reuter, and the foreign press of Japan to the *Mail*—the foreign press of this country being precluded from participating in the monopoly which gives the *Mail* one of its admitted sources of strength”—&c., &c. Now no one knows better than the writer of the above that it is a misstatement. Baron Reuter's Agent was in Kobe during the present year, and the editor of the *Kobe Herald* was distinctly told in a conversation with the Agent that he could have the telegrams, but when the cost was mentioned he had no more to say on the subject.

THE AINU OF JAPAN.

FROM that most excellent periodical *The National Observer*, we re-produce elsewhere a review of Mr. Batchelor's book “The Ainu of Japan.” The review, already deserving of notice because of its bright and clever style, gains additional interest from the fact that its writer is a man who during the three years of his residence in Tokyo, won friends more numerous and earnest than have fallen to the lot of any other sojourner in this land of peace and sunshine.

NAVAL FUNERAL.

A NAVAL funeral took place on Wednesday at four o'clock for the interment of the remains of Lieutenant Rosanoff, a Russian officer, who died on Tuesday at the German Hospital. The function was largely attended, and included a

firing party of 100 men from the Austrian corvette *Fasana*, under the command of Lieutenant Baron Weizlar. The band of the U.S.S. *Marion* played the Russian National Anthem, and after the coffin, which was covered with the Russian flag, had been lowered into the grave, the whole party filed past. There were present the Captains of the *Fasana* and *Rattler*, and other officers, the Russian Consul, the Austrian Consul, an official from the Russian Legation, a party of American officers, and others. The deceased was Chief Navigating Officer of the *Vitias*, and had the rank of Commander.

THE TOKYO CHAMBER OF COMMERCE.

The members of the Tokyo Chamber of Commerce are divided into two parties, and their disagreement often makes it impossible for them to obtain a quorum for their usual meetings. However, by the energy of Mr. Shibusawa, President, they have now become much more friendly. Still the wholesale sugar and cotton dealers are not yet appeased. They propose to form a new association under the name of the *Doyu-kai*. Their anger is not directed against the other members of the Chamber *en masse*, but only against the two, Messrs. Masuda, who, they vaguely allege, disregard the resolution of the *Shodan-kai*, and are thereby slighting its members. (The *Shodan-kai* is an association within the Chamber, formed by the "practical men.") The withdrawal of these malcontents will restore harmony, and enable the Chamber to proceed with various business which has long been suspended. Many important subjects await discussion. For example, several members were formerly defaulters as to subscriptions to defray the expenditure of the Chamber. This unsatisfactory state of affairs has been gradually improved, until some 12 or 13 only remain without paying, and the aggregate of their debt does not exceed 40 *yen*. Of course such a small sum does not inconvenience the Chamber, but, as matter of principle, the defaulters must be made pay. Accordingly, at a meeting held on the 26th, a resolution was passed, and in accordance with the Art. 19 sec. 2 of the Regulations relating to the Chamber of Commerce, it was determined to proceed against the debtors. Again, the Public Works Department in the Chamber is under the control of the Department of Home Affairs, and its members advise on matters relating to the construction and repair of rivers, roads, and harbours at the request of the Minister of State for Home Affairs. But as these works have an important bearing on the general prosperity of the country, the Chamber of Commerce intends to present a petition requesting that the members of this particular section shall be elected from the various Chambers of Commerce throughout this empire. The proposal to present a petition in that sense will be discussed in a day or two. Another point relates to railways construction. The Chamber approves the request of the Chambers in Sendai and in Kanagawa, that members of the various Chambers be allowed to attend the Railway Councils meeting, and will present a representation for that purpose to the Minister of Communications. Finally, a question relating to Customs Tariff was propounded last winter, but has not been answered. Before replying, the Chamber desired to ascertain whether the rates adopted by Mr. Kurihara Ryoichi in the Bill submitted by him to the House of Representatives, were in accord with those of European countries, but though several members have been engaged in this investigation, they have not yet reached a result. The Chamber, therefore, has plenty of business to transact as soon as it can persuade itself to go to work quietly and harmoniously. We take these particulars from the *Nichi Nichi Shimbun*.

IRON INLAID WITH GOLD AND SILVER.

We read in the vernacular press that the faculty of the Fine Arts School at Ueno contemplate the addition of another section to the instruction department. Among the art products for which Japan is famous, objects made of iron inlaid with gold and silver are conspicuous.

During the past four centuries examples of this kind of work have been produced so perfect in every respect that they defy comparison with the similar work of any other nation. In China, especially during the *Shun-tieh* era (1426-1436) of the *Ming* dynasty, inlaying of iron with gold was carried to a point of high excellence. Many exquisite specimens attributed to that era and bearing its mark still survive, though it seems probable that the majority of them belong to a later period. But the Chinese work falls far below the Japanese in beauty of decorative design, and is inferior also in excellence of handicraft. Moreover, this is not an art which shows any signs of decay in Japan. Numerous objects of the very highest finish and beauty have been produced during the past two decades in the ateliers of Tokyo, Kaga, and Kyoto. There are two methods of inlaying. The first is called *hon-sogan* (true inlaying) or *hira-sogan* (flat inlaying); the second *nunome-sogan* (cloth-mesh inlaying). In the former, the pattern is cut into the iron, the section of the channels having the shape of the vertical section of a truncated cone, being thus broader at the bottom than at the top. Into these channels gold or silver wire is hammered until it completely fills the groove, thus becoming immovably imbedded in the metal. In this process durability is obtained at the sacrifice of great cost, for not only is immense labour involved in chiselling out such channels, but the result is that more gold is hidden in the iron than the surface appearance indicates. On the other hand, the work is everlasting. Until the iron oxidizes and crumbles away, the inlaid design remains as clear as on the day when it left the artists' hands. The *Nunome* process is less troublesome. The channels of the pattern are not cut with widened bases but with vertical sides, and instead of filling them with gold wire, thick gold foil is laid over the surface and beaten until it enters firmly into every part of the design. This kind of work has been carried to a pitch of wonderful dexterity and beauty by Kajima Ippu whose atelier is in the Kommei suburb of Tokyo. His masterpieces may possibly be less durable than the *Hira-sogan chefs-d'œuvre* of Kyoto, but since the life of each alike may be measured by centuries, the distinction between them in this respect is not very practical. It is claimed, however, that owing to the great favour which Japanese inlaid iron has found with foreign collectors, inferior specimens are now produced to the probable detriment and discredit of the whole industry. Hence the faculty of the Art School propose to organize a section for the improvement of this class of work, and for the education of experts.

"THE VOLCANOES OF JAPAN."

GRADUALLY Japan, the real Japan, is being transferred to paper. Travellers and temporary sojourners have done their part cleverly and sympathetically in describing the superficial traits of the people, the beauty of their manners and of their environment, their progressive efforts to be strong among the nations of the earth, and the delights of their art. Deeper still men like Satow, Aston, Chamberlain, Gubbins, Batchelor, Conder, Mason and so forth—to mention our own nationality only—have dug to the depths of the country's legends, history, customs, and administrative systems, so that the printing press seems to have brought within our reach about as much as we have any need or inducement to know. But the operation to which we particularly refer here is that of taking portraits of the country. Old residents can recall the days when Beato's photographic studio was an institution of the Settlement. Every Yokohamite bought an album there, and every globe-trotter considered it a duty to carry away some of the excellent reproductions of manners, customs, and costumes for which the studio was famous. Those were the days of easy money getting. It was something then to be a pioneer of commerce. The position brought substantial rewards, for the pioneers had the field practically to themselves, and the virgin innocence of the "native" made it a simple process to exploit him. He, too, was content. Rewards far beyond his most elastic conception of the possi-

bilities of industry, came to him in abundance. Everybody, in short, was happy, and all things boomed. More than one fortune was made in that photographic studio. What matter if the readily earned dollars were as readily dissipated? That was one of the pleasant features of the time. There are no pioneers of commerce now-a-days, but only humble followers. Neither are there any merchant princes but only merchant slaves. The Beato photographs have become curiosities rather than treasures. Their possessors value them for the sake of the associations they recall far more than for the sake of their service as pictures. Incomparably more beautiful and lasting efforts of photographic skill have now supplanted them, and it is to a combination of the leaders of the photographic art in Japan that we owe the inception of a series of albums which, if the programme contemplated be fully carried out, will enable the public to see many of the country's most interesting and lovely features without visiting it. We have already written of Mr. Ogawa's albums of costumes, flowers, and so forth, and noted his association with men like Professor Milne and Mr. Murdoch, whose work as writers converts books which would otherwise be mere collections of pictures into valuable literary records. To the same coterie of photographic and literary artists belongs Professor Burton, now a world-wide celebrity as a scientific photographer. How much Mr. Ogawa has gained by contract with Professor Burton, or *vice versa*, we, not being experts, cannot pretend to judge. But of the admirable character of their combined work we can speak with confidence. The great earthquake of 1891 seems to have brought Professors Milne and Burton into closer relations with Mr. Ogawa, for the first public association of the three was evidenced in the earthquake album, which, we may mention *en passant*, has been a great success, no less than 1,500 copies having been sold. The same collaborators have now produced the first volume of a series of Albums entitled "The Volcanoes of Japan." It is uncertain to what length the series is to extend. The authors prudently decided that the number of parts published is to "depend on the encouragement they receive, and partly on the number of photographs they are able to obtain in the summer of 1892." Naturally their opening volume is devoted to Fujiyama. It contains ten very beautiful and striking views of the peerless mountain. Probably no finer achievements of the camera have ever appeared, excepting, of course, special pictures such as Mr. Ogawa himself contributed to recent exhibitions. A reproduction of one of these unique masterpieces is given in Plate III. It is a view of "Fuji from the West." Vividly do we recall this picture as it hung in the Industrial Exhibition of 1890, a noble photograph, huge as to dimensions and perfect as to tone and details. It loses something in the process of reduction, but still makes an admirable picture. In truth every one of the ten plates is an object of delight. One only disappoints us a little. It is the view of Fuji from the top of the Otome Pass. No one who from Otome-toge has gazed at the inimitable sweep of the graceful mountain can ever forget the loveliness of the scene. But what makes this prospect so exquisite is the middle-distance. As in the case of the view from the Yamanaka way-side plateau, so in that from the summit of the Otome gorge, Fuji raises its beautiful head and shoulders amid seemingly boundless reaches of the softest and most voluptuous scenery imaginable—gently undulating stretches of emerald green plains, dotted with forests of delicate contour, traversed by streams of silver, and brooded over by the dreamiest of atmospheres. Never was there an environment better adapted to its crowning feature. From such surroundings only a Fuji could rise. Ruggedness, sterility, jaggedness of peak or frown of precipice would do violence to the whole scheme of the prospect. Take away the middle distance, however, and the celebrated Otome-toge view is marred almost completely. Unfortunately the photograph has taken it away. From a black foreground of fallen trees, dilapidated huts and

Original from

confused brushwood, we look across to a Fuji rising dim, majestice, cold, and solitary; a Fuji, in short, with nothing but its size and the catenary of its slopes to recommend it. But is it within the capacity of photographic art to reproduce that never-to-be-forgotten view from the Olome Pass? Hereafter, perhaps, but not yet. Meanwhile we have compensations. The view of the crater; the wonderful cloud scene in Plate II.; the lovely combination of lake, foliage, forest, peak, shadow, and sunlight in Plate IX.—these and other delightful pictures make the album a treasure. If we speak first of the pictures, it is merely because we follow the natural course of persons examining such a work. But there is even more interest and certainly more instruction in the letter press by Professors Milne and Burton. The authors commence by a brief summary of Japanese volcanic facts. They tell us of exactly a hundred volcanoes in Japan, among them being fifty above which "a flag of steam" floats constantly to proclaim the activity of the internal fires, while thirty-nine "by their graceful curvature, and by their symmetry of form, inspire painters and poets, and teach those who investigate the meaning of those outlines, lessons of scientific and utilitarian value." As to Fuji itself, its history, the legends connected with it, and the facts that science has revealed about it, the authors have much to tell that is instructive and interesting. (Where, by the way, do they obtain the wonderful name *Slo-ana* for *Hitoana*? Apparently they are ignorant of the etymology of the word.) In fact, their account, combined with the accompanying photographs, makes the mountain a more familiar acquaintance than ever, and supplies all the information we are ever likely to need or to obtain about Fujiyama. It is to be hoped that the authors will obtain sufficient encouragement to continue and complete the series of which this volume makes such an excellent commencement.

EARTHQUAKE RELIEF.

A sum of 16,150 marks and 70 pf. collected by Mr. Carl Wolfson, Honorary Consul in Berlin, and Baron Siebold, being proceeds of an exhibition of fine arts opened for the relief of sufferers in the Aichi and Gifu Prefectures, has been handed over to the Japan Red-cross Hospital through the Foreign Office. The above sum on conversion, realised 5,214.06 yen, which was transmitted to the Governors of those prefectures. Recently the following report was sent to the Foreign Office to be communicated to the promoters in Germany:—

Received a sum of.....	5,214.06 yen
From Mr. Wolfson.....	2,340.86 yen
From Baron Siebold.....	2,873.20 yen

Total 5,214.06

Which has been disbursed as follows:—

To families of 7392 deceased persons	985.575 yen
To 19,102 wounded persons	1,738.399 yen
To 75,879 sufferers	2,493.086 yen

Total 5,214.060 yen

THE EARL OF ORKNEY'S MARRIAGE.

THE Earl of Onslow, who recently spent a short time in Japan on his way home from his Governorship in New Zealand, acted as best man at the wedding of the Earl of Orkney with Miss Connie Gilchrist. The Duke of Bedford gave the bride away, and the gossip-loving public have not failed to make mischief out of the affair, sneering, in the first place, at the Earl of Orkney for marrying an actress, and very broadly hinting, in the second, that the Duke of Beaufort, in giving away the lady, got rid of a friend with whom his relations had not been of the purest. The fact is, however, that the Duke of Beaufort is sixty-eight years of age and has a large family. His friendship with Miss Gilchrist seems to have been of a perfectly platonic character. But it is typical of the times that friendships between persons of different sexes are invariably construed in the worst sense. In this as in other matters the old saying is verified that none are so ready to attribute evil motives to others as those whose own conduct is most swayed by such motives. The Earl of Orkney is only 25 years of age. He has been

for years on terms of the closest intimacy with the Duke of Beaufort. The Duke, for his part, has always been fond of histrionic celebrities. One of his cronies was the late Edward Sothorn, and it is stated that the two planned and carried out many a practical joke together.

GOLD AND SILVER RATIOS.

THE *Official Gazette* gives the following table of comparative values of gold and silver coins and of the pound sterling for the week ended the 20th inst. as derived from the returns of the Bank of Japan and the Yokohama Specie Bank:—

Day	Gold Coin. (Per yen 100) Silver Yen.	Pound Sterling (Per £1) Silver Yen.
15th.....	143.500	A.M. 7.3317 P.M. 7.3317
16th.....	144.200	A.M. 7.3848 P.M. 7.3848
17th.....	143.500	A.M. 7.3038 P.M. 7.3038
18th.....	144.000	A.M. 7.3339 P.M. 7.3339
19th.....	143.000	A.M. 7.3828 P.M. 7.3828
20th.....	143.500	A.M. 7.3848 P.M. 7.3848
Averages.....	143.200	P.M. 7.3593

The above averages show for gold coin an increase in value of yen 0.067 per cent., and for the pound sterling a decrease of yen 0.0258 as compared with the previous week.

COUNT ITO AND HIS POLICY.

THE *Fuyu* says that Count Ito's habit has always been to declare his policy first, and then follow it. Hence his silence since he formed the present Cabinet has been construed as an evidence that he appreciates the truth of the saying "deeds are better than words." But our Radical contemporary denies the truth of this interpretation. It avers that Count Ito originally intended to deliver a long lecture on his policy, and that he hoped to receive congratulations from the press, and to be declared by the public truly the Premier of a Constitutional Administration. His project was opposed, however, by other members of the Cabinet, who declared that it is far better for the nation to eat a well cooked dinner than to see a magnificent menu. This is a cleverly conceived story, but we don't believe a word of it. Count Ito would not be the best trusted man in Japan to-day did he not know the value of golden silence when speech can only furnish grounds for hostile criticism.

OFFICIAL CHANGES.

THE position of President of the Supreme Court, vacated by the resignation of Judge Kojima Iken, has been given to Judge Namura Taizo, hitherto President of the Civil Division of that Court. Another important change, which will doubtless be announced officially to-day or to-morrow, is the resignation of Major-General Okazawa, Vice-Minister of State for War, and the appointment to that post of Major-General Kodama Kentaro.

THOMAS PAINE.

A CORRESPONDENT signing himself "Optimist" has addressed us on the subject of Thomas Paine, apparently in ignorance of our rule not to publish letters from the same writer on the same subject over different *noms-de-plume*. If over correspondent authorizes us to use the signature previously employed by him, his letter shall appear.

YOKOHAMA BENEVOLENCE.

CAPTAIN ARMSTRONG, on whose behalf we published an appeal recently when giving an account of the series of misfortunes that culminated in his being wrecked in the *North American*, now informs us that the generous people of Yokohama have subscribed the handsome sum of \$688, the larger portion of which will be sent to his family for their benefit till he can once more get an appointment.

THE CHANGES IN THE "NIPPON YUSEN KAISHA."

We observe that several lists have been published giving the names of the foreign employes of the Nippon Yusen Kaisha whose services are dispensed with. All these lists are more or less

erroneous, and all contain the same mistaken statement that Lieut. T. H. James, R.N., (retired), Navigating Inspector, is among the number of those to leave. There has been no idea whatever, we believe, of dispensing with Lieut. James' services.

THE YOKOHAMA-YOKOSUKA RAILWAY.

THE News Agency reports that from Sunday the 21st instant until further orders, a special train will leave Yokosuka for Yokohama every Sunday at 9 a.m. the times of departure for the stations *en route* being:—Kamakura 9.26 a.m., Ofune 9.45 a.m., and Totsuka 10.05 a.m. The train reaches Yokohama at 10.30 a.m.

COUNT ITO'S FATHER.

WE regret to learn that Count Ito's father is seriously ill, that this Excellency was obliged to proceed to Odawara on the afternoon of the 24th, where he still remains. The great age of the patient makes his illness a subject for considerable uneasiness.

BURNING WRECK.

THE *Mtike Maru*, which arrived here on Monday from Kobe, reports sighting the burning wreck of a small wooden steamer about 22 miles E.N.E. of Oshima. So far as could be seen, nothing was left of the vessel but her stem and stern-post and the machinery.

VICE-MINISTER FOR JUSTICE.

THE new Vice-Minister for Justice is to be Mr. Kyouza Keizo, hitherto President of the Police Bureau in the Home Department. The appointment was pretty generally anticipated.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

Changes of *personnel* are going on in the minor official positions. Of these changes, those effected in the Department of Justice and in Prefectural Governments have attracted the greatest amount of journalistic attention. The measures have been upon the whole very favourably received by the vernacular press. Thus far the new Cabinet's position has been greatly strengthened by the manner in which the above mentioned changes have been carried out, but no body knows what turn the popular whim may next take.

The *Nichi Nichi Shimbun*, writing on the subject of the changes in the Governors of various localities, observes that, if these changes had been carried out in obedience to party politicians' clamour about the punishment of local authorities who interfered in the last general elections, it could not approve the step taken by the new Minister of Home Affairs. It is inclined to believe, however, that the question of alleged interference in elections is not the basis of the changes, but that they are effected on the principle of removing Governors who have shown themselves unfit for their positions on account either of administrative blunders or incapacity. If, as it appears, such has been the aim of Count Inouye, the *Nichi Nichi* is prepared to endorse his action with all heartiness.

The Opposition journals, however, refuse to view the matter in the above light. They take it for granted that the official changes in question have been carried out solely in consequence of the pernicious interference attempted by the disgraced Governors at the time of the last general elections. Looking at the matter from that standpoint, the organs of the Radical and Progressionist parties heartily welcome the decisive step taken by the new Minister of Home Affairs, so far as the changes thus far effected are concerned. They are agreed in regarding the new departure adopted by the Ministry as an indication of the latter's acceptance of the Opposition platform. Even the *Hochi Shimbun*, which has of late been the most consistent and uncompromising of the Government's assail-

Original from

ants, goes so far as to avow that the new Cabinet, having begun to remedy evils in the Government, "is far superior to its predecessor." As to the disposal of the Governors who have been placed on the Retired List, the *Kokumin Shimbun* warns the Government against the suicidal policy of conciliating them by the gift of seats in the House of Peers. It seems to be feared by the vernacular press that the Cabinet may take some such step, as was done in the case of Mr. Yasuba, late Governor of Fukuoka. Viscount Tani and some other members of the Upper House are reported to have made strong representations to Count Ito on the impropriety of admitting into their House officials who have disgraced the trust placed in them by the Emperor. The *Kokumin* discusses the question merely from the standpoint of the interest of the Cabinet. The most uncompromising opponents of the Government in the coming session of the Diet will be, in our contemporary's opinion, not the present Opposition but the National Unionists; and as the Governors who interfered with elections are sure to sympathize with their protégés of February last, the appointment of the former to the House of Peers would be tantamount to the creation of so many parliamentary enemies of the Ministry.

The Radical and Progressionist organs, though undoubtedly pleased with these official changes, cannot think that Count Inouye will stop there. "The arrows he has thus far shot have all hit the mark," says the *Yiyu*, but then, like all other organs of the Opposition, the Radical Journal proceeds to claim that there remain untouched many Governors who actively meddled with the elections, and who ought not to be suffered to escape scathless. Among the functionaries whose removal is demanded by the Opposition organs, may be mentioned Governor Matsudaira of Kumamoto, Governor Chisaka of Okayama, Governor Funakoshi of Miyagi, Governor Sô of Hyogo, and Police Inspector-General Sonoda.

The resignations of Mr. Miyoshi Vice-Minister of Justice, Mr. Matsuoka Kôki, Public Prosecutor General and Mr. Kojima, President of the Court of Cassation, are also regarded with satisfaction by the whole press of the capital. It had been from the first admitted that the factious contentions in the Judiciary could not be stopped unless the chiefs of the rival factions left the service altogether. So far as the Gambling Case is concerned, the accused Judges were acquitted by the Disciplinary Court on the ground of absence of evidence. But in consideration of the above mentioned faction feuds, as well as of the supposed moral obligation of the parties concerned in the case, the vernacular papers have from time to time called upon both Judge Kojima and Mr. Matsuoka to resign their positions. Hitherto all the efforts of Count Yamada and Viscount Tanaka proved ineffectual to induce them to send in their resignations, and under these circumstances, Count Yamagata is the object of universal journalistic praise because of his success in effecting what men like Count Yamada and Viscount Tanaka failed to accomplish. Mr. Miyoshi, though not held directly responsible for the institution of the gambling case, is still regarded as being indirectly connected with the affair: and his resignation is considered to be only proper and natural, though he is not the subject of such uncompromising criticism as Mr. Matsuoka. The removal of these leaders of antagonistic factions has effectually broken up the long continued rivalry between their followers. Count Yamagata's appointment to the portfolio of Justice was at first sneered at by the Opposition journals, but they now acknowledge the propriety of the choice and observe that the welcome reform in the Judiciary could not have been entrusted to better hands. The Count is earnestly recommended to do the work thoroughly and completely.

The *Kokkai* thinks that the evil of factious contention is not confined to the Department of Justice, but exists in a more or less degree in the Department of Home Affairs, of War, of

Communications, of Education, and so forth. The evil has been effectually remedied so far as the Departments of Justice and of Home Affairs are concerned. The Ministers of other Departments are recommended to avail themselves of the present unique opportunity to abolish for ever an abuse which has incalculably impeded the smooth and expeditious conduct of business in all branches of the Administration. Our contemporary, in another article, observes that the reforms thus far accomplished in the two Departments of Justice and Home Affairs, welcome as they are, must be considered of secondary importance, when compared with the various national problems awaiting solution. It seems to entertain some doubt as to the ability of Count Ito to approach the solution of those problems with decision and firmness equal to that just manifested by two of his colleagues. Not questioning that the Count has many excellent points, since otherwise he could not exercise such vast influence in the political world, the *Kokkai* is nevertheless constrained to say that his greatest weakness consists in want of courage. He likes to fill the public with large expectations which he very often fails to fulfil. However, our contemporary is not without hope that the Count, considering the large expectations raised by his return to power, may strain his great powers to the utmost to justify the high estimate in which he is held by all sections of the nation.

The question of the Codes is of course a subject of anxious discussion in the vernacular press. It had been at first feared by certain observers that the result of the postponement of the operation of the Codes would be to seal their destiny for ever, the presumption being that the real aim of the opponents of the Codes was not merely to postpone their operation, but to defer it indefinitely. Very possibly a few of the barristers who so actively opposed the putting of the Codes into operation at the appointed date, may have been misled by excessive admiration for everything English into objecting to codification itself. But the whole tenor of journalistic writings on the subject does not suggest any suspicion that the advocates of postponement were in any way influenced by a desire to see codification abandoned for ever. The *Nippon*, for instance, though one of the strongest supporters of postponement, acknowledges the necessity of having well arranged codes, and professes to be much puzzled by the apparent indecision of the Cabinet as to the disposal of this problem. Evidently, the Ministers of State are anxious to solve the question in a way not prejudicial to the cause of Treaty Revision. If such be the reason of their delay in coming to a decision, our contemporary bids them be at ease. For under any circumstances, even supposing that revision could be speedily effected, there would be an interval of three or four years before the new order of things could go into effect. Is not an interval of three or four years sufficient for the purpose of revising the Codes? The *Nippon* is also informed that the new Ministers of State are disposed to shape their conduct in accordance with public opinion. If such be really their attitude, they may proceed to the postponement of the Codes without any misgiving, as the Bill for postponement was passed in both Houses of the Diet by a large majority composed of men of all parties. The *Kokumin Shimbun* goes still further and advises the Cabinet to set itself at once to the task of revising the Codes. Should their revision be deferred the present Cabinet may fall before anything has been done to put the Codes into a shape ready for operation, and it is not inconceivable that the next Cabinet will be entirely opposed to codification.

The question of reassessment of the taxable value of land is again on the tapis. It is reported by certain papers that the new Ministry is inclined, by way of compromise with the Opposition, to lay before the Diet a bill for the reassessment of the taxable value of land, a step which seems absurd on the face of it.

Meanwhile, a section of the members of the House of Representatives is making vigorous efforts for the attainment of this reform. They have formed themselves into an association, and issued a document containing the engagements to which they have pledged themselves. They declare that, in order to accomplish their object, they are determined "to cut down as much as possible all appropriations for undertakings of minor importance and to make large reductions in official salaries, office expenses, allowances for repairs," etc. The *Nichi Nichi Shimbun* strongly criticizes the attitude taken by these Representatives. It does not think that the present system of determining the taxable value of land is in every respect fair and equitable, but it suggests that an attempt to make a re-assessment is likely to do more harm than good. All the conditions that directly affect the price of rice and, through it, the price of land, should be taken into consideration. But the association of Representatives apparently pays little regard to these circumstances, their method of re-assessment being crude and arbitrary. The *Nichi Nichi* cautions them against sacrificing the interest of the country to the attainment of a reform of doubtful wisdom.

The vernacular press, without distinction of party, manifests the warmest sympathy with the Grand Old Man on his return to power at such an advanced age. Gladstone and Bismarck are in this country as well known as any Japanese statesmen. Gladstone's liberality and open-handedness in dealing with foreign countries, as well as his earnest sincerity in his private and public conduct, seem to appeal strongly to the somewhat romantic minds of this people. His return to power has been watched by the Tokyo press with keen interest. The metropolitan journals, however, regret to observe that the position of his Cabinet is not at all secure. As to Home Rule, the Japanese papers are all agreed that the step contemplated by Mr. Gladstone is demanded by justice and humanity, and that the result of granting the privilege of self-government to the Irish would be advantageous to England. The majority of these journals, however, think it extremely improbable that Home Rule will become an accomplished fact in the lifetime of the present Cabinet. A few of them, however, the *Fiji Shimpô* and the *Choya Shimbun*, take a more hopeful view of the case. They are aware of the immense difficulties of Mr. Gladstone's position, but they have strong faith in his wonderful ability and pluck, and think that he may yet be able to pull through and attain the last object of his political career.

The Religious Conference to be held at Chicago some time during the coming year, is attracting considerable attention among the Japanese. The *Choya Shimbun* is very glad that such a conference is to take place, for it may lead to important results in the way of diminishing the pernicious prejudices at present existing between nations of different race and religion. So far as concerns the establishment of religious truth, our contemporary does not seem to expect much from the conference. Indeed the fact that such a conference has been deemed desirable indicates a gradual loss of self confidence among religious men of the West. The *Choya* recommends Japanese Buddhists to have their religion represented at the conference as strongly as possible.

The *Fiji Shimpô* again takes up the Korean question. The policy defined in the frank and interesting article we reproduced some time ago from our contemporary's columns, has since been more than once explained away to mean something very much milder and more commonplace than what it originally seemed to signify. But so long as our contemporary's general arguments remain unchanged, we may safely read its later utterances by the light of its first article. The present article dwells on the necessity of Japan's acting singly without inviting any co-operation of other Powers, not even China.

DECORATIVE DESIGNS.

WE find a curious paragraph in the *Kokkai* about decorative designs. "Anxious," writes our contemporary, "to exhibit some new designs at the Chicago Exhibition and thereby win applause, Japanese artists are devoting themselves to carving and drawing dragons, phoenixes, and other strange creatures which they think likely to attract popular attention. Considered solely from the point of view of glyptic or graphic capacity, these creations may be very praiseworthy, but they violate the principles of fine art, since such animals or birds have no existence in nature. The Judges at the Exhibition will always estimate the merit of a work of sculpture or painting by the accuracy with which it depicts the real, and since no model exists for a dragon or a phoenix, a representation of them can never be counted of much merit in foreign countries. The Government ought to exercise care with respect to this point." The *Kokkai* puts these words into the mouth of an exhibitor, but apparently endorses them itself. They inculcate, in our opinion, a very erroneous doctrine. Such a creed, if followed, would lead to the exclusion of the imaginative element altogether from the arts. In the West as well as in the East, mythical beings and animals have always played an important part in decorative art. Conceive what European artists would say were they told to exclude altogether from their portfolio of motives the satyrs, the fauns, the demons, the angels, the dragons, and all the other creations of fancy which have served such charming purposes in their hands. The *Kokkai's* principle, if pushed to its logical limit, would eliminate the subjective element altogether from the field of art, and reduce the artist to a mere photographer. In China, it is true, the dragon has been used *ad nauseum*. The artists of mediæval days erred much less than their successors in this respect. They showed consummate skill in conventionalizing the dragon, so that often the monster, though barely identifiable with his grim original, becomes not the least pleasing feature of the metal work in which he appears. But in later days the sterile and conservative genius of the decorator suggested no such modifications. He took the dragon as tradition had depicted it, and thrust it into fields where the awe that it was originally intended to inspire became entirely incongruous with its circumstances. A celestial dragon to guard and support the palace of the gods; a benevolent dragon that makes the rain fall and the wind blow for human benefit; an earthly dragon that defines and circumscribes the courses of rivers and streams; and a dragon, guardian of hidden treasures, that watches over the wealth which nature has stored away and concealed from mortal eyes—all these are creatures occupying appointed places in the Chinese mythology. A mon-

ster discharging such extensive functions offered wide opportunity for displays of the sculptor's and painter's imaginative faculty. Its component parts were soon fixed—a camel's head, a stag's antlers, a demon's eyes, a bull's ears, a serpent's body, a carp's scales, and an eagle's claws. But the limner of the dragon understood that this anatomical catalogue was intended to suggest multifarious attributes rather than to be faithfully adhered to. He depicted a gigantic serpent, or a winged fish, or a worm no larger than one's little finger, or a sickly snake undergoing acupuncture, or a Rishi's plaything, or a thousand other varieties of monster, as the fancy took him. That is to say, the mediæval Chinese decorator gave the reins in this fashion to his imaginative faculty. But liberty subsequently became license. The dragon began to appear everywhere in decorative designs, and one grows utterly weary of its unending recurrence on all sorts and kinds of objects emanating from Chinese *ateliers*. The Japanese did not fall into this error, or at any rate they avoided it to a great extent. In their hands the dragon is generally used with judgment and true instinct. Some of their carvings and paintings of it are admirably strong and impressive, and when we find dragons in Japanese decoration they are genuinely decorative. The apprehension that any competent Western critic would withhold praise from a design embodying a dragon, merely because no animal of the kind exists, is purely chimerical. It has been said of the Japanese dragon, as it appears in sculpture and painting, that no such monster could be depicted except by a people persuaded of its existence: faith alone could beget it. Whatever truth there may be in this theory, it is certain that Western reproductions of the Eastern dragon are altogether tame and lifeless affairs. The power of depicting it so as to command admiration and inspire awe is still monopolized by the Oriental, and receives full recognition from Western critics. The same is true in a lesser degree of the phoenix. It has played and still continues to play in Japanese decorative art a rôle at once important and excellent. No more fatal error could be made by the Japanese than that recommended by the *Kokkai's* informant. Half of the blunders into which the art artisans of this country have fallen, and half of the losses they have incurred, are due to an unthinking attempt to adapt their work to Western taste. It would be precisely a cognate error did they try to conciliate Western criticism by modifying their own designs or violating their own canons. What they have to do is simply to follow the bent of their national genius. The world has already endorsed the correctness of their decorative instincts, and has paid them the genuine compliment of imitating their creations. Let them continue to use phoenixes, dragons, *shishi*, and any other mythical creature suggested by their fancy. The more purely Japanese they can be, the better assured will be their success.

BOOKS IN 1891.

THE *Publisher's Circular* (London), and the *Publisher's Weekly* (New York), give some interesting information as to the number and character of books published in Great Britain and the United States during the year 1891. The total number published was 10,371: 5,706 in the former country and 4,665 in the latter: these figures include new editions of standard authors, reprints and translations of foreign books, as well as new original works. Although compelled to admit that American publishers have hitherto been more culpable than their British confrères, yet the latter are not absolutely guiltless in the matter of "reprinting." There are editions of HOLMES' Poems, BRET HARTE'S works, &c., from British presses which were not authorized by the holders of American copyrights, to say nothing of the cheap railway editions of CHATTO and WINDUP, &c.

The following list gives the number of books—or perhaps "works" would be the preferable word, since volumes are, of course, not intended—in the order of their importance:—

In Great Britain.	In United States of America.
Fiction.....1,126	Fiction.....2,105
Educational and Classical.....694	Theology, Sermons, etc.....538
Theological, Sermons, etc.....627	Juvenile.....460
Juvenile.....447	Educational and Classical.....452
Historical, Biographical, etc.....413	Law, Jurisprudence, etc.....348
Year Books and Serials.....316	Historical, Geographical, etc.....335
Voyages and Travels.....271	Arts and Sciences, Illustrated.....334
Belles-lettres, etc.....254	Belles-lettres, etc.....290
Poetry and Drama.....201	Political and Social Economy.....197
Medicine, Surgery, etc.....175	Poetry and Drama.....193
Political and Social Economy.....136	Voyages and Travels.....139
Arts and Sciences, Illustrated.....126	Medicine, Surgery, etc.....108
Law, Jurisprudence, etc.....109	Miscellaneous.....176
Miscellaneous.....731	
5,706	4,665

This tabulated statement is of little value, save for a cursory comparison, because the individual taste of the different compilers asserts itself so plainly, and we have such apparent discrepancies as the absence of "Year-books and Serials" from the American list. Doubtless such were published in the United States, but they appear in some other division, probably in "Arts and Sciences, Illustrated," for only on that hypothesis can we explain the fact that double the quantity, under this division, was printed in America as compared with Great Britain.

The most conspicuous feature of the lists, and that to which we shall first give our attention is the enormous preponderance of fiction—an average of 3.34 per day for Great Britain, and 3.03 for America. In the former country the number of novels published in 1891 nearly equals the whole of all other books; in the latter country it exceeds all others combined. Compared with late years, the total number of works of fiction published in Great Britain last year exceeds by a dozen the number for 1890, by over a hundred that for 1889, but falls a hundred short of that for 1888. In America there were 1,118 books of fiction published in 1890, and previous to that last year's figures had never been approached by over a score.

In America, books for young people are increasing in number—although in 1887 there were 488 of this class of literature published, or 28 more than last year; but in England this class of literature is steadily decreasing, the number last year not being within thirty of the totals of any one of the previous five years.

Comparing various other classes of books given to the world in 1891 from English presses with similar contributions in the immediately preceding years, we find a considerable increase in the number of historical and biographical works, an increase—though not so marked—in books on political and social economy, and in narratives of travels and voyages; a falling off in works relating to theology, volumes of sermons, etc., belles-lettres, and juvenile books. In America more books for young readers were issued in 1891 than for several years before, and the character of these books indicates a greater amount of care and attention to the wants of the young than was dreamt of a few years ago; but in this, as in every other field, the chaff will and must grow with the wheat, and the crop of "blood and thunder" literature increases with other kinds. There is to be noted also a significant increase in the number of books devoted to theological, religious, political, and social questions—a reflection of the popular interest in the theological controversies of the day and in social problems concerning the poor in the great cities of America. Books of description and travel, and historical works show a falling off, while the biographies and memoirs number about the same as in 1890.

The greater number of books upon Law, Jurisprudence, etc., printed in America, is explained by the fact that the acts of each State Legislature are published separately. It would be interesting to know how many of the 348 works are based upon the conflicts which must arise under such a system, and also to learn if any of them consist wholly of legislative enactments.

As the autumnal campaigns of the publishers for 1891 were planned before the International Copyright Law went into effect, it is not possible to draw from the figures for 1891 any inference regarding the results of the operation of that law. The statistics for the current year, however, should bring some interesting facts to light.

Several distinguished literateurs were invited by the editor of *The North American Review* to give an opinion as to the best book of the year (see the *Review* for February, 1892). Sir EDWIN ARNOLD selected EMILE ZOLA'S "La Bête Humaine" which, by the way, was not published in 1891; GAIL HAMILTON, ALEXANDER MACDOUGALL'S "The Maybrick Case," AGNES REPLIER, OSCAR WILDE'S "Intentions;" and Dr. WILLIAM HAMMOND, "The Century Dictionary." Admitting the usefulness of the last, and cutting out the

first as impertinent, we are much puzzled that any of the remaining should have been pitched upon by anyone as *the best*: here in truth the personal equation must have entered very largely.

Although not much is thought of Mrs. WARD'S "The History of David Grieve," in it she went so far beyond "Robert Elsmere" that her book must be in the front rank of novels for 1891. Somewhat ahead of it, we think, should be put BARRIE'S "The Little Minister." BARRIE himself still says it is his best. CARMEN SYLVA'S arrangement of Romanian Folk-song in the volume entitled "The Bard of the Dimbrovitna," and GARRETT'S "Elizabethan Songs in Honor of Love and Beauty," seem to stand out with peculiar sharpness of outline as being essentially different from each other, and decidedly unlike the ordinary stray volumes of poetry. The former is quaintness itself. AGNES REPLIER, who so charmingly praises OSCAR WILDE'S book, has herself contributed two volumes of essays to the numerous books in the Belles-lettres series that are delightful reading—"Points of View" and "Books and Men." JUSTIN WINSOR'S "Christopher Columbus" is a masterpiece of biography, and appeals not alone to Americans.

But how absurd it really is to pick out from over ten thousand books one, one dozen, or one hundred concerning which all readers may be expected to be of one opinion!

THE JAPAN MAIL STEAMSHIP COMPANY.

THE necessity for retrenchment, unhappily so imperative throughout the business world of the East at present, has made itself felt in Japan's big steamship Company, the Nippon Yusen Kaisha. A large reduction of working expenses has had to be effected, and under such circumstances we learn with very great regret that several members of the foreign staff have received their *congé*. The gentlemen concerned are Mr. Y. DUER, Manager of the Department of Foreign Correspondence in the Head Office, Tokyo, and Mr. E. L. JAMES, Clerk in that Department; Mr. S. D. HEPBURN, Assistant Manager of the Yokohama Branch; Mr. J. JOHNSTONE, Foreign Manager of the Stores Department, Yokohama, and Messrs. C. POPE, J. H. DONKER-CURTIUS, and J. M. SCOTT, Clerks in that Department; Mr. PATTERSON, Manager of the Engine Works; Mr. J. MACKENZIE, Engine Shop Foreman; Mr. J. H. MACGREGOR, Foreman Boilermaker; Mr. C. B. CLAUSEN, Foreman Carpenter; and Mr. W. DONALD, of the Superintending Captain's Department. Thus, of a total of 26 foreigners hitherto employed by the Company in Tokyo and Yokohama, 12, or virtually one half, are dispensed with, and a reduction has been made in the salaries of the remainder. Similarly sweep-

ing measures have been adopted, we understand, with regard to the Japanese staff, but the details in their case have not yet been published. So far as we can judge, this proceeding on the part of the Directors is not in any sense dictated by the morbid anxiety to dispense with foreign aid which constitutes a feature of the reactionary impulse swaying Japan at present. The question is simply one of retrenchment. Many factors combine just now to curtail the profits of the Company. The gradual extension of railways, though destined ultimately to bring an increase of goods traffic, inflicts at the outset uncompensated injury by diverting the great bulk of the travelling public from maritime conveyances. This alone must have made an appreciable difference in the Company's ledgers. Further loss has been inflicted by competition on very unequal terms. The Nippon Yusen Kaisha is bound by strict conditions. Its charter forbids it to purchase vessels more than two years old, and requires also that its steamers shall be invariably kept in a very high condition. No such limits or standards operate in the case of other Japanese maritime companies. They are at liberty to employ ships of any age, and they labour under no costly obligation as to a standard of maintenance and equipment. Competition, under such circumstances, is one-sided, and it cannot be doubted that the Nippon Yusen Kaisha has suffered by the increase of rivals working on lines so much less costly. Naturally if there were question of attracting passenger traffic, the advantages offered by the steamers of the Yusen Kaisha would bring their own reward; but where goods only are concerned, these hand-to-mouth competitors cannot fail to make their presence inconveniently felt. Added to the above reasons for retrenchment there is the general depression of the times. Comparatively little movement of merchandise is taking place, and in the case of one important staple—fish manure—from the carriage of which a considerable amount of freight is usually derived, the crop this year is so small that an appreciable difference is felt by all public carriers. From many points of view, therefore, the Company is constrained to exercise economy, and as the salaries paid to foreign employés are conspicuously large, we cannot wonder that there should be a tendency to commence retrenchment with them. But it is difficult to avoid a doubt whether the dismissal of men so able and zealous as those we have catalogued above can prove in the long run a really economical measure. Foreigners are by no means chagrined when they see Japan developing ability to manage her own affairs without their assistance. On the contrary, they are disposed to congratulate her on her capacity to be independent. But there are many enterprises to the management

and organization of which Japan was a total stranger before the *Meiji* era. It is no reflection whatsoever on the moral endowments of her people that they should have recourse to foreign aid for the purpose of inaugurating and establishing such enterprises. Indeed we may go a great deal farther, and assert that if, where aid capable of insuring success is available, they failed to employ it because of a sentimental objection to be dependent, then in truth they might fairly be charged with unpractical silliness, and their ability to succeed under any circumstances might be questioned. One of the most valuable forms of human wisdom consists in shrewdness to recognise useful agents and liberality to utilize them freely. This kind of wisdom was possessed in a large measure by the founder of the Japanese mercantile marine. If we saw the Directors of the Nippon Yusen Kaisha diminishing their foreign staff gradually and deliberately, dispensing with the services of one here and another there, as the particular functions discharged by the retiring foreigners fell within the range of the acquired competence of their Japanese colleagues, then we could recognise a deliberate and cautiously exercised policy. But when, out of a foreign staff of 26 in Tokyo and Yokohama, we find no less than half swept away at one coup, we are constrained to doubt whether prudence has not been sacrificed to arithmetic. Is it soberly conceivable that all these men were superfluities, or that the various departments in which they were employed became simultaneously competent to dispense with their services? A great potentate once determined the route of a railway by drawing a straight line on the map between its proposed termini. That was a very pretty exercise of autocracy, but a very poor display of business instinct. The retrenchments of the Nippon Yusen Kaisha seem to us to be the work of an accountant guided by a ruler and a ready reckoner, rather than the programme of a prudent and far-seeing directorate. We trust that the interests of the Company will not suffer in the sequel, but we confess that the need of retrenchment suggests much less cause for anxiety than this mode of retrenching.

JAPANESE JUSTICE.

SO far as concerns the prospect of Western intercourse with Japan becoming closer, and so far as concerns the chance of Western peoples laying aside the distrust which holds them from genuine friendship with this nation, it would be difficult to play a more mischievous role than that which the *Hyogo News* is now persistently playing. In several strongly worded and thoroughly assured articles, our contemporary has sought to prove that Japanese judges are wholly incompetent to administer justice, and that the Japanese people are

"utterly incapable of grasping the ideas of Westerns with regard to what constitutes justice." Now everyone will admit, and the *Hyogo News* must be well aware, that a nation could scarcely have a worse character given to it than this. To be "utterly incapable of grasping" any true conception of justice is to be plunged in moral darkness of the crassest description. We doubt whether it would be possible to say a harder thing about any people. A due sense of justice is one of the elementary qualities that are supposed to be inseparable from civilization even in its early stages. If the Japanese be really devoid of such a sense, they must be relegated to a place below that occupied by any non-barbarous people. It becomes, therefore, more than interesting to know on what grounds the charge is advanced, and whether those grounds are in any way sufficient to warrant it. Happily they are not complicated or lengthy grounds. We can set them forth briefly and in such fashion that our readers may follow them without weariness or perplexity. First, then, there is the fact that a Japanese firm in Kobe, having been sued for failure to perform a contract concluded in its name with a third party by a man named WILKINSON, set up the defence that WILKINSON was not the firm's agent and had no authority to pledge it to any bargain. Now this, *qua* defence, is not only perfectly proper, but is also sanctioned by innumerable precedents in Western commercial practice. If WILKINSON was not—and we may add that under the present treaties he could not possibly have been—the lawfully recognised agent of the Japanese firm, then the latter was entitled to repudiate his act. Moreover, no Japanese Court could possibly saddle upon a Japanese firm the responsibility of engagements contracted by such a person. Whether the Kobe people behaved in good faith towards the person with whom WILKINSON had made a contract, we do not pretend to judge. Possibly they behaved in very bad faith. Possibly they took advantage of a technicality to escape a moral obligation. But most assuredly the Court was entirely precluded from ruling that a pledge given by a foreign agent is binding upon a Japanese firm. Yet the *Hyogo News* advances this action of the Court as a proof of the total incompetence of Japanese tribunals to administer justice, and sneers at "the able Judge who allowed such an irrelevant defence to be proceeded with." The second basis of our contemporary's sweeping condemnation is contained in these words:—"In a case now proceeding at the Yokohama Court the sapient Judge actually declared that there was no need to produce certain vouchers because they were only necessary at the time the transfer of the goods by their means took place." This indeed would have been a most singular ruling—so singular that its extreme improbability ought to have occurred to the *Hyogo News*. But the Judge

of the Yokohama Court made no such ruling. What happened was simply this:—The plaintiffs in the Kerosene Oil case asked the defendant to produce certain documents, namely, receipts that had come into the possession of the Warehouse Authorities after the oil entered in the receipts had been entirely delivered out of the Warehouse. The defendant declined to produce these receipts, alleging that some of them had been destroyed. He was naturally unwilling to prejudice his case by producing an incomplete set of documents, when the lacunæ might be used inferentially to his disadvantage. The question then arose, could the Court order the production of the receipts, and it was with reference to this that the Judge gave his ruling. He ruled that he was incompetent to issue such an order, for the obvious reason that the receipts were not of the nature of documents which the defendant had been under any obligation to preserve. They were, in fact, documents of the character of I O U's or exchange bills, which, though of prime importance in the hands of a creditor, become valueless after the liability to which they refer is discharged, and may consequently be destroyed by the debtor after he has recovered possession of them by discharging that liability. A Court of Law cannot order an alleged debtor to produce such documents since he labours under no disability whatever by not possessing them and is under no obligation to possess them. It will be seen that had the *Hyogo News* deliberately applied itself to misrepresent the Judge's ruling, it could not have done so more successfully. The ruling, so far from justifying that journal's sneer or helping to establish its sweeping charge against the Japanese Judiciary, was strictly just and proper. The third basis of condemnation is the recent decision of a Japanese tribunal that a perpetual lease on unchanging terms cannot be recognised by law. At the time when this verdict was rendered, we expressed strong disapproval of it, because, in the absence of any definite legal enactment to the contrary, the plain terms of a contract ought, in our opinion, to be enforced by the Courts. But it is none the less certain that the highest school of Western jurists decline to admit the propriety of perpetual leases. The new Civil Code, compiled from the best materials furnished by the Occident, does not recognise such leases, and makes special provision for converting into terminable contracts any obligation of the kind that may be in existence at the time of the Code's going into operation. The Court, in the absence of a written law, took the guidance of Japanese custom, and in so doing we cannot but think that it erred. As to the principle at stake, however, the indisputable fact is that the future law of the land, a law strictly in accord with Western jurisprudence, was anticipated, though harshly applied, by the

Court. Evidently there is no ground here for alleging that "Japanese Judges have not the slightest idea of what Westerns consider justice." We come now to the fourth basis, which is said "to eclipse even the others in its blundering stupidity." An American tea-exporter of Kobe found one of his coolies standing beside some carts loaded with tea-boxes. He asked the man what he was about, and the reply was:—"I am taking tea into this Chinaman's house by direction of your *banto*, your godown man, and your Chinese tea-boy." On searching the house, six packages of tea were found concealed in the second storey. Now who was the thief in this case? The Chinaman to whom the house belonged, the *banto*, the godown man, the Chinese tea-boy, the coolie, or all the four? We can form no idea. The coolie, however, was arrested and arraigned before the Kobe District Court on a charge of theft. After three days the case was dismissed on the ground of "insufficient evidence." What evidence was furnished? What took place in the District Court? What defence did the man set up? Will it be credited that nothing whatever is known about all this? The proceedings of the Court are a sealed book. They are not published anywhere, and the *Hyogo News* does not profess to know anything about them. Yet, though completely ignorant of everything that transpired in the Court, and therefore obviously unqualified to criticise the verdict, the *Hyogo* journal does not hesitate to declare that this case "eclipses all the others in its blundering stupidity." We, of course, do not pretend to form any opinion as to whether the ends of justice were or were not satisfied, but we do unhesitatingly affirm that a journal which pronounces a sweeping condemnation of the finding of a law Court without knowing anything about the evidence, the pleadings, or the procedure of the Court, offers in its own conduct a flagrant example of the injustice which it is so ready to detect in others.

It is, at the best, weary work to seriously discuss such premises and such conclusions as those of the *Hyogo News*. We have not approached the task with any desire to provoke controversy, but because there is strong general interest in determining whether these sweeping charges of moral deficiency rest upon any really solid ground. Were it demonstrable that Japanese Judges are incapable of administering justice, in the Western sense of the word, and that the Japanese people are without any appreciation of justice, there could be no doubt about the imprudence of entrusting the guardianship of foreign lives and property to Japanese care. Much adverse criticism has been written and spoken about the manner of administering the law in almost every country in the world, and it would be idle to pretend for a moment that Japanese tribunals are faultless. On the contrary, they appear frequently

to deserve censure, and what they deserve, it is well that they should receive. But when we compare the wholesale denunciations quoted above with the exceedingly slender and inconclusive, if not flagrantly erroneous, evidence upon which they are avowedly based, we are bound to say that the charge of injustice seems to be shifted from the shoulders of the accused to those of the accuser. Foreign estimates of Japanese character and capacity must often betray the defect of insufficient information, but may they not at least be preserved from the disfigurement of obvious bias and gross exaggeration?

FOOT-BINDING.

FROM time to time benevolent people address appeals to public sympathy on behalf of the unhappy female children of China. It is not difficult to understand the compassion excited by the pains of these poor little girls. Few of our readers, we should hope, have been so unfortunate as to see the naked foot of an orthodox Chinese lady. But many have probably looked at photographs of that terribly twisted and distorted member, and the sight must have suggested thoughts of barbarous suffering inflicted on a particularly sensitive part of the human body. Year in and year out hundreds of thousands of little girls, throughout the wide empire of China, are subjected to a ruthless process which crushes the bones and wrenches the sinews of their tender feet, until at last a revolting deformity is produced, and the foot, crumpled into a shocking monstrosity, fulfills the dictates of fashion but becomes almost valueless as a means of locomotion. The wretched girl emerges from her period of feverish torture a mutilated cripple, condemned to hobble through life on feet which preserve no semblance of nature's beautiful mechanism, having become as hideous as they are useless. If such abominable cruelty did not occasionally move the world's pity, it would be a far more evil world than it is. At intervals, therefore, the missionary cries out, the traveller writes, and the charitable agitate. But never do the poor little children benefit. For them there remains always the same ruthless bending of bones, the same agonizing application of tight ligatures, the same long months of bitter pain and unavailing tears. It is scarcely conceivable that such things should be wrought upon helpless children even in the most savage communities, but when we reflect that they are perpetrated in a highly civilized country like China, our wonder becomes bewilderment. Perhaps it is to this singular contrast between general refinement and cultivation, on the one hand, and callous cruelty on the other that we must attribute the periodical appearance of apologists for the appalling custom. These people tell us that though the foot is ultimately de-

formed, though the woman is indeed condemned to be little better than a cripple, yet the process is not so very painful after all. The bones are soft, they say, in early youth; the sinews supple. Twisting, crushing, and wrenching are operations that may be performed without much suffering on baby feet, whereas adults would be maddened by the torture. These apologists mean well, no doubt. They seek excuses to palliate the inhuman brutality of a nation. But in truth they belong to that class of indolent moralists whose tendency is to depict things in softened light rather than apply themselves to efforts of earnest reformation. Let no one talk of the yielding character of young bones or the pliability of baby sinews. We have listened with our own ears to the cries of a little girl undergoing the torturing process. Such agonized wails never before fell on our ears. They were the shrieks of a child absolutely wild with suffering. When the ligatures were loosened and the shocking succession of breathless screams ended in long-drawn wails of exhaustion and misery, the listener turned almost sick with horror and sympathy. Yet a mother was the deliberate torturer of the poor baby, and a father callously listened to its heart-broken cries. Think that this fiendish barbarity is being practised daily and hourly throughout the length and breadth of a land containing three hundred million inhabitants. Not alone are the tender bodies of the poor little girls ruthlessly racked and tortured, but the purest sentiment of humanity, the love of parents for their children, is perpetually outraged. Such unnatural cruelty could be tolerated only in the presence of the worst kind of demoralization. How much can survive of the moral beauty of the parental relation when fathers and mothers, in deference to a mere freak of fashion, consent to inflict on their daughters, day after day, torture that well nigh maddens the baby brain and wrings shrieks of excruciating agony from the little lips? This is one of those facts that make us marvel when we hear a great destiny predicted for the Chinese nation. The qualities of the individual Chinaman, the resources of his country, and the arithmetical strength of his race may justify such a prediction. But a people among whom this inhumanity is habitually practised can never climb to an altitude of civilized domination. To contemplate anything of the sort, one must lose all faith in the world's progress. No, in truth, China is not to be feared. She is to be pitied rather, and the nations of the West are to be pitied seeing that they are condemned to helplessly witness the tortures of her girl babies.

CORRESPONDENCE.

Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

THE SILK CROP.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Referring to the extract in your yesterday's issue from the *Mainichi Shimbun*, about the silk crop, allow me to make a few remarks in support of the views therein expressed. As you justly observe, it has been customary for the native papers in previous seasons to indulge in such utterances which proved afterwards incorrect, and you naturally suspect the same this year. It has been the old cry of "Wolf! wolf!" until he really comes. It is quite certain, I think, that the silk crop will fall short this year, owing to the constant bad weather that prevailed throughout Central and Northern Japan during the time silkworm rearing was in its most critical stages. The delicate creature must have been considerably disturbed in his work not only through the atmospheric conditions, but also because of the difficulty in providing him with the necessary dry mulberry leaf, not to speak of people being much hampered in getting any leaves at all in the almost flooded silk districts. The fears thus entertained as to a bad yield being quite justified, are besides amply illustrated by the fact of the quality of the silk, which is much poorer than usual. It remains also to be proved whether the quality of the silkworm eggs produced by a sickly moth for next season has not been affected. Meanwhile, not only is there 25 per cent. shortage in the Italian crop, but also 25 to 30 per cent. in Japan, with a considerably smaller proportion of good silks, and this accounts for the high prices asked and readily paid.

I remain, Sir, yours faithfully,

SILK REELER.

Yokohama, August 19th, 1892.

KARUIZAWA HAPPENINGS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—This summer resort in Nagano Ken is becoming quite popular. The number of foreigners enjoying their vacation here at present is one hundred and twelve. To these may be added eight persons summering on Usui Togi Pass, which rises some seven hundred feet above the Karuizawa Plain. People are coming and going all the time, so there will probably not be less than one hundred and fifty foreigners in this place during the heated term.

Parties of eight, fifteen, or twenty, making excursions by moonlight to Asamayama's fiery crater to behold the sun rise, have been frequent this year, and varied, amusing, and intensely interesting have been the experiences of the different parties ascending the volcano at midnight.

Religious services in English, which are largely attended, are held every Sabbath at 11 a.m. and 7.30 p.m., and at 3 p.m. in Japanese, in the capacious home of Rev. and Mrs. T. M. McNair. Episcopal Services also are conducted at the residence of Archdeacon Shaw every Sabbath morning.

A mid-week meeting for Bible study and conference is held every Thursday evening at the home of the Rev. and Mrs. W. T. Austen.

Arrangements have just been perfected for the first Christian Conference in Karuizawa. It will be opened on Thursday August 25th and continue till September 1st. Rev. R. B. Grinnan of Kobe has been chosen Chairman, Rev. B. Chappell of Tokyo, Vice-Chairman, and Rev. S. Swann of Fukuoka, Secretary of the Conference. The topics are all to be on "Practical Christian Life and Work."

The fact that the foreign residences are located mostly within a small area conspires to produce much sociability. Evening socials, afternoon teas, lawn tennis, ice-cream parties and various social gatherings, form a prominent feature at this resort this season. In fact this may yet become the Long Branch or Saratoga of Japan!

The climax, up to present writing, however, was the musical entertainment given Saturday evening, August 20th, at the house of Mr. and Mrs. R. J. Kirby. By 8 p.m. an audience of ninety seven filled every available space in the house. The rooms were beautifully decorated with clematis in full bloom, other mountain flowers and vines, and the festooned flags of England and America. This ornamentation, as also the successful concert itself, was largely due to the skill and energy of Miss Lena Thomas. The entertainment revealed the fact that not a little musical

talent is to be found in Karuizawa this season. While all taking part performed most creditably indeed and highly entertained the audience, two or three deserve special mention.

Mr. T. Seel's rendering of classical music from *Tannhauser* and others was superb. His musical ability is well known to the residents of Tokyo. Miss M. L. Schouler of Tokyo captivated the audience by her rich, mellow, and winning voice in her solos. Her response to the encore and "Comin' thro' the Rye" were exquisitely sung. The recitations by Miss Nellie Hart of Tokyo displayed much historic talent and delighted everyone present. The piece on the famous man-of-war "The Revenge," was ably rendered.

Miss Moulton of Yokohama and Miss Thomas of Tokyo alternately presided at the organ. The two choruses on the programme were delightfully rendered by eight ladies and three gentlemen.

The programme was as follows:—

- Part I.
- 1.—Organ Voluntary.....Miss Moulton.
 - 2.—Chorus....."Hunting Song".....Rev. J. W. Cate.
 - 3.—Solo....."Last night".....Rev. J. W. Cate.
 - 4.—Violin Solo.....Bach.....Rev. W. D. Murray.
 - 5.—Recitation....."The Revenge".....Miss Nellie Hart.
 - 6.—Duet....."Were I a bird".....Miss Thomas.
 - 7.—Guitar Solo....."Spanish Cavalier".....Miss F. E. Porter.
 - 8.—Solo....."Spring" (in German).....Mr. T. Seel.
- Part II.
- 1.—Organ Solo.....Trameter.....Mr. E. Gauntlett.
 - 2.—Solo....."Voices of the World".....Miss M. L. Schouler.
 - 3.—Recitation....."Seminole's Defence".....Rev. J. M. Leonard.
 - 4.—Solo....."Tannhauser".....Mr. T. Seel.
 - 5.—Solo....."Comin' thro' the Rye".....Miss M. L. Schouler.
 - 6.—Recitation....."The Peach".....Miss Nellie Hart.
 - 7.—Violin Solo.....Mendelssohn.....Miss W. D. Murray.
 - 8.—Duet....."I would that my love".....Miss M. L. Schouler.
 - 9.—Chorus....."Good Night".....Rev. J. W. Cate.

I remain, yours sincerely, OBSERVER.
August 22nd, 1892.

YOKOHAMA BALLADS.—NO. 1.

Loquitur victima quodam:—

When companies are bustin', and banks are goin' bung,
An' share quotations fall to freezin' point,
An' Exchange is two an' tenpence, an' poor Silver's dirge is sung,
'Tis sure there's something muchly out of joint.
Two years ago them Companies—or may be it was three—
Like Jonah's gourd o'erspread the Ori'ent,
An' Jonah-wise we rested 'neath their shade full trustfully.
An' now they've nailed our every bloomin' cent.
There's Yokohama Towage hat-in-hand at seventy yen,
An' Club Hotels right down to fifty-five,
The Iron Works are up the spout, while not a single sen
Have the P. P. folks to save their life alive.
In Kobe too the sounds of doul sweep up to Maya's lane,
For Kobe's in a mighty ugly fix,
It wasted all its substance, like a prodigal insane,
On a hō-tel slightly dear at less than nix.
And the only wights that profit by this precious game of pool,
Are vendors and the Devil's own Brigade;
If again I save a stiver—Well, to play the bloomin' fool
For once is quite enough for man or maid.
Chorus boys!
For they've taken my hard-won dollars, an' I'll never see them more,
They've vanished quite away like Nelly Gray;
An' about the whole blamed business I feel un-common sore
But never mind! I've had my little say.

LETTER FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, July 30, 1892.

A newspaper item stated the other day, that the police of Boise City, Idaho, on Wednesday, the 27th inst., ordered all Japanese residents to leave the city, and that the order was generally complied with. As that is all that I have seen concerning the matter, I can give no explanations.

The August *Atlantic Monthly*, just out, contains an able and interesting article on "Townshend Harris, the first American Minister to Japan," by Dr. W. E. Griffiths. He has also revised Bayard Taylor's "Japan" for an "Illustrated Library of Travel," recently published by Scribner.

Charles S. Sargent, professor of forestry in Harvard College, passed through here the other day en route for Japan.

Three carriages full of Chinamen, under the lead-

dership of Hip Lung, of this city, visited the World's Fair grounds the other day to see "Alice about it."

We have had a "spell" of six consecutive days of very hot weather, when the thermometer was standing in the "nineties," and in some localities reached 100 and even exceeded that figure. The list of fatalities during that hot period was very large; the ambulances and patrol waggons were kept busy, and the hospitals and morgue were crowded. But the night before last a change came with rain and a tremendous fall of the mercury; and every one feels better.

Last Monday (25th) a cyclone swept over the northern part of Philadelphia, and produced damage to the amount of \$200,000 in forty minutes. Houses were demolished or unroofed, and in Philadelphia and Reading shops were razed to the ground.

The same day Bay City, Michigan, was visited by a great conflagration which burned fifty blocks with over 1,300 buildings, and cost about \$1,000,000.

The climax of the Homestead troubles was reached on July 23rd, when an attempt was made to assassinate H. C. Frick, the manager of the Carnegie mills at that place. A young man who had been frequent visitor for a few days at the Company's offices in Pittsburgh, was admitted to Mr. Frick's private room. Two bullet wounds and four gashes from a dagger show how desperate was the attempt, which fortunately has not yet proved fatal. The assailant was one Alexander Bergman, an Anarchist, a Russian Jew. He was taken from school in Russia on account of his radical ideas; and he has recently had some mysterious connection with the infamous Johann Most. Two or three Anarchists, supposed to have been accomplices, have been arrested. It is but fair to state that the strikers disclaim any connection with Bergman, and express the deepest regret over the dastardly attack. But, by their bitter words of condemnation of Frick, they have indirectly, at least, incited such an assault.

Otherwise, things are quiet at Homestead. The mills are running again with a small force. It seems difficult to find men willing to work there; day before yesterday a number of working men, being conveyed there under false pretences, made their escape, after a fight with their conductors, from the train. Several families of the strikers have had to move from the company's houses. The state militia have left with the exception of about 1,000 soldiers, a battery, and a small squadron of cavalry.

According to the directory enumeration made early last month, Chicago has a population of about 1,400,000; and according to the school census just completed the figure should be 1,428,318 (New York City will have to look out!). Chicago has also 455 churches and missions, and 6,445 saloons; she spends \$16,000,000 annually on her regular expenses budget, and \$80,000,000 for intoxicants. Chicago is evidently a great, but wicked, city.

There have been a number of changes recently in our diplomatic service. Gen. Grubb, having resigned as Minister to Spain, is succeeded by A. L. Snowden, till now Minister to Greece, Roumania, and Serbia; and to the latter post comes Truxton Beale (who married a daughter of J. G. Blaine) from Persia. Andrew D. White, ex-President of Cornell University, New York, becomes our Minister to Russia; he is an able and intelligent man and an experienced diplomat, having been once Minister to Germany.

The Presidential campaign has not yet become very warm. The Democratic National Committee has organized, with William F. Harty, of Pennsylvania, as Chairman; Simon P. Shurin, of Indiana, as Secretary (re-elected); and Robert B. Roosevelt, of New York, as Treasurer. There will probably be a branch headquarters in Chicago. Chairman Harty has not held many offices (he has been postmaster of Philadelphia and secretary of state of Pennsylvania); but he has had considerable experience and success in managing campaigns.

The House of Representatives, though so largely Democratic, have shown sympathy with President Harrison in his attitude toward Canada on account of her treatment of American vessels in Willand Canal. The House passed a bill providing that "when the President shall be satisfied that the passage through any canal or lock connected with the navigation of the St. Lawrence River, the great lakes, or the waterways connecting the same, of any vessels of the United States, or of cargoes or passengers in transit to any port of the United States, is prohibited or is made difficult or burdensome by the imposition of tolls or otherwise, which he shall deem to be reciprocally unjust and unreasonable, he shall have the power to suspend the right of free passage through the St. Mary's Falls Canal, so far as it relates to a vessel owned by the subjects of the government discriminating against the United States." The bill has also passed the Senate.

The conference committee of the Senate and the House of Representatives in the early part of this week sent the Sunday civil service appropriation bill back to the two Houses. The House of Representatives again voted not to concur in the Senate amendments increasing the appropriations for the government exhibit, for the Commission, etc.; but finally on July 27th, by a vote of 117 to 105, concurred in the appropriation of \$5,000,000. The House, however, is at present in a deadlock; for the enemies of the World's Fair have ever since that day succeeded by filibustering in keeping the House from proceeding to further consideration of the bill. They seem willing, for the sake of defeating the World's Fair appropriation, to endanger the entire bill which is full of exceedingly important provisions in the form of absolutely necessary appropriations. The filibusters are chiefly Southern Democrats with a few Northern Democrats, but not one Republican. The Farmers' Alliance representatives are also opposed to the appropriation. Reports this morning from Washington stated that the prospects were good for the Fair.

Whatever may be the result, the World's Columbian Exposition will not be, in the least, hindered or hampered. If necessary, Chicago will and can, effect a loan of more than \$5,000,000, and will carry the Exposition to success. But, while Chicago is able to undertake the responsibility, and can pledge no failure, it will unquestionably raise the credit of the Exposition in the eyes of foreign nations to have the United States, by granting this appropriation, assume the responsibility of it as a purely national affair. Congress voted to establish it, and Congress ought now to "see it through." Chicago has done more than she promised, and asks further assistance only because the affair has tremendously outgrown its original plans. The following clipping will give a good idea of its bigness:—

The Paris Exposition of 1889 cost \$5,000,000, the London Exposition of 1883, \$4,300,000, the Vienna Exposition of 1873, \$7,450,000, and the Paris Exposition of 1889, \$6,500,000. The cost of the Columbian Exposition will, it is expected, reach the sum of \$25,000,000.

I visited the Fair grounds this morning, and was again surprised at the rapid progress of the work. As it was too hot to walk around much, I did not get all over "the Exposition city," as it is called; but I went about enough to get a view of the whole thing. Several of the Exposition buildings are practically finished; others are nearly completed; and all the rest are well under way. The immense Manufacture and Liberal Arts building is almost covered. The various State buildings and those of Great Britain and Germany, are in different stages of construction. The recent heat did not hinder work very much; out of 8,000 workmen, only 14 were affected at all, and not seriously. The Fair grounds, so extensive and so lively, may well be called "the Columbian city."

The following explains itself:—

Washington, D. C., July 21st.

The following proclamation was issued this afternoon by the President of the United States of America:

"A proclamation.—Whereas, By a joint resolution approved June 30th, 1892, it was resolved by the senate of representatives of the United States of America in congress assembled: 'That the president of the United States be authorized and directed to issue a proclamation recommending to the people the observance in all their localities of the 400th anniversary of the discovery of America, on the 21st day of Oct., 1492, by public demonstration and by suitable exercises in their schools and other places of assembly:'

"Now, therefore, I, Benjamin Harrison, president of the United States of America, in pursuance of the aforesaid resolution, do hereby appoint Friday, Oct. 21, 1892, the 400th anniversary of the discovery of America by Columbus, as a general holiday for the people of the United States. On that day let the people, so far as possible, cease all toil and devote themselves to such exercises as may best express honour to the discoverer and their appreciation of the great achievements of the four completed centuries of American life.

"Columbus stood in his age as the pioneer of progress and enlightenment. The system of universal education is in our age the most prominent and salutary feature of the spirit of enlightenment, and it is peculiarly appropriate that the schools be made by the people the centre of the day's demonstration. Let the national flag float over every schoolhouse in the country and the exercises be such as shall impress upon our youth the patriotic duties of American citizenship.

"In the churches and in the other places of assembly of the people let there be expression of gratitude to the divine Providence for the devout faith of the discoverer and for the divine care and guidance which has directed our history and so abundantly blessed our people.

"BENJAMIN HARRISON.

The date of the dedicatory exercises will probably be changed from October 12th to October 21st. How far the public will be admitted to those ceremonies is not yet known; but the press will be generously welcomed. Arrangements are to be made to seat 2,000 persons in the press gallery. This is said to exceed by far all records made in "this or any other country."

The first of the World's Fair Congress to meet will be that of Charities, Correction, and Philanthropy, to be held during the week beginning June 18th, 1893. Ex-President R. B. Hayes will preside. This Congress will be organized in sections as follows:—

1. A section on the prevention and relief of pauperism.
2. A section on the care of neglected, abandoned, and dependent children.

3. A section on the care and treatment of juvenile delinquents of both sexes.

4. A section on the hospital care of the sick, the training of nurses, dispensary work, and first aid to the injured.

5. A section on the commitment, detention, cure, and treatment of the insane.

6. A section on the custodial care and the training and development of idiots and feeble-minded children.

7. A section on the prevention and repression of crime, and the punishment and reformation of criminals.

8. A section on the organization and affiliation of charities in cities, towns, and villages.

9. A section on the introduction of sociology as a special topic of investigation and tracing into the curriculum of institutions of learning.

The W. C. T. U. of this city has adopted a novel way of furnishing a harmless drink to the public. In the post-office building it has set up a penny-in-the-slot machine which supplies wild cherry phosphate!

It is estimated, that the Homestead affair has already (in one month) cost over \$1,000,000, besides the sacrifice of half a score of human lives and serious injuries to many times that number of persons. A few of the items are as follows:—State militia, \$320,000; workmen's wages, \$180,000; Homestead mills on account of idleness, \$180,000; wages of workmen on "sympathy strike" in Beaver Falls, Duquesne, and Pittsburgh, \$100,000; loss to mills at those places, \$100,000. Besides these large matters, there are innumerable small items which will easily bring the total up to \$1,000,000. To offset this, is there any gain?

LETTER FROM BOSTON.

(FROM OUR OWN CORRESPONDENT.)

Boston, Mass., July 27th.

While the home-stayers are sweltering in the dust and heat, and wishing they were richer—just rich enough to travel to the North Pole, the go-aways in some places are flying from ills that beset and annoy. In one watering place, the typhoid fever menaces, the result of impure water, and in another famous resort where are twenty or thirty hotels, small-pox has appeared and the guests are hurrying away. The hotel-keeper who lives on the summer boarder, mourns his lot and mutters, "When the weather favours and drives the people from the city, something's sure to happen to drive them home." The heat in Boston and throughout New England is intense—the highest temperature known, ranging from 96 to 110 in the shade. Sunstroke is frequent and hot weather fevers are on the increase.

The Senate of the United States, as reported in a former letter, appropriated five million dollars for the World's Fair on the condition that the Fair should be closed on Sundays. It was also attempted to add the proviso that no intoxicating liquors be sold in the Fair grounds. This was first adopted by a vote of 28 to 26, but on the next day, several Senators changed their votes, and now liquor will be sold probably on the grounds of the Fair, for the House is not likely to change this. It is provided that liquor shall be sold at restaurants and at meals. The temperance and the prohibition party cry out against this license. It is supposed that the license is given on account of income. But the Fair will get ten millions from the National Treasury, probably more, and since it has ten million dollars from the State of Illinois, it may appear that funds enough are at hand without bidding for the gains that come from the liquor traffic. Providing liquor at meals is the same as selling it all the time, for the man who wishes to drink every hour will have ostensibly as many meal times. That kind of license has been tried in Massachusetts. A man takes a seat at a table calls for pretzel and herring to make him more thirsty and drinks till he is under the table. Although the Sunday proviso has passed the Senate, it has not been acted upon in the house. A great hue and cry has been raised against it. The Germans in Chicago feel the worst. A meeting of German societies called to consider the "evils" of Sunday closing, advise that the appropriation be rejected with "scorn," if given on the condition that the Fair be closed on Sunday. The Germans find it hard work to enjoy themselves without Sunday as a holiday and without beer.

There is prospect of a little "rumpus" with Canada. Our people send their grain crops to the east by lake and canal and by concurrent railways for export. These crops pass in great volume by way of the lakes and canals during the season of water supply, the passage from Lake Erie to Lake Ontario being by the Welland Canal. By our treaty with Great Britain we are entitled to the use of that canal on terms of equality with the inhabitants of the Dominion of Canada. For that we pay a good price. We give in return for equality in the use of the Welland and St. Lawrence canals, the use of the great canals at St. Mary's, connecting Lake Superior with Lake Huron, and the St. Clair flats, connecting Lake

Huron with Lake Erie, upon which the government has expended millions of dollars—more than one million in a single year. But every ton of cargo that passes through the Welland Canal to an American port for export is now charged ten times the toll that is exacted upon the cargo that is to be exported from a Canadian port. To retaliate, a bill has been introduced into the United States Senate providing for a tax of fifty cents a ton to be levied on all Canadian vessels passing through Sault St. Mary canal, that an entrance fee and a clearance fee of fifty cents a ton be levied upon all Canadian vessels entering or leaving our lake ports, that coffee imported by the way of Canada shall be dutiable at eight cents a pound to twelve cents a pound, and that duties on other merchandise imported from Canada shall be double what they are when imported from other foreign countries.

The Department of State at Washington has been exchanging courtesies with the King of Italy. The Italian citizens of New York will present to the United States for the World's Fair a statue of Columbus. This is to come from Italy, and it is now learned that the ship that will bring it will be accompanied by an Italian man-of-war. It is expected that the Italian cruiser will be in New York harbour by the first of October when there will be "ceremonies" in New York incident to the World's Fair.

In June more than 90,000 persons visited the World's Fair grounds. There was a daily average of 3,000, and on one day in May the visitors numbered 12,038. More than one thousand men are at work on the Manufacturer's Building. The total number of workmen employed on the Fair grounds is about ten thousand, and this number will be increased probably that the buildings may be ready for dedication in October.

W. K. Vanderbilt's yacht, *Alva*, was run down on Nantucket Shoals by a steamer and sunk within a few minutes. The yacht cost one million dollars, and was perhaps the most palatial pleasure craft afloat. A thick fog prevailed at the time. Vanderbilt was on board, but escaped with his guests and his crew.

In the last letter an account was given of the strike and the riot in Homestead in the State of Pennsylvania. The troops are still in position. The Carnegie company offered to take back the strikers if they applied on or before a fixed date, but none applied. There is not much sympathy for the strikers. Some of them, experts, working with complicated machinery, earned \$8.40 a day, and none received less than \$2.50 a day. They want the earth. A few days ago, Frick, the manager of the Carnegie Mills was shot and stabbed by a man named Bergman who entered Frick's office for the purpose. Frick received seven wounds, but strange to say he was not dangerously injured and will recover. It is annoying to have these shooting anarchists popping around, but until they have a little more practice with firearms, they will not reduce the population very fast. The man Bergman is a Russian and an anarchist, a loafer and vagabond of the kind of which we have too large a number. The strikers at Homestead have no sympathy for Bergman and declare that he has no connection with them. Bergman glories in his work and expresses regret that he did not kill Frick.

A member of the militia at Homestead, when he heard that Frick had been shot, threw up his hat and cheered. He was strung up by his thumbs left to meditate a while, and then was drummed out of camp. Other mills of the Carnegie company are now closed on account of the workmen leaving, not because they are dissatisfied with wages, but out of sympathy with the Homestead strikers. The fight begun with capital may be long and may involve concurrent interests. It is reported that railway men will strike and leave their trains wherever they happen to be, if the railway companies attempt to transport the products of the Carnegie Mills.

LETTER FROM GERMANY.

(FROM OUR BERLIN CORRESPONDENT.)

Berlin, July 19th, 1892.

During the absence of the Emperor on his cruise to the North, the Press controversy between Bismarck and the government is continuing with increased hostility. Whilst in the beginning only the semi-official papers were engaged on the government side, there have now appeared publications in the *Reichsanzeiger* or Imperial Gazette, which show that the government has at last adopted the plan of openly repulsing its adversary by documentary evidence. The official paper, in its issue of the 7th instant published despatches which throw considerable light on the origin of the

present feud and the conciliatory views of the Emperor. It is worth while to give the documents in extenso, as showing not only the attitude taken up in the beginning by the Imperial Government, but also because they give an insight into the manner in which delicate diplomatic matters are managed by the Imperial Foreign Office. The first despatch is an identical letter of instructions to all German and Prussian missions, dated the 23rd May, 1891. It is as follows:—

"Your Excellency (or the corresponding title of the Chef de Mission) will not have failed to notice that the present views and sentiments of Prince Bismarck, Duke of Lauenburg, were recently publicly brought forward in the Press. His Majesty's Government in taking into consideration to the fullest extent the immortal services rendered by the great statesman, have hitherto adopted the course of keeping silent as long as these statements had reference only to personal affairs or to questions of internal policy. From the moment, however, when they began to embrace questions connected with our foreign policy, it became imperative on H.M. Government to examine whether the continuance of silence on our part might not be falsely interpreted or become detrimental to our foreign relations.

"His Majesty the Emperor is, however, of opinion that a gradually calming down of the present attitude of Prince Bismarck may be looked forward to, whilst in the meantime the actual [i.e. insignificant] value of the statements appearing in the public papers, will be more and correctly appreciated abroad. In consideration of the fact that the reports of the subjective opinions of the Prince are not only more or less incorrectly rendered by his interviewers but appear sometimes intentionally misrepresented; and in view of the fact that they were sometimes confided to persons of undoubted hostility to Germany, it is to be assumed that they cannot produce any lasting injury on our foreign relations. His Majesty distinguishes also between the Bismarck of former times and the Bismarck of to-day, and is entirely averse to any steps being taken by His Imperial Majesty's Government which might to any extent tend to lower the high estimation in which our greatest statesman is held by the German nation.

"In authorizing your Excellency to express yourself in conformity with the above, whenever it would seem necessary, I beg to express the hope that the government to which you are accredited will, on its part, not attach any real value to the Press accounts of Prince Bismarck's opinions."

The above instructions were given at the time when Bismarck was entering upon his Press campaign against the Government. Then came a time of calm and a suspension of hostilities, and soon after followed the engagement of Count Herbert to Countess Hayos, his report of the interesting fact to the Emperor, and His Majesty's gracious reply. He was expecting a reconciliation, and doubtless some of the friends of Bismarck were anxious to bring it about. What the difficulties were has not transpired, though it is not improbable that Bismarck refused to take the first step, and demanded a reinstatement in the Imperial Council. But matters were not by any means so easy of settlement, as the following Despatch shows:—

This document, dated the 9th June, 1892, was addressed to Prince Reuss, the Imperial Ambassador at Vienna. It is worded:—

"With reference to the projected marriage of Count Herbert Bismarck in Vienna, I have the honour, consequent upon a personal report to His Majesty, to inform your Serene Highness to the following effect:—With respect to the rumours of a rapprochement between Prince Bismarck and his Majesty, there is wanting in the first place the essential condition of an initial step being taken by the ex-Chancellor himself. This rapprochement however, if it took place at all, could never reach the extent of giving any grounds to public opinion to assume that Prince Bismarck had again gained any influence whatsoever on the conduct of public affairs. Should the prince or his family think it proper to approach your Serene Highness, I request you to confine yourself in return to the necessary conventional forms only, and to avoid accepting any invitation to the wedding. This instruction for your conduct applies also to the members of the Embassy. I beg to add that His Majesty intends to take no notice of the wedding. Your Highness is authorized to take such means as you may think expedient to give immediate communication of the above to Count Kalnoky."

"Signed

Count v. CAPRIVI."

This communication was undoubtedly made, and when Bismarck applied for an audience of the Emperor of Austria he found the doors closed. It is useless to conjecture whether the Emperor would have received him without this communication, but it is at any rate highly improbable.

On the other hand, the mortification and rage of the former Diplomatic Dictator of Europe are not difficult to understand, though not easy to excuse. The outburst of popularity which met him step by step, the demonstrative enthusiasm which the crowded masses around his carriage showed in every city he entered, and at every railway station he passed through, gave him a false idea of power and influence which in fact he had altogether lost by the disgrace he has fallen into. In a cooler mood he would have maintained the dignified silence observed by him in Berlin, but, just at the time he was smarting under the blow of being refused an audience of the Austrian Emperor, the interviewers came upon him and he could not close his angry lips. Hence the disclosures, grievances, and personal attacks on his successor. Hence the contradictions of his former statements in which he had fully admitted the gentlemanly character and fair play of Count Caprivi. Thus the breach widened between the present and former chancellors, and what is still worse between a master of whose generous and conciliatory tendencies there is full evidence, and a well deserving servant whom the German nation had raised to the pedestal of a national idol. It would be altogether wrong to attribute the motives of these popular demonstrations to a protest against the new régime. They simply showed a feeling of pity with the old man whom many thought hardly used. But this feeling must be dying away in face of the documentary evidence that the Emperor did everything he could to preserve the ex-Chancellor from exposure and public disappointment, and that it was only his continued bitterness and wanton hostility against his successors that brought on him the painful consequences, which he has himself correctly described as a kind of "boycotting." Supposing even that the Emperor of Austria was influenced to refuse receiving Bismarck, and admitting also that a sort of political boycotting was established against him wherever he went—it may be fully justified by the fact that a man of the enormous influence and power of the ex-Chancellor, being in the most aggravated of tempers, could scarcely be trusted to run from Count to Count, sowing perhaps by his ill restrained invectives against his successor seeds of doubt and distrust which could scarcely promote the objects of peaceful harmony or the interests of the fatherland.

The only straight and open course for Bismarck was to make use of his parliamentary privileges in the Reichstag. But here he lacks the first essential of a leader of opposition, namely, a party. All through his long and successful political career he not only failed to form a parliamentary Party, but did his best to reduce the influence which such a body could exercise on the Government. Of the four great parties in the Imperial Parliament he formed by his superior ability combinations and instruments for his policy, and they were willing, not to say yielding, enough to accept the position which it pleased him to attribute to them.

The only party that was always in opposition, and which he fought from the beginning of his career to the last day he was in office, is the "Freisinnige" or liberal party; the only party which now remains in opposition though much calmed down since Bismarck's retirement. It would indeed be a matter of humiliation to the great statesman if he was forced now to associate himself with their tactics. Besides it would be absolutely out of the question for him to do so, for of all his former political antagonists, and there are many of them, none have preserved such a good memory of his persecutions as this party, and its press organs contribute everything in their power to increase the breach between him and the Government. To rise unsupported in Parliament in order to attack the Government "en vizière ouverte" would in all probability be to the former leader of Germany's destinies the greatest of all the disappointments he has yet suffered.

INQUEST.

We received information on Wednesday morning that Mr. Drummond Anderson had been found in his bath in a semi-unconscious condition with his throat cut, but at that time he was still alive, surgical aid having been at once obtained and the wound stitched up. He had sustained the loss of an immense quantity of blood, however, and only lingered a few hours when placed in bed after everything was done for him that doctors and nurses could do. On his death being brought to the notice of the British authorities, Mr. R. de B. Layard, acting as Coroner, summoned as a jury Messrs. Showler, Russell, and Bunting, but the latter, mistaking the hour mentioned by the summoning officer, did not appear in time, and his place was taken by Mr. Hay, when the following evidence was given:—

Edwin Wheeler, M.D., sworn, said—I was called at about 25 minutes to 9 by a coolie to come quickly to No. 43, Bluff. I was met in the hall by a boy who told me to go upstairs, who conveyed me to a bath-room off Mr. Anderson's room, where I found him sitting in a tub of water and blood and a large gash in the left side of his neck about three inches below the left ear. The wound measured between 4 and 5 inches, and was gaping considerably. Just immediately after I got into the bath-room the Staff Surgeon of the German Hospital arrived and told me he had brought the instruments. We had him conveyed out of the bath-room and placed on the bed, and Dr. Kunknitz and I proceeded to ligature the different bleeding vessels. When we lifted him on to the bed he was quite pulseless, but rallied somewhat after the hypodermic injection of some ether. This went on until a little before eleven, when life began to flicker and then expired—about a quarter to 11 I think. I may say he was entirely unconscious from the time I saw him, and he must have been bleeding for some time judging by the clots of blood—it may have been as long as twenty minutes or half an hour. Dr. Kunknitz had one of the hospital nurses there all the time until he died. There were no signs of blood outside the bath, but on the sides and inside. He was sitting on the round part of the bath as if on an arm chair with the blood oozing out of the wound at every breath he took. The wound was self-inflicted, and on draining the bath the boy found a razor in the bottom of it. I was there when the boy found it. (Razor produced and handed in.)

To Mr. Showler—The door of the bath-room was open when I came, but I don't know who found out the matter first.

To Mr. Hay—He had nothing on but the trouser part of his pyjamas—otherwise he was perfectly naked.

To the Coroner—I have known the deceased all the time he has been here. He has been here about 17 or nearly 18 years. He came here in 1874. He never gave me cause to think he was mentally deranged. He complained about being tired and unwell, and I advised him to go into the country for ten days. I have always attended him, but have given him no prescription for some months, except on one occasion when he complained of head-ache about six weeks ago. He thought he had got a slight attack of the sun. I made him keep quiet and he got all right again.

Charles G. Conyngham, sworn, said—About 8.30 this morning I was in my bath-room in this house when Mr. Lionel, Mr. Anderson's son, came and told me that his father was in his bath and had cut his throat. I immediately went with him to his father's room, and there I saw his father in his bath with his throat cut. After that I told the house boy to fetch the Doctor of the German Hospital, because it was the nearest place where there was a doctor. About ten minutes after, the German doctor arrived, when I showed him up to Mr. Anderson's room. From that time, with the exception of about half an hour, I remained in Mr. Anderson's room until he died.

To the Coroner—When Mr. Lionel called me the room doors were open, but no one was there when I went in. The deceased was sitting in his bath with his back against the side. I should say he was perfectly unconscious. The bath was an oval one of wood—a Japanese one. The sides of the bath came up to about his shoulder blade.

To Mr. Showler—Mr. Anderson never spoke.

To Mr. Russell—I think he shaved himself every morning.

To Mr. Hay—Mr. Anderson was in no way moved, as he was in the same position when Dr. Wheeler saw it as when I saw it.

To the Coroner—My first impression was that of a cut by a knife. I could see no weapon. The deceased's hands I think, when I saw him, were on the edges of the bath, but of this I can't be perfectly certain.

To Mr. Showler—My opinion is that the wound was self-inflicted, but I have no reason to suppose so beyond the fact that nobody was in the room before I went in. The last time I saw Mr. Anderson alive must have been ten days ago. I am a resident in the house, but within the last ten days I have not seen him in the house myself, but he may have been here.

William Bourne, sworn, said—I live here, but my daughter is the proprietress of the house. About 8.30 this morning, I heard Lionel, the deceased's son, calling out excitedly for the boy. I called out to Mr. Conyngham to ask him what was the matter. He said, "Come upstairs, there's something the matter with Mr. Anderson," or words to that effect. Others went up with him into the room and saw the deceased in his bath with his throat cut. We had some talk as to what to do, and found out the doctors had been sent for. I went out as far as the German Hospital gate and met the doctor, who

said he would come as speedily as possible, which he did, bringing with him two hospital nurses and his instruments. Dr. Wheeler arrived almost as soon as the German doctor. He was taken out of the bath, placed on the bed, and the doctors proceeded to dress the wound. I went down town on business, and came back a little before eleven, when I found him dying.

To the Coroner—The deceased was quite unconscious when I saw him in the morning. I did not see him the night before. The last time I saw him was about 4 or 5 days ago. I remember distinctly asking him then whether he was going to have breakfast, when he replied he was going to Schwabe's to have breakfast. Since then I have not seen him till this morning. Sometime previously I heard him complain about the work in the office. I never noticed that he was in any way deranged, but he complained of overwork. I noticed nothing excitable in his manner.

To Mr. Russell—I know of no reason why he should not have come home. I presume he came home every night, but cannot say for certain whether he was away every night. For about a week I don't think he has been here for his meals. Thought it strange, but had no reason to think so. I can't think of any trouble that would have led him to commit suicide.

To the Coroner—I knew of no troubles that may have been on his mind.

Herbert William Bell, sworn, said—I am employed in Messrs. Jardine, Matheson & Co.'s office. I arrived here about two months ago, but have known Mr. Anderson for three years. I saw him yesterday afternoon at the Club at 5.30. He was very well then. I had about 10 minutes conversation with him, and arranged to go to the circus to-night. He did not seem at all excited, but particularly well. He complained of too much work when I first arrived. He seemed to be a little depressed at times. He spoke of not enough time to do the work in the office. He used to complain about his head troubling him sometimes.

Lionel John Crossley Anderson, sworn, said—I was going down to the office at about 8.20, when I heard a noise in my father's room. Wondering why he hadn't gone down yet, I went in and I saw him sitting in his bath with his neck cut. I then came downstairs and finding no one in this room (dining room) I called the boy. Then knowing that Mr. Conyngham was upstairs, I went to him and called him. After that I went again into my father's room. Soon afterwards Mr. Thompson and the boy came in. I left them and went to the German Hospital. I called the doctor, and then stayed downstairs and did not see my father after that. Mr. Thompson is a lodger in this house.

To the Coroner—By the noise I heard I mean the sound of snoring. When I went into the room the door leading to the passage was closed; the bath-room door was shut to, but not closed. Lately my father has gone down early—he left the house about 7.30. I have not been in the habit of going into his room before he was fully dressed. I did not see him yesterday, the last time I saw him I think was Saturday. Can't say whether he was the same or not, as I only saw him a short time.

Dr. Wheeler, recalled, in answer to Mr. Hay—I don't think anything could be done pending the arrival of the doctors. Others could do nothing, seeing that ligatures were necessary. When we lifted him up, he seemed to be entirely drained of blood. The cause of death was hemorrhage, and consequent heart failure occasioned by a wound in the throat. There were no other wounds on the body. There was no possibility of its being an accident. The wound gaped so much it looked shallow, but it had cut right through the sterno-mastoid muscle and the external jugular vein, besides wounding many smaller vessels, but the main artery, the carotid, was untouched.

The Coroner then addressed a few words to the jury, who found as follows:—

We find that Drummond Anderson died between the hours of ten and eleven o'clock in the forenoon of August 24th, 1892, at No. 43, Bluff, Yokohama, from a wound caused by a razor; that said wound was inflicted by his own hand while in a condition of temporary insanity.

How few women who like oxtail soup know that the dainty was first invented by the aristocratic emigrants who came to London at the time of the French Revolution. They were very poor, but soup is a necessity to the Gallic stomach. In those days, when the English butchers slaughtered beef, they were accustomed to throw away the tails with the refuse. The French women had the bright idea of buying the tails, since they could get them for next to nothing, and making soup of them. And thus they gave to England the popular oxtail soup, which Englishmen now consider an essential national dish.

CO-OPERATION IN CHINA.

I.

The principle of co-operation is one which enters largely into the life of the nations of the West, and although within the present century it has produced wonderful fruit, it is probable that other and even more important of its results are to be witnessed in the not distant future.

There is reason to suppose that the Chinese were practically familiar with the principle of co-operation, at a time when the communities which ultimately developed into what are now the great nations of the West, were still in a primitive state. The Chinese discovered for themselves this principle as they discovered gunpowder, the art of printing, and the compass. In the application of all the latter discoveries, they have been greatly surpassed by the men of the West, but in China co-operation so far as it goes, possesses a quality of efficiency which is not equalled by anything to be found in Occidental lands. In what it is able to accomplish, as well as in what it fails to accomplish, Chinese co-operation is an interesting study, likely to repay the attention which may be bestowed upon it, by those who are interested in the China people. Hitherto this subject appears to have attracted the attention of foreigners in China, mainly in its commercial aspects. An interesting paper on "Chinese Guilds or Chambers of Commerce, and Trades Unions" by Dr. D. J. Macgowan, was printed in the Journal of the China Branch of Royal Asiatic Society (Vol. XXI, No. 3, 1886), in a footnote appended to which, may be found references to many reports, and articles more or less relevant to this branch of our topic, by commissioners of Customs, consuls, sinologists, and publicists. An elaborate essay on the Commercial law of the Chinese was published several years since in the *China Mail*, and reprinted during the past year.

Fully to comprehend the workings of co-operation in China, is to understand fully the Chinese and all their ways, a task to which not only no one foreigner, but no combination of foreigners is as yet equal. Without attempting anything so rash as a comprehensive account of Chinese co-operation, it is sufficient to offer a few notes upon this broad topic. The reader will bear in mind, that as was long ago remarked by Mr. T. T. Meadows, a "note" upon a subject is by no means a full account of it, and he will no doubt be able to amplify or to correct such examples of Chinese co-operation as may be hereinafter cited. The Chinese share with the rest of the human race, a desire to make a marriage ceremony an occasion of joy. One of the most frequent periphrases for a wedding, is the expression "joyful event." It is in China pre-eminently true that the highest forms of "joy," find expression in eating. While marriage feasts are no doubt to be found in all lands at all times, they are especially Oriental, and are characteristic of the Chinese. Owing to the extent and the intricate ramifications of Chinese relationships, the number of persons who must be invited to a wedding is very large. In some regions it is customary for women only to contribute a "share" (*feitsau*) to a wedding, while the men give a present at that part of the ceremony when the bridegroom salutes the guests in turn with a prostration. As the name of each guest is called to be thus honoured, he hands over the amount of his offering. But in other places men and women contribute in the same way. Of two things, however, one may be confident; that nearly all those invited will be present either in person or by a representative; and that nearly every woman will be accompanied by children, who contribute nothing to the revenues, but add enormously to the expenses. Marriage customs in China certainly vary widely, but of such a thing as being present at "the ceremony," but not at "the wedding breakfast," we have never heard. Indeed, it can scarcely be said, that in our sense of the word, there is any "ceremony." Whatever may be added or subtracted from the performances, the essence of a Chinese wedding seems to consist in the arrival of the bride at her future home. The "feast" is the main feature of the occasion. Sometimes the relatives are not invited at all upon the wedding day, but at a subsequent one, yet it is not the less true that when the guests do come the "feast" is the centre and soul of the occasion. If there is anything which the Chinese have reduced to an exact science, it is the business of eating. The sign of real friendship is to invite a man to a meal, and it is a proverbial saying that he who comes bearing a vessel of wine on his shoulder, and leading a sheep, is the truly hospitable man, for he shows by his acts that his invitation is a real one. The great mass of the Chinese spend their days in a condition which is very remote from affluence, but the expenses of weddings and funerals in the mere matter of eating, are such as must, from the extent of such expenses and the frequency of the occasion which they are required,

reduce any but a very affluent family, to utter poverty. Under the pressure of these inexorable circumstances, the Chinese have long ago an application of the share principle, by means of which wedding and funeral feasts become quite practicable, which would otherwise remain an utter impossibility. It can seldom be known with certainty how many guests will attend a wedding, or funeral, but the provision must be made upon the basis of the largest number likely to appear. Each guest or rather each family is not only expected, but by a rigid code of social etiquette required, as already mentioned, to contribute to the expenses of the occasion by a "share." This will sometimes be in food, but the general practice is to bring money, according to a scale which is perfectly understood by every one. The amount varies greatly in different places, from a trifling sum of the value of about five or six cents, up to a quarter of a dollar, or more, according to the degree of intimacy between the persons, and the ability of the guests to contribute. In some parts of China, the ordinary amount taken to such a feast, seems to be twice as great as in others. Sometimes the standard is so well understood, that the phrase "a share," has a local meaning as definite as if (for example) the sum of two hundred and fifty cash were expressly named.

In some places while the rate of "a share" for a funeral is two hundred and fifty cash, that for a wedding is just double. This is because the food at a funeral is "plain" (*shu*), while that for the wedding is of meat (*huu*) and much more expensive. It is not uncommon to find that "a share" for a person who comes from another city or district is two or three times that of a native of the place where the feast is given. To give only the same as a native would do, would for the person from a distance, be considered as a loss of "face"!

It is a characteristic example of Chinese procedure that the sums contributed upon occasions of this sort, are seldom in reality what they profess to be. If local custom considers ninety-eight or ninety-six cash as a hundred, the temptation to put in a less number as a contribution is generally too strong to be resisted; the more so, as in the confusion of receiving the numerous amounts, it is generally difficult to tell which particular string of cash was sent in by which persons, although the amounts are all entered in an "account," to be presently noticed. Those householders who are very anxious to keep exact track of the relative honesty of the respective contributors, sometimes do so, by having ready a long cord to which each successive sum of cash is tied by its string, after for the sum is entered on the account. When the proceedings are ended, it will then be possible the master of the house to go over the multitudinous strings of cash, ascertaining how much each one is short, and tracing it to its donor by its place on the cord, corresponding to the order of entry in the account-book. But this plan is not regarded with favour by the guests and is not generally adopted, if for no other reason because it makes so much trouble. The advantage of it is, that it enables the householder to pay off the debt to the family which gave short cash, at exactly the same rate, whenever they invite him to a wedding or a funeral. It is worth noticing also, that this practice of making deductions from contributions applies not only to the sums paid at weddings and funerals, but in like manner to subscriptions to temples. In some places it is well understood, that though each guest contributes "a share" of two hundred and fifty cash, it will take five "shares" to make a thousand, since every "hundred cash" is in reality only eighty.

II.

In cities and large towns, the business of managing a wedding or a funeral feast, is conducted much as it would be in any country of the West. A food shop contracts to deliver so many bowls of food, of a definite quality and at a fixed price. Provision is also made for additional supplies should the number of guests be unexpectedly great. But if the feast is to be on a large scale, it is not unlikely that the cooking will be done on the premises by the provisional caterers. It is usual to speak of an affair of this sort as embracing so many feasts, a "feast" denoting not a single individual, as might be supposed, but the number who can sit at one table. This number, like everything Chinese, varies in different places. Sometimes it is eight, and the phrase, "eight fairy table" is the common designation of the articles of furniture required for the purpose. In other regions all the tables are of the same size and shape as these, one side is left open for convenience of passing the food, and a "feast" signifies six persons only. When the feasts are provided by contract, the establishment also furnishes waiters, who convey the food to the guests, and to these waiters a small gratuity is given at the original feast. But the number of fami-

lies who are within reach of facilities such as these, is but a small proportion of those who are obliged to arrange for feasts at weddings and funerals. For those to whom no such resource is open, there is no other way but to put the matter into the hands of experts of great experience in such matters, a class of persons to be found everywhere. Every village or group of villages can furnish a professional cook, who devotes the most of his time to the conduct of affairs of this sort. If he is a man of wide reputation, and employed by rich families, he will have a number of assistants who work under his direction, all of whom at the close of the feast will be rewarded with suitable gratuities. The staff of persons into whose hands the business of arranging for a feast is committed, is divided into three departments or committees, the Stewards (*chih fang*), the Culinary Department (*ch'u-fang*), and Finance Department (*chang-fang*). Each of them is a check upon the other two, although in the smaller and less expensive affairs, all three will naturally run together and be merged in a single head. The Stewards purchase such supplies as are supposed to be necessary, embracing the best which the local market affords. In the northern part of the China, the two items which are most expensive, are wheat bread-cakes (*man-t'ou*) and wine. If the accommodation of the dwelling admit of it, the articles which have been bought for the feast, are placed in a separate apartment, under the exclusive charge of one of Stewards, by whose order alone can anything be paid out to the kitchen, on demand of the head cook. But in practice it is found that at this point there is always a serious leak, for many of the relatives and neighbours of the family which is to have the feast, will send over their children to the store-room to "borrow" a few bread-cakes, or a few cups of wine. For a steward to refuse (as a foreigner would be likely to do), is to incur the ill-will of the family which wishes to "borrow," and the only advantage to the Steward would be that he would to reviled, which no Chinese relishes. As a matter of practice therefore, it is customary to "give to him that asketh," and from him that would "borrow" not to turn away, even though, as the old English saying runs, "Broad things are cut out of other people's leather." It not infrequently happens that the Stewards who are in charge of the entertainment, are smokers of opium, in which case the expenses are sure to be much heavier than otherwise. It has also come to be a custom in some regions, to furnish opium to the guests at weddings, and this may become an item of a very elastic nature. Besides this, a man who smokes opium, is naturally incapacitated from taking even ordinary care of the stores under his charge. If he is himself a smoker, and if opium is one of the articles provided for the occasion, it will not be strange if all his opium-smoking comrades embrace the opportunity to visit him, when the must be invited to take a pipe—of course at the expense of the master of the ceremonies. The disappearance of wine and bread-cakes, on occasions of this sort, even before a single bowl of food has been set before a guest, suggests the evaporation of water on a hot summer day. It was reported to the writer not long since, that on the occasion of a funeral in a neighbour's about sixty catties of wine vanished, without leaving behind any trace of its devious course. The reason for such occurrences, which are of universal notoriety, is not that the stewards are not able to do that which they are set to do, nor is the explanation necessarily to be found in their indifference to the interests of the host. The real seat of the difficulty is, that every family sufficiently well-to-do to have a large feast, is surrounded with a swarm of poor relatives, who have no other opportunities than these to make their connection of any service to themselves, and who on such occasions are determined not to be ignored. A poor family of the same surname as the host, will stand at the door of the mansion where a great feast is in preparation, with bowls in hand, demanding that a share of the good things in course of being served shall be apportioned. Even if the master of the house should absolutely refuse his consent, and if the Stewards should follow his directions, and give nothing, it would be of no avail, for the poor family would raise such an uproar as practically to prevent further proceedings, and all the guests would take the part of the poor relatives, exhorting the host to give them what they asked. The habit of levying tribute upon those who happen to be in a position to pay it, is, as already remarked, deeply rooted in Chinese life. To what this practice leads, may be seen in the extreme cases of which one now and then hears, such as the following detailed to the writer, by the principal sufferer. A man had a dispute with one of his uncles about a tree, the value of which did not amount to three thousand cash. As he was a person without force of character, and unable to get

his rights, he was obliged to 'eat loss.' This enraged his wife to such an extent that she hung herself. It was now open to her husband to bring a suit at law, accusing the other party of 'harrying to death' (*pi-sui*) the deceased wife. Perhaps this would have been the best plan for the injured husband, the 'peace-talkers' persuaded him to compromise the matter for a money payment. The other party had a powerful advocate in a relative who was a notorious black-leg expert in law-suits, and who freely gave his advice. Even under these advantages, the middlemen into whose hands the matter was put, decided that the uncle should pay thirty thousand cash to the family of the woman, as a contribution to the funeral, which was done. It is not usual to make much parades, unless the sum to be expended is exacted from those who are supposed to have impelled to the suicide. In this instance, half the amount paid would have been amply sufficient for the funeral and for all its expenses. The 'family friends' of the husband, uncles, cousins, nephews, etc., took charge of the proceedings, which they contrived to drag out for more than a week, and when the funeral was over, the husband whose crops had been that year totally destroyed by floods, ascertained that these 'family friends' had not only made away with thirty thousand cash awarded as a fine, but that he was saddled with a debt of immediate urgency amounting to twenty thousand more for 'bread-cakes' and 'wine,' which had been consumed 'as alleged' by the 'family friends' during the protracted negotiations. The clear accounts of the expenditure were not to be had, and the only thing of which the poor husband was sure, was that he was practically ruined by his 'family friends.'

It is always taken for granted by the Chinese, that any family rich enough to spend a large amount of money on the funeral of a parent, will be mercilessly pillaged on that particular occasion. The reason for this is, that at such a time the master of the house (theoretically) overcome by grief, and ordinary propriety requires that he himself should take no part in the management of affairs, but should give his exclusive attention to the mourning rites. Even though he clearly perceives that everything is going wrong, he must act if he were blind, and deaf, and also dumb. Long practice has made the Chinese very expert in such an accomplishment, which, it is needless to say, would be for an Occidental difficult, not to say impossible. If the householder is a man for any reason generally unpopular, his disadvantages will be greatly increased, as is illustrated by the following case, narrated to the writer by a man who lived within two miles of the village in which the event occurred.

A wealthy man lost his father, and made preparations for an expensive funeral. He took a hundred strings of cash in a large farm-cart, and went to a market to buy swine to be slaughtered for the feast. On the way he was waylaid by a party of his own relatives, and robbed of all the money, in such a way as to render recovery of it hopeless. Having afterwards bought four swine and an ox (a most generous provision for the feast), the arrangements were put into the hands of managers (*tsung-ti*), as usual. These persons found themselves wholly unable to restrain the raids upon the stores by 'friends,' neighbours, and others, and the night before the funeral was to occur, thieves broke into the 'store-room' and carried off every scrap of meat, leaving nothing whatever for the feast. The managers were frightened and ran away. The feast was of necessity laid with nothing but vegetables, and was of a sort to bring the householder into disgrace. As a result he was afraid to try to have any more funerals, and there are at present in his premises two unburied coffins awaiting sepulture, perhaps by the next generation. It is the duty of the committee which looks after the finances, to take charge of all sums which may be brought by the guests, and to keep a record of the amount paid by each. This is a matter of great importance, as every such contribution occupies the double position of a repayment of some similar gift to the family of the giver, by the family which now receives the gift, and also a precursor of similar return gifts in time to come. The amount which is sent by each person will depend upon the relations existing between the families, and especially upon the amount received by them on some former similar occasion. To disregard the unwritten code which demands from guests proportional contributions, is regarded as a grave offence against decorum, because of its serious consequences to the family concerned in diminishing their receipts. To attend a feast, but not to bring any contribution, either in money or in kind, seems to be practically unknown, though it constantly happens that the quantity of food which on certain occasions may be substituted for money, is less than half of what is eaten by the donor. This is especially the case when the giver

is a woman, who, as already mentioned, is likely to bring one or more voracious children, who must be pacified by food at every stage of the performance, their capacities being apparently absolutely unlimited.—*N. C. Daily News.*

BASEBALL.

A game at baseball was played yesterday between teams from Yokohama and the U.S.S. Marion, when the latter made an awful example of the residents—14 to 3. It is true that the beaten side has had little or no practice for a considerable period, but probably the same might be urged on behalf of the victors. Details are appended:—

SOME PETS OF THE C.M.S.

The Ainu of Japan: The Religion, Superstitions, and General History of the Hairy Aborigines of Japan. By the Rev. JOHN BATCHELOR, C.M.S., Missionary to the Ainu. London: The Religious Tract Society.

THE Ainu is the Caliban of Japan. He cometh none knoweth whence. He goeth but too rapidly, alas! into the state "Poknamoshiri," the Intermediate, and there his spirit is at once relieved of anxiety and responsibility; or, as Mr. Batchelor quaintly puts it, is told where to go and what to do. It is devoutly to be hoped, in the aforesaid spirit is bidden to wash; for the exact complexion of the Ainu is still uncertain, his traditions reverting to the Flood, and his last ablutions being contemporaneous therewith. Now and again an accident occurs, for the Hokkaido abounds in streams; but the resulting discomfort to the hairy unfortunate is too horrible to contemplate. His relations with his gods are charmingly intimate. Ever and anon do these prow down from their mountain fastnesses, and scent out—not a difficult task, by the way—and devour some succulent votary. On the other hand, the Ainu worships with much unctuous ceremony, and, in return for the mortuary favours conferred on his forefathers, now and again slays a stray deity, and divides him up into divers little pieces—for your Ainu is nothing if not polytheistic—and after many salaams will wash him down with copious libations of rice-spirit. The Ainu holds that the roof of his religion lies in the eating, and there be worse things than Yezo bear-chops. For certain reasons, not wholly unconnected with civilization and the concomitant saké bottle, he will soon be as dead as a door-nail. In the meantime, Mr. Batchelor has caught him before the final vanishing, and has succeeded, much to our edification, in unrolling his record in one of the Religious Tract Society's most piquant publications.

It is commonly supposed that it was Miss Bird who discovered and classified the Ainu. This is a great mistake. In the first place she called her aborigines 'Aino,' which, being interpreted, means mongrel; and this is just what the Ainu is not. In the second place, he had been discovered before. Fully three centuries ere our author began the study of his pets, the Jesuit missionary, Father Lodovick Brojus, told the world of the Salvage People which are cloth'd in the Skins of Wild Beasts, Hairy all over their Bodies, having exceeding great Beards, and long Whiskers or Moustachios, which they turn up with sticks made for that purpose when they drink. 'They covet,' he adds, 'and are very desirous of Wine; also Valiant in War, and therefore much fear'd by the Japanese.' Not one jot nor tittle has the Ainu changed since those merry, comfortable days. He is still wholly fascinating, wholly, dirty, and, we have Mr. Batchelor's authority for saying so, wholly drunken. For what does he tell us?

Original from

'Fully ninety-five per cent. get drunk whatever they can obtain enough saké, and to be drunk is their ideal of supreme happiness.' (Their apologist will certainly make us a present of the odd five per cent.) In this connection we regret to say that Mr. Batchelor makes his remarks on the tipping instincts of the race an occasion for an altogether uncalled-for attack on Japanese saké. He compares it to very bad sherry. Some that have squatted with understanding before the cup-bearing maidens at a Japanese feast will haste to congratulate him on his wine-merchant.

One feature in a deeply interesting book is the charming rendering of Ainu legends and tales. Not only will these be found vastly amusing by the seeker after tit-bits, but they cannot fail to prove of profound interest to the student of folklore. Outside the covers of the yellow-back the Ainu is the quaintest child of nature left us. His ideas are few, but, such as they are, illimitable: when he soars, three heavens scarce content him; when he descends, six worlds are required to hold his exuberant fancy; he fights 'riding upon a sound like thunder,' and, when he dies, he 'rides upon the setting sun.' The sun, by the way, comes in at times for some curious treatment at his hands; for, during an eclipse, he is wont to sprinkle water in the direction of the paling light to revive the fainting luminary: which considering his obstinate unbelief in the hygienic virtues of that liquid, appears to show that even in Ainu-land logic is not an article to conjure with on an emergency.

It would be absurd to do more than comment on Mr. Batchelor's fascinating account of the Ainu, for no other white man has a title of his knowledge. He has made the race, the language, the history and mythology, entirely his own. Into a dictionary has he hatched the Ainu vocabulary, into a grammar the Ainu forms of speech, and now, in the pages of this encyclopædic volume, he has photographed the hairy one himself. But to the C.M.S. we would, in all humility, appeal not to appoint a successor to Mr. Batchelor, when, in the future, he shall have retired from his work. He is one in a thousand. The Ainu cannot await the passing of the nine hundred and ninety-nine. He is not an Ahirman among savages to be fought with the shekels of a multitude of benevolent busybodies. For these (it cannot be too often urged) an even spottier prey lies close at hand, and the Oriental may be scraped much nearer home. But to him, who, nevertheless, desireth to gild the Ainu, we would recommend the perusal of Mr. Batchelor's account of the results of mission work in Yezo, and, thereafter, the consideration of the following passage—written, it is true, in another connection, but of these very same people, some centuries ago: 'Yet, after long searching and far travelling through rough and untraced Wilds, sometimes climbing steep Ascents, oft engaged in amazing Precipices, they found their labour in vain, and no end, only seeing some few Salvages hairy all over with slovenly Beards.' We pray you let the Salvages depart in peace.

OBSERVATIONS ON DR. TSUBOI'S DISCOVERY OF ARTIFICIAL CAVES IN JAPAN.

By W. G. ASTON, C.M.G.,

Late Japanese Secretary, H.M.'s Legation, Tokyo.

Dr. Tsuboi's discovery of a number of artificial caves at Nishi Yoshimi in Eastern Japan will breed with much interest by all who have given attention to Japanese archaeology. A few of these monuments of antiquity had been already examined by others, but it was reserved for him to explore them on an extensive scale and to supply many interesting details which throw much light on their character and object. Perhaps he may on some future occasion favour us with a similar report on the thirty other cave districts which he has visited.

But, while rendering justice to the value of the facts collected by Dr. Tsuboi, it may be permitted to question some of his conclusions, more specially his view that these excavations were primarily intended as dwellings. There appears, from the evidence he himself has furnished, good reason to think that they were meant in the first place for sepulchres, although some of them were doubtless used as shelters by beggars or outlaws at a later period.

First of all it strikes one as improbable that so much labour should have been expended merely to provide a dark and narrow cell (2 or 2½ metres square), so wet that gutters were necessary to carry off the leakage, and with sleeping accommodation for only one, two, or occasionally three persons. This too is in a country where wood and other building materials are abundant. It is not easy to see how the ordinary occupations of a household be carried on in such a narrow space, with

doors opening on a precipitous hillside. The improbability becomes more glaring when it is remembered that from the earliest times the Japanese have been an agricultural race, and that accommodation was required not only for their families but for their implements of husbandry, their crops, and their domestic animals. Nor is this all. A glance at the drawings given in the work showing the modes of closing the entrances, will convince anyone that the roof of the entrance, with its drop near the middle, was so constructed purposely that it might be closed from the outside with a slab of stone, an arrangement which alone leads irresistibly to the conclusion that these excavations could not have been primarily meant for dwellings.

Dr. Tsuboi very justly points out that the fragments of Iwaibe (sacrificial vessels) found close to the caves must be contemporaneous with their use as tombs. It is a pity he could not have found space for a more detailed description of this pottery. I presume it is of the same character as that called Giōgi yaki—viz., unglazed vessels of certain well-defined shapes, turned on a wheel, and ornamented with wavy lines made by a stick or wooden comb. The larger specimens have mat-impressions outside, and within are marked by a curious stamped circular pattern which has been called the Korean wheel.* Popular tradition has it that this kind of pottery was introduced into Japan in the eighth century A.D. by a Buddhist priest of Korean extraction, named Giōgi, who is also credited *inter alia* with the invention of the potter's wheel. There is good reason, however, to think that this instrument became known to the Japanese some centuries before Giōgi's time. A guild of Korean potters, who can hardly have been ignorant of the use of the wheel, was established in Japan in the fifth century. They were probably the first makers of the so-called Giōgi ware, which, be it observed, is identical in character with the older Korean pottery. The inference as to the date of the pottery found by Dr. Tsuboi, and of the caves with which it is associated is obvious.

The clay cylinders† found near the caves belong to a different category. They are not wheel-made, but shaped in a mould, and are more like terracotta than pottery. They are not Korean in style, and probably represent the type of pottery in use in Japan before the establishment of the Korean manufacture. There is therefore no reason to limit their age to the date just mentioned, and, in fact, they are found surrounding the tombs of emperors who must go back to the beginning of the Christian era if not further. But these cylinders are appurtenances of a tumulus of the first or second class. Their object was, partly at least, to prevent the soil from being washed away by rain, and they have no *raison d'être* in connection with caves dug in a rock. Their presence at Nishi Yoshimi, if there is no mistake as to the description, points not doubtfully to the existence of a large sepulchral mound in the immediate vicinity. This supposition is rendered more probable by the fact that Mr. Satow in the paper above referred to describes some such mounds, which are situated a few miles farther north. Would it be possible for Dr. Tsuboi to have this suggestion verified?

A short description of the ordinary system of interment practised by the upper classes in Ancient Japan may throw some light on the relation in which these cave-tombs stand towards it. The most ancient tomb seems to have been a plain circular tumulus of no great size erected on an elevation. At least, some of the more ancient Emperors were buried in mounds of this character. At some time, however, not far distant from the Christian Epoch, a highly specialized form of tumulus came into fashion for the interment of sovereigns. It consists of two mounds, one having a circular base, the other shaped like a truncated isosceles triangle, the two being joined together so that the ground-plan resembles a keyhole in form. This double mound is surrounded by one or sometimes two moats of a horse-shoe shape. Many of these tumuli are of enormous size, varying in height from twenty to sixty feet. That of the Emperor Nintoku near Sakai, measures 2,494 yards round the outer of the two moats by which it is surrounded. They do not face any particular point of the horizon. The slope is not even, but is broken by terraces, along each each of which, as well as on the margin of the moats, is placed a row of the clay cylinders above mentioned.

It is uncertain at what time it became the practice to construct a vaulted stone chamber within the tumulus. We know, however, that some of these chambers date from the sixth century A.D. The entrance to them is by a long gallery, which always opens toward the south.

* Numerous drawings of this pottery are given in a paper by Mr. E. M. Satow in vol. vii. of the *Transactions of the Asiatic Society of Japan*. There is a good collection in the British Museum—the Gwondan Collection.

† There is a specimen in the Pitt-Rivers Museum at Oxford.

Princes and other persons of high rank were buried in circular mounds of smaller size, with one or two terraces provided with rows of clay cylinders, and usually surrounded by a small moat. Those of later date contain a stone chamber.

The tumuli of the nobility and officials may still be seen in great numbers in the provinces near Kyoto, known as the Gokinal. They are plain circular mounds without moat, terraces, or clay cylinders, and are generally found in groups on the lower slope of a hill. Like the others, they contain a chamber, which is entered by a gallery opening to the south—the same aspect as the Nishi Yoshimi caves. The walls of the chamber converge towards the top, which is then roofed in by a few rough blocks of stone often many tons in weight. The gallery is roofed in a similar manner. Sometimes it was adapted for being closed by a large slab of rock in a similar manner to the entrances to the caves at Nishi Yoshimi, but more commonly it was simply closed by blocks of stone thrown in anyhow.

An edict has come down to us dated A.D. 646, which regulates minutely the construction of these tombs. It is too long to quote *in extenso*; but I may mention that it provides that in the case of a functionary of the highest rank, the vault should be 9 feet long by 5 feet wide, and the covering mound 7 fathoms square and 3 fathoms high. It was also enacted that the tumuli should be built on uncultivated hill-sides, and grouped in cemeteries, instead of each family burying where they found it most convenient.

Tombs answering the above description are not unfrequent in the near neighbourhood of Nishi Yoshimi, as shown by Mr. Satow's paper already referred to; and I think it will appear a probable conjecture that the artificial caves discovered by Dr. Tsuboi are an adaptation to circumstances of this form of burial. It was found that the sandstone rock lent itself more readily to excavation than to the splitting off of the great slabs of stone required for the roofing of the mound-enclosed vaults. Their situation in groups on a barren hillside may well have been in order to comply with the enactment above quoted. That they belong to about the same period is shown by the character of the pottery found in and about them.

The building of costly mounds began to fall into disuse in the eighth century, and after the capital was transferred to Kyoto in A.D. 794 was only occasionally practised—at least, in the case of sovereigns and grandees. For persons of inferior rank it may possibly have remained the custom for some little time longer. Its abandonment was due to the spread of Buddhist ideas of the worthlessness of these mortal frames of ours, and also, no doubt, to desire to spare the people what had become the very onerous burden of their construction.

Everything considered, I would suggest the 8th century A.D. as not far from the date of the excavations at Nishi Yoshimi. Further investigations may enable us to establish it with greater precision. For the additional data which are necessary in order to do so, we must depend on explorers who, like Dr. Tsuboi, are able to conduct their inquiries in Japan itself. A wide field is open to them.

A few words about the Tsuchigumo. What little is known of them is contained in three passages of the Nihongi and one passage of the Kojiki, all of which belong to the highly legendary period of Japanese History. We gather from them that the Tsuchigumo were usually, though not invariably, outlaws who defied the Imperial authority. They had Japanese names, and inhabited such long-settled provinces as Yamato, Harima, and Bungo. There is nothing to suggest that they were not of Japanese race beyond the statement in the Nihongi that some of them had short bodies and long arms and legs, and were of the same class as pigmies. This, however, I take to be nothing more than a product of the popular imagination working on the hint contained in the name *tsuchigumo* which is literally "earth-spider." Some etymologists prefer the derivation which connects *kumo* (or *gumo*) with *komori* to hide, thus making *tsuchigumo* the "Earth-hiders." But this is probably a distinction without a difference, these two words containing the same root, and the animal which we call the spider, i.e., spinner, being in Japan termed the "hider," an epithet of which no one who has observed its habits will dispute the appropriateness. An ancient Japanese book says *Tsuchigumo* is a mere nickname. It is therefore to be compared with our *clod-hopper* or *bog-trotter*.

One of the passages above referred to speaks of *Tsuchigumo* who lived in a rock-cave, but there is nothing to show whether it was natural or artificial. The *Kojiki* tells us of a band of *Tsuchigumo* who occupied a *muro*. This *muro* was large enough to hold 160 persons, so it could have had little in common with the Nishi-Yoshimi excavations. But it was not only *Tsuchigumo* who in-

Original from

habited muro. Allusions to these dwellings are frequent in the older Japanese literature long after the period assigned to the Tsuchi-gumo, and from the way they are spoken of they were plainly not uncommon. It results from a comparison of numerous passages in which muro are mentioned that they were houses consisting of a wooden frame lashed together by ropes of a creeping vine, thatched with reeds and built in a pit several feet deep, to which steps led down. The walls had sedge or reeds by way of faths which were also fastened with cords of creepers, and were probably plastered with a mixture of clay and grass. Within there was a wooden platform for sleeping on.

Now it will be obvious that the epithet "Earth-hider" is more appropriate to dwellers in such pit-houses than to the inhabitants of rock-caves. Tsuchi is earth, not rock. Probably the muro inhabited by the Tsuchi-gumo were of a ruder kind than those described, perhaps resembling one which I have seen used as a lodging by the poorer class of pilgrims to Mount Oyama, and which was a square pit three or four feet deep covered with a thatched roof, the ends which rested on the edge of the pit. There were no walls. At the present day the word muro is applied to gardeners' for-cing-pits and to ice-houses, so that the original meaning of the word has not been altogether lost sight of.

It seems difficult to trace any connection between the Tsuchi-gumo or their habitations and the caves discovered by Dr. Tsuboi. It may be, however, that the muro was the type after which the first mound-enclosed vaults were constructed.

THE ANCIENT PIT-DWELLERS OF YEZO.

By ROMYEN HITCHCOCK.

When the first Emperor of Japan, known by the posthumous title Jimmu Tenno, whose traditional reign begun 660 B.C., was on his imperial journey eastward from ancient Tsukushi, to establish the seat of government in Yamato, he came to a great "cave" or "apartment", in which eight *tsuchi-gumo* or cave-dwelling savages were awaiting him. The word *tsuchi-gumo* is usually translated "earth-spiders," but Prof. B. H. Chamberlain regards it as a corruption of *tsuchi-gumori*, or "earth-hiders." Whatever the original meaning may have been, there can be no doubt that it was applied to a savage people, who inhabited Japan before the coming of the Japanese.

The ancient records of the Japanese contain many allusions to these dwellers under ground. In the reign of the Emperor Keiko two Kumasos braves were killed in a cave by Yamato-take. The Empress Jingo Kogo was wrecked among *tsuchi-gumo*. They are said to have been numerous in Bungo in other western provinces, in Oni, in Yamato, and in other localities.

The character of their dwellings is not clearly defined, owing to the ambiguous meaning of the Chinese character translated "cave." In certain parts of Japan natural caves are numerous, but they are not common throughout the country. Artificial caves are not uncommon, but I have endeavoured to show, in an article treating of ancient Japanese burial customs, read before section H of the American Association for the Advancement of Science at Toronto in 1889, that such caves were constructed for interment of the dead and not for dwellings. Still other structures, chambers made by piling up huge rocks and heaping up mounds of earth to cover them, are also numerous in southern Japan, and these have been designated as caves by von Siebold, rather carelessly it seems to me. But these also were only burial chambers. Granting that mere opinions concerning such a subject are not of much value, I would only add that until some stronger evidence than von Siebold has adduced gives colour to the idea that the early inhabitants of Japan lived in true caves, I hold that their dwellings were more probably of the character of the pit-dwellings to be described in this article. It is true we do not find the ruins of such dwellings in the south, although they are numerous in Yezo. This is doubtless because all such ruins have been destroyed in the more populous island, where every available plot of ground has long been under cultivation.

The fact is not to be overlooked, however, that the idea of cave life was familiar to the ancient Japanese. The well-known myth of the sun-god, who retired into a cave and closed the entrance with a stone, is significant of the truth of this assumption. It is not unlikely that the idea came from China, and that true cave life was never practiced in Japan.

There are still other people mentioned in the Japanese records, distinguished as Ebisu or hairy savages, who were contemporaneous with the earth-hiders. It is not difficult to recognize in these the

ancestors of the Ainos, who are now confined to Yezo. Not only is the historic evidence clear that the Ainos once lived in the main island as far south as Sendai, but we have numerous facts in support of the further conclusion that, in more ancient times, they occupied the coast as far south as the extreme end of Kinshu. Such evidence we find in the distribution of geographical place-names, which are obviously of Aino origin, in the names of famous characters in Japanese mythology, which are certainly of Aino derivation, and in the contents of kitchen-middens or shell-heaps, which are numerous here and there along the coast.

The writer has briefly summarized the evidence of Aino occupancy of Japan in the paper following this one. The character of the pottery found in shell-heaps is entirely different from any pottery made by the ancient Japanese. The material is the same as that of the Japanese sepulchral pottery, but the shapes of the vessels are not the same and the decoration upon them is absolutely distinctive. Strange as it may seem, the pottery of the shell-heaps is far more elaborately decorated than any ancient pottery of Japanese origin. Many of these are covered with complex designs, such as are absolutely unknown on Japanese pottery. The small fragments representing parts of human figures are, so far as I am aware, unique. Owing to the absence from home of the collector, I was unable to learn anything about them.

The ancient Japanese pottery comes from burial mounds which are prehistoric, or at least which date from a time before the year A.D. 400, when the authentic records of Japan begin. The pottery of the shell-heaps, often designated as Aino pottery, although more elaborately decorated, must be older than this, and it would seem to afford indisputable evidence that the Japanese were preceded by an aboriginal people who were potters. We find the same kind of pottery in Yezo, in the shell-heaps at Otaru, Sapporo, on the small island Bentenjima, Nemuro harbour, about ancient pits in Kushiro, and about similar places on the Island of Yeterof. Associated with it everywhere are found arrow-heads and other implements, such as may be found scattered over many parts of Yezo in the surface mold at the present day.

The question then arises, to what people shall we attribute this spoil? It has been supposed that the shell mounds were left by the Ainos. This is the opinion of Prof. John Milne. But we immediately come face to face with the fact that the Ainos of the present day do not make pottery. The claim is made, upon the rather insufficient ground it seems to me, that the Ainos formerly did make pots; but if so, it is strange that in all my journeying among them I found no indications of such handiwork, nor of their need of such utensils. I cannot bring myself to believe that a people who not only possessed that useful art but who also acquired such a degree of artistic skill in decorating their productions, could have absolutely lost it. Certainly it could not have disappeared within a century, as we must suppose if we accept all the evidence we possess of Aino pot making.

It would be a bold assumption indeed to suppose that the dwellers in earth houses, the *tsuchi-gumo*, made the pottery. We have no evidence of this further than the fact that here and there fragments of pottery, and occasionally well-preserved vessels, are found about pits in Yezo and Yeterof, which, as I shall endeavour to show, are probably the ruins of a kind of pit-dwellings corresponding in the opinion of the present writer to those of the traditional *tsuchi-gumo*. The pottery is there, and it assuredly was not made by the Japanese. It may be much older than we think, older than the Aino occupancy; older than even the traditions of the Japanese; whoever were the people who made it, they spread over the whole country from southern Kinshu to the bleak shores of Yezo and the adjacent islands.

Who were the pit-dwellers of Yezo? I have supposed them to be the *tsuchi-gumo* of tradition, but our only knowledge concerning these if found in the Japanese accounts unreliable enough, but at the same time not without some bearing on the question. For one would scarcely expect such circumstantial and numerous accounts of meetings and combats with dwellers in burrows or caves to be pure inventions. The word "cave" translated means "apartment." They were not cave dwellers in the ordinary sense, for in nearly all the accounts of the people they seem to have lived in holes dug in the ground. We have the less reason to doubt this, since it is known that the Smolenkur of Saghalin construct earth-covered dwellings on the sides of hills, not in any sense caves, and houses of another form will shortly be described which may, with still more probability, represent the dwellings of the *tsuchi-gumo*.

Mr. T. W. Blakiston first brought prominently into notice certain remarkable depressions or pits in the ground which he had observed in various

parts of Yezo, and which he believed to be the remains of human habitations. In the summer of 1888 I made an extended journey in the island, covering a distance of more than 800 miles on horseback, visiting the Ainos and always looking for pits. The pits are numerous in places, usually on elevated land near the coast, or overlooking the mouths of rivers, presumably that the people might readily sight shoals of fish. The island known Bentenjima, which forms a breakwater to Nemuro harbour, is covered with numerous pits. Just at the back of some sheds or storehouses bordering on the water, where the bank is falling away, there are indications of a shell-mound. It was at this spot that Prof. John Milne, in 1881, found some fragments of pottery, several arrow-heads, and one complete vase. I was only able to find a few broken shells, not having the means with me for digging.

About 4 miles from Nemuro, in a north-easterly direction, on a bluff overlooking the sea, near the mouth of a small stream, there are seven pits, approximately square in shape, varying in length from 10 to 20 feet. They are not well preserved, but it was thought worth while to dig a trench across one of them in the hope of finding some pottery or arrow-heads. The trench was dug two feet wide down to a stratum of clay, but nothing was found.

On the island of Yeterof there are many hundred of such pits on elevated knolls some distance from the coast, but overlooking a broad valley, through which a stream meanders for a long distance nearly parallel to the coast. It seemed to me quite possible that at the time the dwellings represented by these pits were inhabited, the present river valley was an immense arm of the sea, and a rich fishing-ground. It was about these pits that Mr. Blakiston says fragments of pottery were picked up. I was therefore quite anxious to explore one of them with a spade, and leaving my companions, Mr. Leroux and Mr. Odium, I set off in search for a habitation. After a long walk I found an Aino hut occupied by an old woman, and there obtained a dilapidated old Japanese instrument which was used for digging. It was the best the country afforded, so I carried it back and we dug over the whole bottom of the pit, and also in several places outside, without finding a single article to reward us. We made some measurements of the pits in the vicinity, which were large and well preserved. Two pits gave the following results:

SOUTHEAST AND NORTHEAST.	NORTHEAST AND SOUTHEAST.	DEPTH.	
		Meters.	Centimeters.
4	3.8	3.8	53
4	4.5	4.5	73

Although I have not yet found a single piece of pottery, nor a chipped flint in any pit where I have dug, it does not follow that nothing of the kind is to be found about them. Other explorers have been more fortunate. The most promising locality for such explorations is at Kushiro, on the southeast coast of Yezo. Only want of the necessary time prevented me from digging about the pits there. In walking over the ground I picked up several small bits of old pottery which the rains had washed out, and the Japanese local officers showed me a small collection of vessels, tolerably well preserved, that had been found there. Some of the Kushiro pits are very large. I measured one which was 32 feet across and 8 feet deep.

The Ainos have a tradition concerning a race of dwellers under ground called *horo-poh-guru*, who formerly occupied the country. The Ainos claim to have subdued and exterminated them. We have no means of knowing whether this is a genuine tradition, or a late invention to explain the existence of the pits. Presuming it to be the former, it is not unreasonable to suppose that the Aino account of dwarfs, who lived under ground, and the Japanese tales of earth spiders or *tsuchi-gumo*, refers to the same people. In the light of the observations related further on, it would seem probable that the pits of Yezo are the ruins of the dwellings once occupied by them, now affording landmarks whereby we may trace the migrations of a once numerous people to their disappearance and oblivion.

In the year 1878 Prof. John Milne* visited Shumushu or Perai Island, the most northern of the Kuriles. There, at the village of Myrup, he found a small colony of migratory people who made huts over excavations. His account of them is short. He writes:

Here there were three wooden houses which had been built by the Russians, and quite a number (perhaps a score) of half underground dwellings. On landing we found that all these were deserted, and in many cases even difficult to find, owing to the growth of wormwood and wild grasses.

The inhabitants of the island, who call themselves Kurisky, are twenty-three in number. They chiefly live at a place called Seleno, about 4 miles distant. I mention these people, as they seem to the only inhabitants of the Kuriles north of Iturup (Yeterof).

It appears that the dwellers in the deserted houses were migratory. Professor Milne has elsewhere

*Trans. Seismological Soc. of Japan, IX, 1886, pp. 277, 288.

declared that "these excavations have a striking resemblance to the pits which we find further south."

A Japanese author, Mr. Y. Hashiba, has published a description of some peculiar dwellings built over pits, which he found in Shionai, on the west coast of the northern part of the main island of Japan. I am indebted to Mr. P. Jaisohn for a partial translation of this article, which is written in Japanese. There are two huts, built over circular pits about 1 foot in depth by 2 to 3 yards in diameter. The framework of one is of reeds, that of the other of branches, over which there is a covering of earth 2 feet thick. In the middle of the floor is a triangular fireplace. Other pits were found in the vicinity and fragments of pottery, but the pottery is said to differ from that found in Yezo. The points of difference I have been unable to learn.

The Aleuts build also over excavations in the earth, erecting a framework of wood over which they pile a covering of sods. The entrance to such dwellings is through a low passage along which one must crawl.

When the Japanese obtained the Kurile Islands from Russia in exchange for Saghalin, they determined to transfer the few inhabitants they found there to a more accessible spot. The selected island of Shikotan, and although the people did not wish to change their abode, a steamer was sent to take them away, and thus a colony of about one hundred persons was established on Shikotan. This island is situated nearly east of the extreme eastern limit of Yezo and south of Kunashiri. It is small, mountainous, not of much importance, and difficult to reach.

Professor Milne was the first to tell me of these people, but he had not seen them. At Nemuro I made inquiries about them and resolved to visit them if possible. My Japanese servant bargained for a native fishing-boat to carry me over, and the lowest price offered was \$30 for the trip. In such a craft the trip would not be without danger, and it might be a voyage of either a day or a week. Fortunately I had already made the acquaintance of two other foreigners who were travelling for pleasure and observation, and as we happened to be together in Nemuro, they had become interested in my proposed visit to Shikotan. But the fishing-boat plan did not seem to be well received by either of them. M. Leroux, chef de musique at Tokyo, one day halted me on the street with the news that in four days a steamer was going to Yeterof and would stop for us at Shikotan. Mr. Odum, a botanist, joined us, and at 3.45 a.m., on August 9, the *Yoshino Maru* with her three foreign passengers and a load of salt for the fisheries of Yeterof, steamed from her anchorage in the harbour. I was on deck before sunrise, but already we were out on the heaving water. Toward the south the terraced shores of Yezo could be dimly traced as far as the eye could reach. Toward the north the volcanic range of the Menoshi Peninsula was capped with snow. At half-past eight we were abreast of Kunashiri at the point where Chia-chia towers as a regular volcanic cone and slopes on one side in graceful, unbroken concave to the sea. Shikotan had already been sighted and now lay close at hand on the starboard bow, while Yeterof was visible in the distance. But it was noon before we anchored in the harbour, entering through a beautiful narrow passage between high, bold, gray cliffs of sandstone, concealed here and there with patches of green. Within lies a quiet bay with a verdant valley, inclosed on every hand by mountains and brush covered hills.

The settlement at this place consists of eighteen houses arranged on opposite sides of a single street which runs directly back from the sandy beach. The number of inhabitants is at present uncertain—one informant told us sixty, another sixty-five. They are in appearance a well-formed, hardly people, but they are fast dying off. Subsisting on the most miserable food, bulbous roots, green tops of plants, and a pittance of rice from the Japanese Government; not properly clothed, and unable to obtain the fish and other things which in their native isles were so abundant, disease, especially consumption, has made fearful havoc among them. In five years their number has decreased one-third. The Japanese are now trying to better their condition, but past neglect has done its work. The people cannot subsist without aid where they now live, and in any event they will soon disappear from the face of the earth. The people were clothed in European dress. This is because they have so long been under Russian influences. In winter they are accustomed to dress in skins, but whether they are able to provide themselves with such warm clothing from the resources of Shikotan is very doubtful.

In a general way it may be said that each dwelling is composed of two parts, a front, thatched house, occupied in summer, and a winter earth

house connected with the former by a covered passage.

The thatched house very much resembles the houses of the Ainos. There is a low front part used for storage and as a hall or passage-way, and the main portion constitutes the living room. This room is usually nearly square, with a low door in front and a small door at the back opening into the passage which leads to the winter house. Entering from the front we find in the main room a rude and very dirty floor of boards, raised six inches from the ground, leaving a small inclosed space near the entrance from which one may step up on to the floor. There is a large, rectangular fireplace sunk in the floor about the middle, on which pieces of wood fitfully burn and fill the house with smoke. The rafters and cross-beams are covered with a shiny coating of oily soot. There is a smoke-hole in the roof, but only the excess of smoke escapes. There are usually two small windows, one on each side, perhaps a foot square, and on one side a raised bunk with high side boards.

Above the fire hangs a Japanese iron pot containing a more or less unsavory stew. The pot is coated with accumulated deposits within and soot without, and is probably never washed, if it is ever quite emptied.

Around the walls hang articles of clothing, such as fur-lined gloves and shoes of fish-skin, rude baskets, skins of small animals, strips of hide for thongs, articles of dried fruit, etc.

The winter house is of greater interest, because it probably represents the early pit dwellings of Yezo. These are at the upper end of the village, and they are only ones not connected with thatched houses. They are dome-shaped mounds of earth, with windows and a sort of chimney.

The mounds are built over shallow excavations or pits in the ground about 12 to 18 inches deep. The room of the earth-covered house on the left measured 2 metres wide 2.25 metres deep, and 1.30 metres from the floor to the highest part of the ceiling. The beds were simply bunks, 38 centimetres from the floor and 60 centimetres wide. The entrance is through a small, low doorway from the covered passage. This passage may run quite across the back of the thatched house and extend some distance beyond it. As one descends into the hut, it seems very damp and gloomy. There is nothing to be seen but the bare floor, the sleeping bunks on the sides, and the fire-place made by piling up rounded stones in one corner.

I have expressed the belief that these Shikotan huts are the modern representatives of the ancient pit-dwellings of Yezo. Perhaps it will be very difficult, or even impossible, to prove this connection; certainly the huts I saw were much smaller than many of the pits of Yezo, but I do not know what kind of a pit would be left by the falling in of one of these houses. I should think, after weathering a few years, it might not be very unlike the pits. On the other hand, it may be that the people, having learned to build better above ground, no longer require such large and deep subterranean huts as in the past, and that these shallow excavations are but survivals of the old plan of construction, which is no longer useful. However this may be, it would seem that the ancient pit-dwellers were driven from Yezo, perhaps by the Ainos, to the Kuriles, for the pits can be traced through Yeterof, and perhaps in the smaller islands beyond. The existence of the pits in Yeterof, the finding by Professor Milne of a small remnant of people on the same chain of islands who build houses over pits, and the finding of still others on Shikotan, may be fairly taken to indicate a connection between the people who dug the ancient pits and those who live in such dwellings at the present time.

There was very little to collect in the way of specimens to represent the people. M. Leroux was so fortunate as to find a single musical instrument. Not another could be found of the same shape, which was recognized as of Russian design. The people were making other of different shape, evidently in imitation of the Japanese *samisen*.

We left Shikotan towards evening, bound for Yeterof. The rocky bluffs rose clear and sharp behind us, soon to be shrouded in a veil of mist, which in this region is constantly forming and reforming with endless changes in the scenery of shore and mountain. Early next morning we arrived at Shiana, a small fishing-station on the island, where a few Ainos and Japanese were found. At noon we were on board ready to start again, when suddenly a dense fog shut in around and held us, damp, cold, and miserable, in the little steamer until midnight. At half-past five the next morning we anchored at Bettobu, where we visited the pits already described, and then returned to Nemuro.

THE PAMIRS.

The recent rumours of Chinese activity on the western outskirts of Eastern Turkistan ought to interest all Englishmen in India. The almost romantic account of his last expedition into the Pamirs given by Colonel Grombchevsky before the Russian Imperial Geographical Society—in January, 1891—for which English readers are under great obligations to the admirable translation of Captain McSwiney—evidently did something more than stir British Indian surveying parties into emulation. It aroused the jealousy of the Imperial Court at Peking, which, ever since the downfall of Yakub Beg, the Atalik Ghazi, as he used to be called, of Yarkand, and the resumption of Chinese authority over Kashgar, had been very sensitive regarding the outlying Chinese territories touching the Aksu river. Grombchevsky left no doubt in the minds of his readers that, unless forbidden by his official superiors, his second expedition, to which history and science alike owe so much, would not be his last; and students of history and Asiatic geography will be equally concerned with Mandarin diplomats in the precise character and extent of any precaution which M. De Giers may have enjoined on the explorer. Indian readers will remember that, some time after the period when M. Grombchevsky's last expedition naturally came to a close, the *St. James's Gazette* started a report—upon which some Indian newspapers have been living ever since—that the Foreign Office at St. Petersburg had passed a severe censure on Col. Yanoff, Komaroff's successor in Russian Turkistan, for the treatment which Captain Younghouseband had received at the hands of Grombchevsky. No intelligent student of Central Asian politics can have failed to note that, while making a great deal of this alleged censure, which was conveniently treated as a formal apology to Britain for an imaginary outrage on her survey parties, the *St. James's Gazette* carefully withheld all authority for its comical statements, and no less carefully refrained from quoting a line from the alleged dispatch to the British Foreign Office, which if it had had any existence outside the imagination of the newspaper, would have been readily communicated to the press. Lord Salisbury is too eager to publish any diplomatic triumph over Russia, that has ever been really secured, to admit of any faith being placed in the nonsensical concoctions of military writers in London. We may be sure that if Colonel Yanoff had really been censured for anything that happened to Younghouseband's survey party in the Tagdumbash Pamir, and the fact had been officially communicated to the British Foreign Office, not only would the terms of the dispatch have been published long ere now, but Grombchevsky himself would not have been permitted to resume the discredited expedition so soon and in so open a manner. We have little hope, considering the free hand that has apparently been given to the Foreign Office under its present exclusively military inspiration, along the entire line of the North-Western Frontier, that the Viceroy, whose interest in the country is said to be already decaying, in view of his early retirement from it, will care now to acquire an intelligent familiarity with the history of that frontier; or, if his Excellency did so inform himself, that he would care to assert himself at the close of his career against a current of prejudice which has been slowly acquiring the proportion of a torrent, and may be expected some day to hurl itself beyond the frontier at the first foe that may offer. But Lord Lansdowne has still the opportunity of acquainting himself with the wrong that has been done during his Viceroyalty, and of preventing its perpetuation in the next; and at any rate history will have to be written some day, whether any particular Indian ruler cares to secure its approval or its blame.

It is almost amusing, since the result of Grombchevsky's explorations have been given to the world, to read the cautious manner in which the few Indian newspapers that make any pretence of treating Central Asian difficulties seriously, refer to the claims of the Afghan Ameer to the principalities of Roshan and Shignan, which only a year ago were unblushingly claimed as undoubted possessions of Afghanistan. When the occasion offered some months ago, we quoted Vambéry in disproof of this latter pretension; and the crying off of partizan writers may, we suppose, be regarded as an act of deference to a public opinion growing better informed regarding once little known facts. But a responsible ruler like a Viceroy will scarcely claim the shelter of public ignorance for deliberately neglected Imperial responsibilities; and it may be hoped that the resumption of the temporarily suspended Russian expedition to the Pamirs will conspire with the natural Chinese jealousy on the subject to bring England into the position of an umpire who might

if appealed to to judge between two rival disputants without being involved in complications with either.

It has never been doubted by any honest student of Central Asian history that Russia has come into practical possession of all the territory that was ever in any sense Bokhariot, with the exception of the portions of the Khanates which lie on the left bank of the Abi-Panja. Upon these, though his theoretical sovereignty over them may be questioned, —and indeed always has been questioned, alike when Shere Ali overran Wakhan and Badakshan in 1869, and when Abdur Rahman repeated the performance on a smaller scale twenty years later—Abdur Rahman, like Shere Ali, has undoubtedly made some impression. The fact, perhaps, is that, in strict right, neither Bokhara nor Afghanistan can lay actual claim to the sovereignty of the larger of these Khanates. Even where the claim of Bokhara has been made good by years of military supremacy, as in Darwaz, Gromchevsky bears witness that the people prefer their own Khan to the Ameer of Bokhara. So also, if another Wood were to visit the Khanates, skirting the southern bank of the Oxus from Sarhad to Bosaga, we should find the races inhabiting those territories more loyal to their petty chiefs than to the distant Ameer at Cabul. What England, however, has evidently to do in all such cases is to divide roughly between the territories possessed by Bokhara and Afghanistan respectively, and to restrain Abdur Rahman from getting up disgraceful repetitions of the Panjdeh affair along the boundary line. One conclusion to which even military critics, not lost to all sense of decency, appear now to be tardily inclining—*viz.*, that it would be well if a 'scientific frontier' were once for all properly delimited—is, be it remembered, the conclusion to which Russia has for years in vain endeavoured to bring up British diplomacy. When the Indian Foreign Office accepts the inevitable in this matter, and realises that protests offered against Russian aggression in Central Asia will be meaningless in the face of our own strangely obstinate refusal to carry on the work of the Delimitation Commission, —which was most unaccountably suspended at Bosaga, there may be some hope of a cessation of these immoral squabbles which arise from time to time, not apparently, so far as any one can judge, because Russia encroaches on Afghan territory, but because the Ameer of Afghanistan seems to have received hints from somewhere to allow his territory, as *The Times* once oddly expressed it, to "mature to his own interests," and Russia does not appear to relish this kind of unlicensed aggrandisement any more than we do. That Russia will continue to extend her dominions eastward under compulsion, which she neither has created nor can resist, must, as we have before shown, be evident to every reader of history. It is a repetition of the British progress in India. That results disastrous to civilisation and to Asia would result from any unnecessary conflict between England and Russia in Asia, is a truth so obvious to any thoughtful mind that the whole weight of public opinion ought to be directed against the abandonment of the final decision on this important question to mere chance or the unconscious immorality of military sentiment.—*Statesman*.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, August 19th.
The following changes have been made in the Cabinet recently formed:—

The Earl of KIMBERLEY (President of the Privy Council and Secretary of State for the Home Department) has been appointed Secretary of State for India and Lord President of the Privy Council.

The Right Hon. HERBERT H. ASQUITH, Q.C. (Chancellor of the Exchequer), has been appointed Secretary of State for the Home Department.

Sir WILLIAM VERNON-HARCOURT (Secretary of State for the Colonial Department) has been appointed Chancellor of the Exchequer.

The Marquis of RIFON (Secretary of State for the War Department) has been appointed Secretary of State for the Colonial Department.

The Right Hon. H. CAMPBELL-BANNERMAN (Secretary of State for the Indian Department) has been appointed Secretary of State for the War Department.

The Right Hon. JOHN MORLEY (Vice-President of the Committee of the Council on Education) has been appointed Chief Secretary for Ireland.

Lord HOUGHTON (Chief Secretary for Ireland) has been appointed Lord Lieutenant of Ireland.

Mr. ARTHUR H. D. ACLAND has been appointed Vice-President of the Committee of the Council on Education.

Mr. SYDNEY CHARLES BUXTON has been appointed Under-Secretary for the Colonies.

Parliament has been prorogued.

London, August 22nd.

It is stated that the Queen objected to Mr. Labouchere's being appointed to a seat in the Cabinet.

(FROM THE "MANILA COMMERCE.")

Madrid, July 29th.

Cholera decreases in France and increases in Russia; it has invaded Turkey and Poland.

Madrid, August 2nd.

Cholera has appeared in Austria. The cholera in Russia during the month of July last has claimed 50,000 victims. In Paris, during the last week, 140 deaths were recorded. Sr. Romero Kobledo, Minister for the Colonies, left to-day for St. Sebastian.

The "state of siege" declared in Pontevedra and Barcellona has come to an end.

Madrid, August 5th.

The enfranchisement of all the ports of Mindanao is under consideration.

A tax of one cent is imposed on every hundred matches sold in Cuba.

Vice-Admiral Rafael Rodriguez de Arias y Villavicencio is dead.

(FROM THE "SINGAPORE FREE PRESS.")

London, 6th August.

Mr. J. Keir Hardie, Labour member for West Ham (South), drove to the House of Commons on Friday in a waggone, with a band playing the "Marseillaise." He wore a tweed suit and a cap in the House, and only removed the latter when called to order by the Speaker.

London, August 8th.

Next Session Sir Charles Dilke intends to move a resolution in the House of Commons to neutralise Egypt and to place that country under European guarantee.

CHESS.

(All Communications to be addressed to the Chess Editor.)

SOLUTION OF PROBLEM No. 31.

WHITE. BLACK.
1—Q to R 8 1—B x Q
2—Kt to K 5 mate
2—Q to K 4 mate if 1—K to B 4
2—Q to K Kt 8 mate if 1—Kt to K 3
2—Q to K 8 mate if 1—K to B 2

Correct solution received from Scacchi, W.H.S., J.W.E., J.D., O. Balk, Omega, Omicron, and Delta. Omega describes this problem as "a magnificent specimen of the old Doctor's handicraft."

Additional correct solution of Problem No. 25 received from B.R.B. (San Francisco).

PROBLEM No. 33.
By GODFREY HEATHCOTE.
BLACK.

White to play and mate in two moves.

The recent phenomenal successes of the young Prussian Chess player, Emanuel Lasker, recall

the excitement which invaded European Chess circles 34 years ago, when the brilliant Morphy travelled over to the Old World and paralysed the masters of the day. Morphy at the time was only 21 years old, and carried all before him against such renowned players as Lowenthal, Andersen, Harrwitz, etc. We give two smart little games in the great match with Andersen played in Paris, December, 1858; it will be interesting to compare the style of these games with those in the recent Steinitz-Tschigorin contest. (The notes are by Howard Staunton, the English champion of 40 years ago.)

THIRD GAME.

"RUY LOPEZ."

WHITE (M.) BLACK (A.)
1—P to K 4 1—P to K 4
2—Kt to KB 3 2—Kt to QB 3
3—B to Q Kt 5 3—Kt to RB 3
4—P to Q 4

This or Castling is undoubtedly preferable to 4—P to Q 3.

5—Kt x Kt 4—Q Kt x Q P
6—P to K 5 5—P x Kt
6—P to QB 3

The last move of Black (which was first given in the German Handbuch and has been analysed by Mr. Lange in his *Schach-partien*), is not commendable.

7—Castles 7—P x B
8—B to K Kt 5 8—K B to K 2
9—P x Kt 9—B x P
10—R to K sq. (ch.) 10—K to B sq.
11—B x B 11—Q x B
12—P to QB 3 12—P to Q 4
13—P x P 13—Q B to K 3
14—Kt to Q 3 14—P to R 3
15—R to K 5 15—R to Q sq.
16—Q to Q Kt 3 16—Q to K 2
17—Q R to K sq. 17—P to K Kt 4
18—Q to Q sq. 18—Q to KB 3
19—Q R to K 3

The purpose of this is so manifest that Mr. Andersen in his best form would have detected it at a glance.

19—K R to K Kt sq.
Completely unmindful of the snare! Black should have played 19—P to K Kt 5 and he would then have had at least as good a game as White.

20—R x B 20—P x R
21—R to KB 3 winning.

NINTH GAME.

SICILIAN DEFENCE.

WHITE (M.) BLACK (A.)
1—P to K 4 1—P to QB 4
2—P to Q 4 2—P x P
3—Kt to KB 3 3—Kt to QB 3
4—Kt x P 4—P to K 3
5—Kt to Q Kt 5

Late experience has shown 5—Kt to Q Kt 5 to be dangerous, if not fatal, to the Sicilian defence, as no one knows better than Mr. Andersen: why then adopt this defence?

6—Q B to KB 4 5—P to Q 3
7—B to K 3 6—P to K 4
8—Q Kt to QB 3 7—P to KB 4
8—P to KB 5

Already Black has a lost game. If instead of this move he had played 8—P to Q 3 he would have fared no better.

9—Kt to Q 5

White now finishes off the game with uncommon brilliancy in a very few moves.

10—K Kt to QB 7 (ch.) 9—P x B
11—Q to KB 3 (ch.) 10—K to B 2
12—B to QB 4 11—Kt to KB 3
13—Kt x Kt (dis. ch.) 12—Kt to Q 5
14—B x Q P (ch.) 13—P to Q 4
14—K to Kt 3

The only hope was in taking Bishop with Queen, and that was a forlorn one.

15—Q to KR 5 (ch.) 15—K x Kt
16—P x P 16—Kt x QB P (ch.)
17—K to K 2
and Black resigned.

REPORTS.

The American steamer *Peru*, Captain Ward, reports:—Left San Francisco the 4th August; had moderate winds, weather foggy and misty, sea generally smooth. Nothing spoken.
The Japanese steamer *Takasago Maru*, Captain Nirei, reports:—Left Kobe the 19th August at noon; passed Oshima at 9.17 p.m., made Rock Island at 11.53 a.m. on the 20th; had fine weather and hazy with smooth sea and light S. and E. breeze throughout the passage. Arrived at Yokohama the 20th August at 6.12 p.m.
The Japanese steamer *Sendai Maru*, Captain R. Tipple, reports:—Left Hakodate the 18th August at 7.11 p.m.; had gentle southerly wind with fine clear weather to arrival at Miyako the 19th at 10.10 a.m. and left the 20th at 1.45 a.m.; passed Kinkasan at 9.40 a.m. and Inuboye at 11.45 p.m.; had light variable winds with fine clear weather throughout the passage. Arrived at Yokohama the 21st August at 10.28 a.m.
The Japanese steamer *Sagami Maru*, Captain Hussey, reports:—Left Otaru the 17th August at 1 p.m.; had light variable airs and fine weather to Cape Komai, which was passed at 7 p.m., moderate breeze with passing rain squalls from the S.S.E.; at 10 p.m. strong breeze with heavy rain squalls and lightning continuing to midnight, when cleared away, wind shifting to the westward with moderate breeze and fine clear weather; on the

18th at 0.45 a.m. met steamer *Wakanoura Maru* going with at 8 a.m. passed Shirakami Light; thence gentle breeze and fine clear weather. Arriving at Hakodate the 18th at 11 a.m. and left the 19th at noon; had gentle S.W. breeze and fine clear weather; at 3.38 p.m. passed Shiriya-saki Light; thence to port light to gentle variable breezes and cloudy weather. Arriving at Oginohama the 20th at 10 p.m. and left the same day at 2 p.m.; had gentle easterly breeze and fine weather; at midnight light variable airs and fine weather; on the 21st at 1.30 a.m. met *Yamashiro Maru* going north; passed Inuboye Light at 5.10 a.m.; thence to port light variable airs and calm with very fair weather. Arrived at Yokohama the 21st August at 3.10 p.m.

The Japanese steamer *Miike Maru*, Captain MacMillan, reports:—Left Kobe the August 21st at 5.20 p.m.; passed Oshima the 21st at 3.10 p.m.; arriving at Yokohama the 22nd at 1.30 p.m.; experienced fine weather and smooth sea to Omai-saki; thence to Vries Islands thick foggy weather; thence to Port fine weather; at 5 p.m. the 21st observed a burning wreck 22 miles E.N.E. of Oshima, which was found to be the lower part of a small wooden screw steamer, only the stem and stern post and the machinery remaining that were visible.

The Japanese steamer *Higo Maru*, Captain Pender, reports:—Left Kobe the 23rd August at noon; had light variable winds and fine weather. Arrived at Yokohama the 24th August at 5.30 p.m.

The Japanese steamer *Wakanoura Maru*, Captain Wilson, reports:—Left Otaru the 20th August at 1 p.m.; had gentle S.W. winds to Hakodate, arriving the 21st at 9.05 a.m. Left the 22nd at noon; had light to moderate southerly winds and fine weather to Oginohama, arriving the 23rd at 0.20 p.m. Left the same day at 2.51 p.m.; thence to port had light S. to S.W. winds with fine weather and smooth sea. Arriving at Yokohama the 24th August at 6.45 p.m.

The British steamer *China*, Captain Seabury, reports:—Left Hongkong the 20th August; from Hongkong to Lamocks, light S.E. winds and heavy rains; thence to Yokohama, light airs, and calms, fine weather, smooth seas, no well. Time, 4 days, 17 hours, and 42 minutes.

The Japanese steamer *Senda Maru*, Captain Tipler, reports:—Left Kobe the 24th August at midnight; passed Rock Island the 26th at 0.50 a.m. and arrived at Yokohama the same day at 7.30 a.m.; had light variable winds with fine clear weather throughout the passage.

The Japanese steamer *Kobe Maru*, Captain Haswell, reports:—Left Shanghai the 20th August at 10 p.m. and arrived at Nagasaki the 22nd. Left again the same day at 5 p.m. and arrived at Kobe the 24th at 6 a.m. Left the 25th at noon and arrived at Yokohama the 26th August at 4 p.m.; experienced fresh to moderate S.E. winds and fine weather to Nagasaki; thence to Kobe had light variable winds with fine clear weather; thence to Yokohama N.E. winds with cloudy squally weather to Rock Island; thence to port fine and clear.

LATEST COMMERCIAL.

IMPORTS.

There has been more doing generally during the past week, not only in spot cargo but for arrival, especially in Yarns and Grey Shirtings, and in these latter buyers have been able to obtain considerable concessions on current quotations, owing the very depressed condition of the Manchester market, which has doubtless induced the large business reported. Piece Goods generally have been in improved demand, and in many cases holders refuse to accept previous prices, with prospects of full crops, trade being good, and supplies on a reduced scale. Sterling Exchange is quoted 2/10 1/2 for Bank on demand. Sales for the week comprise 1,500 bales English Yarn, 20 bales Bombays, 17,500 pieces glb. Shirtings, 500 pieces Washed Shirtings, 850 pieces 8 1/2 lb. Shirtings, 2,500 pieces T. Cloth, 5,000 pieces Turkey Reds, 2,000 pieces Indigo Shirtings, 2,000 pieces Prints, 1,500 pieces Silks, 500 pieces Cotton Italians, 1,800 dozen Handkerchiefs, 1,200 pieces Velvets, 250 pieces Silk-faced Satins, 2,000 pieces Italian Cloth, 5,000 pieces Mousseline de Laine, and 10,000 pairs Blankets.

White Java and Penang	3.60 to 3.70
White refined	6.25 to 6.40
	5.50 to 7.60

EXPORTS.

RAW SILK.

Our last issue was of the 19th instant. Since that date there has been a very large business on this market, settlements reaching 2,287 piculs, divided thus:—*Hanks*, 266 piculs; *Filatures*, 924 piculs; *Re-reels*, 832 piculs; *Kakeda*, 175 piculs; *Oshu*, 90 piculs. There has been no direct export this week, so that the total business remains as above noted—2,287 piculs.

A very heavy business has been done, and sellers have been masters of the situation. Prices rise apparently with every fresh sale made, and buyers seem ready to pay whatever holders ask. Best grades are again about \$30 dearer on the week, and stand at \$200 per picul more than they did this day last year. Of course we have now a lower exchange; but when all allowance is made for this, the difference in the two markets is very pronounced.

A great feature in the trade this year is the very large business done for Europe so early in the season. This proves that a good quality of silk must be at a premium in Europe, as best *Filatures* destined for Lyons have been weighed up at \$800. Medium grades have also been pushed up considerably in price and are now nearly approaching their relative value, as compared with the best silks.

There have been two shipping opportunities

since we last wrote. The English mail steamer *Ancona*, on the 19th instant, carried 704 bales for Europe, and the steamer *Phra Nang*, which left port on the 20th instant for Tacoma, took 127 bales en route for New York. These departures bring the present export figures up to 6,091 piculs, against 7,088 piculs last year and 2,133 piculs at the same date in 1890. There must be in foreigners' godowns fully 3,000 bales awaiting shipment by the outgoing mail steamers.

Hanks.—These have been largely bought for Europe during the week, but the quality is far from satisfactory this season; still prices advance. \$600 is reported paid for a small lot of good *Shinshu*, while plenty of good medium silks are sold at \$550. Common *Hachioji* have advanced to \$500, at which price there appear to be more buyers than sellers.

Filatures.—As usual, these have been the first favourites in demand, and several parcels fine size have been booked at \$800. Some dealers now ask more, holding out for the fancy price of \$820. In coarse sizes, Extras are held for \$790, \$785 having been paid a day or two ago. Other sorts have risen in proportion; in fact, we must chronicle a general advance all along the line.

Re-reels.—These have had their turn at last, buyers investing heavily in medium grades. "Five Girl" have sold at \$715, with other good silks in proportion. Medium grades have been freely done at an advance of \$20 upon the rates current ten days ago.

Kakeda.—A steady business goes on; prices have been pushed up in sympathy with other classes. Daruma chop, \$740; Horsehead, \$700, are some of the latest purchases made.

Oshu.—Considerable demand for these at the beginning of the week, one parcel prime *Hama-tsuki* bringing \$560, with other grades at \$530 and \$500.

WASTE SILK.

Business in this branch has been confined to sales of 317 piculs, all *Kibiso*.

Arrivals continue and the stock shows an increase of 1,400 piculs on the week. Buyers still complain that holders require too much for their goods, while these latter appear perfectly content to continue waiting. Meanwhile, advices from consumers are by no means rosy, and only time can solve the enigma as to higher or lower prices.

There has only been one shipping opportunity, the English mail steamer *Ancona* taking 15 bales for Europe. The present export figures are therefore 1,795 piculs, against 709 piculs last year and 765 to the same date in 1890.

Perced Cocoons.—The situation remains unchanged. Holders will not reduce their quotations and offers from foreign markets are for the moment quite "out of it."

Noshi.—Nothing has been done this week. Here again shippers complain that holders require

too much for their wares, and the consequence is that no transactions take place.

Kibiso.—The business done is all confined to this class and consists of about 120 piculs *Filatures* at prices ranging from \$80 to \$97½. The balance of the settlements are on line of *Foshu* ordinary *Kibiso*; price \$27 to \$30 according to quality.

Nothing whatever passing in other descriptions.

THE GREATEST WONDER OF MODERN TIMES. HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In 1 short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN! HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon me, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1890.

STEAM LAUNCHES & YACHTS

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 40 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. We are also sole makers of the

KINGDON PATENT LIGHT PORTABLE ENGINE

Stock sizes, 1½ to 6 H.P. Burns less fuel, and gives three times the power, weight for weight, of any other engine. Awarded First Prize by Royal Agricultural Society England, 1890, in competition open to all makers. Illustrated Catalogue in English, French, or Spanish. Send for Copy to

YOKOHAMA: SATURDAY, SEPT. 3RD, 1892.

MARRIAGES.

On the 31st August, 1892, at H.B.M. Consulate, Yokohama, before R. de B. Lazard, Esq., Acting Consul, and afterwards at Christ Church, by the Rev. E. Champneys Irvine, M.A., ROBERT W. BORTHWICK, of Yokohama, eldest son of Mr. Thomas Richardson Borthwick, Bathgate, Scotland, to EMILY, elder daughter of Mr. E. J. Moss, Woolside, Yokohama, and Cirencester, England.

On Tuesday, the 30th August, at Christ Church, Yokohama, by the Rev. E. C. Irvine, M.A., assisted by the Rev. C. G. Gardner, B.A., EDITH ISABELL, youngest daughter of the late Mr. James Brown, Banbury Road, Oxford, to OSCAR BALK, of Yokohama.

DEATH.

On the August 31st, at 2 a.m., Miss M. E. V. PARDOX, at No. 13, Tsukiji, Tokyo.

SUMMARY OF NEWS.

THE first snow this year fell on Fuji on the 26th ult.

THE Jigan-in, a Buddhist temple at Koishikawa, Tokyo, was burnt on the morning of the 26th ult.

THE regular general meeting of Shareholders of the Yokohama Specie Bank will take place on the 10th inst.

SOME 350 residents in the North and South Tama Districts of Kanagawa Prefecture have become members of the National Union.

H.I.M. THE EMPEROR has been pleased to decorate Mr. Tsuji, Vice-Minister for Education, with the Second Class Order of the Mirror.

THE death of Mr. Tayama Yakichi, manager of the Hakodate Branch of the Third National Bank, is announced to have taken place at Hakodate on the 24th ult.

COUNT INOUE, Minister of State for Home Affairs, proceeded to the Metropolitan Police Bureau on the 27th ult., and accompanied by Superintendent-General Sonoda and Chief Police

Inspector Takahashi, made a general inspection of the Bureau. The Count afterwards visited the Kajibashi Prison.

MORE than one hundred students of the Noble's School for Boys, who have been indulging in sea-bathing at Katase for some time, returned to the capital on the 25th ult.

VISCOUNT SUGI, Grand Master of Services to H.I.M., the Empress-Dowager, proceeded to Odawara on the 26th ult., to inquire into the condition of the father of Count Ito.

DURING a violent gale on the night of the 14th ult. an outbreak of fire took place at Hisazumimura in the Naoiri District, Oita Prefecture, and 28 dwellings, 11 stables, and 5 out-houses were burnt.

STEAMSHIP communication between Yokohama and Yokosuka, which had been suspended for some time, was resumed on the 28th ult. Steamers will run four times a day between the two ports.

A NOTIFICATION is issued by the Minister of State for Finance to the effect that a drawing of the Six per cent. Capitalized Pension Bonds to the amount of 6,000,000 yen will take place this month.

SHORTLY after midnight on the 27th ult. a fire broke out in a building within the enclosure of the Shimbashi Railway Station. The flames, however, were got under control before the fire had time to extend.

THE 30th ult. being the birthday of H.I.H. the Crown Prince, officials of *chokunin* and *sonin* rank in the Imperial Household Department proceeded to the Akasaka Palace to congratulate His Highness on the occasion.

IT is stated that the Cabinet has decided to grant sums of yen 30,000 and yen 20,000 from the Treasury in aid of the funds for repairing the damage caused by the recent inundations in Hyogo and Tokushima Prefectures respectively.

A PETITION for the transfer of Governor Utsumi, of Kanagawa, signed by more than one hundred and forty Headmen of villages and towns in the South Tama District of the Prefecture, was presented to the Home Minister on the 24th ult.

A FIRE broke out in a residence at Tsuwata in the Kaboku District of Ishikawa Prefecture, on the 26th ult. at 2 p.m., and before firemen could successfully grapple with it, 102 houses were destroyed and 2 considerably damaged; 2 telegraph posts were also burnt down.

H.I.H. PRINCE KOMATSU, who proceeded to witness the review of the artillery of the Imperial Guards, which took place at Shizuhara in Chiba Prefecture lately, returned to Tokyo on the 29th ult. The Prince had an interview with the Emperor the following day, and reported to his Majesty the details of the review.

DURING the month of July last 1,412 applications for patents were made to the Patents Bureau and 1,391 patents were granted, for which fees to the amount of yen 1,727.838 were received. The above is a decrease of 87 applications, 396 patents granted, and yen 261.652 paid in fees as compared with the previous year.

THE total number of steamships and sailing vessels that arrived and left Kobe during the three months ended June last was 235. The particulars are as follows:—Arrivals: 95 British steamships and 76 sailing vessels; 13 French steamers; 19 German steamers; 3 American

sailing vessels, and 3 Norwegian steamers; departures: 76 British steamers and 1 sailing vessel; 8 French steamers, 13 German steamers, 1 American sailing vessel, and 1 Norwegian steamer.

MR. ITO Juzo, father of the Prime Minister, who has been suffering from a dangerous illness at Odawara, is said to be making slow progress towards recovery. Count Ito, who has been in almost constant attendance on his father, will probably return to the capital in a day or two. Dr. Baelz was requested on the 29th ult. to visit the patient.

ARRANGEMENTS have been made by the members of the Young Men's Progressive Party to give a banquet to Mr. Takata Sanae, editor of the *Yomiuri Shimbun*, and a well-known *Kai-shin-to* representative in the Lower House, on the 30th ult. at the *Kinki-kan*, Kanda, Tokyo, to congratulate him upon his recovery from the wound which he received during the last session of the Imperial Diet.

LIEUTENANT SERATA, of the *Katsuragi Kan*, has been appointed Captain of the *Manju Kan*, and Lieutenant Ito, of the *Yamato Kan* has been appointed to the *Manju Kan*. Captain Sawa, of the *Yamato Kan*, and Captain Kawamura, of the *Manju Kan*, have been released from their posts. Chief Gunner Ishiura, of the *Ryugo Kan*, has been made Adjutant to the Commandant at the Port of Yokosuka.

A DESPATCH from Okinawa gives details of the most violent storm that has been experienced there for over sixty years, and which visited the neighbourhood of Nagomagiri in Jito province, on the 10th ult. The wind rose at about 3 p.m., and gradually increasing in violence, was at its height at 11 p.m., raging heavily from 7 p.m. up to that hour. Shortly before midnight there was a lull for twenty or thirty minutes, after which the tempest was renewed with redoubled force lasting for nearly three hours. About two hundred houses were blown down, and one hundred and fifty considerably damaged at Nagomagiri, several lives being lost, and many persons injured. Much damage was done to the crops.

THE improvement noted in the Import trade last week has been maintained, and has in certain directions been extended, the operations of Japanese dealers being stimulated by the idea that stocks are not large and that prices are likely to be higher before they are lower than present rates. The demand has extended over a variety of goods, and a large business has been done in special lines at full, and in certain cases higher, rates. There has been some enquiry for Metals, and the quotations for Wire Nails have been raised. There has not been a great deal passing in Kerosene, but this is more due to the attitude of holders than of buyers, the latter being choked off by the prices asked, while the former are very firm. Sales of Sugar have been made at full rates, and, stocks being small, there is more likelihood of a rise than a decline in values. Notwithstanding the daily rise in the prices demanded for Silk, there has been a "boom" in this market, and, including 370 piculs direct shipment, the trade of the week mounts up to 2,316 piculs. Prices have advanced daily during the week, but actual business yesterday was a little quiet, though there is no sign of lower rates. Only a small business in Waste Silk, and the stock increases rapidly. The Tea trade is fairly large, and prices are well maintained for the leaf in request, namely, lower grades. Exchange has fluctuated as usual, but is still

EDITORIAL NOTES.

THE "JIJI" ON KOREA.

THE necessity for adopting a definite policy towards Korea furnished the text of many a leading article in the vernacular press a short time ago. Some writers contended that Japan ought to join with England in maintaining Korean independence, while others deemed it more advisable to unite with Russia for the same purpose. The *Jiji Shimpō* now undertakes a crusade against both views. It acknowledges that England and Russia are eminently influential in the East, and it thinks that England has always supported China, and helped the latter to extend her sway in Korea, whereas, on the other hand, Russia is most anxious to stand up for Korea, and to establish her independence. Yet it would be wrong for the Japanese to ally themselves with either, for so surely as she does so, the other will become her enemy; a contingency which she cannot afford to regard with indifference. England's commercial influence is paramount throughout the civilized world, and if Japan wishes to become wealthy and influential by means of commerce, she must by all means avoid making an enemy of England. Again, though with Russia Japan has no commercial relations, the former is the latter's neighbour, and when the Siberian Railway is completed, this empire—we quote the *Jiji*—will have a formidable foe on her borders. Therefore to identify herself with either Russia or England would be to Japan's disadvantage. Nevertheless, Korea's condition calls for some change, and the only method of changing it satisfactorily is to remove the feeling of estrangement that now exists between Japan and China with respect to the little kingdom; to annul that most inconvenient treaty of Tientsin, and to take a strong stand in securing Korean independence. The *Jiji* sees no other way to solve the Korean problem without provoking the enmity of any country.

* * *

It is not easy to discover the precise import of the epithet which the *Jiji Shimpō* applies to the Tientsin Treaty, but we gather that our contemporary regards that agreement as an objectionable obstacle to the carrying out of the programme which it now advocates. We should like to receive from the *Jiji Shimpō* some analysis of the position which Japan would occupy towards Korea to-day had not this very Treaty of Tientsin been concluded. It is true that the Treaty precludes either of the high contracting parties from sending an armed force to Korea without giving previous information of the fact to the other, and it is also true that the effect of that proviso is to prevent both Powers alike from independently pursuing any strong policy towards the peninsular kingdom. But this is precisely the clause which places Japan on a pedestal of equality with China in respect of Korea. China's steadily pursued though unostentatious policy is to hold Korea perpetually in a state of vassalage, but if the necessity arose to assert that policy by methods more trenchant than the resources of peaceful diplomacy, the Tientsin Treaty would stand effectually in the path. In short, it is to the Tientsin Treaty that Japan owes her right of opening the Korean question at any moment with China. Instead of applying to the Treaty condemnatory epithets, we should have expected a journal like the *Jiji Shimpō* to appreciate its true value.

THE NIPPON YUSEN KAISHA.

THE reorganization of the Japan Mail Steamship Company so far as concerns its foreign staff was referred to by us in a previous issue. The *Jiji Shimpō* and some other vernacular journals give further and more comprehensive accounts of the matter. In the first place, we are told the reasons of the reorganization. These are pretty much as previously explained by ourselves and so long as there were no railways in the country, all steamship companies prospered more or less; but the gradual extension of railways has so largely encroached upon

the business of marine transport that the days of great revenues for steamship enterprises are over. The only way to maintain an establishment like that of the Japan Mail Steamship Company is to decrease its expenditure as much as possible. Secondly, as to the policy of reconstruction, it is stated that since the Company in the years 1889 and 1891, adopted every possible measure, short of interfering with its *personnel*, to effect economy, nothing now remains, in the face of further necessity to economise the expenditure of each branch by as much as 40 per cent.—except to reduce the number of officers and diminish the salaries of those remaining. In the next place, with regard to the extent of these dismissals and reductions, we read that the number of officers whose services are dispensed with is 56 Japanese and 53 Foreigners. More than half of that number were in receipt of high salaries, and among them were included several who possessed ripe experience or were near relations of the principal officers. But no considerations of this nature were allowed to interfere with the programme. As for those remaining, from managers of branch offices to day labourers, their salaries were cut down from 10 to 25 per cent. In respect of the salaries of the principal officers, no reduction is made in the cases of the President, Vice-President, and Directors, because, on the occasion of the last reconstruction in 1891, the above mentioned officers agreed to receive 25 per cent. less than salary, in order that the money might be employed to secure the services of ten experts who were needed at the time. Further, we read that in addition to reductions of staff and salaries, various changes in the distribution of officers have been made. For instance, whereas hitherto European engineers were employed in the Yokohama Stores Department and Engine Works, they are now replaced by Japanese engineers. Moreover, economies are to be effected in various contingent allowances, as for stationary, ink, and so forth. It appears, however, that the above reduction of over a hundred employes is, in a certain sense only nominal. For by their dismissal a need arises to replace eighty of them. In short, the word dismissal is only a method of saying "engagement at lower rates." The chance of resuming work at reduced salaries is offered to 80 per cent. of those who have received their *congé*, and failing their acceptance, either the junior officials of the company are engaged, or outsiders are taken. Finally, the Directors explain that since these measures are rendered imperatively necessary by adverse circumstances, and have been adopted with much reluctance, there is no desire to hold any to their engagements against their will. If reductions of salary have created discontent among the officials remaining, the discontented are informed that they may leave the Company at any moment.

* * *

It is a little singular that the newspapers which set forth the above details with so much apparent accuracy should, one and all, have fallen into the error of greatly over-stating the number of the foreign employes whose services were dispensed with by the Company. That number is not 53, as stated by our Tokyo contemporaries, but 12.

THE EXAMINATION DAY.

THE *Choya Shimbun*, under the above title, says that Count Inouye has fixed the 5th instant for the assembly of all the local governors at the Department of Home Affairs, when they are to be subjected to sundry inquiries. Many of them, hearing the news, are said to feel extremely uneasy and to be looking greatly depressed. One is even reported to have avowed his apprehension that in the sequel of the examination he will receive his *congé*. Reminded that many local Governors have come to Tokyo on many occasions to exercise their patronage on account of their *protégés*, or for other purposes, and that the present should be regarded as a fine opportunity for offering valuable advice and assistance to the new Minister of Home Affairs, the solicitous official replied that the new Minister is not like

his predecessors, and that an unnecessary word addressed to him may cost a man his position. The most courageous, therefore, must be disconcerted by the prospect of such an ordeal. It is certain, says the *Choya* in conclusion, that those sharp and piercing eyes of Count Inouye will speedily gauge the ability of each Governor who comes before him, and estimate his true value. No wonder the local officials regard the 5th of September as the great examination day of their lives.

AN UNRECOGNISED WRECK.

VERY peculiar circumstances in connection with the wreck of a steamer are reported from Shanghai, the stranded vessel having been seen by several steamers that have arrived at that port, but none were able to make out her name or give a clue to her identity through her general appearance. In reference to this the *Shanghai Mercury* of the 20th inst. has the following:—"Up till a late hour this afternoon nothing had been heard in Shanghai to lead to the identification of the vessel seen ashore on the Hieshans by Captain Hutchison of the *Whampoa*, and speculation has been rife all day as to what she could be. Several steamers were mentioned as likely to have been in that neighbourhood about the times the luckless steamer is supposed to have come to grief, and many were of opinion that she might be the *Bengloe* or *Guthrie*, but on making enquiries of Messrs. Gibb, Livingston & Co., the agents for both these vessels, we were informed that it was altogether improbable if not impossible that she could be either of them. In the first place both of them, being British steamers, were bound to have their names conspicuously displayed on the bow, a thing which Captain Hutchison was careful to note was not the case with the steamer he saw. Then as to the *Guthrie*, she only left Kobe yesterday and that of course disposes of all possibility that the derelict should turn out to be her. The *Bengloe* left Moji for Hongkong on the 14th inst., and as her course would be well outside the Hieshan group it is almost impossible to conceive that she could so far get out of the proper track as to be found where the wrecked steamer lies. Besides she has not so many derricks on deck as Captain Hutchison describes on the vessel he saw. The Chinese telegraph steamer *Fecheu* was also mentioned, but it is quite as unlikely that the wreck should prove to be her. All the probabilities point to the luckless unknown being a total stranger in these waters. Further information is anxiously awaited."

* * *

The *N.C. Daily News* of the 22nd ult. thus refers to the wrecked steamer:—"Speculation is still rife as to the name of the vessel that the *Whampoa* saw wrecked on the Hieshans on Thursday last. The *Cathay* passed the islands on the following day at 1 p.m. but did not see her. The *Haeslin*, which always keeps a sharp look-out after storms for wrecks or disabled vessels, failed to sight her, though of course at the time, it was not known there was a wreck on the island, and the *Puensang* which passed the Hieshans on Friday evening knew nothing of the wreck till she arrived at Shanghai. The *Benvenue*, which left Hongkong on Saturday week for Japan may be the vessel, and there was also a suggestion that the wreck is that of an oil ship, the *Hounslow*, from Batoum and bound to Shanghai. The *Hounslow*, which is a sister ship to the *Windsor*, now in port, has a black funnel, whereas the wreck is said to have a buff-coloured funnel. Fortunately the rumour that the wreck was the *Hounslow* was discredited yesterday by the arrival of that vessel at Wusung, where she is detained in consequence of insufficient depth of water to cross the bar. The *Glennear* passed the ill-fated vessel on Friday morning, and describes it as a total wreck. The name could not be made out, neither the colour of the funnel." The same journal of the following day says:—"It seems most extraordinary that a vessel should be lost within less than two hundred miles of Shanghai, and this too in the track of steamers coming to Shanghai from the southern ports, and her name not be known for four or five days. Yet such

Original from

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

is the case, as the name of the steamer which is wrecked on the Hieshans is not yet known, neither is the fate of her crew. The *Benglos* has not reached Hongkong yet, and it is beginning to be believed that is the vessel. There is a steamer with timber from Singapore for Taku, and she is said to be overdue. The *Kwang-lee* was about two miles off the wreck on Sunday at 2 a.m. and saw lots of lights about, but not knowing there was a wreck in the vicinity did not stop to investigate. The *Canton*, which also arrived here yesterday, did not see the wreck."

YOKOHAMA TRADERS' GUILD.

SOME days ago we reported that trouble had arisen among the members of the Yokohama Traders' Guild. The complications seem to have gone from bad to worse, and at present there is every sign of the Guild's disintegration. The *Nichi Nichi Shimbun* says that Mr. Ono, President of the Guild, formed a party in conjunction with Messrs. Moji, Anzai, Ikeda, Asada, and other members, and without obtaining the concurrence of their remaining associates, constructed public godowns and granted subsidies to newspapers in Yokohama out of the fund collected from the regular commissions on mercantile transactions. These gentlemen are further accused of scheming to get the whole of the silk business into their own hands, to which end they proposed that the amount of security deposited by members should be 5,000 yen, whereas at present any one wishing to enter the Guild is required to furnish security to the amount of 2,000 yen only. Such an arrangement would effectually prevent any new silk-men from joining the Guild. Mr. Adachi, therefore, stoutly opposed the idea, and finally Notification No. 56, issued by the Kencho, declared a uniform amount of security for all. This just enactment, however, being an abstacle to the prosecution of the schemes in question, the plotters raised objections to the new Regulations, and prepared and presented to the Kencho various questions on minor points. On the other hand, Mr. Kimura and others, who are displeased with the management of Mr. Ono and his party, thinking that they saw their opportunity, presented a document to the President of the Guild, requesting him to call a special meeting for the purpose of abolishing the system of collecting commissions to form a maintenance fund for the Guild. But the Ono Party, apprehensive lest the proposal should pass, despatched telegrams to various watering-places, where some of their supporters are staying during the summer vacation. Meanwhile, the opposition declared that though the Kencho's new Rules present some inconvenient features, they are better for them than the old rules, and that the wisest plan would be to reorganise the Guild on the basis of the amended rules. The time allowed for organization is only 15 days from the day of the publication of the Regulations, so that very little interval remains available. In the reorganized guild there will be not only Messrs. Kimura, Suzuki, Nakajima, Yamada, Adachi, Kashiwagi, and other wholesale merchants, but also Messrs. Hara, Shibusawa, and other well known independent merchants. It is confidently predicted that the dissolution of the present Guild will take place within a week.

THE YOKOHAMA SILK MERCHANTS' GUILD.

THESE has for some time past been a great deal of disorganisation in the Yokohama Silk Merchants' Guild, owing to the refusal of Mr. Adachi Shoten, a seller of silk, to submit to the control of the Guild. The object of the establishment of the Guild, as stated by its leading members, was to render membership compulsory in the case of all persons who wish to deal with foreigners, and the assistance of the Prefectural authorities has been repeatedly solicited for the attainment of this object. Mr. Adachi defied the Guild and carried on his business in opposition to its rules. The Guild took legal proceedings against him. The police authorities before whom the case was first heard gave it against Mr. Adachi. But in the District Court this decision was reversed, and it was ruled that the Guild had no right to en-

force rules compelling membership. This verdict, as may be imagined, was welcomed by a great many silk merchants who had joined the Guild under the impression that no other course was open to them, and they at once signified their intention to withdraw. To save the situation, those interested in the continued existence of the Guild applied to the Governor of Kanagawa and succeeded in obtaining his consent to a new body of rules, which have been drafted so as to render it compulsory for every person engaging in the silk trade to join the guild. Imprisonment is now the penalty for such obstinacy as that shown by Mr. Adachi.

Though there is no denying that the guild is intended to fulfil some useful purposes and that some of its rules are such as no honest trader could object to, we cannot approve of the action of the Kencho authorities in this matter. To require that a trader shall submit to the control of a voluntarily organised body consisting of fellow-traders, or, in the alternative, be debarred from carrying on his business, is, to our minds, a dangerous concession to the claims of the majority to coerce the minority. Further, to make imprisonment the penalty for business transactions, of however honourable a kind, carried on without reference to a body of traders possessing self-constituted authority, is surely of the nature of despotism and is certainly out of all harmony with the spirit of modern Japanese laws. It is astonishing how despotic the men who clamour for more liberty are apt to become directly they are entrusted with authority. Personal liberty is all the cry when the vociferators feel the weight of their chains, but the fetters which bind their neighbours they are not concerned to remove. Witness the persistency with which the guild of silk traders have solicited government aid in order to enforce obedience to their rules.

THE 50 "SEN" PIECE.

SOME months ago the Department of Finance propounded to the Tokyo Chamber of Commerce a question relating to the utility of the 50 sen silver-coin, and the question is one of those now awaiting discussion by the Chamber. The same query being addressed to the Bankers' Association, elicited an opinion that the coin is inconvenient and useless. The financial section of the Chamber of Commerce also considered the half-yen piece superfluous, and at the same time passed a resolution advising the manufacture of 25 sen coins, and the revocation of the 5 sen silver coins, the 2 sen copper-coins, and the 1 rin copper-coins. The following is a translation of the draft of the answer to the Government, which will be laid before the Chamber for approval:—

Str.—In your despatch of 30th May, you ask our opinion as to the necessity of keeping the 50 sen silver-coin in circulation, and at the same time address to us other cognate queries: We have carefully investigated the matter, and ascertained that the 50 sen silver-coin, being too bulky and too heavy to be conveniently used, is generally disliked by the public. The Chamber of Commerce has therefore passed a resolution to the effect that the coin is absolutely unnecessary. This first and principal question having been thus settled, there does not appear to be any occasion to answer the correlated enquiries. We entertain, however, some views about the currency which we desire to submit herewith for your consideration. We remain, etc.,

(Signed) SHIBUSAWA YUICHI (President).
For the Tokyo Chamber of Commerce.
To Matsuno Oniy-shi, Esq.,
Director of the Accountant's Bureau, Financial Department."

OPINIONS ON THE SUBSIDIARY CURRENCY.

We have elsewhere stated that the 50 sen silver-coin is inconvenient and unnecessary. If it were re-cast of 900 fineness, its value would not change, but its size and weight will be diminished a little. Since, however, we find that it is inconvenient for purposes of carriage and disliked in trade transactions, we believe that a trifling change in its dimensions would not materially improve its popularity. Therefore we conclude that it is unnecessary. Besides, since the total amount of 50 sen silver-coins in circulation is over 2,000,000 yen, much expense would be involved in the operation of re-casting, and further, if the coin were finer, it would wear out more rapidly. Therefore the existing 20 and 10 sen silver-coins seem sufficient for present purposes, and, should it be found expedient,

the 50 sen coins may be re-cast into 20 and 10 sen coins. Again, the existing 5 sen silver-coin is so small as to be extremely inconvenient. It ought to be totally abolished. At present there are four kinds of subsidiary silver-coins in circulation, namely 50, 20, 10, and 5 sen. Among these, however, the 50 and 5 sen coins are unnecessary for the reasons assigned above. On the other hand, if 25 sen silver-coins were cast, we believe that the measure would conduce to the convenience of exchange, as was the case when the *ichibu* was issued under the Tokugawa Government. If it be deemed necessary to re-cast the existing 50 sen coin, perhaps the best plan would be to make them into 25 sen silver-coins of 800 fineness, instead of into 50 sen of 900 fineness. In the former case, the 20 sen coins should be called in gradually.

Further, there are four kinds of copper-coins in circulation:—the 2 sen and 1 sen, and 5 rin and 8 rin. Among these the 2 sen copper-coin is so bulky as to be very inconvenient, and the 1 rin is so small as to be equally inconvenient. Since there are 5 sen nickel-coins, and 1 sen copper-coins in circulation on the one hand, while we have also the old cash less than 2 rin in value, it would seem that neither the 2 sen nor the 1 rin copper-coin is required. We think that these ought not to be increased, and that the coins already in circulation should be gradually called in. Such are the opinions held by the Chamber of Commerce with respect to subsidiary coins. We desire to submit them in the sequel of our reply to the question relating to the 50 sen silver-coin.

LAND ASSESSMENT.

At a recent meeting of members of the Diet who are in favour of re-assessing the taxable value of land, a committee of six was elected, namely, Messrs. Amakasu Bunye, Inouye Kakugoro, Kawashima Jun, Ishida Kannosuke, Murayama Rihei, and Morino Tamegoro. They compiled rules, and another meeting was held on Tuesday last, when over 30 members assembled. The following rules were adopted:—

1. Members of the Diet who are in favour of reassessing the taxable value of land shall subscribe to the following rules with the view of accomplishing their aim.
2. Every member who expresses his agreement with these rules shall pledge himself to harmonious co-operation, disregarding any slight differences of view that may exist between him and the rest.
3. A committee of 7 members shall be elected to determine the method of co-operation.
4. From among the members one or more commissioners from each Prefecture shall be elected, to assist the Committee in carrying out the above duty.
5. The principal methods to be adopted for bringing about the reassessment of the taxable value of land shall be as follow:—
 - (a) Members shall unite with public-spirited men throughout the empire, and investigate the best way of carrying out re-assessment.
 - (b) By questions and other means the opinion of the Government on the subject shall be ascertained in the 4th session of the Diet.
 - (c) For the purpose of achieving the object in view, the expenditures for public works not urgently required shall be cut down as much as possible, and large reductions shall be effected in salaries, office-expenses, cost of repairs, and so forth.
6. All persons, to whatever political party they belong, shall co-operate harmoniously in this scheme, provided only that they are in favour of re-assessment.

The seven members of the Committee have not yet been elected, but Messrs. Amakasu Bunye and Higashio Heitaro are managing the affairs of the Association. If the Government decides not to introduce a Bill for re-assessment, these seven members will do so. The above rules have been circulated among all the members of the House in their respective provinces, and it is expected that pressure will be brought to bear upon some of the members by their constituents.

IDENTIFICATION BY PHOTOGRAPH.

THE camera seems likely to play an important part in the Homestead troubles. While the fight was in progress between the strikers and the Pinkerton detectives, agents of the Steel Company, disguised as workmen, were on the battle field, armed with Kodaks. They succeeded in taking several pictures in which a number of men are shown in the act of shooting down the unfortunate detectives, who were imprisoned in a barge without any means of escape. The pictures have been developed, and it is stated that by their means not a few of the most bloodthirsty among the strikers can be identified. Arrests have already begun, and the prospect of sternly administered justice, backed by strong military force, seems to cow the desperadoes effectually. The affair was a terrible example of sanguinary lawlessness and cruelty.

Such ferocity as the strikers displayed against the unfortunate Pinkerton men who were simply doing their duty, has deservedly alienated from them every sentiment of mercy or sympathy. It is to be observed that if the riot and its incidents stand to the permanent discredit of the State, the action subsequently taken by the authorities showed thorough promptitude and efficiency. The militia were soon in full control of the district, and their manner of going to work immediately taught the rioters that further attempts at intimidation were out of the question.

Nothing is more astonishing in connection with this memorable strike than the wages of which the strikers were in receipt. We read that under the scale of 1889, "roller No. 1 in twenty-four days earned \$259.05; roller No. 2 in twenty-four days earned \$278; roller No. 3 in twenty-three days earned \$279.30." This gives an average of over \$11 per diem for each roller. In Australia at present labourers refuse to work for seven shillings a day, and in America it appears that even ordinary mill hands earn from \$2 to \$3 daily, yet they are not content—so discontented, indeed, that they resort to murder and arson to emphasize their supposed grievances. Any of us who have reached middle life can recall the days when a shilling per diem was the wage of an able-bodied labourer. In Ireland, as late as the year 1865, ten pence satisfied a good farm hand. But they have changed all that. A skilled workman at the Homestead Mills receives at least \$144 per month; a shear helper \$2.64 for eight hours work; a heater, \$130 per month, and so on. The Company, however, having spent from five to six million dollars on machinery, and thus equipped the mill in such a manner that, according to their claim, the hands could turn out more produce than is possible in any other mills, and were thus enabled to earn proportionately larger pay—for they are paid by task—the Company having done this, thought themselves entitled to alter the scale so as to bring their rates of wages to something like the general level of the mills throughout the country. But one feature of the labour agitation of these curious times is that while labourers are always striking for higher pay, they will never under any circumstances consent to a reduction. Times may be bad, employers may be in difficulties, great sums may be expended to improve the producing capacity of machinery, but the workman's earnings must never suffer: they alone are sacred.

John McLuckie, Burgess of Homestead, one of the leading spirits of the Amalgamated Association and an *employé* in the works, who is now locked up in Allegheny jail on a charge of having counselled the mob, was examined before the Investigation Committee. He gave evidence well worth perusal:—

"I wish to be put on record to this effect. I think it a gigantic conspiracy on the part of this company and its representatives, aided and abetted by violent legislation, created with a view of depriving the workmen of this country of their most sacred rights under the Constitution to life, liberty, and the pursuit of happiness. I think that fact has been pretty clearly demonstrated, and if an opportunity were afforded, I think we would have no difficulty in establishing the truth.

"Three years ago, at this same mill, we had trouble of a similar character. The capacity of the mill at that time was quite limited. Then came the McKinley tariff bill, reducing the tariff on this very identical article on which our wages were based, viz., steel billets, and raising the tariff on all other articles of production. It was a gigantic conspiracy to rob the labouring man of a fair day's wages for a fair day's work. The Carnegie Company holds the mortgages on their employes' property to a considerable extent. There are employes who have bank deposits, to what extent I do not know. Our people, as a general thing, believe the Pinkertons to be a horde of cutthroats, thugs, and lawless invaders."

Mr. Oates—Your idea, then, is that the company, after having obtained a scale of wages based on the market value of steel billets, caused the duty on steel billets to be reduced?

Mr. McLuckie—es, sir; they shortly converted the Duquesne works into a billet plant, increased the production, flooded the country so that prices may be reduced, and thus affect our wages. The Duquesne produce large amounts of billets.

Judge Taylor—I cannot understand how they can

make money by selling billets at a less price than before?

Mr. McLuckie—The Duquesne is not a union mill, and they have no defence there. They have no regular scale of wages. At any time the company wishes to reduce these men's wages they have no defence. They can run billets down to almost any price, so as to compel them to go down with them, and then bring it to the Homestead plant also. We make some billets at Homestead also, but while we may possibly make 100 tons of steel billets, we will make 5,000 tons of beams, &c."

Question—Why should the firm want this reduction when they certainly lose by it?

Answer—Because every article produced is based on that particular item of steel billets.

Judge Taylor—You think this conspiracy consisted of whom?

Mr. McLuckie—I think the Pacific Railroad people were connected.

"And who else?"

"H. C. Frick and the Carnegie interest. I think there was quite a large circle if you cared to gather them up."

"Any members of Congress?"

"The bill was passed."

"The majority of Congressmen must have been in it."

"I did not say so. I am not here for the purpose of insulting this committee."

* * *

The latest move contemplated by the strikers is remarkable. We read in a New York journal that "Mr. Brennan, the attorney of the Amalgamated Association, has advised the association officials to communicate with the State Department with a view to securing the arrest in Scotland and extradition of Mr. Andrew Carnegie. Mr. Brennan is of the opinion that Mr. Carnegie can be held on the charge of treason in maintaining a force of unauthorized armed men, without constitutional right to do so, and, if a warrant in his case is granted, a strong effort will be made to have him brought to America for trial. The Advisory Committee of the strikers claims to have in its possession evidence sufficient to prove that not only the Carnegie Company brought a large number of men into Pennsylvania for an illegal purpose, but also that it imported weapons sufficient to arm the entire force. The bringing of a force of armed men into one State from another is a violation of the Federal Constitution, and the committee has been advised that it has a good case against the Carnegie Company."

THE TOKYO CHAMBER OF COMMERCE.

On Friday last at 11 a.m. the members of the Tokyo Chamber of Commerce held a special committee meeting at the Bankers' Rooms in Sakamoto-cho to discuss the Mining Regulations. In the afternoon a general meeting was held, at which twenty-six members were present. Mr. Shibusawa, President, took the chair, and the following resolutions were passed:—

1.—In accordance with the provisions of Art. 19 sec. 2 of the Regulations of the Chamber of Commerce, it was resolved that members who failed to pay their subscriptions upon demand should be sued in Court.

2.—It was decided to postpone the amendment of the Bye laws of the Tokyo Chamber of Commerce till the next meeting, there being an insufficient number of members present to pass a resolution on the subject.

3.—Representations relating to the amendment of the Regulations of the Railway Council (*Tetsudo Kaigi*), and of the Public Works Council (*Doboku Kai*). Resolutions were passed approving the drafts prepared by the Committee which shall be presented to the Minister of State for Home Affairs and the Minister of State for Finance, respectively. The following is a draft of the Representations:—

According to the Rules relating to the Railway Council and Public Works Council, each Council shall consist of a President, 20 ordinary members, and a certain number of special members; and out of these 20 ordinary members, 10 shall be elected from among high officials of the various Departments. As the Railways and Public Works are affairs of national importance, it is absolutely necessary to have some high administrative officials in the Council, but as the methods and processes of constructing railways and harbour works, etc., have very important bearings on commerce, the questions involved may be considered commercial rather than administrative. We are disappointed, therefore, to find that in neither Council is provision made for the appointment of practical men as members. Although 10 members out of the 20 ordinary members are to be elected from amongst administrative officials, nothing is said as to the character of the other 10 members. Besides, as there is no limit in the Regulations as to the number of

special members, any number of practical men may therefore be appointed; and since practical men are necessary factors in such organisations, some express provision for them ought to be made in the Regulations. We accordingly venture to propose the election of commercial members from amongst the Chambers of Commerce throughout the Empire. These Chambers were organised under the Regulations relating to Chambers of Commerce, promulgated on the 11th day of September, 1890, and have power to decide upon the best means for the development of commerce, and the prevention of its decline; and also to convey to offices or boards their opinion as to the enactment, amendment, abolition, and mode of carrying into practice, the laws and regulations relating to all matters of commercial interest. Thus as they represent the commercial world it is both just and convenient that members of the Railway Council and Public Works Council should be chosen from amongst them. We pray that those Regulations may be amended so as to provide for the attendance of at least three members from each Chamber of Commerce at the Council meetings. The mode of their election shall be decided by the respective Ministers of State.

4.—The proposition made by the Kansai Chamber of Commerce to hold a united General Meeting of the various Chambers of Commerce throughout the Empire was rejected by a large majority.

5.—It was decided to abolish the 50 *sen* silver coin. The representation on this subject was published in a previous issue.

6.—Questions relating to rafts were left over till the next meeting.

7.—Mr. Shibusawa Yeichu was elected to represent the Tokyo Chamber of Commerce at the Miners' Conference.

The meeting closed at 9 p.m.

REMARKABLE WORDS OF MR. OHIGASHI.

THE *Nippon*, now becoming noted for publishing poetically composed conversations between official and political magnates, once more fills its columns with some remarkable words attributed to Mr. Ohigashi Giteisu who is known as the Sage of Goshu, and who was formerly President of Committee of the Whole in the House of Representatives. Speaking of political parties, Mr. Ohigashi is made to say that the time has arrived to dissolve the old parties, such as the *Kaishin-to*, and to organize new political associations adapted to the requirements of constitutional institutions. For the Government has begun to act constitutionally, whereas the existing political parties have been long despised. Hence, if a new party be formed at this juncture, there will be no more occasion for the service of *soshi*. Politicians may then throw away the sticks and swords that are still necessary for self-protection. With reference to a rumour that the Popular Party is collecting materials to re-open the attack on the new Cabinet, he declared that these are not times to return evil for evil. He himself had often suffered at the hands of the *Meiji* Government, and he had ample cause to complain in the Diet. But if the nation is to obey the Imperial command and labour for the establishment of a perfect constitutional system, these old grievances must be forgotten. As to the alleged difficulty of assuming the reins of administration, he admitted that to defeat the united strength of Satsuma and Choshu is difficult, but his own experience convinced him that the bonds which bind the two together may easily be loosed. To intrigue for that purpose, however, is not allowable under a constitutional government. Referring to the *Hakushi* (scholars possessing the highest degree in various sciences), whose numbers have so largely increased, he contemptuously avowed his surprise to find them so valueless, and charged them with lacking spirit and independence. They are, he said, no better than a set of living-dictionaries; and yet they are unable to educate the rising generation. He also severely criticised the ambition of students to become officials on the completion of their scholastic course. Concerning this a story is put into his mouth:—"Once upon a time a certain scholar went to visit Count Soyejima, and setting forth his extreme poverty, implored the Count to give him an official post, however mean. The Count listened to the youth's appeal, and having heard him to the end, said:—"You may remember that Yen-hoi was extremely poor, but he did not complain of it to his Master Confucius, nor did his master recommend him to seek an official post. What did Confucius say? 'Yen-hoi takes pleasure in the doctrine and is content with his poverty; and the Master is pleased with his pleasure in the doctrine, and satisfied

with his content in his poverty.' How feeble is your mind by contrast!" The youths of the present day, according to Mr. Oligashi's view are no better than that despicable and spiritless lad who became the object of the Count's scorn. As for the so-called "politicians" of the day, he declared that they worship sharpness, and take no heed of virtue, though the latter is the true pillar of the nation, and the only efficient oil of administrative machinery. These are brave words.

IRELAND AT CHICAGO.

Mrs. ERNEST HART, who recently published such admirable papers on Japanese industries, is now engaged, in conjunction with the Countess of Aberdeen, in getting up an Irish village for the World's Fair at Chicago. The following is an account of the affair, by Mrs. Hart:—

"We shall have seven cottages in which peasant girls and lads from Donegal and elsewhere will be seen at work, weaving, spinning, dyeing, sprigging, carving, etc. The girls will look very pretty in Connemara red petticoats, fishwife skirts and blouses, and scarlet cloaks. In the first cottage will be a precise model of a cottage in Donegal, with undressed walls of granite, with a hooded fireplace and dresser full of bright crockery: a girl will be seen dyeing and spinning our famous Hand-and-Heart Home-spuns, the wool of which she gets from the lichens and heather of her native bog outside. There will be an imitation peat fire, and on this the dyer will from time to time place her iron potato-pot, and proceed to dye the wool. This operation is certain to prove immensely attractive to sight-seers, and, as well as the carding, spinning, and bobbin-filling, which will be shown here, is an extremely interesting process.

"In the second cottage there will be linen weaving and embroidering of the famous Kells Art Embroidery; whilst linen damask weaving on a Jacquard handloom and fringe-knotting will go on in the third cottage. Between this and the next cottage there will be a model dairy, in which dairymaids will be at work churning and butter-making. I can assure our American cousins they will have a chance of some good butter, as we shall send over some of the world-famed Kerry cows, which will be stabled at the rear. There will also be a pleasant, cool spot here where visitors can rest and drink iced milk.

"In the fourth cottage, which is under the especial care of the Irish Industries Association, every description of Irish lace will be shown. There will be a Limerick lace worker at her frame, the Torchon lace worker at the pillow, the numerous varieties of point lace, and so forth.

"Sprigging and veining, which are employed in the production of the beautiful hemstitched handkerchiefs of Belfast, will be shown in the next cottage. The girls of Donegal are especially noted for their exquisite and delicate work. We have not quite definitely decided about the two remaining cottages, but we shall probably show in the seventh the wood-carving industry in Ireland, which has reached a really remarkable degree of development when one remembers the workers and teachers are peasant lads. You should see the set of owls carved by some of my own boys for Lady Aberdeen last year. The expression of the owls' faces, as well as the execution, was excellent. Other features of our Irish industrial villages will be a replica of Donegal castle, an old well, and other interesting Celtic memorials. I believe the Irish village will be successful; we shall certainly do our best to make it so."

EMIGRATION.

It is not a little astonishing to find a paper like the *Kokkai* decrying Viscount Yenomoto's emigration scheme, on the ground that the so-called emigrants are in truth nothing more than people who go abroad to labour, and as such are virtually a species of slaves. This shortsighted sentimentality does not convey a very flattering idea of the *Kokkai's* good sense. According to our contemporary's method of viewing things, everyone who works for wages is in effect a slave. There may be some reason in the contention that until Hokkaido is fully developed the Japanese should not entertain any schemes of emigration to foreign lands, through truly we fail to appreciate the force of such an argument, seeing that, if the Japanese decline to emigrate to Hokkaido, it becomes a more waste of time to talk about sending them there. But when we are told that to go abroad and accept an engagement to work for a certain time in return for a certain stipend is to sell oneself into slavery (*batto*), we are constrained to wonder how things would have fared with Englishmen and Scotchmen in all these centuries had they been governed by such romance.

JAPANESE STEERAGE PASSENGERS.

We find the following item in an American journal:—

"I left San Francisco a few days after the arrival in port of the ship *John C. Potter* with a condition of affairs on board that is a disgrace to the American flag," said John H. Grew at the Palmer yesterday.

"Down in the hold, among the sacks of ill-smelling raw sugar, were more than fifty human beings in such a pitiful plight, that even the Customs officials, as

as they are to woful sighs, were struck with horror. The unfortunate creatures were Japanese, who had been brought all the way from the Hawaiian Islands in quarters unfit for an American hog. They had been tossed into the hold and given the same treatment as the sacks of sugar, and no more.

"If they slept it was on the timbers of the ship or the cargo. No bunks were put in the dark hole for them. There was no chance for them to sit down. Even the ordinary toilet requisites were lacking.

"All this was bad enough even in fine weather, but when it is understood that the ship *John C. Potter* had to weather a gale on the passage, the full measure of misery accorded the poor heathens can be realized.

"Crude or raw sugar is dirty, foul-smelling stuff, and so disagreeable on all accounts that the harbour master will allow it to be unloaded only on one wharf in the city.

"The Japanese were put on board at Honolulu twenty-one days before they reached San Francisco. Just below the hatch aft an opening was left between the sacks of sugar. It was a sort of an alley running across the ship's hold, with the sugar piled up within a foot or two of the deck on both sides. Part of the Japanese were dumped into this hole. Forward the portion of the hold between the fore hatch and the bow of the ship was left unfilled, and the rest of the poor Orientals were tossed in that cave and left to shift for themselves as best they could.

"On June 19 the gale blew with fearful fury. A tremendous high sea was running. The ship was in a serious predicament for a time, as was plain from the fact that all the iron work about was carried away.

"If the hatches had not been fastened down the hold would have contained a liquid mixture of sugar, and the Japanese would have been forced to swim for their lives.

"These openings had to be closed to save them, but in that stifling place their situation must have been terrible. It was the black hole of Calcutta over again.

"There is some doubt whether there is any law that will put a stop to this disagreeable traffic. In the case of the ship *John C. Potter* for instance, each of the passengers had the number of cubic feet of air space that the law fixes as the minimum.

"A general exodus of the Japanese from the Hawaiian Islands has begun, most of them being ignorant labourers."

THE POLICY OF THE CABINET.

The members of the new Cabinet, says the *Kokkai* finally determined their policy on Thursday 17th ult. and settled what reforms are to be made. The following are reported to be the principal steps contemplated:—

(1) Vice-Ministers of State—At present four Vice-Ministers only will be changed, viz—the Vice-Ministers of War, of Justice, of Communications, and of Foreign Affairs. The candidates for these posts are not known, but it is rumoured that General Kodama will become Vice-Minister for War, Mr. Makino, Governor of Fukui, Vice-Minister for Communications, Mr. Kiyoura, member of the House of Peers, Vice-Minister for Justice, and a certain *Hakushi*, member of the House of Commons, Vice-Minister for Foreign Affairs.

(2) Local Governors—About 8 or 9 local governors will be removed from their office, among whom 4 or 5 will simply be transferred to other localities, while others will have to retire; and will perhaps be nominated members of the House of Peers. Some able officials from the Departments of Home Affairs and of Finance will fill the vacant seats.

(3) Diplomats—There will be some changes in the diplomatic corps. Mr. Kajiyama, Resident Minister in Seoul, will return to Japan soon, and Mr. Hayashi, Vice-Minister for Foreign Affairs, will succeed him as Minister Plenipotentiary; or may perhaps be despatched to Austria to succeed Mr. Watanabe.

(4) Judicial Officials—If Mr. Matsuoaka resigns his present office in deference to the advice of Count Yamagata, Mr. Kawazu, Vice-Minister for Communications, will succeed him as Chief Public Prosecutor and Mr. Ozaki, Director of the Legislative Bureau, may be appointed a Privy Councillor, being succeeded by a certain *Hakushi*, member of the House of Representatives.

It will be observed that the above was written before the announcement of the appointments of Mr. Kioura Keigo and Major-General Kodama to be Vice-Ministers of Justice and War respectively, and before the appearance of the *Gazette* announcing changes of the Local Governors. The fact that the *Kokkai's* forecast proved so accurate in these respects invests the whole of its information with a claim to confidence, but we are nevertheless persuaded that it makes some errors.

Major-General Kodama Gentaro served in the rank of Major during the Satsuma Rebellion (1877) and was promoted to be Lieut.-Colonel and Colonel a short time afterwards. Subsequently he was raised to the rank of Major-General.

General, and received the appointment of Chief of the *Kangunbun* (Inspection Department) in the General Staff. He has but just returned from Europe whither he had been sent on official business. It is said that he stands very high in the estimation of the present Minister of State for War as well as in that of Count Yamagata, and that, in military circles, his ultimate promotion to the post of Minister of State for War is looked upon as assured.

COUNT KURODA.

In olden times, says the *Nippon*, Count Kuroda squandered millions of money in Hokkaido, built a gigantic palatial mansion in Sapporo, and sold the country's property to Satsuma men. All this is only too well known. Such doings earned for him an unenviable reputation. But now we see a totally different man in the new Minister of Communications. He is no longer careless and rough, but extremely thoughtful. For instance, since he accepted the portfolio of Communications he has been engaged examining the Budget for next fiscal year. Each Director of a Bureau has submitted his estimates, and given the necessary explanations. The section relating to ordinary expenditure was completed without difficulty, but when the Count came to look through the extraordinary expenditures, he noticed an appropriation of some hundred thousand yen on account of the construction of a submarine cable to Okinawa Prefecture (Loochoo). After hearing the explanation, he said that lately he had heard much talk among young officials about maritime defences, and that he himself had meditated on the subject seriously, and was prepared to cast his vote for strengthening the Navy. Hence he was averse to sanctioning any expenditure without full regard to this important national need. Doubtless the proposed construction of a cablegraph was desirable, but unless the country possessed a spare man-of-war to station in the neighbourhood of Okinawa, no submarine cable could be of much use. There were no such ships to spare at present, and he therefore thought that the cable might be deferred. So saying he took up a pen and erased the item. "Changed indeed is the character of Count Kuroda."

COUNT SAIGO.

COUNT SAIGO, if we may credit the News Agency's account, is progressing very favourably with his political tour in the north. At Fukuoka, at Hachinohe, and at Sanbongi, he and his travelling companions organized successful meetings and were well received. At Aomori, however, he was conspicuously fortunate, for an audience came together such as had never greeted either Count Itagaki or Count Goto. The News Agency attributes this to the fact that practical men in Aomori have hitherto been unwilling to associate themselves with any party movements, and have consequently stood aloof from the *Kaishin-to* and *Fuyu-to* demonstrations; but Count Saigo's reputation for thorough honesty and practicality attracted them, and drew them in crowds to the meeting. It does not speak well for the enterprise of the vernacular press that we have no detailed account of the speeches made by either Count Saigo or Viscount Shinagawa on their tour.

AN UNEXPECTED MARRIAGE.

THE *Fiji Shimpō* states that Mr. Masuda Yoshimatsu, a young man who has been educated abroad, fell in love with a Boston girl, "with blue eyes, auburn hair, and a fine complexion," named Sarah Barley (?), while the two were studying the beauties of rural nature on Coney Island. Deeming that consultations with relations and friends as to the suitability of the match would spoil its romance, there and then the happy pair agreed to be married. They applied to the Roman Catholic priest in charge of the village church for the performance of the necessary ceremony, the lady being a Roman Catholic. Before consenting to act, the priest demanded that Mr. Masuda should become a Catholic and take a solemn oath that he would ever remain faithful. "Although," says the *Fiji*, "Mr. Masuda had never professed belief in any religion

before, he consented to fulfil the required condition of his marriage." The knot was tied in the presence of a few witnesses, and Mr. Masuda is said to be well satisfied with the object of his choice. The rites of his newly adopted religion he will study in interesting company.

SILK.

The Yokohama silk market, says the *Shogyo Shimpō*, is becoming very active. The departure of the mail for Europe on Sunday last, and the Canadian mail on the day following, caused large transactions to be made on Sunday with Messrs. Marius, Giraud & Co., Jardine, Matheson & Co., and Griffin & Co. Prices are going up very rapidly. Messrs. Griffin & Co. purchased a lot of Shinsu at \$815 per bale, and Messrs. Jardine, Matheson & Co., some Uzen at \$824, which is the highest price recorded this year. On Monday, Messrs. Marius, Giraud & Co. again began to purchase fine silk in considerable quantities for the French market. Among the various transactions were Goshu Yamanaka at \$800, Yetchu Nakamura at \$790, and Kyoto Nagamura at \$760. Messrs. Jardine, Matheson & Co. purchased some Sanshu Shinyosha at \$780, and Bushu Mori at \$755. Messrs. Nabholz and Osenbruggen; Siber and Brennwald, and others were also among the buyers. It is reported that Messrs. Siber and Brennwald have more orders on hand so that further business may be looked for.

MURDER IN NIIGATA.

A CORRESPONDENT of the *Nippon* writes from Niigata that some time ago a foreign wrestler by the name of Webster, an American subject, came to Niigata to exhibit his prowess. After squandering all his money, he found himself unable to return home. The authorities applied for assistance to the American Consul at Hakodate, who, however, declined to recognise him as a citizen of the United States, and pending reference to the Foreign Office, Webster was kept in a Japanese inn. Recently, he seems to have quarrelled with one Kazama Yoichiro, who has died from the effects of a blow received from a heavy stick in an encounter with the wrestler. Oddly enough, the murderer has not been arrested, and there is much indignation over this laxity on the part of the police. The story as related by our contemporary, is somewhat vague, but more will doubtless soon be heard of it.

The Japanese press furnish a few more details of the alleged murder committed by the man Webster in Niigata. The case is probably the outcome of a drunken brawl. Webster is reported to have gone to the police station and there made a statement that he had been attacked while out for a walk, in proof of which he showed some wounds on his back. These are said to be very slight, and in the opinion of the police probably self-inflicted.

RELIEF FUNDS.

THERE has been much discussion on the disbursement of the Treasury fund for the relief of sufferers by the recent inundations in the Tokushima, Okayama, and Hyogo Prefectures. It was stated that the Government was unwilling to disburse any sum unless ascertained to be absolutely necessary. But in the case of repairing river-courses the expenditure will be so enormous that it cannot be defrayed out of the local taxes, and must therefore be undertaken by the Government. As for the damage done to fields, etc., there is a Famine Reserve in each Prefecture specially set aside for such emergencies. It is now, however, stated that though the total amount of the Famine Reserve in Tokushima Prefecture is yen 234,970.60 only 5 per cent. of the same is available for the recent disaster. Out of that small sum some yen 650 have already been spent, and the balance is far from sufficient to repair the damages. The Governor of Tokushima has requested the Government to make a special grant of yen 60,000 and the Governor of Hyogo has applied for another disbursement of yen 90,000. Pending investigations into the amount of damage in

these Prefectures, the Financial Department has authorised a grant of yen 30,000 to Hyogo, and yen 20,000 to Tokushima.

CUSTOMS RETURNS.

THE following is a summary of the Customs Returns for July, showing the foreign trade of the empire for the month:—

EXPORTS AND IMPORTS, 1891.		1892.	
SILVER YEN.	SILVER YEN.	SILVER YEN.	SILVER YEN.
Exports	6,075,292.090	6,903,322.480
Imports	4,985,175.310	5,598,190.430
Total exports and imports	12,501,512.910	12,501,512.910
Excess of exports	1,315,132.050	1,315,132.050
CUSTOMS DUTIES, 1891.		1892.

LAW OF ADMONITION.

THE Law of Admonition was once more enforced by the Metropolitan Police Bureau on Tuesday last. Some 17 men were immediately communicated with, and it is stated that a large number will receive the usual notice in a day or two. It is satisfactory to see that the Government do not intend to relax their efforts in any way to crush the baneful power exercised by the bands of *soshi* who still roam at will about the country. The number of these gentry in the capital has been increasing daily, their presence being marked by acts of intimidation worthy of the worst class of desperadoes. Now that the Metropolitan Police have succeeded in tracing the major portion of the offenders, it is to be hoped that we have seen about the last of the nuisance.

THE KOKKAI ON GENERAL LE GENDRE'S TREATISE. REFERRING to the chapter now in course of publication from General Le Gendre's treatise on "The Human Race and its Growth from a Common Centre," the *Kokkai* writes thus:—"The first chapter of General Le Gendre's treatise on 'the Human Race and its Growth from a Common Centre' was published in the *Japan Mail* yesterday. Its continuation will no doubt appear in the same paper. But the General declared that the Japanese race came not only from the north of Asia, but also from Australia through the south of India. Whether

such a conclusion be correct or not, we must express our admiration of General Le Gendre's research. For though we have had scholars who declared that the banner of Prince Shotoku, preserved at Nara, came from Assyria, and that the demon by the side of Buddha's image is of Dravidian origin, no one previous to General Le Gendre had ventured to declare that our race sprang from such sources. It is to be especially observed that this new scientific opinion is published during the time while the General is commissioned to Japan to negotiate with our Government on Korea's behalf about the revision of the Quelpart Fishery Treaty, a mission which has not been successful, and has not obtained for the General any very kind reception from our Minister of State for Foreign Affairs. It might be supposed that the General's mind is fully occupied with his important project, but evidently he is a man much out of the common.

We admire the spryness of the *Kokkai*, but are at the same time reminded by that journal's writing of the old aphorism that the sharpest folks run most risk of getting cut. If the *Kokkai* could only have exercised sufficient patience to wait for the publication of the whole chapter which it undertakes to criticise—not the "first chapter" by the way, as our contemporary erroneously states—it would have learned that the book from which our extract is made was compiled by General Le Gendre years ago, and was concluded before he entered the Korean service. It has not occupied any part of the author's time during his present mission to Japan, and if a chapter of it happens to see the light to-day, it is simply because General Le Gendre yielded to the solicitations of folks who have had an opportunity of examining the work. But even if this were not so, how captious would be the *Kokkai's* comments? What would that journal say about Mr. Gladstone, we wonder, who, at the very moment when State affairs press most heavily on his attention, finds leisure to compose a long essay discussing, with infinite research and minute reference to mediæval records, the chances for and against Dante's having visited Oxford; or about Mr. Disraeli, who composed works of fiction in the study of the Prime Minister's residence in Downing Street. The idea which chiefly occurs to one reading our Tokyo contemporary's remark is that, if statesmen can find time to conduct scientific research, it is a pity that journalists cannot make time to read to the end of the matter they criticise.

THE SURPLUS.

DURING the second session of the Diet, countless propositions were made for disposing of the surplus. The members of the Popular Party hoped to utilise it by reducing the land-tax and re-assessing the taxable value of land, while the Government intended to employ it in building men-of-war and in carrying out enterprises calculated to develop the national strength. One of the most noteworthy schemes was that of Mr. Hoshi Toru, President of the House of Representatives, who proposed that the surplus should be spent by the Emperor in visiting Europe and America. But, it will be remembered, except for a small grant towards the Earthquake Relief Fund in Gifu and Aichi, it remained untouched. In the special session the question seemed to be almost forgotten; indeed, the only mention of it was the Representation relating to the Management of Surplus Funds presented by Mr. Inouye Kakugoro and others. It was handed over to a special committee, and nothing has since been heard of it. Now, however, according to the *Hochi Shimbun* the question is once more brought forward. Our contemporary states that the total amount of the Surplus Funds which will be dealt with next session, is over fifteen million yen. Already the following Departments have applied for a share in its distribution. (1) The Naval Department demands a sum of yen 2,800,000 for the construction of men-of-war; and another sum of yen 2,000,000 for the establishment of a Steel Foundry. But the latter item is not considered very urgent. (2) A sum of yen 1,800,000 is required by the

Department for Home Affairs for the improvement of the Tone, Shinano, Yoshino, and other great river courses. (3) The Department of Education wishes to have as large a portion as possible kept in reserve for the Imperial University. In order, ultimately, to render the University an independent institution. (4) The Department of Agriculture and Commerce demands a sum of yen 40,000 or yen 50,000 for the investigation of deep-sea fisheries. Thus every Department hopes to obtain a big share, but since a sum of yen 4,000,000 must be granted for the repair of damage done by the recent inundations in the Tokushima, Okayama, and Hyogo Prefectures, there is sure to be keen competition amongst the claimants when the question arises.

SETTLEMENT OF THE ASHIO MINERAL POISON QUESTION.

THE above question has been a topic of discussion for quite a long time. It has inspired leading articles in newspapers, and prompted the diatribes of Mr. Tanaka Shozo, but no prospect of settlement offered. Now, at last, a committee of arbitrators has evolved a basis of arrangement between the injured parties and Mr. Furukawa, owner of the mine. The agreement was signed on the 24th ultimo to the following effect:—

The mineral poison which escapes from the Ashio Copper mine, the property of Furukawa Ichibei, having caused much damage to the villagers along the Watarase River, a committee of arbitrators elected to settle the consequent dispute, has now drawn up the following agreement between Furukawa and the villagers, to which both parties have signified their assent.

Art. 1.—Though Furukawa Ichibei claims that he has not yet fully investigated the amount of damage done, the arbitrators, in accordance with the authority vested in them, declare that the following sums of money shall be paid to the villagers:—

- (1). A sum of 2,497,973 yen for various expenses connected with the conduct of the present case.
- (2). A sum of 18,500 yen by way of compensation for the injuries caused.
- (3). A sum of 26,400 yen for the preservation of river banks, which sum shall be paid from October 1893 to October 1894.
- (4). The sums mentioned in the 1st and 2nd clauses shall be paid immediately.
- (5). Although, owing to some cause now unforeseen, the repairs of river banks contemplated in the 3rd clause be not fully carried out, the full sum mentioned in that clause shall nevertheless be paid to the villagers.

Art. 2.—Inasmuch as Furukawa Ichibei agrees to pay the sums mentioned in the foregoing article, the period from the present time until the 30th day of June, 1895, is hereby allowed for the purpose of ascertaining by experiment the results obtainable by means of new machines for collecting mineral dust, and during that period no discussion shall be raised between parties to this agreement nor will any one be at liberty to institute legal proceedings in our Administrative or Judicial Court.

Art. 3.—After the 30th June, 1895, if the above mentioned machines are found to give satisfactory results, the parties to this agreement shall remain on friendly terms.

Art. 4.—Should the above machines prove unsuccessful, fresh negotiations shall be undertaken, in which event the damage shall be assessed from 1895.

Art. 5.—Furukawa Ichibei shall be at liberty to cut down trees on the mountains among which the Watarase River rises, but he shall take care not to decrease the water of the river thereby, neither shall he fail to plant young trees in the place of those felled.

Art. 6.—Should the Mine be sold or given away, the existence of the present agreement shall be made known to the purchaser or recipient, and he shall be pledged to observe its stipulations. And in the event of the name of the proprietary being changed by Furukawa Ichibei, this agreement shall be equally binding.

Art. 7.—The district concerned in the present agreement is fixed by the annexed plans and by a minute memorandum appended hereto.

(Dated) 24th August, 1892.

Signed by the parties to the Agreement.

PRESERVATION OF OLD RELICS.

MR. AOYAMA YUIGAKU, who was recently despatched to Kiushu to conduct investigations as to the old relics in the temples and shrines there, is reported to have tendered advice of a character such as might have been anticipated. He says that the art treasures of the country have been gradually exported abroad, or lost through carelessness. In 1888 a Treasure Investigation Bureau was established in the Imperial Household to preserve them, but previously to that time the priests had regarded the treasures in each temple or shrine as their own private property, and had freely pawned, mortgaged, or even sold them. Since the establishment of the above Bureau, however, the art treasures in Kyoto, Nara, Kamakura, etc., have been examined, and their shapes, sizes, materials, makers, dates, etc., carefully recorded in the book of the Bureau, so that even if any of them be abstracted, it can

easily be traced. For example, some years ago an image of Buddha suddenly disappeared from its place, but owing to the accurate details entered in the official record, it was easily recovered by the police. Mr. Aoyama does not hesitate to assert, that among articles worthy to be valued as national treasures there are some which were made during the past thirty years, while, on the other hand, many antique objects, though originally preserved at the temples as valuable, have no real title to a place in the official records. He instances paintings of Sesshu or Motonobu, which, though undoubtedly genuine, are too badly executed to possess any value, and, despite the great names of their painters, do not bear comparison with many pictures by Togan, Mitsuoki, Yeioku, or Tanyu. The same is true of glyptic works. Teicho and Unkei were certainly Japan's greatest sculptors, but sometimes the figures of Buddha carved by them are far inferior to the works of Tankei or Zenkei. We are glad to find that this discrimination is made by a responsible authority. The great majority of Japanese connoisseurs deem it high treason to breathe a word against any picture from the brush of Sesshu or Motonobu, and are, on the whole, slaves to the singular creed that established antiquity constitutes excellence. Mr. Aoyama gives a list showing the nature of the objects which, in his opinion, ought to be recorded in the official catalogue and the order to be observed in entering them:—

- (1). Ancient documents.
- (2). Paintings.
- (3). Carvings.
- (4). Works of Art other than the above.
- (5). Buildings.
- (6). Ancient autographs.

He explains the objects that fall under above categories as follows:—

- (1).—Any document relating to the history of the country or to that of foreign countries belongs to the first category.
- (2).—Paintings by Kose, Kasuga, the Tosa school, Sesshu, the Kano school, Sumiyoshi, Korin, Tani, Hishikawa, Utakawa, Maruyama, the Shijo school, and so forth, should be included in the second category, provided that their execution justifies such a distinction.
- (3).—Carvings of Buddha, above ornaments, netsuke, and other works shaped with the knife belong to the third category.
- (4).—Lacquered writing boxes, medicine cases, incense trays, objects of carved red or black lacquer, incense caskets, porcelain wine-jars, plates, dishes, cups, tea-coal holders, iron water-kettles, swords, daggers, sadoles, brocades, etc., constitute the works of art referred to in the fourth category.
- (5).—Temple or palace buildings.
- (6).—Ancient autographs do not owe their value to the nature of the composition, but to the quality of the calligraphy. Thus copies of the Horke Scripture or of the Kanon Scripture, written by Kobo Daishi, Sugawara Michizane or Ono-no Tofu are esteemed chiefly on account of the beauty of their writing and not because of their language or the doctrine they inculcate.

THE JUVENILE RADICAL PARTY.

STILL another political association makes its appearance under the name of the *Seinen Jiyu-to* (Juvenile Radical Party). It is probably largely composed of *soshi*, if we take its grandiloquent programme as an index of its character. The vernacular press attribute the organisation of the party to Mr. Takata Yataro, member for Ibaraki Prefecture, who has succeeded in obtaining forty adherents, and establishing a central office in Kanda. There is nothing startlingly novel in its statement of motives and policy, and we are glad to observe one touch of modesty in it—a virtue strangely unfamiliar to such documents. Our object, it says, is to educate the young and rising politicians of the empire so that they may become thoroughly qualified to succeed the present radical leaders when the time comes. Is this an indication of better things? Hitherto, we thought every youthful radical looked upon himself as a born statesman.

AN ENGLISHMAN ON THE JAPANESE STAGE.

THE late performances by members of the story-telling guild at the Harukiza Theatre in Hongo deserve placing on record if only for the appearance of, probably, the first foreigner on the Japanese boards. Mr. Black, a son of the author of "Young Japan," and already favourably known as one of the *hanashika*, or story-tellers of Tokyo, made his debut a few days ago, in *Bansuiri Chobei*, in a scene taken from the "Story of the Otokodate of

Yedo," familiar to all readers of Mitford's admirable little volume. The unique spectacle of an Englishman essaying such a rôle drew large audiences, who showed their feelings in ways thoroughly characteristic of the people. Black had evidently made a study of Danjuro in the part, and every successful imitation of that popular actor evoked a spontaneous burst of applause; on the other hand, any marked lapse from the stereotyped rendering caused the house to shake from end to end with irrepressible mirth. And it may well be imagined such instances were neither few nor far between. Amateurs may evidently take any liberties they please on the Japanese stage; they do not pose as the real article, and hence what would only be tolerated as burlesque in the West is here accepted simply for what it achieves. Hakuem, the noted *hanashika*, a stout-built man apparently on the wrong side of fifty, as the maiden *Yaegaki Hime* in the drama of "Nijushiko" was a ridiculous spectacle, but after the first shock of surprise, the audience listened to him with sympathetic attention. Black's acting, however, was far removed from any suspicion of caricature; it was a clever and conscientious rendering of a difficult part and has been deservedly praised by the Japanese press and play-going public.

THE SPECIE BANK.

THE general meeting of the Yokohama Specie Bank, says the Tokyo News Agency, is fixed for the 10th of next month. The profits of the Bank during the first six-monthly period of this year have been large, and, in view of this fact, the shareholders, naturally desirous not only to obtain a good return on their money but also to see the Bank's scrip quoted at a high price in the market, are anxious that a dividend of sixteen per cent. should be declared, as in former years. The Directors, however, are in favour of a fourteen per cent. dividend only, as they consider it the duty of every bank in such times as the present to add as much as possible to its reserve fund. This difference of opinion has not yet been settled, but according to the source from which we quote, a compromise is likely to be effected, by the dividend being fixed at 15 per cent.

FUJI.

OWING to the facilities afforded by the railway, the ascent of the redoubtable mountain has become quite a commonplace incident; indeed, we hear of an enthusiast from Tokyo who makes the trip once a week, and this, too, without being obliged to dine outside his own doors. It is accomplished in this way. Taking the 9.50 p.m. train from Shimbashi, he arrives at Gotemba at 1.24 a.m., snatching a little sleep by the way. An hour or so is required at Gotemba in making arrangements for horses and guide, and the summit is reached by 10 a.m., just twelve hours from Tokyo. It will thus be seen how easily Gotemba can be regained in time for the 5.54 p.m. train which arrives in Tokyo at 9.45 p.m.—a rather late hour for dinner, it is true, but that is a minor consideration.

THE PORTUGUESE AND EXTRATERRITORIAL JURISDICTION.

THE alleged recent arrival of intelligence on the above subject is commented on by several of the leading Tokyo dailies. It is stated that no sooner was the news of the abolition of Portuguese extraterritorial jurisdiction communicated to the Portuguese Government by Mr. Nomura, the Japanese Minister in Paris, than steps were taken by Portugal to place its subjects in this country under the protection of France. As a condition of accepting this responsibility France is reported to have demanded that Macao should be sold to her at a nominal price. The Japanese Foreign Office is said to have been informed that the French Chargé d'Affaires will, in the absence of the Minister, take charge of Portuguese interests in this country. Our contemporaries are by no means certain that the new departure is intended to indicate that Portugal expects to recover extraterritorial jurisdiction. To such a proposition the Japa-

nese Foreign Office would certainly object. There is no way open to Portuguese subjects of escaping Japanese jurisdiction other than a change of nationality, and according to French law a foreigner has to reside on French territory for three years before becoming naturalised. With this condition, of course, Portuguese in Japan could not comply. Hence, supposing that the above version of the intelligence received by the Japanese Foreign Office is correct, it is not to be inferred, say the Tokyo journals, that the situation of Portuguese residents in Japan *vis-à-vis* Japanese jurisdiction will be materially altered thereby. That part of the above account which refers to the cession of Macao to France by Portugal is unlikely to be true, as the latter power, if report be correct, has promised to restore the place to China should she decide to relinquish it.

SUSPENSION OF A THEATRICAL PERFORMANCE.

It will be remembered by our readers that last year a great deal of sensation was caused by the discovery that a man called Tsujimura Kura, who had been acting as a judge in a district court, was a fugitive from justice. Tsujimura's life has been written, and a Nagasaki theatrical manager, perceiving that the story was calculated to prove attractive if represented on the stage, applied for permission to introduce the play at the Maizuru-ya. Permission was granted and the necessary costumes were prepared at considerable expense. After the performance had been advertised and just when the Nagasaki theatre-goers were on the tip-toe of expectation, an order was issued by the police forbidding the entertainment, on the ground that it was not desirable that the acts of a man who had occupied a seat on the bench should be held up to ridicule. The manager conferred with the police, and, by consenting to withdraw certain parts of the play, obtained their consent to his placing the remainder on the stage. On the appointed day, the theatre was crowded. The acting, however, had not proceeded far before orders to close the performance were given and the actors were taken into custody. This is the first instance, says the *Hochi Shimbun*, that a stage play has been interrupted by the interference of the police. We (*Japan Mail*) fail to understand why the police acted in such a hesitating manner. That the moral effect of the play which it was proposed to put on the stage must be bad would, we should say, be admitted by all thoughtful persons. In the eyes of most of the attendants at the theatre, Tsujimura would have figured as a hero; while on the minds of many, his clever methods of evading justice could have anything but a salutary influence.

DR. SCUDDER'S SUICIDE.

The New York *Sun* gives the following account of the suicide of Dr. Scudder:—

Two men stepped off from the 9 o'clock morning train from here Northport yesterday July 19th. One leaned on the other's arm. Both looked worried, and one had a strange look in his eyes. They were Edward M. Scudder, a New York lawyer, and his brother, Dr. Charles D. Scudder, the well-known New York physician, whose wife is a daughter of ex-Senator William M. Everts. A carriage was waiting for the men at the railroad station. They got into it and were driven to the Scudder summer home, about two miles away. Many persons greeted them during the drive, for every one in this part of Long Island knows the Scudders. They have made Northport their home for many years. "Dr. Scudder is looking bad," commented a neighbour. "The poor fellow looks as if his mind is giving way."

News had got here that Dr. Scudder was in poor health, and the sympathy of the community had been aroused. Every summer he has been a familiar figure here. Yesterday afternoon he was seen walking about, driving, and boating, either his brother Edward or his other brother, the Rev. Henry T. Scudder, being with him. The summer sojourners and the residents noticed that he seemed to be depressed. They felt sorry for him and his family.

Every one in the place was shocked this morning to hear that Dr. Scudder had killed himself. The news spread rapidly. Last night, after half a day's outing, Dr. Scudder and his brother Edward went to the house for dinner. Their mother, Mrs. Emma Scudder, and his wife, were there and all had dinner together. Dr. Scudder seemed to be in good spirits. During dinner he chatted and joked. His relatives were delighted

over the change in his demeanor, for he had been in depressed spirits during the day.

After dinner the family spent a few hours on the lawn. It was noticed then that Dr. Scudder was becoming melancholy again, and it was arranged that the Rev. T. Henry Scudder should spend the rest of the night with him. About 10 o'clock Dr. Scudder and the Rev. Henry T. Scudder went to a room in the upper part of the house. Dr. Scudder would not go to bed. He paced the floor and acted as if he were alone in the room. He paid no attention to his brother. Frequently he clasped his hands to his head and muttered: "My head's going. This is killing me."

Shortly after 2 o'clock this morning he lay down on the bed. He took off only a part of his clothing, but he went to sleep. His brother sat by the bedside. He watched the Doctor closely, for he was afraid that he might do himself harm. Several times Dr. Scudder stirred as if he intended to get out of bed. At first his brother was inclined to assist him, but when he saw that the motion was the result of disturbed sleep, he kept quite so as not to arouse him. At 5 o'clock Dr. Scudder stirred and moaned. Then he jumped from the bed. His brother put his arms around him, but Dr. Scudder, with an unexpected display of strength, threw him aside. Then the half-clad man darted to the room door, threw it open, and dashed down stairs, three steps at a time. His brother was close behind him, but was not so quick as the fleeing maniac.

Dr. Scudder ran into the kitchen, seized a big carving knife, and dashed out through a back door on the beautiful grounds surrounding house. By this time his brother had aroused the other members of the family, and they hurried out of their rooms. The Rev. Henry T. Scudder lost sight of the brother who had awakened him for a few moments, and when he and the other members of the family and the servants rushed to where he stood they did not once comprehend what had happened. Just as he started to tell them he caught sight of his maniac brother about 300 yards away in a clump of trees. He ran to the spot, while the others remained at the door.

As he did so Dr. Scudder made his way further into the grounds. Finally he sat down, twined his legs around a tree, placed the point of the blade of the big knife against his breast with the handle against the tree, and putting his arms around the tree he drew himself toward it. The knife was thus forced into his breast. When his brother reached him he had released his hold, and was lying back dead at the foot of the tree. The knife had pierced his heart.

His mother and the others were not allowed to look at his body. Fortunately the trees had shut the dreadful scene from them.

Dr. Scudder's remains were brought into the house. Later in the day Coroner Koldman viewed the body. Dr. Scudder's wife was in Windsor, Vt. A telegram was sent to her. It did not say that he had killed himself. She sent word she would start from Windsor at once. A reporter of the *Sun* called at the Scudder home this afternoon and saw the madman's brother, Willard Scudder, he said, had worked very hard all the winter. In June he resolved to take a long vacation. Ten days ago, while he was resting in Windsor at the summer home of his father-in-law, he began to be troubled with melancholia. Then he decided that it would be best to come down to the old family place here. He did not show pronounced signs of his trouble until the night before he killed himself.

The arrangements for the funeral have not been completed yet. It was been decided, however, that the interment shall take place in Windsor.

Ex-Senator Everts is in Windsor, where his daughter, the wife of Dr. Scudder, is staying with her child, a seven-year-old girl. Mr. Allen W. Everts, the son of the Ex-Senator, was at the office of Everts, Choate & Beaman yesterday afternoon. He said that the first news of Dr. Scudder's death came to his uncle, Hewlett Scudder, early yesterday morning. Mr. Scudder and Charles C. Beaman left for Northport at once, and Mr. Sherman Everts went to Windsor. Mr. Allen Everts said that, as far as he knew, Dr. Scudder's health had been good recently, and he had not heard of any mental derangement.

Dr. Scudder was born in 1855. He comes of an old Long Island family. His father, Henry T. Scudder, was born in Northport, which was his son's country home. Henry T. Scudder served a term in Congress and for many years and the law partner of James C. Carter. His son graduated from Trinity College in 1875, and from the College of Physicians and Surgeons three years later. He has been in active practice in New York since. Nine years ago he married Miss Louisa Everts, the daughter of Ex-Senator Everts. He lived at East Thirty-third street. He was a member of the University Club. Dr. Scudder's father died about six years ago. His mother's home is at 21, East Twenty-second street, but she has been at Northport for the summer.

THE "CHOYA SHIMBUN" ON FOREIGN POLICY.

The *Choya Shimbun* discusses Japan's foreign policy in a leading article. The public, it says, always declare that the empire's foreign policy is unsettled, but what they really mean is that the problem of treaty revision is not yet solved. In that sense however, the policy of the Government has been settled ever since Viscount Aoki

became Minister for Foreign Affairs. The one object has been a treaty of equality. On the other hand, the opinion of the majority of the people is also settled. They, too, desire a treaty of equality. It is true that a certain small section of conservatives are opposed to mixed residence, but they count for little, if anything. Even the members of the *Kaishin-to* who approved every provision of Count Okuma's unequal treaty have now changed their minds and are in favour of equality. Thus the only difference that will be observable between Viscount Aoki, Viscount Enomoto, and Mr. Mutsu is one of method: their fashions of negotiation may be diverse. But that is a matter which ought to be left to the judgment of the Minister himself, especially when, as in the case of the present Minister, Mr. Mutsu, he is known to be one of the shrewdest and most competent statesmen in the empire. Meanwhile, the nation has been so anxious to conclude treaty revision that it forgets the existence of other important matters which also belong to the category of foreign policy. For example the Korean question, which is growing more and more critical daily, or the problem of emigration. These must be attended to without a moment's delay, for their importance is scarcely less than that of treaty revision. The *Choya* frankly expresses its opinion that unless these vital problems are duly remembered and solved in good season, indifference and neglect may involve something like national disaster.

THE OSAKA CHAMBER OF COMMERCE.

On the 23rd ultimo the Osaka Chamber of Commerce held its general meeting, and the accounts for the previous year having been passed, questions submitted by the Government relating to the 50 *sen* silver-coin were discussed, and the following resolutions were adopted:—

The 50 *sen* silver-coin is necessary.

Reason—If the 50 *sen* silver-coin be called in, and the 20 and 10 *sen* coins alone remain in circulation, considerable inconvenience will be entailed.

(1.) The quantity of 50 *sen* silver-coins already issued is sufficient.

(2.) When the 50 *sen* notes are all redeemed, the amount of 50 *sen* silver-coins required in the market will be about 4,000,000 *yen*.

Reason—As the silver-coin is not so convenient for carrying as the paper-note, when the latter is redeemed people will carry fewer fifty-*sen* tokens. On the other hand, there will be a tendency to hoard the coins, and probably the amount hoarded will be about the same as the amount of notes redeemed. Thus four million *yen* worth should suffice. At present the 50 *sen* silver-coins in circulation aggregate about 3,514,000 *yen* and the 50 *sen* notes about 1,958,000 *yen* the sum of the two being about 5½ million *yen*. The hypothesis of this chamber is that a reduction of 1,500,000 *yen* will be possible when the notes are withdrawn, the difference being made up by 10 and 20 *sen* silver-coins.

(3.) The existing 50 *sen* silver-coin is too large and too heavy. It is inconvenient from both of these points of view.

(4.) The chamber considers that the coin should be recast of good fineness; and that its design should be changed, so as to prevent counterfeiting. The 1 *sen* copper-coin can easily be plated to represent a 50 *sen* silver-coin, the sizes of the two being virtually the same.

(5.) The existing 50 *sen* silver-coin should be called in at once when the new coin is struck.

Reason—It would be exceedingly inconvenient to have two coins of different appearance and different intrinsic value circulating as tokens money of the same denomination.

TRANSVAAL AND THE POSTAL UNION.

The following notification has been issued by the Department of Communications:—

The Transvaal, a Republicans State in South Africa, joined the International Postal Union on July 1st, 1892.

Postal matter despatched from this country to the Transvaal will be charged in accordance with the rates determined by the Postal Union Regulations.

(Signed) KURODA KIYOTAKA, Count,

Minister of State for Communications.

(Dated) 26th August, 1892.

A LEPROS HOSPITAL IN PEKING.

We find in the *Hochi Shimbun* a statement to the effect that a certain Chinese gentleman, by name Lo Kui-fwan, having been treated for leprosy by Dr. Arai Saku of the *Shusai* Hospital in the Komagome suburb of Tokyo, and having derived great benefit from the treatment, has given a sum of ten thousand dollars towards establishing a Lepros Hospital in Peking, and further proposes to subscribe twenty thousand *yen* next year for the rebuilding of the *Shusai* Hospital.

Hospital. This is indeed generosity. But surely if we may look for a glow of generous liberality anywhere, it should be in the bosom of a man who has been cured of such a terrible disease as leprosy, and Mr. Lo is said to have been completely cured by Dr. Arai's treatment.

PRISON INSPECTION.

COUNT INOUE would seem to be setting about the duties connected with his office with much vigour. On Saturday forenoon he made an inspection of the Metropolitan Police Bureau and various prisons, and discussed with Mr. Sonoda, the Superintendent, the future policy of the Department. After lunch, he visited the fire-proof godowns, the Fire Brigade Department, the Kajibashi, Koishikawa, and Ichigaya Prisons. No Minister of State has ever inspected the prisons before, and the *Nichi Nichi Shinbun*, which reports Count Inoue's proceedings, remarks that the prisoners were no doubt delighted to find the new Minister come in person to see the wretched condition of their cells.

COPPER AND IRON MINES IN NAGASAKI PREFECTURE.

THE *Nippon* reports that Mr. Ide Udoki has discovered valuable deposits of copper and iron in the Kawara Section and at several other places in Nishisonoki District, Nagasaki Prefecture. The area of the copper mine is stated to be 278,400 *tsubo*, and the aggregate area of the various iron mines 1,246,948 *tsubo*. It is to be hoped that this story will not prove baseless, as has hitherto been the case with the reputed discoveries of iron deposits in Japan. An iron mine in Nagasaki Prefecture in the very midst of the coal fields, would be invaluable to Japan.

ANTHRAX AMONG HORSES.

AN extremely contagious disease known as anthrax which has for some time been carrying off three or four horses a day has broken out in the southern Sayetama district. The complaint is known in different parts of the world and invariably is found very difficult to suppress. We remember that in 1886 the cows and sheep of the same district were attacked by this disease. On that occasion Dr. Janson got rid of the complaint by means of inoculation. The lymph used at that time by Dr. Janson is now being applied to the horses of the infected district and there is every reason to think that it will prove successful. Several veterinary surgeons have gone down to the seat of the disease, and are taking precautions against its further spread.

AN ELABORATE HISTORY OF YOKOHAMA.

THE fullest history of this port that has ever appeared in Japanese has just been published. Mr. Ota Hisayoshi is the author. We have not yet seen the book, but judging from the praise bestowed on it by the *Yiji Shimpō*, we should say that it will prove a valuable work of reference to foreign and native writers alike. Mr. Ota was for many years connected with the Yokohama district offices, and, we understand, has had various official documents placed at his disposal while compiling the work. The Japanese title of the book is *Yokohama no Yenkakushi*. It embraces the period from 1859-1890. The *Yiji* remarks that, though professedly only a history of Yokohama, the book gives a minute account of Japan's foreign relations during the thirty years under review.

PROFESSOR E. S. MORSE.

THE *Nation* says that Professor Morse's essay "On the Older Forms of Terra-cotta Roofing-tiles," originally communicated to the Essex Institute, Salem, Mass., and afterwards printed serially in the *American Architect*, has been reprinted in the Bulletin of the Essex Institute and also separately. It is a study of great interest and practical and artistic value, and among the many illustrations are some drawn from the author's favourite Japan.

A JAPANESE BAZAAR IN SHANGHAI.

MR. ARAO SEI, who established a commercial school for Japanese in Shanghai, now proposes to open a Japanese Bazaar in that settlement.

For that purpose he has returned to Tokyo, and consulted with various persons who have an interest in China. All the necessary preparations are said to be completed, and it is expected that Mr. Arai will soon start for Shanghai, purchasing in Osaka and Kyoto *en route* various objects of art to stock the Bazaar.

STATISTICS OF DISEASE IN 1891.

STATISTICS relating to contagious diseases prevalent in Japan during 1891 are published as follows:—

	Cases.	Deaths.
Cholera.....	11,142	77,60
Typhus.....	43,957	96 14
Dysentery	46,358	11,208
Diphtheria	3,429	1,974
Eruptive Typhus...	1,194	203
Small-pox	3,608	721
Total.....	18,968	31,480

A DENTIST DECORATED.

WE read in the *Yiji Shimpō* that Mr. Ogawa, a dentist residing in Ogawa-machi, in the Kanda district of Tokyo, has received a decoration from the Emperor of Russia, in which country he resided for several years, studying the practice of his profession. Mr. Ogawa probably enjoys the distinction of being the only decorated dentist in Japan.

ALTERATION OF TRAINS.

A NOTIFICATION has been issued by the Railway Department suspending the train which hitherto left Yokohama at 6.5 a.m. for Kozu. A train connecting with the 9 a.m. train from Shimbashi, will henceforth leave Yokohama at 10 a.m. and arrive at Kozu at 11.45 a.m.; and an up train leaving Kozu at noon will arrive at Yokohama at 1.45 p.m.

ARREST OF A "SOSHI" LEADER.

SUGENO MICHICHIKI, a well-known *soshi* leader, was arrested on the 30th ultimo on suspicion of being concerned in sending the dynamite bombs to Mr. Kono and Count Okuma some weeks ago. The police are now on the track of his accomplices.

MR. T. B. CLARKE-THORNHILL.

MR. T. B. CLARKE-THORNHILL, formerly second Secretary of the British Legation in Tokyo, has been appointed the official delegate and representative of the Japan Society of London to the Oriental Congress which is to be held in Lisbon next month.

OFFICIAL APPOINTMENT.

MR. TAKASAKI CHIKAAKI, Secretary of the Osaka Kencho, has been appointed Vice-Director of the Bureau for Police Affairs, and Mr. Oura Kanetake, again takes up his former office as Secretary of the Osaka Kencho.

POSTAL FACILITIES.

THE Post Office authorities will make up a mail for despatch by the Northern Pacific steamer *Victoria*, sailing on the 6th September, and we understand that this is likely to become a permanent arrangement.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

It is an interesting study to observe the varying moods of the Opposition press in regard to the existing Ministry. When it was first known that the Camera statesmen had consented to take over the Administration, the organs of the *Yiyu-to* and the *Kaishin-to* hastened to express their unfeigned pleasure and satisfaction "at the formation of a Cabinet which will pursue a constitutional and liberal line of policy." They were even betrayed by their sudden transport of joy into avowing that they would henceforth give up that policy of wanton opposition to the Government measures, which they had pursued during the past few years with such disastrous effects. In a few days, however, these papers, as if suddenly awakened to their senses, began to look about and explain in an apologetic strain that whatever good things they might

have said about the new Cabinet were not to be taken as an indication of their satisfaction with the new rulers of the country. They stated that they were only pleased with the new Ministry as it seemed to be stronger than its predecessors, and that their attitude towards it would remain as antagonistic as ever. But in spite of their explanations, it was rumoured in well informed circles that the Opposition journals, especially those belonging to the Radical party, were really well disposed towards the Ito Ministry. This report seemed to be confirmed by the manner in which the news of the recent changes in the *personnel* of local Governors was received. The Opposition papers again returned to their amiable mood and expressed great joy at "the punishment meted out to the obnoxious Governors who interfered in the elections of February last." This was during the preceding week; and during the one under review the mood has again changed, and the Opposition papers are once more parading their courage to fight with the present Ministry. But while both the Radical and Progressionist organs equally pretend to be dissatisfied with the reluctance of the Government "to follow up its policy of punishing the offensive Governors to the utmost extent," a significant difference is to be noted in the tone of the papers of the two parties. The Progressionist organs maintain an ominous reserve in pointing out particular phases of the Cabinet's measures with which they are dissatisfied. Their tone is that of men who are waiting for an opportunity to vent their pent up passion. The Radical papers are very different. They are loud and frank in criticizing the apparent unwillingness of the Government to carry out any decisive reforms. The reforms which the Radicals require the Government to undertake are the reduction of public expenses; the revision of the Publications, Newspapers, and Public Meetings Regulations; the abolition of the Peace Preservation Regulations, and the Admonition Law; the amendment of the Law of the Houses, and the Law of Elections; the alteration of the Organization (*Kwansei*) of the various branches of the Administration; reforms in the Military and Naval administrations; and, above all, a frank confession and apology for the past errors and abuses of the Meiji Government. If you do all this, we will pardon you and give you what support we can. Such, in brief, is the price for which the goodwill of the Radicals is to be bought. The way in which these reforms are demanded of the Government leads one to believe that the Radicals are not without hopes of some at least being taken up by those in power. At all events there is no reason why we should change our oft-repeated opinion that the Radicals will be more amenable to reason in the next session of the Diet than their allies of the Progressionist party.

Our view about the probable attitude of the *Yiyu-to* and the *Kaishin-to* in the coming session of the Diet is shared by many of the metropolitan papers, of which the *Choya Shinbun* is one of the most conspicuous. Our contemporary observes that the Radicals have during the past few years made great progress. From the destructive and desperate party of former years, it has gradually changed into the comparatively rational and well-disciplined party of the present day. That it will become more amenable to reason in the next session of the Diet is tolerably certain, for, says our contemporary, its leader, Count Itagaki, is doing all in his power to restrain the excesses of his inexperienced followers. He has been of late telling them that they must abandon their negative policy in favour of a positive and constructive policy. Moreover, the Radicals, according to our contemporary, have done nothing to drive them into incorrigible hostility to the Government. Their attitude in the fourth session of the Diet is consequently believed to be more or less well disposed to the Cabinet. The Progressionists have made a retrogressive motion. Formerly they laughed at the destructive tendency of the Radicals, but they have entirely changed character with the latter, being now hopelessly pledged

to a policy of violent and unreasoning opposition to the Government. Between them and their adversaries in power, there are, says the *Choya*, several historical impediments against their reconciliation. The gradual approach of their allies, the Radicals, is not calculated to sooth their already irritated mind. On what grounds are the Progressionists going to oppose the Government? Their cant about want of confidence will no longer serve their purpose; for how can they stand up to declare want of confidence in the Cabinet when they know very well that they themselves enjoy but little of the confidence of the nation? The Progressionists, concludes our contemporary, are thus in an extremely awkward position.

The *Kokkai* has been informed of a singular circumstance. It has been told that some of these Opposition politicians entertain an audacious scheme of discrediting the Government. That scheme is said to consist in applauding whatever the Government may undertake and thus to lead it to the belief that it has nothing to fear from the Opposition, when on a sudden they will spring upon it and force it to yield up its power. Needless to say that the absurdity of such a scheme is ruthlessly criticized by the Tokyo papers. Our contemporary, however, fears that this may simply be a device with which certain politicians hope to screen from public condemnation the business to be bought forward by those in power.

The *Nichi Nichi Shimbun* calls attention to the inconsistency of the Opposition journals in demanding of the Cabinet the pursuance of some extravagant and showy policy. Had they not condemned the first Ito Cabinet for the pursuance of just such a policy? But that circumstance is apparently quite lost sight of by the Radical and the Progressionist organs which are now loud in their clamour for something dazzling and brilliant. How absurd it is to cry that the people are getting tired of the new Cabinet, when it has been in existence only for about twenty days. What is really required, continues our contemporary, is that the Cabinet, instead of wasting time over glittering manifestoes and picturesque reforms, should persevere in doing solid and steady work. It hopes that those in power will not suffer themselves to be carried away by the incessant clamours of the Opposition papers.

The Opposition journals continue to regard the recent changes in the *personnel* of local Governors in the light of punishment for the part which those Governors took in the elections of February last. The *Nichi Nichi Shimbun* finds it necessary to explain once more the absurdity of this contention. We do not, however, think it necessary to reproduce these articles. Suffice it to say that while, on the one hand, the *Nichi Nichi* regards these changes as the results of purely administrative convenience, the Opposition journals, on the other, refuse to look at the matter in that light, and persist in urging upon the Minister of Home Affairs the necessity of disgracing several others who still remain at their posts to the great disgust of the local inhabitants.

It has been customary to call together the local Governors in the capital whenever there has been a change of Ministry. In pursuance of this custom, Count Inouye, it is stated, has issued a summons to the *Chiji* throughout the country. The *Mainichi Shimbun* seizes this opportunity of urging the importance of completing the changes in the *personnel* of the local authorities before summoning them to the capital; for our contemporary, like the rest of the Opposition papers, cannot get over the illusion that more changes are going to be effected to please the Radicals and the Progressionists. The *Aijun* does not evidently labour under such a delusion. It, however, goes very hard against the local Governors, whom it denounces to be indifferent to the interests of the people under their care. Many of

them leave the control of local affairs in the hands of their subordinates. As the result of this indifference, they are profoundly ignorant of the condition of things under their jurisdiction. In the matters of local legislation, agricultural improvement, and so forth, there remains much to be effected by local Governors. They are advised to devote themselves in the future more to the promotion of the interests of their respective localities. As they are at present, our contemporary wonders what good can be attained by their periodical visit to the capital.

The question of the Budget is beginning to attract the attention of the metropolitan journals, and a rumour has been circulated to the effect that the Budget for the 26th fiscal year would exceed that for the current year by about six million *yen*. This report has caused some excitement among the Opposition journals. They state that, it having been generally supposed that the Ito Cabinet would effect a large reduction in public expenses, the report in question has been a surprise to them. They tell the Ministry that the only chance of its meeting with a friendly reception by the Diet consists in presenting a Budget in which every item of expenditure will have been cut down to the lowest figures. There being a surplus of about ten million *yen*, the Ministers of State are said to be competing with each other in order to secure as much of it as possible for the use of their respective Departments. Has the surplus been effected by the Diet, ask these papers, so as to satisfy the whims of enterprising Ministers of State? These Ministers state that such and such undertakings are of paramount importance to the country's interest or safety; why then did they not take earlier steps to effect reductions to carry out measures of such importance? On the contrary, they did all in their power to oppose the creation of the very surplus which they are now so anxious to employ for the carrying out of their pet schemes. The Opposition papers claim that this surplus and the annual surplus of about 4 million *yen* having been attained by the efforts of the Popular party, these amounts must be employed for reduction of the land tax and the re-assessment of the taxable value of land. It is obvious from these articles, that the fight between the new Cabinet and the Opposition, if there is to be a fight, will take place over the Budget.

The Law of Admonition (懲戒令) was recently put in force upon 16 or 17 *soshi* who had given much annoyance to some rich merchants. This law is not popular with the Opposition journals, but they are, upon the whole, satisfied with the manner in which it has been enforced on the present occasion. When the order was first carried out in February last, the Opposition journals were loud in condemnation of the impartiality of the authorities, for it so happened that the *soshi* of the Popular party were the principal sufferers by the measure. On the present occasion, no such charge of impartiality is preferred against the Government. The *Mainichi Shimbun*, while refraining from adversely criticizing the measure in itself, is yet disposed to doubt its efficiency, for the real leaders of these obnoxious youths always escape unpunished. So long as there are men who support the *soshi* with funds, the evil can never be eradicated by simply putting in force the Admonition Law upon the comparatively insignificant and irresponsible members of the fraternity. Until a month or two ago, says our contemporary, there were several members of the Cabinet who had intimate relations with some of these *soshi*. The *Mainichi* hints that even now there are one or two Ministers against whom similar charges may justly be brought. You must, concludes our contemporary, strike at the root if you wish to do away with the evil in an effective manner.

The *Choya Shimbun* has two very interesting articles on the importance of directing the energies of the nation to some foreign enterprise. Our contemporary, like the *Yiji Shimpō* and

several others, is convinced that the only escape from the fruitless struggles over domestic affairs is to turn the energies of the people abroad. There are signs, says the *Choya*, that the nation is impatient to try its fortune in some foreign adventure. This tendency grows stronger and stronger, and those who have the reins of Government are advised to ride on the tide and carry out some daring and aggressive foreign policy. Treaty Revision may for some time serve to unite the people; but this cannot be a permanent question. Our contemporary does not define the policy which is to be pursued; but it seems to advocate colonization on a grand scale.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

It speaks well for the independence and zeal of the native workers that the summer issues of the Christian religious journals continue to present attractive tables of contents notwithstanding the absence at mountain summer-resorts of the great majority of the foreign missionaries. There is a marked absence of the controversy which distinguished the religious press about this time last year, and no particularly important issues are being mooted. The summer-schools of both leading cults are absorbing the chief attention of all workers, and the interchange of thought which there occurs is one of the most important influences on the policy of the coming year. Japanese action is always the resultant of individual forces; and the occasions when all can meet and quietly test in personal intercourse the general trend of opinion are those which determine the future course of the whole body. The only writing that can be considered as having anything of a momentous character is the remarkable utterance (perhaps the most remarkable since Mr. Fukuzawa's advocacy of official Christianity) of Mr. Nakanishi Goro, entitled "A Comparison between Buddhism and Christianity." Mr. Nakanishi, it will be remembered, is one of the most prominent of the New Buddhists, and the author of "The New Buddhism," some time ago summarized in our columns. What will come of this declaration we do not know. If all could believe as he does, the religious millenium would indeed be at hand. But nobody need expect that he is preparing to cross over to the Christian camp; he is too independent for that. Nor can we hope that his views are shared by any considerable number of the Buddhist clergy; there is about them, as in all religions, too great a weight of history and tradition and cherished association to permit as free a search for universal truth as Mr. Nakanishi has found himself able to undertake.

In the *Kirtukyo Shimbun* (Congregationalist) there is an interchange of letters between a Mr. Taketomi, who criticizes a passage in Mr. Yokoi's recent article on "The Religion of this Life," and Mr. Yokoi, who replies. The critic asks for an explanation of passage in which Mr. Yokoi said that when Christ, at the beginning of his ministry, came into Galilee, he preached of a future worldly bliss, founding his hopes on this world's future alone; but when his opponents became powerful and danger threatened and he saw that a worldly kingdom was impossible, he placed his hope on another world; he was to come again with angels and establish his kingdom. Now the critic is unwilling to regard Christ as a defeated coward, who abandoned his faith when its realization became impossible; and he asks if this was Mr. Yokoi's meaning. The latter skillfully avoids the trap. He begins by positing the axiom that man's being is constantly developing; no person can always remain the same; night and day he changes. Some progress by listening to teachers; others by the study of great writers; still others by mastering nature's varied lessons through their own intuitive genius. The first are of the lowest order; the last of the highest; and to the last belongs Christ. He was constantly, as he tells us, learning from his Hea-

venly Father. It is thus that we see him progressing from lower to higher truths. We must not make the mistake of ignoring his humanity and thinking only of his divinity, there was undoubtedly some change of opinion on his part as to the nature of the future kingdom of happiness, and no doubt the change came after he realized that he must die without the visible realization of his hopes. But Mr. Taketomis hard epithets have no application to this change of opinion.

The *Rikugo Zasshi* (Congregationalist) presents us with the following dish of culture spiced with religion; "Yokoi Shonan" (the father of the present preacher); "Reforms in Pronouncing Chinese Characters," by Professor Oshima; "The Cultivation of Eloquence," by Mr. Miyagawa; together with Dr. Ladd's Tokyo lectures on "Religious Philosophy," and Professor Ely's "German Universities from the American standpoint." We find a review of Mr. Kanamori's recent translation of Dr. Pfeiderer's "Philosophy of Religion," published under the title "Liberal Theology." The religious world is congratulated on having such a valuable work brought to their knowledge in Japanese; and Mr. Kanamori's skill in rendering difficult terms is especially praised. But the reviewer deplores the omission of three leading chapters on "The Origin of Religion," "The Idea of God," and "The Development of the Religious Idea." In the reviewer's mind, it seems, the times demand Fabian caution rather than Paulsenian zeal, for he declines to express any opinion (even under the shield of anonymity) as to the correctness or incorrectness of Pfeiderer's views. We wonder whether the rest of Japan's religious thinkers will observe the same policy.

The *Fukui Shimpō* (Presbyterian) writes about "Fatalism in Christian Work." The warning is against losing heart because Christianity does not grow as fast as was expected, and then declaring that after all it is fate and cannot be helped. It is not fate; it is the fault of the Christian workers. If there were more zeal, there would be greater results. The same journal publishes some views upon the plan to be followed at the great Christian Conference to be held next year. The best time is on all hands regarded as summer. The place, it is admitted, should be a central one; but some resort having natural attractions of scenery, etc. (Hakone, for instance) is recommended in preference to Osaka.

The *Yūyū Kiristukyo Shimbun* (Universalist), using the title "Orthodox Bigotry," declares it narrow and ungenerous that the Liberal Christians are not to be invited to this Conference, and that a similar course has been followed by the managers of the Christian Summer School at Hakone. It would seem that they are afraid to let their hearers listen to the words of the Liberal missionaries, and hence have gone back to the Catholic methods of the Middle Ages of refusing to listen to non-orthodox argument. It is difficult to believe that the Japanese people themselves are inclined to such methods. Certain orthodox journals call themselves liberal; but where is their orthodoxy, if they refuse to associate with good Christians? In the *Shinri* (German) Mr. Maruyama concludes his article on "The Progress of Christianity." He analyzes the idea of "faith," as commonly accepted by Christians, and finds it to have for its object chiefly a number of traditions or doctrines stated as facts. These have really been the growth of centuries, and it takes considerable acquaintance with literature even to understand many of them. They are really outside of the true Christianity, and a sort of palace in the air. What is real Christianity? Not old traditions, not systematic theology; but a very simple thing, religious morality. The Catholics cry, "The Church will give you happiness and peace." Protestants cry, "The Bible and our Creeds will give you happiness and peace." But the true source of the blessing they seek is nothing more nor less than Christ himself. Some people are given to talking of

Christianity as a time-worn edifice tottering to its fall. But they confound Christianity with the framework of Catholic and Protestant theology built around it. While reverence for God and love for man are to be found, Christianity is still living and growing. In the *Shukyo* (Unitarian) we find, among others articles on "The Province of Religion," and "Woman's Education," with Dr. Ladd's lecture on Liberal Theology.

In the *Bukkyō* (Tendai sect; but also under Zen influence) is given a report of an interview recently held between Sir Edwin Arnold and a delegation of priests. The views elicited are interesting, and are summarized as follows, Sir Edwin being the questioner:—

Q.—Among the old Indian monks there exists a magical power of communicating with distant persons. Does that exist among Japanese Buddhists? A.—There are among us 12 great sects; but we have never heard of this power. Doubtless there are many saintly persons who by their character and learning have attained certain spiritual powers. But they are spiritual powers which come from the heights of sanctity which these persons have reached; they could never be attained merely by seeking them for themselves. Moreover, they are not gross tricks of magic, but qualities of the spirit. Powers contrary to our nature, and other than these spiritual qualities, we cannot get. Once in Ceylon I met Colonel Olcott, who told me that he could make his handkerchief into a Bible, could get a letter from London in one day, and could work in the air as well as along the earth. Those things can may perhaps be done by magic, but certainly not by any study of Buddha.

Q.—You speak well. But do you think that Buddha did these things? A.—Yes, Shaka Muni had those powers naturally; but with him it was no miracle; it was as natural an effect of natural powers as carrying water in a bucket is with us.

Q.—Now, in the Buddhist records it says "Outside of our mind there is nothing." What is your explanation of that? A.—That was said by the old saint Rinzi. The fool thinks that Mind and Nature are two; but they are only one. Where mind exists, there we find space and the laws of the universe; where mind is destroyed, nothing exists. Trying to get away from mind is the beginning of misery, for it is seeking something in nothing.

Q.—But if a man can reach this supreme knowledge, there must be a method. A.—Yes; by meditation only. Of course I am of the Zen sect and I know only their ways. One is the "sitting-contemplation" (*sa zen*),—as Buddha learned, sitting under the Tree. If we reach that knowledge of the Infinite Eternal Mind, then we can realize the unity and variety of the whole world; then the universe is ours.

Q.—But what practical results can you reach, and how? A.—Their practical effect—which is nothing but to attain a knowledge of the Infinite Eternal Mind—is that we are able to turn the world upside down, build towers on a hair, and do other such things. Yet to describe it to one who has it is not as difficult as to explain to you how water tastes to me. I can make my white hair give forth a great and glorious light; yet to you I am nothing but a beggarly monk talking in the Teikoku Hotel.

Q.—But can you communicate with the spirits of the dead? A.—In my faith there is no life and no death. The spirit of life is quenchless, eternal. As Buddha says, life and death in Nirvana are like yesterday's dream." And thus ended the interview.

In the *Dento* (Shingon) sect) Mr. Nakanishi Goro makes "A Comparison between Buddhism and Christianity." When I look, he says, at the great influence of Christianity, its glory seems to fill the world and the flag of the cross to be the sign of victory everywhere. Yet when it reaches a certain point it must stop. This checking of its progress has already begun, and, though it is still powerful, its Kingdom is destined to disappear, like those of Rome and Macedonia of old. But its victories have been awed to the truth it has wielded. Let us see what is this truth. First, it lies in Christianity's emphasis of the existence of one Absolute Infinite, creator of all creation, father of Love, source of all things, pure spirit, omnipresent, omniscient, omnipotent. To prove this truth there is nothing so potent as Christianity in all the world. To identify the Father of Love with the Source of the Universe is to have emphasized one of the most important truths for

mankind. It is the revelation of this pure Spirit which unites man and God, and this uniting of man to God is one of the great doctrines of Christianity. In Buddhism this truth is accepted in substantially the same form. But Buddhism expounds the attributes of God more minutely. It sees more of God in nature. *Shinnee* is Absolute Infinite Pure Spirit, beyond and above all other imaginable things. There is nothing in the universe but God; and the universe is identified with God. Nor does this blaspheme the divine honour, in our opinion. But, furthermore, this omniscience, omnipresence, and omnipotence, which Buddhists also postulate, is by us not directly predicated of the perfect Absolute Being, but of Buddha, our highest exemplar. What we term Buddha corresponds to the what Christian conceive as God. Christians attribute to God the human capacities of feeling and thinking, as we do to Buddha; only we are more logical, for if God has human impulses of good, he must also have capacity, however small, for bad, and thus he could not be perfect. We avoid this by seeing this culmination of human faculties in Buddha, while transcendental perfection is to be imagined in the Absolute Being only. Yet here Christianity, though not so strictly logical, is but one step behind Buddhism. Another great truth emphasized by Christianity is the imperishability of the moral law. Our deeds of to-day will bear fruit in the future, reward and punishment, not only in this life but in another. This doctrine of inevitable punishment and reward is also held by Buddhism; only the Christian idea of the nature of the future life and of its single judgment day with a final sentence will not stand the test of argument; the Buddhist idea of a succession of future lives, of a gradual improvement or deterioration in the transmigrant souls, is much nearer to reason. Again, the influence of Christianity is due chiefly to the purity and nobility of ideal life. Christ sacrificed himself for the benefit of the world, and that act forever glorified the possibilities of humanity. The moral influence of Christianity, like that of Confucianism, is strong in its practicality; doing, not knowing only, is it great theme. The teachings of Christ embody everlasting truths, fervent, noble, flashing upon us like lightning, startling and illuminating us. The teaching of the Four Gospels is the most perfect, most noble, most practical moral doctrine below heaven; and it is most easy to understand and most simple to follow. The central principle of Christian morality is, "Love God, love man." The personality of Christ, this is the magnetic power of Christianity. I have now described what seems to me the great truths of Christianity and the reasons on which its influence rests; and in all this there is nothing that conflicts with what a Buddhist believes. But Christian doctrines have another side, a side of superstition, and ignorance. Like the sickness of a healthy man, it will cause the end of Christianity, if it is not cured. Chief among these doctrines is that of the Trinity. Christianity calls itself monotheistic, and yet sets up a Trinity—Three Gods in One. Of course no one can really explain this. Either the Trinity is meaningless, or they are not monotheists. Even if you say there are Three in One, this is not pure monotheism. If three may be as one, why may not all be found in one, as in pantheism? The fact is that the doctrine of the Trinity dates back to Eastern traditions (Philo of Alexandria had it), and was kept in the Christian system, as history shows, because it helped out another of the unsound Christian doctrines—that of salvation. If either of these goes, the other must go too. The present age is one of progress; and if Christianity continues to cling to these antiquated doctrines of the Trinity and Salvation, it will lose its hold on the world. Thus we have surveyed Christian truth and Christian error. Can Christianity progress further? I answer, If it is to progress, it must first cast away its errors; otherwise it will decline. But if it does cast away its errors and continues on its path of progress,—it will progress into Buddhism!

COUNT ITO.

THE *Kokumin-no-Tomo* of a recent date publishes an interesting open letter addressed to Count ITO. The epistle was penned a short time previous to the Change of Ministry, but that fact does not detract from the value of the document. It is a significant circumstance that whereas when Count ITO sealed the fate of Count OKUMA'S treaty revision programme by resigning the post of President of the Privy Council, this very periodical pronounced a funeral oration on him as a statesman, it now publishes a highly eulogistic article, calling him the first statesman of the day and urging him to return to power. "Speaking plainly," says the *Kokumin*, "we are not in the habit of admiring Your Excellency. But when family affairs become deranged, one begins to think of a good wife, and in a political crisis men's minds turn towards a capable statesman. . . . Were we called upon to indicate an ideal statesman, we should not name Your Excellency, and if we now venture to appeal to you, it is simply because you alone are competent, and in some respects bound, to assume the direction of affairs at the present critical juncture." The Tokyo periodical goes on to describe the dangerous state of politics, and to impress upon Count ITO the necessity of speedily taking office. Of all Japanese statesmen, whether in the Government or in the Opposition, there are, in our contemporary's opinion, only two who deserve the name and are competent to be Minister President. They are Count ITO and Count OKUMA. The latter is now in the Opposition and has no opportunity to take office, whereas Count ITO enjoys the boundless confidence of the EMPEROR, is respected by his colleagues, and surrounded by a number of capable followers, while the mass of the people are impatient to see him assume the reins of government. He is essentially the right man in the right time. Moreover, he is under a moral obligation to take office. For the present political difficulties may be said to have had the origin on the day when he compelled Count OKUMA to leave the Government in 1881. Together with Count OKUMA and Count INOUE, he had considered it no longer advisable to treat with indifference the incessant claims of the people for the fulfilment of the Imperial promise as to the establishment of a constitutional Government. The three statesmen had set themselves to investigate the subject, and their united efforts were on the point of assuming practical shape, where Count ITO and Count INOUE suddenly threw Count OKUMA overboard and forced him to resign. The *Kokumin* refuses to enter into the causes of this alleged sudden change of mind on the part of Counts ITO and INOUE. But it charges the former with having at that time evolved a plan of maintaining the Government by

an exclusive coalition of the Sasshu and Choshu clans. One consequence of the adoption of such a policy was that the establishment of a National Assembly, which had reached the verge of attainment, was deferred for a period of ten weary years. Other important results of the new policy were that all the progressive elements outside the Sat-Cho combination disappeared from the ranks of the Government; that the greatest restraints were placed upon liberty of speech and public meeting, and that the so-called German method was zealously adopted in all branches of the Administration. In short, Count ITO and others are accused by the *Kokumin* of having devoted the interregnum of ten years, not to winning the hearts of the people, as they ought to have done if only in their own interest, but to alienating popular sympathy by opposing the aspirations of the people. In 1888, a temporary change of policy for the better took place by the return to power of Count OKUMA, and the Constitution, in the framing of which Count ITO had the largest share, was in the following year promulgated in the midst of universal rejoicing. At that time a hope of reconciliation between the Government and the Opposition presented itself, but the complications that arose in connection with the question of Treaty Revision again brought about a return to the old obnoxious system of clan Administration. In the failure of Count OKUMA'S revision programme, Count ITO is stated to have had the largest share; and being therefore held principally responsible for the present difficulties between the Government and the Opposition, he is challenged by the Tokyo periodical to come forward and remedy the evils occasioned by his own acts. He may complain of the difficulty of managing the so-called Military party, but our contemporary reminds him that the leaders of that party are all soldiers of simple minds, who have honestly assimilated some of the principles of the German administrative methods which nobody has been more active than he himself in inculcating. Therefore from this point of view also the responsibility devolves on him of converting the military politicians from the error of their ways. He may perhaps say that he has no more desire for political honours and glory. Indeed he has attained all the renown that lies within reach of a Japanese subject, and in proof of this the *Kokumin* briefly reviews his past career, referring, among other things, to his boyhood when his master, the great KIDO, declared that "the lad named ITO RISUKE, though of humble birth, is eager to study under me; he is slow in intelligence and backward in learning, but I love him, as he is docile and unaffected;" to his burning of the British Legation at Gotenyama, in company with KUSAKA and TAKASUGI; to his adventurous voyage to Europe together with INOUE, in the course of

which he confessed to his companion the impossibility of "excluding barbarians" from this country; to his share in assisting the inauguration of the present era; to his appointment as Governor of Hyogo, when "Hyogo opinion" was the watch-word of the progressive party in the Government; to his subsequent transfer to Tokyo, where, in concert with OKUBO and others, he became the fountain of reform in all departments of national life; to his travels in the West in company with KIDO and OKUBO; to his influence over OKUBO; to his appointment to the Home Office on the assassination of OKUBO; to his power in the Government since then; and finally to his elevation in 1885 to the post of Minister President of State, a post hitherto invariably held by Court nobles of the very highest rank, the only exceptions being ASHIKAGA YOSHIMITSU, TOYOTOMI HIDEYOSHI, and TOKUGAWA IYENARI. With such a brilliant record, he may naturally be indifferent to political honours. But political honour is only one of the objects of a statesman. Duty to the SOVEREIGN and the country should be a more potent incentive, and in obedience to it the Count is strongly urged to assume the responsibility of directing the Government. Some allege that Count ITO is more skilful in devising than in carrying out a policy. But there has never been a perfect statesman; and speaking comparatively, no Japanese of the present day surpasses the Count in the qualities that go to make statesmanship; nay, it is doubtful whether he has many peers in this respect. The strongest point in his character is clear and comprehensive vision. Count INOUE is certainly quick-sighted, but his horizon is not wide enough. Evidence of this trait in Count ITO'S character is furnished by the manner in which he has quietly and almost imperceptibly strengthened his position by making the nobles and the graduates of the Imperial University his staunchest supporters. Besides, he has obtained the sympathy of men of letters by freely associating with them; while his loyal opinions have excited the admiration of conservatives. Thus he possesses supporters of more varied description than those of Count OKUMA, who nevertheless has spared no pains to procure followers in all stations of society. Count ITO is believed by some persons to be crooked in his policy. The *Kokumin* declares this to be a gross misrepresentation. He is neither so daring as Count INOUE, nor so courageous as Count OKUMA, nor so plain and straightforward as Count ITAGAKI, but crookedness can never be proved against him. Our contemporary makes an admission that he is open to the charge of shirking responsibility in a difficult crisis. So too NOBUNAGA was noted for his propensity to escape from the field of battle. But he completely retrieved his honour by the gallant stand he made at Okehazama.

Original from

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

Count ITO is advised to profit by NOBUNAGA'S example, and to close his splendid career with a similarly gallant stand at the present juncture. In conclusion, the *Kokumin* recommends him, should he assume power, to sever all connection with the National Unionists, and pursue a neutral (*chosen*) policy, at the same time anticipating the wishes of the Opposition by carrying out the reforms which they have advocated for the past ten years.

Our readers will doubtless agree that this is an interesting analysis of Count ITO'S character, and of the incidents that have culminated in the state of affairs now before us. The Tokyo periodical does not use laudatory language *con amore*. Between the lines of its writing is everywhere apparent the desire to extol Count OKUMA at Count ITO'S expense. That it would prefer to say bitter things were choice free, is plain enough, and we may therefore regard its praise as at least the testimony of a witness not biased by friendly sentiment. There can in truth be no doubt that the nation at large regards the present Cabinet as the last and best hope of a peaceful issue from the crippled condition into which politics have drifted. If Counts ITO and INOUE fail, who can succeed? That is what men ask each other. Assuredly if Counts ITO and INOUE fail, Counts OKUMA and ITAKAKI cannot succeed, even if they could be induced to try the experiment, which is doubtful. There is no abler or bolder man in Japan than Count OKUMA, but it is impossible to doubt the correctness of the *Kokumin's* assertion that his following cannot compare with that of Count ITO. Indeed Count OKUMA stands to-day more or less isolated. His immediate supporters, the *Kaishin-to*, can show more talent and competence in proportion to their numbers than any other association of politicians in Japan, but their practical influence is virtually *nil*. Only by combination with the *Fiyu-to* can they exercise any power, and that is a combination which can never be stable, and which, owing to the great numerical disparity of the two parties, tends to lower the prestige of the weaker. Count ITO, therefore, is the only possible saviour of the situation, and we cannot wonder that the career of his Cabinet is watched with the keenest anxiety by the nation. Even those who view him with not over friendly eyes, like the periodical from which we have quoted, recognise his great qualities and understand that the crowning effort of his life is to be made now.

The amount of Government paper in currency and bank notes in circulation on the 1st of August last was yen 47,338,855.85, of which, yen 17,545,277.50 represented Government notes above 1-yen face value, and yen 5,511,120.85 Government notes under 50-sen face value, and yen 24,282,457.50 bank notes. As compared with the previous month the above figures show a decrease of yen 700,757.55 in Government paper and yen 87,297.00 in bank notes.—*Official Gazette*.

A DETACHED CHAPTER

FROM AN UNPUBLISHED MS. ON "THE HUMAN RACE AND ITS GROWTH FROM A COMMON CENTRE."

BY CHAS. W. LE GENDRE.

CHAPTER I.

FROM the facts brought to light in the foregoing Chapters, we see that, before becoming the one national group of to-day, the Japanese people, or rather the peoples of the Japanese Archipelago, included a number of diverse races, divided into separate and distinct political organisations, each with its own laws, institutions, and peculiar customs. These laws, institutions, etc., had not been introduced from one point, *i.e.* China, by way of Korea, as has hitherto been generally believed, but came from several points here and there in the West, so far away as the base of the Celestial Mountains. Here, in this north-western part of Asia, for the first time, we find the Aryans—leaving their one-time isolation in Northern Asia—mixing freely with Melanian and Finnish races, and entering, with the hybrid offspring of their marriages with these two races, upon that stage of unrest, continual change, overthrow and sorrow, which we call "history." In their turn, again, these masses of humanity, having thus been made to move from this initial point, gradually wandered from each other, calling upon other Finnish and Melanian races to take part in their social life; here, in a north-easterly direction, by way of Tartary; there in a south-westerly direction, by way of Babylonia to Japan. So two great human currents were begotten, through whose agency the blood and primitive civilisation of their ancestors reached the uttermost limits of the Far East. This movement of humanity, starting in other directions with like results, combined, with the currents of the winds and waves, in keeping up the great work of constantly modifying the life-conditions of man on the surface of this our planet.

It was thus that the great northern current sent out subsidiary streams of humanity as far as Japan, by way of Foukoué and Kiaotchi, on the one hand, and Tibet and India on the other. The great southern current, for its part, having reached Babylonia, split up into two human streams. One of these went west, by way of Asia Minor, Upper Egypt, North Africa and Western Europe, to the eastern coasts of Central America; the other drifted eastward, by way of the Ganges region and that of the Indus, Arabia, East Africa, Malabar, the Gulf of Bengal, and Malasia. At this last-named point, the sub-current divided into three minor streams, which found their way to three quite different quarters. These were (1) Borneo, Papuanasia, the Celebes, the Moluccas, the Carolines, the Mariannes, Formosa, the Riu-kiu Islands, and finally Japan, where it became amalgamated with the great northern current, which, by way of the northern seas and North-Eastern Asia, had continued travelling eastward until it reached that part of North America lying between the 35° and 45° of north latitude; (2) by way of the Polynesian and Micronesian isles to several localities in the

two Americas, between the 30° of north and the 50° of south latitude; and finally (3), by way of the islands and archipelagos of the South Pacific, to New Zealand.

At the same period of time that the civilising influences which, under the foregoing conditions, had been produced by the agency of the mixed peoples born on that vast territory, lying along the base of the Celestial Mountains, during the last days of the antediluvian era of Central Asia, and shedding their first potent glimmerings on our planet—at the same time it was that the arcadian civilisation of the primeval home of the white race—traces of which civilisation we have found in the philosophy of LAO-TSZE—entered, in the northern part of the Asiatic Continent, upon the last stage of its decline. It was then also that ideas peculiar to the progressive party, inspiring a party which had sprung into existence near the close of the antediluvian period in this same portion of Asia—in the very midst of the Aryan race while it still occupied the territory of the White Island—were carried by the northern and south-west currents both to China and Babylon. Together with serpent-worship, we find very distinct traces of these ideas in the philosophies of the precursors of FOHE and OANNES, and also in that philosophical system which VAYCIA transmitted to us in the Vedas during his sojourn in Bactria. Finally, about the beginning of the post-diluvian epoch in Western Asia—according to the traditions of the Hindus as preserved in the *Padma-puran*, those of Babylonia as found in the fragments of BEROSUS, and those of the Jews as embodied in the Bible—the different branches of the Aryan race settled down into three great human groups: the Shemites, the Hamites or Kushites, and the Japhetites. All the notions and ideas peculiar to each of these three groups, were, together with the blood of the races they represented, transmitted in diverse epochs by means of the two great currents above referred to, either to the north, the east, the west, or the south of the region situated at the foot of the Celestial Mountains. Thus the system of concubinage peculiar to the Shemites was introduced at one time into the Hindú branch of the Aryan race and among the Chinese, taking in both cases the place of that monogamy which had preceded this system among these two peoples. The Tartar race, which through its white parent stock is connected with the Japhetic group, whose civilisation it possessed at the outset, also adopted the practice of concubinage. Later on, coming under the race-influences of the Kushite group through the agency of the great northern current, these influences helped to modify the characteristic features that the Tartar civilisation had borrowed from the two preceding classes of race-influences; and this resulted in the mixed civilisation now peculiar to the Tartars, the characteristic traits of which even the adoption of the Buddhist creed has not been able to efface.

Thanks again to these diffusory agents, the blood and civilisation of the Kushite race were first carried to India and Babylonia and thence to Asia Minor, Arabia, Africa, Europe, and the eastern littoral of Central America, on the one hand, and to Eastern Asia, Malasia, the Pacific Isles and the western half of the New World, on the other. By these agencies, Brahminism flowed from the blood of the Japhetites to the north-west of

(* This chapter embodies some of the principal conclusions arrived at by the author in an exhaustive and interesting work. It bears detachment from its context, and we have therefore obtained permission to publish it independently, though the complete work of which it forms a part has not yet appeared.—Ed. J.W.M.)

India; and Europe was Aryanised before the Kushite and Aryo-Hindû branches of the white race reached that continent. It is again owing to these agencies that the Sacca race, addicted to sun-worship and the practice of magic, reached China (coming from Bactria) about the 23rd century B.C.; Scandinavia and Western Europe in a very ancient epoch which can no longer be determined with exactitude, and finally India, about the 14th century B.C. Long before the Saccas arrived in India, these same diffusory agencies had carried the religion of Zoroaster to Persia, traces of which may still be found in Judean Christianity. By them, one-and-twenty centuries ago, Buddhism was introduced from India into China, by way of Shansi; and in the same manner, this creed, a little later on, went eastward to the Pacific, by way of Ceylon, Cochin-china, Java, and Siam. Finally, it is owing to these agencies that the civilisation of MAHOMET spread throughout Asia, Africa, and Polynesia, where everything tends to show that it became the substitute for the civilisation of its forerunners, and flourished in that distant part of our globe until Aryan Europe came to stop its progress.

Of all the race-influences brought into play by the great northern current of humanity, those of Tartary have left the most unmistakable traces in the customs and habits of the Japanese Archipelago; while among those who reached Japan by means of the great southern current, it is the Kushite influences which antedate all others and which existed for the longest time and were most vigorous. And this is only what we should expect, for this Kushite civilisation, starting out in the dawn of the days when our planet began to teem with human life, had monopolised the territory both east and west of India, where it had preceded the civilisation of the Aryan Hindus. From India it went on to Arabia, where, thirty-five centuries before our era, we find the race of *Afrikes*, or *Afriks*, making North Africa the field of its enterprise, and perhaps Central America as well. We have seen that the port of *Acla*, in the Gulf of Uraba in the last named region, is easily connected with *Atlan*, and moreover points to that part of Africa which had been colonised by the Kushites; that *Aztlan* was no other than this port of *Acla*, which was reached by the parent stock of the Nahua races, coming westward to America, after one hundred and forty years of wandering aimlessly hither and thither. From this place the parent races of the Nahua started out on their colonising migration to the region of the Mexican lake in the year 2,700 B.C. VOTAN, who had himself set out from one of the Mediterranean ports, landed at San Domingo and passed thence on to the land of the Chiapas, on the eastern coast of Central America. Owing to the absence of any precise details whatever, we are tempted, with HUMBOLDT, to make the epoch in which this event occurred coeval with the extension of the Kushite race in Western Europe. The place from which this enterprising race of colonists set out was *Opira* (from *aphar*, "west,") situated in *Abhira*, province of Guzerat, Western India. While they still occupied this part of Asia and prior to the advent of the Aryan Hindûs from the region of the Celestial Mountains, *Opira* had, for a long time, been the most westerly of their Indian possessions. Thence, possibly under the leadership of adventurous voyagers, they

they reached *Atlan*, their last colony in the west. This they managed to do with the aid of a succession of *ophir*, or "western stations," viz., that of Arabia, between Musa and Aden; then that of *Aparica*, or the Atlantic region, the name of which is also derived from *Ophir*; *Apar*, *Aphar*, etc.

But though they dispersed so far in a westerly direction, they did not, for that reason, give less attention to the Orient. We have already spoken of the enormous trade carried on between India, the Persian Gulf, Arabia, and the Mediterranean ports. Of this trade the adventurous Kushites had the monopoly until the 20th century B.C., when their original ancestors still ruled in Babylonia; and we know that everything tends to show that the commerce kept up between China and *Yue-shang* (the site of the Canton of our own days,) in the early part of the 24th century B.C., was also in their management. So thoroughly was the trade control in their hands that the importance of this eastern commerce and especially that of their establishments in the Persian Gulf—by means of which, together with the Hindû *Ophir*, the eastern trade had connection with that of the west—became so great that, in the 16th century B.C., they made arrangements to have a prince of their race on the throne of Babylon, while this ancient metropolis was under the dominance of their allies, the Kings of Egypt.

It was in their exploits in following up the eastern branch of this vast trade that the Sabaeans, whom AGATHARCIDES depicts as surpassing all other peoples in the world in wealth and splendour, amassed their treasure. This trade supplied them with the prime articles most eagerly sought for by the manufacturing establishments of their Phœnician brethren in the Gulf of Persia and the Mediterranean. That is why the Phœnician Kushites never abandoned these Oriental stations of their trade. To tell the truth, they looked upon them as a veritable place of safety wherein they might find a refuge and shelter in case they should lose their Mediterranean establishments. In order to make sure of preserving the monopoly of these places, they kept their very existence as long as possible a secret from the rest of the world. It was for this reason that, in the Orient, they spread the report that all the products which they brought from Bengal, Malasia, and China by way of Siam, and which they carried to their purchasers either in a crude state or else in the varied forms of manufacture produced in their establishments or depôts in the Persian Gulf and the Mediterranean, both to those customers in Western Asia by way of their ports in the Persian Gulf, and those in Africa and Europe, by way of their Arabian and Mediterranean stations,—that all these products came exclusively from India. And when, after the appearance in the Mediterranean of the Pelagians, a rival sea-faring people, in the 16th century B.C., the Phœnicians found themselves compelled to give up their one-time supremacy in Grecian waters, they fell back on Africa and Western Europe, well knowing that, in case of need, by means of the marts which they had possessed, from the remote past, on the eastern coast of this continent and on the Arabian littoral, they might easily keep up their trade communications with Oriental regions. This explains how it was that of the two hundred colonies they possessed, about the 6th century B.C., in the western part of our planet, no less than one hundred

and forty-six were located on the West African coast. They began this great work of colonisation in the 12th century B.C., and about the 7th century before our era, NECHO, King of Egypt, undertook upon their advice, and accomplished with their aid, the circumnavigation of Africa.

We are not in possession of any details concerning the number of establishments of this kind which they had on the east coast of Africa in India, Cochin-China, Malasia and other places in this eastern direction. None the less, the number must have been very great. Among them the ports of Yemen and Ceylon, as substitutes for the more ancient Bahrein Islands of the Persian Gulf and *Ophir* in Guzerat, must have been the great centres of the distribution of the products gathered together and selected in other secondary ports in the Gulf of Bengal, Acheen, Java, and *Yue-shang* in Kiaotchi. We are thus enabled to explain how it came about that, a little later on (11th century B.C.), the very people who had always been most careful to conceal from the knowledge of the vulgar crowd all that related to the Hindu *Ophir*,—so long as it served as the general depôt of this Oriental trade—did not hesitate to conduct thither their allies, the Jews, in ships modelled after the adventurous barks which they had formerly made use of in sailing the Atlantic.

What is certain is that in this same epoch, i.e., in the year 1109 B.C., we hear of the arrival in China of ships coming from the port of *Yue-shang*; and this occurrence caused as great a commotion at the Court of the Son of Heaven as did, twenty-nine centuries later, the appearance of European fleets in Cantonese waters. In fact, everything indicates that, in those times, the Indian seas had long ceased to be exclusively in the possession of Kushite races. Grown wise by their experience, the Aryo-Hindû nation, who supplanted the Kushites as arbiters of India, were then already carrying on a vast maritime trade in these seas. Hence came their colonisation of Malabar in 1167, and of Java, ten years later. In this position, the sea-faring Kushites—who thought very little of any marts of which they did not enjoy the monopoly—foreseeing the possibility of such changes, had long before travelled farther to the East, whither neither their rivals nor the Jews whom they had voluntarily initiated into their commercial secrets, could promptly follow their footsteps. It was in this manner that, during several epochs, the Kushites reached first Kiaotchi, then Northern China, and finally the shores of Japan. There is reason to believe that when the forerunners of the IZANAGI of CHAUMEN'S account, arrived in Kiushiu at the date given in that narration, the early Kushite explorers of the Pacific and the Chinese seas had already long known of the existence of this region. While the seafaring Kushites were thus going to places ever nearer the source of their eastern trade, and consequently were compelled to shift, in a corresponding manner, the base of this trade in order to keep it a secret from their rivals, carrying it first from the Hindû *Ophir* to Ceylon and thence successively to Acheen, Java, and possibly to *Yue-shang*; while, too, the Aryo-Hindûs, following in their wake, found their way to Java, and the Jews established themselves in *Ophir*,—the original time Europe continued to be profoundly ignorant of the circum-

stances attendant upon these distant enterprises. It was not until the second century of our era that Roman vessels found their way to Malabar, and it was apparently very much later on that Roman merchants found a footing in Ceylon. In fact, when, four centuries later, Persians arrived in Ceylon, the great western metropolis did not seem to have as yet obtained any preponderating influence in that island. After the fall of Rome, in consequence of the invasion of Europe by Asiatic Aryans, the fruit of the Imperial City's discoveries was lost to the Occident. It was owing to this fact that, at the close of the 15th century, nothing was any longer known concerning the routes leading to the Pacific by way of the East. It was not until 1508 that the Portuguese rediscovered Ceylon, and that only by accident, despite the fact that they had ten years before established themselves in Malabar,—only a few steps away. The account which they gave of their discovery shows that, at the time, the island was still a vast commercial centre. We may thus understand how it was that the art of navigation had made much greater progress in that part of the world than in Europe. True, five thousand years before this date, the art of navigation in Europe had attained a degree of development not incomparable with that of which the Cingalese ships were then examples; but the art had rapidly decayed in the Occident, to be, centuries upon centuries later, revived again with the results referred to. Indeed, we may call to mind that when the Portuguese arrived in Malabar, they found there Cingalese vessels six times the size of their own.

But although the Kushite race-influence had caused itself, almost uninterruptedly, to be appreciated throughout such a vast expanse of lands and seas, it was very far from having continuously monopolised the whole of this space. This was particularly the case in the east in the VAYCIA epoch, when the Brahmins—who had reached the period of their utmost authority in India,—began to found stations in the Pacific. If during this long period the sectarians of Shiva gained the upper hand in all that concerned race-influence, and, in consequence, the influence of the Kushite civilisation regained its pristine vigour in this eastern sea, it was for a limited time only. Thus, in the 16th century before our era, just at the very moment when the Shivaic influence had attained its highest point of development in Brahminic India, we find the Brahmins, aided by the Saccas whom they had called from Bactria, suddenly rising superior to their rivals, while these same Saccas thereafter went to the south-east of the Ganges valley and thence to Arracan and Siam, into which countries they introduced the sun-worship they had brought with them from their native land. From this base their race-influence must have spread out, concurrently with that of Brahminic India, in opposition to that brought into operation by the Kushite civilisation, for we find its trace even at the outmost point of the great southern current in America. Finally, in 559 B.C., upon the Brahminic influence having regained all its one-time vigour in India, it must have neutralised the other rival race-influences; and thence spreading out towards the Pacific, it must more than ever have disputed the possession of these island territories by the Kushites. The situation did not become any better, so far as the Kushites were concerned,

when, six centuries later, Buddhism appeared on the scene; for not only did this creed almost entirely usurp the place until then held by Brahminism, but it went also to work with a vigour and intensity such as were unknown to the older religion. This is amply demonstrated by the fact that, in 465 A.D., Buddhism travelled, without meeting with any impediment, by sea to China, which land it had reached, six centuries, earlier by way of Tartary and Shensi. This never occurred in the case of Brahminism, which reached the Chinese Empire by the land-route only in the 12th century B.C. Buddhism managed to establish itself so firmly in this Empire that, when all trace of the influence of the older creeds had vanished, it became so ripe a source of serious political embarrassment to the ruling power that one of the Imperial Ministers deemed it his duty to memorialise the Dragon Throne against it. The doctrine of Shakyamuni had not less thoroughly established itself in Pegu at that time, for it boasted there of one hundred temples, all resplendent with gold and silver. There is no reason to believe that the Jewish element, which had found its way to India in the 11th century B.C. and to China about the first century of our era, in which Empire it held an isolated post at Kaifou in the province of Honan, ever spread so far in the direction of the Pacific as to be able to exercise any dominant influence whatever. The same holds good of Christianity, which, in the first century A.D., reached the Cranganore by way of Syria, and China, in 635, by way of Tartary, for Malabar appears to have been the southernmost land in which this religion took deep root. Although the introduction of Mahomedanism into Malabar about the year 800, and into Acheen in 1204, had very marked influence on the civilisation of Malasia, there is no reason to presume that it in any way affected the development of the civilisation of the Japanese Archipelago, for the progress it made in Acheen, both in a southerly and north-easterly direction, was very slow. It found no foothold in Java until the year 1450, nor did it reach the Philippines until some fifty years later. In these islands, whence it might easily have gone on to Japan by way of Formosa, it was completely thrown into the shade, together with the other creeds that had preceded it, by the influence of Europe—an influence which ever since then has not ceased to be predominant. But until the 12th century of our era, all these civilising agencies, rivals of the Kushite race-influences, moving incessantly hither and thither over the territory in which Kushite ideas had primarily been established beyond the limits of the Dravidian region, must have more or less counteracted the efforts made by the Kushite form of civilisation to direct or control the intellectual and moral development of the numerous peoples dwelling in that vast region which stretches from the east and north-east of India to Japan.

It is particularly in the geography and among the ruins of this immense expanse of territory that we come across traces of these intrusive agencies in the domain peculiarly affected by Kushite race-influences. These traces are, as we have stated in the 10th volume of this work, clearly marked on the map in the names of the commercial or trading stations which the Kushites established all the way from Africa to Western America. These ancient trading posts still bear their old names, all of which—as we have seen—

where demonstrated—are derived from *Onady*, the name uniformly given in the earliest ages of the Kushite dominance, to spots in the deserts of Egypt, Lybia, and Arabia where the traveller, wending his way on the patient camel—his "land-ship" (*el wah*)—might find abundant water, food, and repose. Such names were *Saba* (a synonym of *Yava*, *Yaba*, *Zaba*, *Jawa*, *Sawa*, and *Hawa*) in Arabia; *Saba*, in Malabar; *Ava*, *Taway*, which, for many ages, were centres of Kushite commerce (especially the trade in rubies and other precious stones) in the Gulf of Bengal; *Yava*, *Saba*, or *Jawa* in the island of Java, where, in one epoch, there was a Kushite centre for exchange or barter between the East and the West; *Jawaka*, or "Little Jawa," a name which the Bugis gave to the Moluccas, doubtless owing to their having been a secondary depot for commercial exchange. The Polynesians say *sawaki*, "Little Sawai," and *ko* in Japanese means "child," or "small." Then we find *Sawai* in Ceram; *Taway*, the name given to New Zealand by its inhabitants; *Hawaii* in the Sandwich Islands, and an almost infinite number of *Sawai* in Polynesia. In Japan we must note the *Kuro-shiwo*, from *kuro*, "black," and *shiwo*, "a current of water;" also *Sawa*, on the line of this current. A fact to which we have called particular attention is that, among all these peoples, this root *wa*—which is at the bottom of all these names—expresses the idea of *water*, *food*, or *peace and comfort*. The root has the self-same signification in all the languages derived from Sanskrit, as for example in English, German, and French, where we have *water*, *wasser*, *eau*. *Purwa* in Sanskrit signifies a "spring," and recalls *wai*, "water," and *ua*, "rain;" in the Hawaiian tongue, *wai* is "water," *wha* means "rain," in Tonga; *wai* is water and *ua* is "rain," in Samoa. These ideas are expressed respectively by *wai*, *vai*, and *wa* in Fiji and Rotuma; by *vai* and *ua* in New Zealand; by *nwai* and *vai* in the New Hebrides. In the ceremonial language of Java, *sawa* means "running water," the same idea being expressed in the vulgar tongue by *wada*, *ouau*, and *sawa*. In Japanese we have the word *sawa* meaning "a marshy tract of land;" and in the Nahuatl tongue of Central America the word *a* was connected with water. From this *a* comes *Atlan*, the name of a people in that north-eastern part of Africa which was colonised by the Kushite of the earliest ages; then *Atlantic*, the name of the great ocean between the Old and New Worlds, and *Atlan*, a port on the eastern coast of Central America and the most westerly of all the stations of the Kushite people. We may call to mind the fact that *Toah* among the hyperborean Apaches of North America is similar to *wai*, with the same signification which this word has in Hawaii. In Arabic *nabata* means to drip or run like water; *nabatha*, "to germinate," and *bathara* "to sow seed." *Saba*, the great metropolis of Kushite trade, was itself a kind of *oasis* in the Arabian desert, and derived its importance from the immense reservoir there, so much so, indeed, that after the destruction of this reservoir, the city was abandoned. A very particular species of millet was cultivated there. This had probably been imported from Africa where it was called *dura*, a name which reminds one of *jowara*, "grain," and *wara*, "rice from the rice-fields," in the language of Hindustan, as also of *jawa*, "millet," and *para*, "rice straw,"

awa, "millet," *waraya*, "a thatched house," *warabe*, "an infant," and *warau*, "to laugh," in Japanese. In Arabic *wady* is "a little valley with running water" and also "the bed of a torrent," and in Japanese *awai* signifies an "interval" or "space between;" *sawa*, "a marshy tract of land," *sawasawa-to*, "the soft murmur of running water," *sawa-te*, "stained by water," *sawayaka*, "serene, cheerful, fluent." *Sabha* signified a religious congregation in the archaic diction of Beloot-Tag, and *sab-bath* in Armenian, "peace and repose in the reunions of humanity." The traces of this great Kushite current are no less striking in the ruins which lie along the line of its course. Thus we observe the custom of building with dry (*i.e.*, without mortar) stones—which was the peculiar usage of the race of Kush—in the Upper Nile Valley; in Arabia, India, Ceylon, Martaban; in the Pacific isles, particularly Tonga, Tahiti, Java; at Osaka, Tokyo, etc., in Japan; in South America; and North America. In the ruins of Soukou, Java, there are bas-reliefs which in their general style bear resemblance to those of Egypt and also, as we have shown, to those of Arabia. Then there is a stature of Typhon, a carved figure which at once recalls the Egyptian dog-headed Anubis. In these bas-reliefs we find also a crane like the Egyptian ibis, palm-trees, the serpent—a sacred symbol common to both Arabia and Egypt—and statues holding a trident in either hand, which weapon was the symbol of supreme power in the representations of Poseidon among the Mediterranean Kushites and of Shiva among those of India. Another statue is still more conspicuous owing to its phallus being six feet in length and bearing a long inscription. Others excite attention by means of their clubs, the favourite weapon of HERCULES, who was himself a Kushite prince. In the ruins of the Presidency of Pattaronang, are numerous traces of Kushite India: among others a Mandi bull; a statue of Maha Deva with the trident, with an inscription in Devanagari; and a statue of the Sun in his chariot, drawn by seven horses. In the ruins of Djoejocarta and Souracarta, we meet with crosses which at once remind us of similar phallic emblems in the caves of Elephanta and Ellora, in India. In Egypt we meet with the *crux ansata*, or *tau* cross, which was carried by all the deities in their left hands, and which, in consequence of its phallic origin, expressed the word *anch* or "life." It is the first hieroglyph immediately following the cartouche of a reigning Egyptian monarch, in the phrase *anch, uja, seneb*, or "Life, health, prosperity." Phalli are found in other parts of the island of Java, notably on the tombs. Such symbols are also found graven on the tombs of Kakas, one of the Celebes group; among the Baitas of Sumatra and in the temple of Dorey on the north coast of New Guinea. Many parts of these islands have names of evidently Kushite origin. Such a name is, for instance, that of the kingdom of *Ande-las* in Sumatra, which would seem to have been derived from the same root as *Andalusia*: the name which the Arabs gave to one of the Spanish provinces, which is retained to this day.

These traces of Kushite civilisation in Malasia, as found in the ruins of that region, are met with farther on in the Pacific and the two Americas on the one hand, and in Japan, on the other. In connection with this subject we may remark

that phalli are found placed on old Japanese tombs, and that certain stones of oblong shape and rounded at one end, *i.e.* looking like real phalli, which are occasionally to be met with in the river-beds of this country, are made objects of worship. The same kind of stones are also observed in Fiji, where they are similarly venerated. A superstition of like nature seems to have prevailed in the Philippines among the Zymboles, the Ilayas, the Iglotts and Tenglians. Among the Mayas of Central America the feast of seed-sowing was kept high in honour. This was a purely phallic ceremony, during the course of which practices similar to those prevalent in India were a prominent feature.

A large number of other customs, institutions, and superstitions belonging to the various countries lying along the line of the great southern current, also have evident connection with the Kushite form of civilisation. Among other usages, we may refer to the cult of sacred trees which, by way of Arabia, Keddah, and the Malayan Peninsula, reached both Japan and Korea, coming originally from the region lying at the base of the Celestial Mountains; then the custom of human sacrifices, which, starting out from the same original point, reached Japan by way of Egypt, India, Malabar, Arracan, the Philippines, Lombok, Borneo, the Celebes, and Formosa, and, by way of the Pacific, accomplished the long journey to Central America. Then comes the habit of going barefoot, observed both in Japan and America. To the former country it came from Arabia by way of India, Malabar, Ceylon, Java, the Philippines, the Moluccas, and the Celebes; by crossing the Pacific, the latter terminus was reached. Finally, among many others, are the customs of tattooing and of confirming or verifying the virginity of young women upon their marriage. We may follow, step by step—so to speak—the gradual eastward advance made by the former of these customs from Babylonia, where it seems to have originated, to the farthest N.E. of Asia and N.W. of North America. The route taken was the following:—India, Bengal, the Cochinchinese Peninsula, the Philippines, Japan, Yesso, the Lower Amoor, Kam-schatka and the west coast of North-western America, whence it spread to the region of the lakes and Virginia. Coming back to Borneo, we may follow it by way of the Pacific isles to California, on the one hand, and South America on the other, whence the practice travelled as far as Mexico. We thus meet with this custom in Arabia; Bengal; Martaban; Arracan; Sumatra; the New Hebrides; New Ireland; Australia; New Zealand; Borneo; the Island of Hainan; among the Ngai-lao of Yunnan; in Formosa; the Celebes; the Philippines; the Carolines; among the Wha; the Ainos; in the Kuriles; among the Ouen-Chin; the Tunguses; the Ostiacks; the Koriacks and Tchukches; the Hyperborean American tribes; the Tinnels and Kutchins; the Koniagas; the Esquimaux; the Haidahs of Columbia; the Columbians; the Kutchin-Chepewyans, etc. in Virginia; the Ayenes of the lake region of North America; New Guinea; the Solomon Islands; the Cook Archipelago; Mendana; Hamoa; Tonga; Rotuma; Tahiti; the Sandwich Islands; Easter Island; Terra Ferma; Central America; among the Mayas; in Nicaragua; Yucatan; Mexico; New Mexico; among the Californians; the Chinooks; the Kodiacks; French Guiana; Hayti; and Brazil and Buenos Ayres. The ceremony of verifying the virginity of brides was known in

Arabia under the name of *Wad-el-binat*, and we meet with it in an almost identical form among the Egyptians and Samoans, and in an unknown form among the Mexicans.

In contrast to the traces of Kushite race-influence as found in the ruins and geography of the Island of Java, we meet there with quite another class of vestiges evidently of Brahminic dominance. Relics of this nature are found in the ruins of Panataran, in which the existence of BRAHMA worship is plainly apparent by reason of special features which we have taken to represent a sort of protest against the practice of the phallus cult as existing in the immediate vicinity of this locality. Moreover, the geography itself of the region in which these ruins are met with, shows connection with Aryan India. Thus we find there Mounts Arjou, Indroklo, Indrorowah, Semai, and volcano Kawi, all of which form the culminating points of one and the same chain, in full view of the ruins. Farther away lie Mounts Bromo and Sumeru. Then we have the stone-heaps of the Malasian Peninsula, the Island of Java and Polynesia. These stone-heaps are found on the tops of the highest mountains. The stones composing them are called *balai* in the Malasian region, and are known under the style of *Patapa-an* or *Pamugalian* (two words of Hindû origin meaning "place of penitence" or "place of adoration") to the west of Java. In Malasia these stone-heaps date back to the times anterior to Mahomedanism, known as *sasakala alam Buda*, or "vestiges of the age of Buddhism," in which the Brahminic age is included, which was the forerunner of the former. Evidently they carry us back to those epochs in which Aryan India was engaged in the work of proselytising Malasia and the Pacific isles. This is all the more probable as the name of *balai*, given to these stone-heaps, reminds one of *Malai*, the style under which sacred places were known in the Island of Tonga, and *Morai*, the name applied to such localities in Tahiti and other islands of the Pacific. It is quite on the cards that some of the missionaries who first carried the Brahminic and then the Buddhist creed to the island world of the Pacific, came originally from Malabar, for in Sumatra there is a river called *Sungei Malayu*, which rises in Mount *Maha Meru*, the name given to the Himalayas in India. Prior to the arrival of Hindû colonists in Sumatra, this island was called *Pulo Percha*, a name devoid of any Hindû characteristic. *Sumatra*, on the contrary, is evidently derived from the Sanskrit: it may come from *Sumitra*, the name of the twenty-eighth king of the "Dynasty of the Sun" in the fourth age; or it may be connected with *sumadr*, meaning "ocean" in Sanskrit; or, finally, it may be compounded of *Su*, "excellence of gold" and *matra*, the root *mtr* of which, in the same tongue, has the sense of "that which comes from the sun."

A number of these names derived from Sanskrit are to be met with in the Polynesian isles. The mountains in this island world, represented as being the dwelling-places of gods, or of princes who, according to a custom which obtained both in India and Arabia, have been deified, are all called *Meru*. One of the princes who founded the Sandwich Island monarchy, was named Miru (pronounced *Méru* in Polynesian.) In the most ancient tongue of this island world, *Varuna*—the name of the great marine deity of

the Aryans of the White Island—used to express the idea of "god" and "spirit." In the same language, *Vaiti*, which reminds one of *Valeni*—the name of a Hindu deity—also means "spirit." There are no traces whatever of Brahminism to be found beside those of Kushite race-influence in the ruins of Central America. In their place we note, in very clearly marked forms, vestiges of that mixed influence which, as we have seen above, in the 14th century B.C., became predominant in India, and thanks to whose agency the cult of SHIVA, blended with the worship of BRAHMA, KRISHNA, and the Sun, was carried to the east. It is perhaps to the same class of influences that we should ascribe the appearance of Aryo-Indian indications recognisable in such names as *Diwa*, *Dawato* and *Anito*, given, the first, by the natives of the Island of *Sambawa*, the second by the *Bisayas* of the Philippines, and the third by the *Tagallos*, to their respective divinities. We must, however, acknowledge the existence of Brahminic creed-influence in the names given to princes or their followers, all the way from Western Asia to the uttermost confines of Polynesia, via India. These titles are evidently derived, without exception, from *Arya*, "honourable,"—the name borne by the Aryans of the antediluvian epoch. Thus we have *Arii*, *Arya*, *Arioi*, *Aria*, *Ariana*, in Western Asia; then *Arya*, in India; *Aru*, *Arang*, among the Bugis; *Arang*, *Pangerang* and *Aria*, in Java; *Arocha*, *Banabe*, and *Turanga*, in Viti; *Ariti*, *Aliti*, at Ceram and Amboyna; *Ta* or *La*, in Nawaii; *Arii*, *Eree*, *Tinara*, *Orihi*, *Aru*, *Rangatira*, *Ranakira*, in Polynesia; *Allah* (the name of the Supreme Being in Arabic), *Takarea*, ("sun"), *Arinan* and *Alai* ("day"), in Formosa; *Ra*, *Phra*, in Madagascar and Egypt; *Radama*, *Ranavula*, *Raseralala*, in Burmah and Siam; *Raja*, *Rama*, in India; *Ratu*, *Latu*, *Datu*, *Radin*, *Rajin*: all of these being probably derived from the name of the sun. The same in the Egyptian *Irich*, the Polynesian *La*, *Ra*, and still preserved in the Hindu *Ravi*; the Malayan *Rarak* ("sun"), *Ari*, *Hari* ("day"); *Heli*, in Greek; *Sol*, in Latin; *Sun*, in Saxon; *San*, *Naga*, *Tchang*, *Chung*, *Magana*, together with the nasal terminations *Rang*, *Lang*, *Lunga*, *Ulunga*, *Langi*, *Langit*, *Langits*, etc., all these being names of the sun, the celestial vault, or of the Deity in several languages of Africa, India, Trans-Indian countries, and the great insular region east and south of Asia. The fundamental idea of all these names is the worship of the Sun, the deification of chieftains, and the application of the style of the orb of day as a title equivalent to "god," "lord," "king," etc. The Polynesian *Ariki* or *Arii* appears to signify literally "son," or "child," "of the sun," meaning thereby the members of the royal line. The deity of the inhabitants is styled *Usinemu*, "Lord of the Sun," and *shujin*, *nushi*, *aruji* mean respectively "master" and "lord" in Japanese, while *hara-(ru)* signifies "to grow clear and bright." Hence came the habit, universal along all this long line, of inferiors kneeling in the presence of their superiors whenever they had any communications to make or commands to receive. While those of low rank assumed thus a posture of abject submission, their superiors affected an air of indulgence and unparalleled gentleness. It was not until the inferior forgot himself so far as to defy his master that the latter dropped his rôle of good-natured reverend; and in

so doing he let fall on the imprudent being, as a god might treat his own creation, the full weight of his omnipotence, and killed the audacious one on the spot. This is the reason why, all the way from Malabar to Japan, we find the governing classes ever sword in hand; nor did they hesitate to use their trenchant blades against those whom they caught in flagrant disobedience to the rule. The fact that the spirits of deified chieftains were called *Aritis* in the Marianne Islands and the members of the royal family were styled *anai* in the Riukiu Archipelago is confirmatory of the hypothesis that, by way of these two island groups, the Aryan influences brought into active operation first by Brahminism and thereafter by Buddhism, found the route to Japan; in the case of the former creed somewhere between the 12th and 7th centuries B.C., when the Aryan Hindus colonised Dekkan,—where they supplanted the Kushites—Brahmaputra, Java, and Bali; and in the case of the latter, a little before the Christian era, when Buddhism was introduced into the Island of Java.

We may thus at once explain the presence of Sanskrit roots in the Japanese language, as attested by Mr. ASTON in a paper read before the Asiatic Society of Japan in 1874. Although in fact Buddhism did not obtain a footing in Japan until the sixth century of our era, and that by way of Korea, yet as this doctrine had been brought to Java by Aryo-Indian propagandists, it continued to give support to the linguistic influences introduced in Malasia by the elder Brahminism. Spreading out thence towards the Japanese isles, by the above indicated route, this doctrine necessarily brought about the adoption, by the Japanese tongue, of terms derived from Sanskrit. But Japan being the most northerly point reached by these Aryan influences, their action was consequently very feeble, and this explains how it is that the traces which they left behind them are not of a more marked nature; all the more as the influence of the Chinese tongue, which became so eminent in the Japanese Archipelago from the 3rd century of our era, must have contributed to weakening them still further.

The modifying Aryan influences, of Dravidian character, which succeeded in affecting the Japanese tongue by the aid of the great Kushite current, were joined by others coming originally from Bengal. From this region proceeded that mixed doctrinal and linguistic influence which arose in India in the 14th century B.C., and which produced effects, though of a very limited nature, in a north-easterly direction. The Aryan influences were furthermore conjoined with those hailing from Nan-youé, which, contrary to their Bengal congeners, must have been quite vigorous and emphatic, if we may form an opinion of them by means of the impressions they have left upon the habits, institutions, and religion of Japan. It is perhaps owing to the energetic intervention of this last class of influences that the Japanese language does not show a greater similarity to the dialects of the Dravidian region.

It is on account of this western origin of nearly everything connected with the religion, government, habits, and usages in general of that part of the Japanese Archipelago which was colonised by the *Wha* race, the counterpart of which religions, etc., is to be found in Polynesia and Micronesia in general—all of which local institutions, etc., had come to these different

regions by the ocean route—that we may explain the great importance given to the idea of "water" among all these peoples.

In Polynesia so far north as Formosa the most frequent reply made in answer to the question as to the origin of the natives is "that they came hither in canoes." We have seen that nearly everywhere the teeth of whales and tortoise-shell are the most acceptable offerings that can be made to the gods. The road to heaven is the sea, and the last ordeal to which the soul is subjected before being definitely admitted into the abode of bliss consists in walking along an oar which the chief of the gods places across a yawning precipice. At the bottom of this terrible gulf are deep-waters in which the unhappy spirit which fails to pass the ordeal in triumph is drowned. Among the gods of Hawaii, we may note in particular deities endowed with power of moving, without fear of mishap, over the seas. But when the ocean is no longer spoken of in the legends which treat of these deities, it is the sun which takes its place. And so the princes of those islands, as is invariably the case in the Japanese Archipelago, come to be considered celestial beings. We hear thus in Hawaii of a prince of Tahiti who, upon being offended by the inhabitants of the former island, deprived them of the light of the sun; just as *Tensho Daijin* did in consequence of the insulting treatment she suffered at the hands of her brother SUSANOWO. The Hawaiian prince gave back the sun-beams after having left the offenders for a time in darkness, exactly as did the Japanese Goddess.

Among the children born to the IZANAGI and IZANAMI of the Kojiki* there were several who received the waters of the ocean as their peculiar domain. Such was the case with the ancestors of *Utsushi-higamasa*, himself a marine deity, from whom the lords of Adzumi were descended, whose vassals were fishermen. *Take-haya-Susanowo-no-Mikoto*, more simply styled *Susanowo*, received from his father the empire of the ocean (*una-hara*), in part. *Izuruko*, who, in the legend of IZANAMI, appears to symbolise the inferiority of the offspring begotten in the contact of barbarian races with the more highly civilised races of the Archipelago, is despatched to the sea. Like YEBISU, the ancestor of the Ainos, he is the god of fishermen in Shinto mythology. Indeed, it is quite possible that IZURUKO and YEBISU were one and the same personage. At all events, like SUSANOWO, he is an essentially marine being. *Shiho-tsuchi-no-Kami*, "Deity-Salt-Possessor," who appears in the legend of HOWORI, mentioned elsewhere above, is also evidently a marine divinity; while *Wata-tsunino-Kami*, of whom mention has also been made and to whom *Shiho-tsuchi-no-Kami* sent HOWORI, was the king of the high sea. In fact if we subtract from the legendary history of Japan that which the story of *Oho-kuni-nushi* and

* As distinguished from the Izanagi (伊弉諾) of Chaumen's (倉然) narrative. Chaumen was a Buddhist priest dispatched in 984 A.D., by the Emperor Shunhai (Tenno of Japanese annals) (970-984 A.D.), as that prince's ambassador to the Chinese Emperor Tai-Tsong (太宗) of the Song dynasty, upon the request of Tai-Tsong, Chaumen gave an elaborate written account of Japan, its Sovereigns from the remotest times upwards, its political divisions, &c. In the list of Japanese Sovereigns given in that account, Izanagi no longer stands as the progenitor of the Japanese race, but merely as one of the predecessors of Jimmu Ten-o, i.e. the first Japanese Emperor of the dynasty. Jimmu Ten-o being the 3rd, i.e. the 1st, Emperor of the dynasty.

Nuna-kaha proves to have come from Northern Asia, together with that which we know to have been taken from China, all that remains is only a Polynesian and Malasian panorama, *i.e.* essentially marine.

IZANAGI, the progenitor of the Japanese race, according to the *Kojiki*, is represented in this work, as a sea-faring warrior, who, upon fecundating the waves by striking them with his lance armed with a head made of a red precious stone, caused the first islands of which his empire was thereafter composed to appear above the surface of the watery abyss. In the annals of Polynesia it is a divine fisherman who industriously draws the islands of the Pacific one after the other out of the blue waves, attached to the end of his rod. We have seen that in the Polynesian legends the gods venture upon the path across the clouds in order to reach the earth and, in certain cases, land on the coast by means of a suspending bridge. This was also the case in Japan. This celestial bridge is mentioned at the outset of all the voyages of discovery, of all the colonisations or invasions effected by the gods of the race of the Sun-Goddess, IZANAGI, SUSANOWO, AME-NO-OSHI-HO-MIMI, HIKO-HO-NO-NINIGI, OHO-KUNI-NUSHI, all of whom were navigators of consummate ability. The last named divinity traversed the western sea of the Archipelago in a tall and light vessel, with a bird's head on its prow; while the dwarfish SAKUMA-BIKO-NO-KAMI voyaged thither in a skiff made out of the rind of the *kagami*-fruit. While the bark of the former deities remind us of those great ships which we know were used in the Pacific at a very early date, and while the boat of OHO-KUNI-NUSHI recalls those of the Tunguse colonisers of North-eastern Asia and the north-west of North America—which races the Polynesians, from whom they adopted the practice of tattooing, may perhaps have instructed in the art of navigation—the skiff of SAKUMA-BIKO is the counterpart of those canoes which the inhabitants of the Kuriles use to this day, and with which people the “Little-Prince-Famous-Deity” is readily identifiable, by reason of his diminutive stature and his clothing made of the skins of birds. The “Crocodiles” of the Ocean King, for their part, had staunch boats, which gave them marine characteristics of such striking nature that all the races which contributed their early civilisations to that of the Archipelago appear, from the very outset, to have been in possession of a very thorough knowledge of the art of navigating the high sea—a fact which would appear to indicate that these settlers brought their knowledge with them from their native lands.

Much weight is given to this hypothesis by the prominence—in all the legends relating to the primitive civilising races—of the worship of fish-gods or marine deities, as well as of the “talismans” of peculiar efficacy while on the sea, all of which were introduced into the Archipelago by these people. The cult of fish-deities is particularly noticeable in the legend of the Empress JINGO. The story of this Great Queen's invasion of Korea abounds with scenes in which the genii of the seas—from ancient days dwellers of the Japanese coasts—play a most striking rôle. Talismans are met with in the legends of and after the epoch of the colonisation of Kiusiu by HIKO-HO-NO-NINIGI until the accession of OJIN TEN-O, in the narrative of whose reign we hear of eight of these *magical* beings.

compass and marine charts being included in the number. That with which HIKO-HO-NO-NINIGI had been provided, helped him to find his way across the light beds of celestial clouds in *Amz-no-ih-kura*, one of the “ships of stone,” *i.e.*, ships of a solidity and strength unknown to the natives prior to the arrival from the south, of those who sailed in them. We have seen that one of the ancestors of JIMMU TEN-O made a second conquest of the Empire with the aid of a talisman given him by the Ocean King. This again recalls the “pearls of the ebb and flood,” brought for JINGO from the “Castle of the Dragons” by ISORA, the pilgrim of the bottom of the sea. In both cases, these talismans imply a most consummate knowledge of the tides, on the part of those who had obtained them. We know that the tides are exceptionally high and dangerous in Oriental Asia, so that it was very much in the interest of any navigator, intending to make an invasion—as JINGO did in the case of Korea—to be thoroughly familiar with their rise and fall. It is ISORA who appears as the directing and inspiring agent in this undertaking. We may also call to mind these double-decked ships, of which JINGO made use on this occasion. The very possession of such vessels is proof positive of a very great advance in the art of navigation, and points to indubitable relations with the maritime races of either Malasia or Polynesia, who, from days of the remotest antiquity, had ever been enterprising and fond of distant adventures.

Among these various races some Kushite Arabs and Malabarians were to be found. We have already stated that the former had taught the Shemites the roadways to the Far East, and that there is every reason to believe that they themselves had been acquainted with these routes ever since the 15th century B.C., and probably for some time previous to that date. The Malabarians, on the other hand, seem to have colonised the Marianes in very ancient times. To this is due the presence of numerous Arabic roots in the languages of the Japanese, the Carolinians, the Formosans, and of many other peoples in the Pacific. Shemitic types are frequent among these varied peoples, and even in America. We know that the Shemitic and Arabic tongues are closely related. These Arabic characteristics, introduced into the islands of the Indian and Southern Pacific Oceans, went thereafter on to Japan and America, there to mingle and meet with others of the same kind, which had originated in Western Asia and travelled thither by way of Kiaotchi, Upper Asia, and particularly Tartary, where they are of quite frequent occurrence. We see thus that it is not only in religion, government, habits, and language that traces are met with of that great human stir and bustle, which began at the base of the Celestial Mountains under the circumstances set forth in the first part of this chapter. We find such deep-lying racial traces in the characters and physiques of those dwelling along the great line marking the eastward advance of this movement of humanity, all the way from its starting point to the New World, by way of Polynesia and Japan. The Shemite, Kushite, and Japhetite forms which these two great human currents and their branches—the result of the primordial movement at the base of the Celestial Mountains—bore here and there to different localities along this line, into the midst

of Finnish and Melanian peoples, gave birth to composite forms which, like those conglomerates made up of fragments of well known different rocks, were self-descriptive of the elements to the combination of which they owed their existence. Hence it is that we so frequently find, in Asia and America, in the very midst of peoples evidently descended from a Finnish ancestry, upon mixed forms, pointing to the presence, in these two Continents, of Melanian or Aryan modifying race-elements: Shemites, Kushites, or Japhetites.

One of the most remarkable of these forms is the Malasian type, met chiefly in the region whence it has received its name. North, south east and west of this region there are other forms which sometimes closely approach that of the Malay, without, however, being ever quite the same. And wherever in these directions either of the two great meridional and northern currents of humanity did not reach, or, if they did reach, left but insignificant marks of their passage behind them, we find either Melanian or Finnish barbarism predominant—in the physical as well as the moral aspects of man. Hence those transitions, either gradual or abrupt, from Melanian or Finnish types—of either pure or mutually mixed descent—to those other types in which are visible the influence of the various branches of the Aryan race. It is with groups of this transitional nature that we meet everywhere in that vast expanse of territory, radiating from the common focus of the region at the base of the Celestial Mountains. Such types are frequent in Kouenloun, India, China, Malasia itself, Polynesia, Micronesia, Japan, and other Pacific isles to the very coasts of America.

At both ends of the lines followed by the southern current of humanity and its northern branch, from South-western Asia and India to North-eastern Asia and the western part of the American Continent, do we meet with almost perfectly pure representatives of the three great parent races. We observe them in the Western Himalays, in Assam, and Hindu-Koo. Such are the negroid tribes still living in Cashmere, certain parts of Kouen-loun, Nepal and Assam; also the Finnish races found here and there from Hindu-Koo to the frontier of China, and from the sources of the Ganges to the mouths of the Godavery; the Siah-Posh, whose territory adjoins the Pamirs, and who are pure Aryans, as well as numbers of Brahmins in India who very closely approach the pure Aryan type; in the Andaman Islands; among certain hill-tribes in Sumatra; in the interior of Borneo; in the Celebes and Papuanasia, where we sometimes meet with negroes of a more abject status even than the Bheels of Hindustan.

The same thing is true of certain Manchoo tribes, and of the inhabitants of North-western Korea as also of those of Mandana in North America, where Aryan types are abundant. Not only do we know that the negro race once existed in the purest state in America, but we also still meet with indubitable traces of the blood of this race in the peoples inhabiting that Continent. Finally we have in the Esquimaux of North America the most perfect known representatives of the Finnish type, while several Indian tribes in Mexico, California, and Peru present the most striking resemblance to certain branches of the Chinese race.

University of Illinois at
URBANA-CHAMPAIGN

find among them a series of forms which, by sometimes almost insensible gradations, show a degeneration into that state of primitive barbarism, represented in the above-cited localities by Finnish and Melanian types of the present description. Owing to the intermedium of the mixed races, which were more or less related to the Aryan stock of Indo-China—the Burmese, for example, who are so closely related to the Malays of Binna and Daya—through the agency of the Dyaks of Borneo, the Malays of Keddah, of Sumatra, the Celebes and the Philippines; and through the natives of Hawaii, Formosa and the Marianne Islands,—the Finnish and Melanian types of the Himalayas fuse themselves, so to speak, in the finest types of the Japanese Archipelago, so rich in Aryan blood; while through the lowest types of this Island Empire, and through the Aleuts, the Kamschadals, the Esquimaux, and certain Californian peoples strongly impregnated with Melanian blood, we are gradually brought back to the observation of that state of primitive barbarism of which the Himalayan types are the exponents.

Such is the scene which meets our gaze everywhere along the lines followed by these two great human currents. But so soon as we look beyond them and wherever in this vast region we no longer meet with the waters of the Pacific or the arid deserts of Asia, we come suddenly face to face with the abject primitive barbarism of the Finns or Melanians, just as it was when, ages upon ages ago, it prevailed in Yamala, or Lemuria, its cradle.

The same condition of stagnation is observable in the state of morals. Throughout this vast expanse of peninsular, insular, or continental lands, all those peoples who, either owing to the effect of the geographical position of the lands inhabited by them, or to the circumstances of the times in which they lived, remained forever or only temporarily, completely or only partially, outside of the elevating influences set to work by the two great human currents, appear before us in the possession of intellectual and moral traits reproductive of those of the Finnish and Melanian races, either pure or mixed, in a measure or in direct ratio to the duration and rigour of the seclusion in which they were kept away from the influx of these elevated race influences. It is quite easy to prove this proposition by citing examples. We have said that there is every reason to believe that the immense region known as "Lemuria," which, once upon a time, stretched along the equator from Africa to a very distant point, in the opposite direction, in the Pacific, was originally peopled by a race of negroes hardly four feet high. The Gougous of Sumatra, who are covered with hair like apes, are possibly the last representatives of this once mighty race. Somewhat above these stood the Endamenes, who are still to be found in the mountains of Southern Asia, Sumatra, Borneo, New Guinea, and several other islands. It is most likely that these Endamene negroes owe their elevation above the level of the Gougous, to having mingled with Finnish races more or less imbued with Aryan blood. These impure Finns must have descended from the heights of the Himalayas in an unknown epoch, and their type is perhaps preserved in the Punans of Borneo, who belong to the order of sea-faring races. So far our investigation of this subject has been based on conjecture merely, but we now enter into the domain

of facts. Just as the Gougous of Lemuria may, according to our hypothesis, very well have been elevated to a higher rank in the human hierarchy by admixture with the Punans of Borneo, so the Endamenes, who, according to the same hypothesis, were the offspring of these racial marriages, evidently must have been elevated by mingling with races coming from India and Arabia. They begot thus a new race, viz., the Malays. The more intimate and longer continued these intertribal minglings were, the more marked became the elevation of this negro race. The Malacca Peninsula, Sumatra and Java are the places in which the Hindû and Arabian colonists appears to have settled most numerous. And it is just there where the Malayan type is most accentuated. Leaving in its turn its original habitat, this Malayan race spread out in the direction of the Pacific, and grafted itself upon the Endamenes, who had not yet been elevated by the admixture of Hindu and Arabian blood. Sea-farers of the region once covered by Nan-youé have for 1,800 or 2,000 years traded with the same negroid peoples with whom the Malay race mixed; and wherever these two races had relations with Melanian peoples, they gave to the latter the physical and moral characteristics peculiarly their own. In New Britain, New Ireland, the Solomon Islands, the Charlotte Islands, the New Hebrides, New Caledonia, Loyalty Island and New Guinea—where we know that the Chinese and Malays have long been accustomed to carry on trade—the blacks, especially those dwelling on the coasts, strongly resemble the two races in question. This is particularly the case at Guebes, Waigeon, Salwati, Gammen, and Bulenta. At Santa Isabella, one of the Solomon Group, Chinese characteristics are of so marked a nature among the indigenous Melanians, that they go by the name of "Black Chinese." But at certain places in the Philippines, which we know by tradition to have been colonised by Malays coming from Borneo and Malacca, the native blacks look wholly like Malays, while their language bears many points of resemblance to the Malay tongue. These blacks have been given the name of Tagalos. In the central archipelago comprising the Mulgrave, Marshall and Gilbert groups, often visited by Malay and Chinese traders in ancient times, the complexion of the autochthonous negroes has come to be a dusky copper, with the exception of those living on the two harbourless atolls, unapproachable to stranger merchants: these isolated negroes have consequently kept their primitive black type. There is the same striking contrast between the races of the New Hebrides, who are tall, with well-developed foreheads and almost aquiline noses, and the wholly unadulterated Melanians of the other islands not far from this group, one of which boasts of the very ugliest negroes in the whole of Oceania. In Ceylon, which was for so long a time the principal depôt of the trade between the Occident and Orient, and where we have found successively, engaged in trade, the Kushite Arabs, the Aryan Hindûs, the Persians and the Romans, the native Melanian population gradually assimilated Aryan features of a very pronounced type. The people of the Malacca Peninsula, which seems to have been the gathering-ground of the first civilisers of the Endamenes of Malasia and other Pacific islands, reveal, especially in the case of the women, characteristic features of a much

superior kind than those possessed by the inhabitants of the neighbouring islands. For these islands, owing to their insignificance, were not of a sufficiently tempting nature to cause the first civilisers, who were, beyond doubt sea-faring warriors and traders, to make a stay there. The same train of reasoning holds good in the case of the little harbourless islands off the coast of Sumatra. The islets have remained almost as isolated from the rest of the world as the wild mountains of Sumatra, where the Mishmees still dwell, and are inhabited by pure-blooded Endamenes.

It is particularly on the coasts of Sumatra that the autochthonous negro races must have undergone the most far-reaching racial modifications, by mixing with colonists coming from the north and west; and it is, indeed, in just such localities where we find the most complete effacement of the primitive Endamene type. The Abungs are probably all that remain of these early hybrid coast-dwellers. They represent the position of those who were later on driven from the coast to the interior, or confined to the mouths of certain streams of water, where they led a wandering life. The oppressors in this instance were a new race of colonists, coming this time apparently from India. The Endamene characteristics of the Abungs are less obliterated than those of the other aborigines who mixed freely with the colonists. To the latter groups belong the Batas, among whom traces of Hindu civilisation are visible. These Batas having, in their turn, been forced to seek refuge in the interior, owing to the encroachments of other invaders, did not make the same degree of progress as those who, keeping to the coasts, mingled with the encroaching strangers. Like the Endamenes, the Abungs, from the very day on which they condemned themselves to a life of isolation, either remained stationary or else retrograded in civilisation.

An analogous spectacle meets our eyes much farther north, in the Marianne Islands and Japan, for instance. The Finnish races do not appear to have gone from the north of Asia in the direction of the Pacific isles—after arriving there from their birthplace on the high plateaus whence the Yangtse Kiang rises and the great rivers take their source—beyond the limits of the Marianne Islands; while the northern colonies of the Melanian races of Lemuria were not of any magnitude beyond the boundaries of the Philippines, except in archaic times. Indeed, in most cases, whatever portion of the blood of these Melanians found its way farther north, was completely neutralised by that of other immigrants belonging to highly Aryanised races, coming both from the north and south; in consequence of which, all the characteristics peculiar to the first class of colonists were almost entirely effaced. This is why it is so difficult to affirm the presence of any Melanian traces among the Marianne Islanders and other northern Pacific insular peoples. We may explain after a like fashion how it is that the traces of Indian civilisation—which we know to have reached both of these island peoples—are also of so circumscribed a nature. Traces of Hindû civilisation were obliterated in Japan by other race-influences which originated in the north-west, i.e. those of China, Tartary, and the Fouyu region. But as these race-influences did not get as far as the Mariannes, the institutions, habits and customs of these islanders preserved the

same general features which they owed to the civilisation of Malabar, until the epoch in which this group was discovered by Europeans, in the 16th century of our era. On the other hand, in the same period of time, the characteristics of like origin traceable in the institutions, habits, and usages of the Japanese, were so greatly changed in kind that the discovery of their source has been made in consequence one of the most arduous of tasks.

In Europe, where at a very early period Aryan races were found in large numbers, coming from the north and west of the Asiatic Continent, we meet with no other vestiges of the one-time presence of the Finnish race than those of a fossil nature which have been brought to light in several places. In America, on the contrary, we come across this race of yellow dwarfs in not a few places. It reappears in the guise of Esquimaux, who, shut out from the rest of the world by the icy solitudes they inhabit, have ever been almost completely free from blood-relationship with other racial groups coming from Asia. The territory of the more southern brethren of the Esquimaux has, however, quite often been invaded by such racial influences, resulting in the birth of the Aleuts, the Tinnah Kinai, and Koniagas, all of whom are of well-nigh gigantic stature.

All the races, tribes, and people of Southern Asia and the Pacific isles in whose veins Finnish or Melanian blood, or a mixture of the two in various proportions, predominates, with or without an addition of an Aryan strain, are universally addicted to anthropophagy or tattooing and frequently to both customs. Some of them have no social organisation worthy of the name; several live in a condition not far removed from that of the beasts. But all the people living either in the immediate vicinity of the regions thus still in a barbarous or semi-barbarous state, or in places more or less distant from these unregenerated races, who have, on the contrary, been subjected to the various racial distinctions brought into energetic exhibition by the one or the other of the two great currents of humanity, enjoy a certain degree of civilization, corresponding, in each case, to the more or less favourable circumstances attendant upon the development of those influences which have thus happily affected them. Of such a description are the Aryanised peoples of India, Ava, Pegu, Martaban, Malacca, the coasts of Sumatra, Java, the Celebes, some parts of the Borneo littoral, the Philippines, Formosa, the Carolines, the now no longer extant Marianne Islands, the inhabitants of the Riukin Archipelago, and lastly the Japanese themselves.

A study of the legends of Japan leads to the conclusion that, before being subjected to the race-dominance of the northern currents, the inhabitants of some portions of this Island Empire were in a condition analogous to that of the Esquimaux or certain peoples of the Pacific isles. The inhabitants of Hawaii have several times experienced changes in their social condition, under the influence of the southern current of humanity. The barbarian ancestors of these two insular peoples were cannibals and practiced tattooing, as we have seen above.

Among the common institutions, usages, prejudices and superstitions which serve to illustrate the social condition of some of those peoples, between India and North America, along the road followed by the southern current—the social status

appearing to be the same as that elaborated by their semi-barbaric ancestors—we may note, besides certain more or less modified forms of cannibalism and tattooing, the use of poisoned arrows, government by women, phallus-worship, human sacrifices, the fear of the spirits of the dead and the consequent custom of changing one's residence upon the decease of relatives, the belief in dreams being communications of the gods, the habit of pulling out the hairs of the beard, the fondness for believing man to be descended from certain animals, and the custom, derived from this superstition, of wearing artificial tails and elongating the ears.

As we find this predilection for long ears prevalent also among the Finnish nations of Northern Asia, we are tempted to conclude that the superstition with which we connect this strange fancy was called into existence by the explanations given by some of their early civilisers, of the theory of the successive evolutions of eternal matter,—a theory which is at the base of the cosmogony of the navigator OANNES. The one point in this cosmogony which struck these credulous barbarians was that in which it culminates, i.e. the derivation of the human type from the highest animal forms. In consequence of this, they made that theory the basis of their social organisation. So true is it, as the Brahmins and Jesuits tell us, that when we fail to keep elevated religious ideas on the level of the inferior races whom we desire to instruct, they do this of their own accord, owing to a natural tendency which has the same fatal results among them as has the law of gravitation with regard to the whole universe. It is with the aid of this fatal tendency among the races that we may explain how it is that, after Brahminism had travelled throughout Indo-China and the Pacific Isles and the teachings which had originated in Upper Asia had found ready listeners as far as the Japanese Archipelago, upon the institution of marriage being introduced into these two regions, it prevailed only in such forms as were most likely to suit the intellectual and moral tendencies innate in these peoples. The wife has never been among them anything more than the first of those female slaves with whom the man was pleased to see himself surrounded. While the youngest and the most beautiful of these slaves served to gratify the passions of their lords under the style of concubines, the healthiest and strongest of all, and perhaps those of the noblest lineage, were chosen to perpetuate the family name in their offspring, under the style of wives. And this is why, of all the institutions we find among these peoples, marriage is the one connected with the least number of ceremonies. The celebration of the nuptial bond, when compared with the ceremonies observed on the occasion of funerals, the birth of children, or of the choice of names for such offspring at a given period, or even of their reaching the age of puberty, as a rule, is but an insignificant ceremony. We ascribe the origin of the institution of marriage itself to the same racial influences of those people to whom we are also inclined to attribute the excessive use of baths as an extension of the idea of purification by water; also the habit of counting by years of five or seven months, the fundamental idea of which was based on the solar influence, in connection with the bi-annual harvests reaped in Malasia and Japan. The introduction of

this latter innovation was perhaps the result of these peoples having been initiated in the arts of agriculture by those who imposed their civilisation upon them,—be it that they came from Upper Asia, or that they were natives of India.

We come then to the institution of slavery, in divers forms and as a substitute for the practice of devouring prisoners-of-war; the custom of paying a certain price for a wife, which is a modification of that of carrying women off by force; the abolition of the sanction given by custom to the gratification of the lusts of the flesh in an unnatural manner. But as the reformers aimed too high for these people, there was an unavoidable reaction among them. Hence came those artifices to which these peoples had recourse in order to veil their moral weakness, of which they were fully conscious though feeling unable to combat successfully against them. Such is, for example, the institution of keeping young pages, whom until quite recently the nobles of Sumatra and other Pacific Isles liked to have about them, and who wore proudly on their dress the coats-of-arms of the masters whose unnatural lusts they served to gratify.

These civilisers appear to have met with better fortune in another sphere of influence. We meet thus here and there, among the same peoples, with useful, precious or specially valued possessions—for instance, certain animals eaten by man, as the pig or fowl, and even wine—sometimes even of human figures of baked clay, used as substitutes for human sacrifices in the offerings made to the gods. This custom is most strongly expressed in the Polynesian *taboo*. Prior to this innovation, the custom of immolating human beings, either on the altars of the gods or at the tomb of the dead in funeral ceremonies, seems to have existed along the line which stretches from Phœnicia to Japan by way of India, Malasia, and Polynesia. It has not even yet been abolished in a number of localities.

A fact which should be particularly noticed in connection with these changes is that they were accomplished among these peoples with such rapidity that the last one adopted invariably effaced the traces of those by which it had been preceded. It would seem that, admirably as these peoples have been endowed with all that appertains to intelligence, they are nevertheless organically inferior to the Aryan races of Europe and America, so far as their creative abilities are concerned. A special aptitude for assimilation takes, in their case, the place of inventive genius; and they are thus doomed to reflect, as in a mirror, all that which, in the course of the ages, has gone beyond them, consequent upon the progress of civilisation, of which the Aryan races still lead the van. Hence the erratic and impersonal character of all the progress they make, as well as the sudden ebullitions to which this character gives rise, despite their great conservatism. This is connected with the fact that they are in possession of remarkable powers of clairvoyance. And whenever their racial pride—which is much more developed than in the case of the Aryan races; or their interests—to which their practical good sense, bequeathed to them by their Finnish ancestors, makes them so thoroughly alive—are at stake, so long as they may be urged to action by the sight of a model or the exhortations of a teacher,

they never hesitated to step out of the rut in which, in all other circumstances, they would infallibly have been content to remain. This is the secret of those far-reaching and rapid changes which took place among the nations of Malasia consequent upon the introduction of Mohammedanism in the beginning of the 16th century; and also of those marvellous metamorphoses in Japan after the opening of this country to foreign commerce in our own days. Being thus constituted by nature, these peoples no sooner find themselves face to face with a civilisation superior to their own, than they know no rest until they succeed in assimilating it, being well aware that their national independence depends solely upon their success in so doing. But if left to themselves, they would remain stationary. And this is why at the same time we observe spasmodic progressive tendencies among them, we find them strongly averse to all change, and condemning it in principal in the most emphatic and pre-emptory manner.

The abolition of human sacrifices, as noted above, had probably something to do with Brahminic India. But long before the Aryo-Hindûs came to India, from which time dates the diffusion of Brahminic dogmas in the world of the Pacific, the sun of civilisation had shone on this great ocean, along the course taken by the southern current of humanity and its northern arm. Civilisation had come hither, as above pointed out, from the Himalayas, and thereafter from Kushite India, probably by way of Burma, Ava, Pegu, Martaban, and Malacca. It is to this early civilisation that nearly all of the arts known in these island regions, is attributable. Such arts included the use of a calendar, which must have undergone frequent alterations in later ages, as is shown by the calendar in use among the Battas, which is evidently connected with Brahminic India; the custom of keeping a register of the great phenomena occurring either in the heavens or on earth, and also of the most noteworthy events of the political and social history of each reign; the art of weaving the patterns of dress-stuffs and the method of dyeing by rubbing in the colours; the use of several kinds of musical instruments; dramatic celebrations; the domestication of the majority of the domestic animals; metallurgy and working in iron; and the manufacture of those large vases or jars of which we have elsewhere spoken at length. We remember that the use of such jars or vases would appear to have been unknown in Western India in the epoch in which the Rajah MARONG MAHA WANG-SA reached Keddah from South-western India. It was at this spot in the Malacca Peninsula that he heard of them for the first time, or, at all events, that he received them direct from the manufacturers; while everything tends to show that he was the first coloniser coming from Malabar, or, in any case, personifies the first colonies planted by the Malabarians in this part of Indo-China. Immediately after landing in this latter region, we find him sending to the north for these vases, to a place which, to judge by the description of this incident as given in the "Annals of Keddah," we believe to have been located in the basin of the Irrawaddy, probably Ava.

The custom of colouring the teeth, which is still kept up by both sexes all the way from India to Japan, was also introduced probably from Indo-China into the north and east of the Pacific, by way of Tong-

king, Siam, Malasia, and the Marianne Islands. This curious custom would appear to have originated in India, where it seems to indicate an Aryan reaction against the tendency of certain barbarous peoples to imitate animal forms by artificial means. Although the Hindu ladies used to elongate their ears, they told one of the first European explorers of their country, in the 16th century, that they blackened their teeth by chewing betel-nut, "in order to keep from looking like monkeys." We meet with this practice in Venezuela; the Marianne Islands; New Charlotte Island; Tongking; Siam; the Kuriles, where the lips are always painted black when the teeth are not; among the Mayas; in the Celebes, where the teeth are painted black and red, and those which have been extracted are replaced by artificial teeth of gold; in the Philippines where the natives colour their teeth black or red or incrust them with gold; in Java, where the teeth are not only coloured but filed to a point. The custom of covering the teeth with gold seems to have come from Szechuen. It is a noteworthy fact, in connection with the above, that, upon the introduction of modern dentistry into Japan, several atavistic tendencies made their appearance. Not only are extracted teeth frequently replaced by solid gold ones, particularly in the case of the incisors and cuspids and therefore most conspicuous, but even artificial plates are quite often provided with teeth of solid metal, in places where they are most likely to strike the eye. The interstices between the upper incisors are also frequently filled up with gold.

The custom of erecting wooden dwellings on high piles in the rivers came perhaps also from the west by way Indo-China. At all events, it seems certain that the ordinary interior arrangements of houses and the shape of their roofs are the same all the way from Malasia to Japan. And as the use of these characteristic dwellings would appear to have been general, ever since the days of the remotest past, around the hearth of the primordial civilisation of Central Asia, there is reason to believe that this style of architecture originated in that place. We met with traces of this description of building among several semi-civilised peoples in India, Indo-China, and the Pacific Isles, while Chinese and Japanese authors speak of such dwellings as having been used in their respective lands in archaic days. There is tangible proof of their having been built on the banks of the Nile, in Switzerland and other parts of Europe, in epochs dating back to the last days of the diluvian age in this Continent. Until that time the people seem to have lived, as a general rule, in huts built in the trees or in caves: the latter class of homes having given rise to the idea of subterranean dwellings, while the airy tree-huts evidently suggest the construction of houses on piles. These pile-dwellings had moreover the great economic advantage of being placed above streams, which, in ancient times, must have been to semi-barbaric peoples what they still are, *i.e.* almost the only roadways by which access was comparatively easy either to the mountains or the sea, from which, either by hunting or fishing, the inhabitants obtained all that they needed with which to clothe and feed themselves. Dwellings built on piles are to be met with among the Haidahs of Columbia; the Mayas; in New Zealand; Borneo; in Sumatra, among the Lampongs in Java;

among the Sabanos of the Philippines; and the inhabitants of Venezuela. We find them also in the island of Mindanao, which belongs to the Philippine group, where they are of exceptional size and beauty, while their plank floors are covered with matting. The habit of settling by preference on the banks of rivers still prevails in a number of countries: in Malasia; Kamtschatka; New Caledonia; and among the Columbian Haidahs. The inhabitants of Foukoue had the same marked predilection. The subject of various styles of buildings as being substitutes for the most primitive habitations of the human race, leads us to mention two other usages, very wide-spread throughout the Pacific. These are (1) the practice of letting the smoke of the household fireplace or hearth pass out through an aperture in the roof, and (2) the erection of dwellings with dry stones. The former is noticeable in the lacustrine region of North America; among the Bayagoulas of the same Continent; the Mayas of Central America; in Ceylon, where the smoke is made to pass out through the doors and—a noteworthy exception—no aperture in the roof is made for the purpose; among the Hyperborean Koniagas; the Tinnch; the Thiankeets; the Aleuts; the Nookas of Columbia; the Haidahs; the Californian tribes; the Esquimaux; the Samoyeds, who live in tents instead of houses of wood or stone; the Ostiacks; the Euluth Tartars; the Tartars in the neighbourhood of Krasnoyarsk; the Kamtschadals; the Moho, who lived in caves with an opening at the top, which seems also to have been the case in Japan, particularly in the vicinity of Osaka.

Houses built of dry stones, *i.e.* laid without mortar, are found all the way from Arabia to the American Continent, passing through India and the Pacific Isles, including Japan. We meet with them in Arizona; among the Mound-builders; at Xochicalco, Mexico; at Oajaca and Guerrero; in Guatemala; Peru, in the district of San Tomaso; the citadel of Cuzco at Aymarae, where dry stones only are used; in North Guatemala, in Foukoue, Tonga, Tahiti, in the ruins of Martaban, Arabia, Java, Ceylon, where those in which this style building is traceable date, it is believed, from the beginning of the Christian era; at Mavalipura, on the Coromandel coast, in Greece, Italy, Sicily, and Egypt in the Upper Nile Valley. A Stonehenge in miniature is to be found in this last-named region, besides which there are ruins which appear to date from a day anterior to the arrival of the Aryan Hindûs in India. They look very much like the Arabian, Syrian and Phœnician ruins of North Africa and North and South Europe. The remains of ancient buildings made of dry stones at Newgrange, Ireland, are very much like those found at Mycænæ. Similar buildings were formerly to be seen in Phœnicia, the inhabitants of which land (according to LUCAN) followed the Egyptian style of architecture; and we may still meet with such specimens at Costa, in Italy; in Boeotia, Cirgalos, and Mycænæ. The famous *Teocalli* of Anahuac, Mexico, resembles, according to HUMBOLDT, the no less celebrated mausoleum of Belus in Ancient Babylon. The custom of perpetuating in poetry, as a vehicle of oral tradition, the great deeds of ancestors, belongs most probably, as we have seen elsewhere, to the most ancient period of the Aryan race, and may very well have reached the Pacific by way of Kushite

Original from

India. We may remember that the same custom existed in Archaic Arabia and in India; thereafter among the Komrings of Sumatra; and in the other islands of Malasia, Polynesia, and Micronesia; in the Japanese Archipelago, and the region of the North American lakes. The liking for handsome mats must have originated in Arabia. The skill displayed in manufacturing such articles by the majority of the semi-civilised nations of Malasia, Polynesia and other Pacific islands, including Formosa, the inhabitants of the Riukiu Group; also highly civilized Japan, and the Korean Peninsula, is simply astonishing. The different customs alluded to in the following list are of unknown origin, but would appear to have connection with the Kushite order of civilisation, and are to be met with along the course of the southern current of humanity, crossing the Pacific to Japan. These are (1) the custom of keeping in hostels a number of women of easy virtue, whom the guests of the inn may use at their convenience, by recompensing them with some little gift; (2) that, of not considering a woman one's concubine until she has been permitted to take up her residence in one's own house; (3) that principally practised by warriors, of choosing a made friend with the intent of gratifying unnatural desires, and the ceremony attendant upon the choice of this friend. This custom is to be met with in both North and Central America, and as such men-women have been observed in Tartary, Korea, and Japan, it is quite on the cards that the unnatural practice reached the Pacific by way of both North-eastern Asia and Malasia; (4) the custom of celebrating the attaining of the age of puberty by one's daughters. This ceremony is conducted with all the pomp the family is able to make, and numerous presents are distributed on the occasion of its celebration. The belief that all maladies are visitations of the god, and the custom of erecting little hillocks or mounds over the graves of the dead and of placing in these graves, with the deceased, the objects most frequently used or most highly valued by him or her;—all these seem to have been introduced from the West both by way of North-eastern Asia, Arabia, and India. It is, however, difficult to trace up the origin of the usage of presents upon the loss of a relative, one which obtains in the Pacific and at several places in America. The institution of caste came to the East through the agency of the two great currents; to China by way of the north-east; to Japan by the same route and also from the south-west. The superstition with regard to volcanoes seems to have reached the Far East along a southerly route. The same holds good perhaps in the case of the prostitution of slaves, and their giving up a certain portion of their earnings to their master. We have already stated that the employment in clothing of a sort of dress-material made out of the bark of the paper-mulberry should be ascribed to Java and Egypt; while that of fermented liquors made by the process of mastication is unknown. No longer traceable is, moreover, the origin of the custom of a husband passing a necklace around the neck of his wife on the day of their marriage.

The period during which the western portion of our hemisphere thus exercised an influence over the Japanese Archipelago, by way of India, Bengal, Malasia, Kiaotchi and other maritime states of Cochinchina and Nanyoué, was of very great length, for it began—as we stated

on the first page of this chapter—in those days in which the Kushite form of civilisation commenced to make way in the Orient of our globe. It is owing to the influences set at work, under these conditions, by the great southern current, that the peoples of the southern portion of the Japanese Archipelago were endowed with those physical, intellectual, and moral traits in the possession of which we find them in the "Wha (X) Age" of Chinese authors; while those which at once attract our attention in the west and north of this island group, were introduced into those portions by the great northern current. When, later on, these two classes of racial influences began to react upon each other, a series of mixed traits were produced throughout the whole extent of these isles, and there they prevailed until the moment in which Chinese race-influences, reaching the Archipelago by means of the great northern current, gave birth to types of race and forms of civilisation which were perpetuated until the appearance of the Aryan element coming from Europe and America in the 16th century of our era. This Aryan element was introduced from all sides, i.e. by the great southern current and its western branch—interrupted for ages but originally brought into movement by this same Aryan race-element—and by the great northern current, which, from the very beginning of civilised life on the surface of our globe, has never ceased to exert an influence in the direction of the north-east.

We ought to add, perhaps, that the work from which this chapter is extracted was compiled several years ago, though arrangements for its publication are not yet completed.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

THE LATE PORTUGUESE CONSUL-GENERAL.

TO THE EDITOR OF THE "JAPAN MAIL."
SIR,—Friends in Tokyo were good enough to send me, by the last mail from Japan, copies of the *Japan Daily Mail* of the 3rd instant, containing the article you were so kind as to write, contradicting the many false and scandalous accusations that have been made against me since I left Japan, through the medium of several newspapers both in Japan and Shanghai, and more particularly in a letter published by the *Kobe Herald* of the 26th July, under the signature of "One Aggrieved."

The charges brought against me both in my private and official capacity are so plainly extravagant that no right-minded and conscientious person, even though unacquainted with the facts and my humble person, could believe them, except on the supposition that I had been temporarily deprived of my senses. I might consequently treat my traducers with the contempt they deserve. Still, it is necessary to remember that the object really in view has never been, I am persuaded, to attack me personally—for I am conscious of not being such an important individual that newspaper editors would think it worth while to devote time and space to writing about me. The true origin of the trouble is to be sought in the animus of those who are ever ready to seize every possible chance of attacking the Japanese Government. These persons have detected in the suppression of the Portuguese Consulate-General in Tokyo, an opportunity to make political capital. They understand very well that without a breach of official confidence the general public, both in Japan and elsewhere, could not possibly be made acquainted with the truth; while, on the other hand, the gravity of the affair naturally attracts attention to everything written about it. Prompted, therefore, by their own bias, and misled by unscrupulous informants, they have given publicity to falsehoods involving not only my reputation as a Portuguese Government official and as a man who has striven to do his duty conscientiously, but

also the good name of His Excellency Viscount Enomoto, late Minister for Foreign Affairs in Japan, as well as the fair fame of the Japanese Government.

I apprehend that the promoters of this iniquitous campaign, apparently directed against me but in reality inspired by a desire to bring discredit on the Japanese Government, thought that they could pursue their plans with impunity. They trusted that considerations which I need not define would deter me, far removed as I am from the scene of attack, from instituting legal proceedings against my traducers. But in justice to my good name as well as to the reputation of the Japanese Government, at whose hands I have always received the highest consideration, I shall not let the matter rest, but will adopt speedy steps to obtain legal redress against the newspapers which, regardless of journalistic propriety, have circulated grossly libellous accusations against me since my departure from Japan.

I thank you, Sir, for having, in the cause of justice and unsolicited, stood forward to defend an absent man who has the consciousness of never having given cause for such cowardly and unjust attacks. Public opinion, I am persuaded, will not hesitate to pass sentence on journalists who, instead of seeking to be guided by the strict truth in matters of general interest, have degraded their honourable profession by conspiring to persecute a man who, through no fault of his own, but in consequence of the economical embarrassments of the country he has served for many years without reproach, finds himself suddenly placed in serious difficulties. The accusations preferred against me by these writers would, if left unrefuted, greatly accentuate my embarrassment by closing to me all avenues of access to honourable employment for the support of my family and myself. Diplomatic reserve, however, forbids me to enter into full explanations in the public press. I shall have recourse to other and more efficacious means.

I authorise you to give publicity to this letter if you deem it advisable, in order that my friends in Japan may know that I do not remain indifferent to the scandalous charges advanced against me.

I remain, yours truly,

J. LOUREIRO.

Macau, August 18th, 1892.

THE MOENCHENSTEIN BRIDGE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Referring to "German Subject's" remarks anent bridge failure at Moenchenstein, I beg to inform him, through your paper, that I have had the following information sent me by my friends in Europe:—

"Bridge failure at Moenchenstein.—This bridge was originally stated, though how we do not remember, to have been built of material made in Germany, but the statement though widely accepted at the time, was doubtless an error. In the Official Report made by experts afterwards to the Swiss Government it is stated that the original design by —, was modified by Messrs. —, the well known —Engineers, and the construction of the Bridge was carried out by them.

In the Summary of the Report, Professors W. Ritter and L. Tetmayer give their answer to the question as to the cause of the fall of the Moenchenstein Bridge, put to them by the Federal Government, as follows:—

"The Bridge was originally too weak in several parts, and defective in construction.

"The iron used was in great part not equal to the necessary requirements in respect of strength and toughness.

"The stability of the bridge was permanently weakened by the flood of 1881.

"The strengthening works, in 1890 were confined to a few parts, leaving other important weaknesses remaining.

"The train did not leave the rails before the fall of the Bridge.

"The principal cause of the accident was the weakness of the middle struts, the eccentricity of the connection of the struts with the main girders, and the inferior quality of the iron having contributed the result."

The Report is dated Zurich, August 24th, 1891.

You will thus see, Sir, that there is no proof that the material for this bridge was made in Germany, and I am sorry that I helped to circulate the report that it was.

A correspondent of yours, in doggerel verse some time ago, was witty at my expense, but I have heard of German business men putting forth, and wishing their clients to believe, quite as unlikely events as girdstones floating and worms devouring steel rails.

I remain, Sir, yours faithfully,

F.B.S.

August 26th, 1892.

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

AN ACKNOWLEDGMENT.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—To your kind appeal to my countrymen on my behalf, I am thankful to say that a very hearty response was made, not only by American citizens, but by residents of all nationalities in Yokohama. I take this opportunity to thank you for the *Mail's* effective efforts on my behalf, and the public who so readily put their hands in their pockets on behalf of my wife and young family. I shall always remember the kindness of the Yokohama community.

Yours, etc.,

GEORGE N. ARMSTRONG.

August 26th, 1892.

KARUIZAWA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It has occurred to me that a few lines on Karuizawa might be acceptable to the readers of your paper.

The popularity of the place as a health resort is evidently on the increase. With the railway over the Usui Pass, promised to be completed by the end of this year, a further incentive to this resort will be furnished. This railway in itself will be the finest piece of engineering as yet attempted in Japan, and will be a monument to Japanese talent in this direction. Running underground more than half the distance through the wild and precipitous gorge in some 25 tunnels, on a gradient requiring the cog-wheel traction system, the railway which thus connects the E. and N. Coasts, will add to the delight and comfort in reaching this place, though it may detract from its rural quietness. The weather has, if possible, exceeded its favourable record of years past, cool, bracing, and free from dampness, mist, and rain to a remarkable degree, it affords what the foreigner in Japan is in search of. The visitors to the place, most of whom stay during the entire season of from two to three months, number nearly 200 thus far. An accurate account makes the number as follows:—Families 34, children 63, single ladies and gentlemen 55. To this number we may add 9 who live about a mile from here at Usui Toge-mura. The number of houses built and furnished in part foreign style is 24, to which 4 ought to be added. These 4 have been built by a Japanese in the place where a veterinary school formerly existed, but which was discarded a year or so ago.

Just at present, Karuizawa affords an added interest, in the shape of a conference similar to the Arima conference, reported in your columns of last year. The first meeting was opened with an attendance of about 60 persons, in the gymnasium, which affords a pleasant assembly hall. The conference enjoys the presidency of the same person who presided over the Arima conference of last year, the Rev. R. O. Grinnan. Mr. Grinnan appeared first on the programme with a full and able paper on "The Qualifications of the successful Missionary." A few of the points are presented here. The successful missionary is "born not made," born, not only naturally, but especially spiritually. No one without this spiritual experience is equal to the task of turning the nations "For Christ's sake"—no other motive will bear one through the trials and discouragements. Every other motive must perform end in disappointment. The chief object of his work is to "form Christ" in the hearts and characters of those appealed to. Missionaries must join hands in presence of a common foe, and preach only Christ and him crucified. Thus laying himself on the altar of service for life will only insure full success. The sacrifices are various. In Japan outward afflictions do not count for much. But the missionary must drop into insignificance. Though settled and positive in his views, he must learn forbearance with the opinions of others. He is not to sacrifice truth and principles, but there is a time for silence which must be watched. The Japanese is not to be over-bearingly silenced, but gentlemanly forbearance will win the day if it is to be won. Elasticity of mind, so as to get broad views of questions and situations, but also stability so as not to lose bearings and be swayed by every wind and wave of doctrine, are requisites. The doctrines of Christ, not mere moral or sentimental reasonings, are the theme and centre of work. Japanese speculation on the pulpit here infect us readily. The fact that the Cross of Christ and miracles are often discounted is no reason for our wavering. We are servants of God, not of the people, in preaching. Hence be independent and do not become tools in the hands of others. For as tools to be used for pet schemes, and then to be discarded when better tools are found, we gain no man's love and respect. Be ready to work on all occasions, however small, for thus opportunities will offer more

important things, and the Japanese will give you their trust and respect.

Each ought to do what he is best fitted for, to preach, or to teach, or both as the case may be, and knowledge of the language is imperative for best success. To get at the heart of the Japanese is the thing needed, and this can be done only by meeting them in the heart's own language. Old and ruling Japan is to be known only thus. Through English, only new Japan, i.e., the student class is touched and there but on the surface often. The *obasan* is a most important person to get hold of. The advice of some Japanese that the missionary is only needed to teach them English, is a great mistake. Whole-hearted time for 10 years will conquer the language somewhat. Sacrifice outside work to do this. Practice constantly. Example of children is the work here. The language must be first and always. A number of detailed suggestions followed here.

Relations to the Japanese. We must be one with them, must love them and sacrifice all for them. Foreigners, especially at present, have great difficulty in conquering here, but love will conquer. Despising or looking down upon others never wins confidence. Get at their ways of thinking—mingle with the people,—the masses and their leaders.

Difficult to know how to treat visitors. To sit, eat, and sleep as they do is a help here. Japanese customs and laws are to be respected. Japanese plainness often fails to understand the complexity of missionaries' houses. Yet we should not live too meanly so as to forfeit their respect. Never show temper. The strength of the national spirit occasions much difficulty, and forbearance is here needed. Be not hard in money matters. Missionaries, as they are responsible to donors, and as Japanese are often bad financiers, must exercise oversight, but as we are foreigners we must not be unwilling to suffer for it.

Wisdom and love is the gist of all—wise as serpents—harmless as doves.

The evening was taken up by an address by the Rev. S. Swann on "Apprehending Faith" founded on Mark 11, 24. It is not the purpose to write at length on the evening service, as this is more devotional in its character. This audience bore abundant testimony to the excellence and zeal of the address.

According to our programme, Rev. J. W. Sawin should have addressed the conference this morning, but as he was hindered by circumstances beyond his control, Dr. J. C. Hepburn kindly addressed the conference on his and Mrs. Hepburn's personal experiences in Mission fields. The speaker began in his modest way, by stating that he was not a clergyman, and so had no text: he had been requested to give a talk on the best methods for acquiring the Japanese language, but as every student has his own method it seemed best to him to give instead a general talk on experiences of the past. The Bible had always been his comfort and only sure guide. The doctor stated that he was now in his 78th year and had been engaged in Mission work since 1840 (fifty-two years), and as God led the children of Israel through the wilderness by the pillar of fire and the cloud, so has the Heavenly Father graciously led him; as God faithfully kept his promises to Moses and Joshua, in like manner have the Divine promises been kept with reference to him, and during all these years His presence had been with him and his wife. When a student in the University of Pennsylvania he became a Christian and soon after he consecrated himself wholly to the Lord's work, and he never had an occasion to regret the step taken. His father was a lawyer and greatly desired that he should follow the same profession, but lacking fluency of speech, he chose the medical profession instead, but this was all ordered of the Lord, for had he become a lawyer he would never have come to these ends of the earth as a Missionary of the Cross.

While a student he was thrown into the company of two men who became earnest missionaries, and their influence helped him to decide to become a Missionary. One of these men was Richard Armstrong, the father of General Armstrong, who is now teaching in the institution for coloured people at Hampton. Richard Armstrong was one of the first missionaries to the Sandwich Islands. The other, Rev. Matthew Loyard went to Africa where he died after a short, but earnest ministry. Dr. Hepburn's mother had the Missionary spirit and was the president of a ladies' missionary society. These and other circumstances gave his mind a certain bent, and after practising medicine for three years in America, and after marrying his beloved partner, who had shared with him life's burdens and joys for fifty-three years, he cheerfully accepted a call to labour in Siam and left America in 1840. They were detained, however, in Singapore and spent two years there. When China was

opened, at the close of the opium war, many missionaries went to China from Siam, Malacca, and other places in the East. Six families of the Presbyterian Church, also went, and Mrs. H. and the Dr. were of the number. In a very short time four of the six ladies became ill and died, the Doctor's wife and Mrs. Young being the only ones spared.

He opened Hospital Work in Amoy in connection with Dr. Cumming, an independent missionary. Two of the male missionaries were drowned, one of whom, Walter Lowrie, was thrown in the sea by Chinese pirates. The malaria attacked all until at last Mrs. H. was reduced to 87lbs. weight, and so after six years of labour they were ordered to America and made New York city their home. Here three nice boys were born to them, all of whom died. In New York he renewed the medical profession, but also engaged in church work and spent two cholera seasons in administering to the sick.

After the opening of Japan, Mr. Wells Williams sent an urgent appeal that a medical man and one of experience be sent to Japan, and in the providence of God they were sent. They were 146 days in reaching the place of destination. Arriving in Japan they met at Nagasaki Messrs. Higgins and Williams, now Bishop Williams.

On arriving at Kanagawa, they noticed the white godown buildings and thought they would make good houses to live in. They knew of the strong antipathy of the Japanese to Christianity, and did not know that they would be permitted to land; on going to see the American Consul, they were told that missionaries were neither needed nor wanted, that the treaties were made for merchants, not for missionaries, and that the only way he could secure a residence for them in the country, was to register Dr. H. as physician to the Consulate and this was done. The Governor of the province set aside a temple for their use, (an old building that the Dutch Consul had rejected as a place not fit for a stable); however, the temple was made very comfortable by a little carpentering. The furniture that they brought with them consisted of only a few pieces, and they had to get along as best they could. The Governor sent servants, who came nearly naked and who constantly prostrated themselves whenever we returned to our house. In those days there was no meat, no potatoes, and no bread. The only meat we got came from the ships, and was kindly sent from time to time by generous captains. They could buy Japanese rice, fish, and sweet potatoes, eggs, and sometimes fowl.

There was no such thing as soap, and the wash board was practically introduced into Japan then by Dr. and Mrs. Hepburn. There was only one Japanese phrase that he learned before coming to Japan, and this was taught him by Dr. Williams, viz. *Kore wa nanni?* Dr. Williams had taught him to say *Kore wa nanto iu mono?* but the shorter form was easier to remember.

The first word that he learned in Japan was *Abunai!* The carpenters had built a fire near the straw roof of the temple, and the Dr. said in English "that is dangerous!" whereupon the carpenter understanding the motions, if not the words said, *Abunai?* Very many of the first words that he learned have some historic connection.

There were no grammars nor dictionaries in those days, and the only help at hand, in the way of books, was a vocabulary, translated from the Dutch, by Dr. Medhurst, who resided in Batavia. The only teachers to be had were the servants, carpenters, workmen generally, and visitors who came from curiosity, but whom they made use of. Dr. S. R. Brown and Dr. G. P. Verbeck and Dr. Simmons came out as Missionaries soon after, under the Dutch Board, and excepting Dr. Verbeck, who stopped in Nagasaki, they formed a part of the circle at Kanagawa. After a while Hoffman's Grammar was sent them leaf by leaf from Nagasaki. The learning of Japanese was found especially difficult.

Dr. Brown came running in one day and said, "I have found the future tense for I have just heard a man say *Miyonichi ame furimasho*."

It was not until a year had passed that they succeeded in securing a teacher. One day a man named Sadajiro came and said he would teach Japanese for English. This man became quite noted in Japan and died only a few years ago. With him the translation of Matthew was begun, but when they had finished translating about a chapter the man refused to translate more, as it would cost him his life. This man, and also the men who were sent as guards were spies who doubtless reported to the Government every thing that was done. The doctor's teacher soon left him on account of fear, and then he secured another. In 1861 he opened a dispensary and carried it on for only a few months when it was suddenly stopped by the government. He had made the mistake of beginning it without

first asking permission. He then gave himself up for some time to the study of the language, and in acquiring a vocabulary for his own use gradually began the work of preparing a dictionary. Some merchants hearing of the work that was done urged him to print the book, promising to defray the cost of printing themselves; so, in 1870 the doctor went to Shanghai and published there the first edition of the dictionary. This work has now gone through four editions, and has served and is still serving a good purpose. The doctor said that he never thought that a man of his poor ability should ever accomplish such a thing, and the work was accomplished simply by perseverance. "If you would accomplish any good thing in life, my young friends learn to stick to your work!" In 1863 he began a dispensary in Yokohama and continued it for fifteen years. The walls of the dispensary were covered with prominent scripture texts and from these he preached to the patients who came for medicine. He also took charge of the Sumi-oshicho Church, the third Christian Church that was organized in Japan. The first Convention that met to consider the matter of Bible translation met in this dispensary, and as the result of this convention the following were appointed to translate the New Testament into Japanese:—Dr. V. R. Brown, Dr. D. C. Green, Dr. Hepburn, Dr. R. S. MacLay, and Dr. Nathan Brown afterwards joined the committee; others were invited but took no part in the work. The onus of the work fell on the first three members. Dr. Hepburn also was one of the three to translate the Old Testament. The Dr. said that the Japanese translation of the Bible is as good as the English translation made from the Original Hebrew and Greek, and this Japanese translation is destined to be a very important factor in its influence upon the language of this land.

There was no need that he should give an address on how to learn the language of the Japanese. "You have all the needed helps now and are young," said the speaker, "and so should succeed. I was a young man when I went to China, and learned more Chinese in two years than I did Japanese in ten years, but then I was forty-five when I came to Japan. My work is now finished here, and we feel that we are relics of the past, and soon we expect to leave Japan, not for long knowing what is before us, but fully trusting Him who has so faithfully guided us hitherto. We leave our unfinished work to you. Be not discouraged—stick to your work! You have a great Saviour and Captain who will bring you to certain victory, helping you to overcome all difficulties. "You will live, I think, to see this land brought to Christ, Japan made a Christian country indeed. The Lord be with you all."

The conference unanimously voted sincere thanks for the very interesting address of Dr. Hepburn. Dr. Hepburn also made some interesting remarks on the History of attempts at Bible translation into the Japanese language, but these we omit for the present.

Mrs. Hepburn then gave some amusing reminiscences, after which the meeting adjourned.

August 26th, 1892.

The third day of the conference opened with an address from one of two members of the Society of Friends, Mr. Samuel Morris, of Philadelphia. This gentleman and Mr. J. E. Rhoads being on a tour of inspection of missions deemed such an occasion to meet with missionaries of sufficient value to justify their journey to this summer resort. On the basis of Christ's words, in Ep. 17, 23,—"In them, and them in me, that they may all be one," &c., the speaker said,—these words are true in the present, and this oneness is a confirming evidence. Union with Christ and with one another, notwithstanding failures, is yet in great measure realized. Missionaries here all unite irrespective of denominational lines, as disciples of one Master. Hence our thought was to join with them, not as strangers but as brethren. This oneness in Christ's cause is needed, and in all essentials we do agree. We are near to one another in the highest and deepest sense. The remark that the professing church is full of antagonism and strife is much too severe, and sceptic and scoffer make the most of it. The nearer to Christ, the nearer to one another we are. Differences and divisions become less pronounced, and thus an undivided Christ becomes a growing strength in the Church. In mission work, this oneness is needed so that the people do not stumble, are not puzzled and dismayed by our differences. The comforter's work makes Christ more real, present, living, and will guide us out of intricacies into all truth. The Holy Spirit's work was here dwelt upon. Of this loving gentle teacher, we should be growing, deepening pupils. The worship of God is simple in proportion as it is "in spirit and in truth." Reverential stillness before God is deepest, truest worship and communion with God. The Holy spirit is needed to prepare the heart for prayer, short prayers like the

publican's reach the throne of grace very quickly. Thus we grow more simple and more reverent. The Holy spirit is mouth and wisdom, tongue and utterance in the ministry of the word. The call to the ministry is very precious, deep and involves much. "Without me ye can do nothing." Poor words are often astonishingly used. The Holy Spirit is a guide for daily life giving quickness of understanding in all things. Go not to neighbours rather to God for advice.

The work of God appears at times to go on slowly, full of weakness as if God had forgotten his work. The need of a deeper tone in spiritual life impresses us and a desire for a deeper work of grace pervades the church. The time since Christ came is long, and yet millions have not yet heard his name, and the work looks hopeless. But Christ's work in the Holy spirit is not confined to the Church but is for the world, and God's witness is in every heart. To this powerful witness we can appeal, though an unknown god to them. Hence God works with them as well as with us.

We have not mere doctrine to teach. Life must go hand in hand. As Dr. Hepburn so truly stated, there is such a thing as being led about guided and taught of God. Thus learn to live a day at a time in God's fear, favour, and blessing, and however long the way, there will be many Ebenezers. And thus we unite in St. Paul's prayer, Eph. 3 14-21.

This impressive address was followed by Mr. Rhoads in some fitting remarks on Christian experience and growth in grace, and the truth as it is in Jesus as known by Christian experience.

A short discussion closed the morning session. The evening meeting was led by Mr. Landis who spoke on the Return of Jesus, or more definitely, the mystical union of the believer with Christ.

August 27th, 1892.

The weather here continues clear, and fresh breezes from the mountains keep us cool and refreshed while your folks in Tokyo and Yokohama must be sorely tried by the heat.

Yesterday an excellent sermon was preached by Dr. Geo. Cochran to a very crowded house, on "The Unchanging Christ." After the preaching service the Holy Communion was administered by Dr. Cochran, Dr. Thompson, and Rev. M. S. Vail. In the evening the Conference was addressed by the Rev. A. G. Taylor on "Our Encouragement." This morning Dr. Cochran addressed the Conference on "The Holy Spirit in Relation to Service."

The Dr. said:—"I shall not read you a paper this morning, but rather in an easy conversational way, making a free use of the Bible, let us approach this subject of deep interest to us all as Christian workers. In the first place, then, is the Holy Spirit a person? And does He possess knowledge and freedom to choose? From various acts ascribed to the Holy Spirit, and the use of the personal pronoun we must conclude that He must be regarded as a person, and from the Baptismal formula and from the Apostolic Benediction we must regard Him coequal with the Father and the Son. The second point was the relation of the Holy Spirit to the Father and to the Son. According to statements in the Gospel of John He proceedeth from the Father and is sent by the Son. The Doctor remarked that he thought the great controversy concerning the origin of the Holy Spirit might have been avoided if the fathers had kept closely to the text of the Scriptures. The third point was the relation of the Spirit to the redemptive work of Christ. And in (a) He reveals Christ, (b) He vindicates Christ and convicts the world of sin, (c) He is the life of believers, and bears witness to their adoption, (d) He prepares Christ's agents for their work, (e) He is our helper in prayer, (f) He ministers to our joy, hope, comfort, and guidance.

All of the above points were quite fully discussed and proof texts were adduced in every case.

Various interesting questions were asked and answered, and altogether this meeting has proved to be one of the most profitable of the meetings yet held, and this evening the discussion on this subject of vital interest will be continued.

Yours truly,

Karuizawa, August 29th, 1892.

GAMMA.

THOMAS PAINE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The unpublished anonymous letter recently sent you called to mind a few items I had gathered which, I think, can be relied upon in estimating the moral character of Thomas Paine. From what I am able to find, I cheerfully acknowledge that my quotation from Dr. McIlvaine is not supported by the now known facts in the Bonneville case. As to Paine's services in the cause of Independence, I have nothing to say that would in the least diminish his fame. There were, no doubt, two Paines.

G. Vale, whose life of Paine is apologetic, says

he only fault he can find in his subject's character is that at one time his weekly supply of rum was a quart. This information is from Mr. Barger, a clerk in a store which furnished Paine his liquor.

Corner at that time said: "Paine was like other men, he would sometimes take too much." While Corner said this in an angry letter he never withdrew it, though he afterwards had a splendid opportunity in Cleetham's own house:

His "Common Sense" and "Rights of Man" were conceived while "sitting over some punch after a game at bowls."—(Vale.)

"In 1760 he obtained a place in the excise at Thetford, and subsequently at Lewes in Sussex, where he also carried on business as a grocer and tobacconist. Being accused of smuggling in connection with his business as a grocer, he was dismissed from the excise."—*American Cyclopaedia*.

"In 1777 he was elected secretary to the Commission on Foreign Affairs, but was censured by Congress and obliged to resign for making improper use of official secrets in his letters in the *Pennsylvania Packet* against Silas Deane."—*Am. Cyclopaedia*.

Hon. William Jay, son of John Jay who was a member of Congress at the time, furnished from his father's private papers a document which Dr. McIlvaine quotes on the same subject.

"Appleton's Cyclo. of American Biography" says of Paine:—"His first wife lived but a short time, from his second wife he soon separated, an irregular attachment to the wife of a Paris publisher did not improve his character."

"Schaff-Herzog Cyclo. of Religious Knowledge" says of him:—"Comparison of contemporary biographies, both of friends and foes, seems to show these facts: Paine was through life a harsh, unfeeling, vain, and disagreeable man. He was wanting in a sense of honour, and therefore could not be trusted. But it was not until after his return from France, when he was sixty-five years old, very much broken by his long sufferings and the strain of the great excitement in which he had lived for years, and for the first time in his life above want, that he developed those traits which rendered him in his last days such a miserable object. The charge of matrimonial infidelity and of seduction are probably unfounded; but that he was in his old age penurious, unclearly, drunken, unscrupulous, may be accepted as true."

Col. Ingersoll, in his eulogy on Paine in a recent *North American Review*, paints the pathetic scene of his death and burial. This is the Col. Ingersoll who cursed and threatened to thrash Joseph Cook when they once met at Saratoga, and about whom there recently appeared in the public print that he had sued a Baptist preacher for slander because the preacher had said that the Col. had used his mighty power to influence legislation in the interest of immoral literature. However, when the case was tried the Colonel was the loser. The way of the transgressor is hard. No man who sets himself to battle against Christianity can expect other than the inevitable. His name will pass either into oblivion, or will only be remembered for the evil done. The name of every noted dead infidel only suggests the vanity of his efforts to overthrow truth. Somehow or other it seems decreed that their good shall be forgotten on account of their evil. They were fighting on the wrong side.

For those who wish to look further into the life of Thomas Paine I quote from "Schaff-Herzog Enc. of Religious Knowledge":—"His life has been written by Francis Oldys (pseudonym for George Chalmers), continued by William Cobbett, 1796 (abusive); James Cleetham, 1809 (written by one who knew him in his last days); this is the source of all the damaging stories about Paine: Cleetham meant to be fair, yet was prejudiced; Thomas Clio Rickman, 1814 (apologetic, but honest, a good corrective of Cleetham's exaggerations, was friendly to Paine, but is compelled to give him, on the whole, a bad character); W. V. Sherwin, 1819 (apologetic); J. S. Harford, 1820; G. Vale, 1841 (apologetic and largely copied from Sherwin); Charles Blanchard, 1860 (a thorough-going defence of Paine, written in a careless style, and interlarded with irrelevant and questionable matter; it is prefixed to the edition of Paine's theological works).

I must offer an apology for mentioning this subject again. I know it is quite displeasing to a number of friends. It has come to such a pass that the bare mention of an infidel's name in the foreign press of Japan immediately calls out in its defence those chosen few who for strategic effect are forced occasionally to vary their ensign. *Fins*, Thanking the Editor for his indulgence, I am, yours respectfully,

E. SNODGRASS.

Tokyo, August 29th, 1892.

AU FUJIYAMA.

Salut, roi des monts et des âges,
Toi dont l'auguste front domine les nuages,
Dont la magnificence à la gloire répond,
Salut, monarque du Nippon !
O toi, dont l'image ornemente,
Et la pauvre chaumière et le palais puissant,
O toi, que le poète chante,
Et que révère le croyant,
Dont le trône repose au centre de la terre,
Que dans son sein la nature forma,—
Qui surpasse ta grâce et ta grandeur altière ?
O superbe Fujiyama !

Le souvenir toujours vivace
Des troubles souterrains dont tu portes la trace,
Ta naissance soudaine en une nuit d'horreur,
Nous glaçant encor de frayer :
La terre et la mer se soulèvent,
S'entrouvrent en formant des abîmes béants,
Les cataractes du ciel crévent
Les laves tombent à torrents ;—
Est-ce la fin d'un monde, un autre qui commence ?—
A ce moment la terre l'enfante.—
Qui jamais décrira l'heure de ta naissance ?
O terrible Fujiyama !

Autour de ton auguste épaule
Quand vient se déchainer le vent glacé du pôle,
Tu tiens ta cour cachée au sein des ouragans ;
Mais si, las du règne des vents,
Et du cortège des orages,
Dans ton manteau d'hermine aux bords étincelants,
Tu nous montres dans les nuages
Ton diadème de diamants—
Par un beau jour d'hiver, au clair soleil d'automne,
Ah ! quel mortel jamais n'admirera
Ta fière majesté, l'éclat qui s'environne ?
O redouté Fujiyama !

Sous l'haleine du Pacifique,
La nature a repris sa parure magique,
La flore du Nippon sa grâce et ses couleurs ;
Désarmant soudain tes rigueurs,
Et comme épris de son sourire,—
Tu déposes ton sceptre et ton royal manteau ;
Ton aspect riant nous attire,
Te voyant si grand et si beau,
Qui n'élève vers toi les yeux et la pensée ?
Quel voyageur ne s'enthousiasme,
En contemplant tes traits dans la voûte éthérée ?
O radieux Fujiyama !

Conserve ton règne paisible
Que jamais ton courroux ne s'éveille terrible.
En répandant partout la mort et le chagrin ;
Reste le guide du marin,
L'idéal de la beauté pure ;
Reste pour ces régions de l'Extrême Orient,
Le souverain de la nature,
La gloire du Soleil Levant ;
Lorsque tout à tes pieds passe on se renouvelle,
Toi que jamais nul trouble n'ébranla,
Conserve ta grandeur, ta couronne immortelle,
O sublime Fujiyama !

Salut, roi des monts et des âges,
Toi, dont l'auguste front domine les nuages,
Dont la magnificence à la gloire répond,
Salut, monarque du Nippon !
O toi, dont l'image ornemente,
Et la pauvre chaumière et le palais puissant,
O toi, que le poète chante,
Et que révère le croyant,
Dont le trône repose au centre de la terre,—
Que dans son sein la nature forma,—
Qui surpasse ta grâce et ta grandeur altière ?
O superbe Fujiyama !

Tôkyô, Août 1892.

WEDDING AT CHRIST CHURCH.

The marriage was celebrated on Wednesday of Miss Moss, daughter of one of the oldest and best known residents of Yokohama, and Mr. R. W. Bortliwick, manager of the North & Rae Company, Limited. By the time appointed the number of friends assembled nearly filled the church, and the bridegroom entered supported by Mr. K. F. Crawford, who acted as best man, being shortly followed by Mrs. E. J. Moss, mother of the bride, who wore a dress of mauve embroidered crape and black lace and a mauve bonnet trimmed with jet. Then came the bride, who is pretty and petite, looking very daintily in a rich robe of white corded silk embroidered with silver thistles and trimmed with silver cord, accompanied by her father, Mr. E. J. Moss, and followed by Miss Annie Moss, as bridesmaid, who wore a pretty costume of pale blue figured silk and a white crinoline hat trimmed with lace and forget-me-nots. The ladies carried handsome bouquets

provided by Mr. Manley, and were followed by their brothers, Edward and Pen Moss, as pages, dressed in white sailor suits. The ceremony was performed by the Rev. E. C. Irwine, M.A., after which a hymn was sung, and Mr. Choep played the "Wedding March." The wedding party then drove to Woodside, the residence of the bride's parents, where they received the congratulations of a host of friends and well wishers, the number of whom may be estimated by the unusually long list of wedding presents given below :—

Mr. E. J. Moss, complete bedroom and boudoir suite; Mrs. E. J. Moss, house linen, Maltese silk lace handkerchief; Miss Annie Moss, fancy-work; Master Teddy Moss, tea service; Masters Willie and Johnny Moss, shell vase; Bridegroom, piano and manicure set; Mr. and Mrs. C. D. Moss, dinner service; Miss Aebersold, chrysoleum; Mr. and Mrs. Wyckoff, shawl, head-wrap, and silver tea-strainer; Mr. McKinnell, marble clock; Mr. Woodruff, pair of vases; Miss Young, silk table square and mats; Mr. and Mrs. H. Box, saddle bag cushion; Mr. and Mrs. Robinson, Irish linen handworked tea-cloth; Mrs. Mitchell, silver tea-spoons and sugar tongs; Miss Mitchell, felt table cloth; Mr. A. Mitchell, silver mounted umbrella; Mrs. Pound, brass table-gong; Miss H. Pound, tea cloth; Mrs. and Miss Woodward, toilet stand; Mr. and Mrs. A. Crawford, two jewel caskets; Mr. and Mrs. Noble, hand-painted table scarf; Miss Griffin, electro-plated card receiver; Mr. and Mrs. Roth, tea set; Mr. and Mrs. Vincent, pearl bracelet; Captain and Mrs. Steedman, set of silk Maltese lace; Mr. and Mrs. J. W. Cain, electroplated card-tray; Mrs. Cain, two porcelain plaques; Captain and Mrs. Kenderdine, electro-plate ruby jam stand; the Misses Vincent, ivory and lace fan; Dr. and Mrs. Wheeler, cloisonné vases; Miss Grant, silk table cover and cushion; Mrs. Cooper, bread fork; Mrs. and Miss Hickson, books; Mrs. Cruickshank, Tartan rug; Miss Martin, picture; Capt. Pender, pearl brooch; Mr. W. S. Edwards, pearl name pin; Mr. and Mrs. Mullendorf, tea cloth and serviettes; Capt. and Mrs. Efford, fancy night light stand and silver sugar tongs; Mrs. Brinkworth, silver salt spoons, and fancy-work stool; Mr. and Mrs. Esdale, silver jam spoon; Mr. North, epergne; Mr. and Mrs. Watson, serviette rings; Mr. O. Keil, treadle sewing machine; Capt. and Mrs. Walker, silver coin tea spoons; Mr. and Mrs. Curtis, scent stand; Mr. and Mrs. Truscott, butter knife and jam spoon; Capt. Martin, electro-plate and ruby butter dish; Mr. and Mrs. Rustace, cruet stand; Mr. and Mrs. McArthur, painted screen; Mr. Clark, tea-cosy; Mr. Wilson, cloisonné mounted in plush; Rev. and Mrs. Booth, tray; Miss Deyo, quaint iron kettle; Mr. and Mrs. G. Booth, ice bucket and tongs; Misses Booth, embroidered table scarf; Mr. and Mrs. Hay, nut crackers; Mrs. Black, gold bracelet; Miss Black, shawl; Mr. and Mrs. Mayer, picture in cherry lacquer frame; Dr. and Mrs. Eldridge, cloisonné vases; Mr. McKenzie, electro-plate butter dish; Mr. and Mrs. Pratt, clock; Mr. and Mrs. Jensen, porcelain flower stand; Mr. and Mrs. Retz, gold bracelet; Mr. Duncan, butter dish; Miss Bourne, crumb brush and tray and antimacassar; Mr. Marcus, 1 doz. silver tea spoons; Mr. and Mrs. Cameron, embroidered cushion and tea cosy; Misses and Masters Cameron, lacquer trays; Miss Efford, six hand-painted mats; Mr. Efford, hand painted picture; Mr. Coulson and Miss Swain, biscuit jar; Capt. and Mrs. Carter, electro and ruby preserve stand; Mr. Patterson, brass kettle and spirit lamp; Mr. and Mrs. Barrie, Bible; Mr. and Mrs. Towley, 2 silver salt cellars and spoons; Messrs. North and Rae, cheque; Rev. and Mrs. Buxton, ruby brooch; Mr. and Mrs. Tresize, 3 silver serviette rings; Mr. J. Hall, fish knives and forks; Mr. and Mrs. Hegt, photo frames; Mr. Meiklejohn, photo album; Mr. G. Brinkworth, pair of vases; Mr. Litchfield, electro-plated fruit dish; Mr. and Mrs. Crowe, 1 doz. silver tea-spoons, and silver tea-strainer; Mr. A. H. Cole Watson, 2 butter dishes and knives in case; Mr. Barrett, ivory paper knife; Mr. and Mrs. Yamaguchi, piece of silk crape; Mr. Witkowski, cloisonné vases; Mr. and Mrs. Balk, sugar tongs, butter knife, jam spoon, and fork; Mr. K. F. Crawford, dessert knives and forks; Miss Thorn, sugar bowl and sifter; Mr. Sarda, 2 cloisonné plaques; Mr. and Mrs. J. B. Gibbs, lace handkerchief and case; Mr. Powys, cafetière; Mr. and Mrs. Boag, tea-cosy; Mr. J. Johnstone, breakfast cruet; Mr. and Mrs. Smedley, photo frame; Mr. and Mrs. Bond, porcelain vase; Capt. and Mrs. James Harrison, bread knife and fork; Mr. Charlesworth, breakfast cruet; O Haru-san, embroidered dressing jacket; Mr. Forrest, birthday book and thimble case; Mr. and Mrs. Rose, glass flower bowl; Nisa, fir tree in porcelain pot; Mr. and Mrs. Johns, hand painted vase; Mr. and Mrs. Bunting, six lace handkerchiefs and piece of

Maltese lace; Mr. Peyre, cloisonné box; Mr. Littlewood, plush work case; Mr. and Mrs. Egert, porcelain flower stand; Misses Sale, pair of vases; Kani, fan; Mr. G. Booth, electro-plated bread fork; Nozawaya, Japanese wedding gift, O-Hana-san embroidered dressing jacket, etc., etc.

THE DEVELOPMENT AND SETTLEMENT OF THE HOKKAIDO.

[An address delivered before a public meeting held at Sapporo on August 15th, 1892 (during the continuation of the Hokkaido Exhibition), by Arthur A. Brigham, of the Sapporo Agricultural College, Rev. M. Oshima acting as interpreter.]

We are met to-day to consider the conditions and adaptations of the Hokkaido in relation to its settlement and development by the people of Japan. The conditions of the Hokkaido which invite our attention may be readily grouped under the general divisions of Fishers, Mining, Forestry, and Agriculture.

If Japan has her Ito, the great statesman to whom her people are looking hopefully expecting that he will safely guide the ship of State, so also has the Hokkaido her Ito, the magnetic, energetic fisherman, who is in all places at once, who can hatch for you a million salmon in the twinkling of an eye, or tell you the champion fish-story of the East with a twinkle in his eye. If you seek information as to the fishery-resources of the Hokkaido rivers, lakes, and surrounding seas, you have only to ask our Hokkaido Ito, and before the question is well out of your mouth, you will have your answer, full, plain, and explicit.

If you seek to know the possibilities of the Yezo mineral deposits we have our Jimbo, the Hokkaido geologist who, though loving a quiet life, has travelled this island all over and through and can tell you where is located every mass of coal, every bed of sulphur, and every speck of silver. If you do not care to travel over the island in the summer's heat, to be pestered with *obu*, mosquitoes, and sand-flies, to find these minerals, our geologist will show you all these items on his maps and in his books, all in the quiet of your room at home.

In forestry we are looking for the coming of a Hokkaido Gladstone, some one, who, with statesman-like qualities, shall yet, like the "Grand Old Man" have a love for the beautiful and useful trees and such a practical belief in the dignity of manual labour, that he shall not, on occasion, consider it beneath his dignity to actually wield the axe in felling a ripe "monarch of the forest," by sturdy and repeated blows, reducing and preparing the tree for the common needs of man. The Hokkaido should profit by the expensive and instructive experiences of other countries in the maintenance and management of her forests.

But it is the agriculture of the Hokkaido which to-day most needs a leader, yes, many leaders and workers with muscles and brains. The agricultural resources of the island demand development.

According to statistics which have been furnished me, the area of land under cultivation in 1889 in the Hokkaido was 414,532 *tan*. In 1891 the area available for immediate cultivation was over 3,000,000 *tan*; the area available for cultivation after draining was about 1,000,000 *tan*; the area available for cultivation after great improvement was over 1,000,000 *tan*, while the area available for grazing was nearly 4,000,000 *tan*.

The soil of the island is fairly fertile and with proper husbanding of its resources by rational rotation of crops and fertilizing, will produce continuous good crops and may be increased in fertility and excellence of agricultural condition.

In clearing the wild land, the work is partially and sometimes wholly remunerated at once by the value of the products removed. The trees especially are of use for charcoal, fuel, lumber, and ashes.

The climate deters many of the people of the South from seeking a farm and home in this North land, but the experience of the actual settlers here in the past twenty years, proves that healthy persons, settling in the Hokkaido grow stronger, more healthy, and more hardy after the first year of acclimation. The climate is bracing and invigorating.

After the land is prepared for agriculture, all of the crops of the Northern portion of the temperate zone may be cultivated successfully. The list of crops includes the cereal grains, the best pasture and meadow grasses and fodder plants, the best Northern fruits, the garden vegetables, several industrial plants, in all more than fifty useful crops. Here in breadth enough to satisfy the desires of any one truly interested in agriculture, and room enough to choose a branch of agriculture according to one's tastes.

Three branches of farming are especially adapted to the Hokkaido. They are grain growing, fruit culture, and live stock husbandry. Wheat, barley, oats, rape, and maize all succeed well and are adapted for the people's food and for feeding

live stock. Wheat, barley, and maize are in good demand and bring good prices. Hokkaido wheat is wanted in the south. Buckwheat, millet, and beans are as successfully cultivated as the cereal grains.

I have been told that fifteen years ago the farmers here would not accept apple trees as a gift for planting in their land. To-day the farmers in large numbers are demanding apple trees at good prices in larger quantities than they are supplied. Apples are consumed and exported in considerable quantities and in both cases command high prices. The outlook for apple-culture is bright, for both consumption and exportation of this best of fruits are increasing. Plums and cherries share to a considerable extent the favourable condition of the apple, while the pear, peach, quince, and the numerous small fruits, especially the strawberry, have yet to be developed in their culture here.

But it is in live stock husbandry that the Hokkaido ought to excel. Notice the area adapted for grazing—nearly 4,000,000 *tan*; bear in mind that the best grasses, which are the foundation of all live stock husbandry, may be grown here in great luxuriance, also that several wild forage plants, including the nutritious *wetch*, are already growing here in abundance; further, the grains, especially the oat and maize by their seeds and foliage contribute to the certainty of success in stock-farming. Horses, cattle, swine, and poultry thrive here exceedingly well, and sleep can be adapted by proper management. Consider how easily all of these domestic animals increase in numbers under the fostering care of the farmer, and then consider how thus the wealth of the Hokkaido and of the Empire may be increased in developing a department of agriculture greatly neglected in Japan.

What are the essentials for securing success in the practical development of these and other branches of farming in the Hokkaido? Can the peasants of the South immigrate here and with the *hand kuma* and Southern methods secure profitable returns for their labour? Yes, by the kind indulgence of Nature they may, but only to a limited extent. This is the way in which the agricultural resources of the island have been developing for twenty years. The agricultural progress actually made, has for the most part, been dug out with the *kuma* by the hard manual labour of the peasants. When you come to consider the time elapsed—twenty years—the area of land brought into cultivation—less than 500,000 *tan*—and the area that remains to be redeemed—over 9,000,000 *tan*—how little has really been done. We can truly say it is only a beginning.

Why not now substitute the plough for the *kuma* where practicable, and the power of the horse and ox for human muscles where possible? Great progress in agriculture in Western countries has been associated with wonderful and ingenious development and use of agricultural implements and machines. Why not use the simplest and most practically and profitably useful of these aids of modern farming in the Hokkaido?

Furthermore the advancement of the agriculture of the world has received an enormous impetus through the education of the agricultural classes and the use of brains in farming raising "the most useful, most healthful, and most noble employment of man" to its proper position. To emphasize these two things would be enough for to-day—the use of helpful apparatus and animal power in farming operations and to educate the farming class in a knowledge of their business.

After all the great need of the agriculture of the Hokkaido is *leaders* who are *workers*. We need young men who can and will labour with hands and heads. We need middle-aged men of experience who have the requisite wisdom to adopt their methods of farming to the new conditions of the Hokkaido. We need brawny labourers. We need men with capital, not "two cent" capitalists, who invest a few pennies in securing documents which shall give them vast tracts of land as free grants from the government and then allow their land to lie unredeemed from its wild state, until by the persevering labour of workers on adjoining lands the idle land gains a large unearned increment of value, and is then sold by the speculator at an immense profit. Not such capitalists, but men who with their money, their brains, and their hands shall work to help to redeem the wild lands and cause them to produce the fruitful, useful products of agriculture. The philosopher Emerson says of the farmer "He is the continuous benefactor. He who digs a well, constructs a stone fountain, plants a grove of trees by the wayside, plants an orchard, builds a durable house, reclaims a swamp, or so much as puts a stone seat by the wayside, makes the land so far lovely and desirable, makes a fortune which he cannot carry away with him but which is useful to his country long afterwards." The man

that works at home helps society at large with somewhat more of certainty than he who devotes himself to charities."

There is room for 100,000 homes in the Hokkaido now.

The Hokkaido appeals to the people of Japan to settle this land and make those homes for the sake of honourable financial gain. The rewards of agriculture are slow but they are sure, and they give a man that priceless blessing—a home.

The Hokkaido appeals to you in the name of independence and manhood. Who is so independent and manly as the progressive educated farmer? "In the great household of Nature, the farmer stands at the door of the bread-room and weighs to each his loaf."

Again, the appeal is for the sake of the self-defence both of Yezo and of Japan. For this reason the island should be full of homes. For who, in case of war, are so valiant and strong as men fighting in defence of their homes and their lands?

For the sake of your national pride you should promptly develop this promising land. You forbid other people inhabiting the Hokkaido. If you keep others out, then it behoves you to make use of the splendid natural resources and opportunities from which others are excluded. Not until you have filled the Hokkaido with homes should any schemes find favour in Japan for the sending of colonists to Mexico, Canada, and the isles of the Pacific.

And the Hokkaido appeals to you finally, as patriots for the love of your country, to develop this land because such development means a more wealthy Japan, a more strongly defended Japan, a more progressive, independent, and happier people.

What I would most strongly urge here in the Hokkaido is a concentration of policy and an expansion of the work. Let us have a settled policy and then proceed to put it into persevering practice.

In conclusion, allow me to emphasize what I have said by urging—

First—The providing of a good and effective system of road and bridge maintenance for easy communication and transportation purposes in the Hokkaido.

Second—The arranging for more easy and less expensive transportation and communication between the Hokkaido and all other parts of the Empire.

Third—The encouragement of the use of all the modern mechanical helps and profitable systems of farming so far as they are adapted to the agricultural conditions of the Hokkaido.

Fourth—That in the common schools and higher schools the elementary principles of the practice of agriculture be taught and that by every possible means the farmers and their children and the young men of the Hokkaido be educated and trained into an enlightened and progressive agriculture.

BASEBALL.

The return match, "Marion" v. Yokohama, was played yesterday, the mariners being again successful. This game, which occupied one hour and forty minutes, was closer than the last, though the scores were small—6 to 4. Details are appended:—

MEXICO.

A Lecture given on the 25th June, 1892, in the Rooms of the Japanese Society of the French language, by His Excellency M. J. KASCON, Envoyé Extraordinary and Minister Plenipotentiary of Mexico to Japan.

(Translated from the *Revue Française du Japon*.)

GENTLEMEN,—It is so long since I have had the pleasure of making a speech in French, that I would certainly not have dared to appear before you, if it were not a question of speaking of my country; and I hope your indulgence. To describe a whole country and to describe it well in the few minutes at my disposal, seems to me to be impossible. To do it I would have to start from several centuries prior to the present period and to make a study of the races that to-day people Mexico, of their history and of their social, religious, and political evolution; but, time not permitting that, I shall have, very much against my will, to content myself with making general observations upon the condition in which my country finds itself at present, principally from a point of view as to the development of its natural resources. The present population springs from aborigines that inhabited the country at the time of the discovery of America and from the Spaniards that made its conquest. The two races had certain common qualities which, from that very fact, have not disappeared. It is, thanks to these qualities, that all foreigners are well received by us, and, if I point out the fact it is because it is fitting that all those who may wish to visit us, should know that they will be received everywhere as friends, whatever be their nationality, their religion, or their occupation. Of the political constitution of the country, I will simply tell you, that to-day it is a federative republic composed of 27 States, 2 territories, and of the federal district wherein the General Government resides. Each State conducts its own local affairs, whereas all are bound together by the Federal Constitution and by the laws voted by the Congress of the Union. The supreme power is divided into the legislative, the executive, and the judicial. The legislative is composed of two Chambers. Each State chooses two senators and every forty thousand inhabitants, one deputy; the first are elected for four, and the second for two years. The members of the two Chambers have each a salary of \$3,000 a year. The President of the Republic is elected by electors who are themselves named by universal suffrage; the length of his functions is four years. The President appoints his Ministers of State independently of Congress. The State makes profession of no religion and protects the exercise of all kinds of worship, so that every one can follow the one of his choice. The dominant religion is Roman Catholicism, but there are about 120 Protestant churches in the land. Education is obligatory; there are about 11,000 primary schools. The Constitution gives to foreigners all the civil rights and the same guarantees as to Mexicans: they can freely trade all over the Republic, follow their respective occupations, acquire landed and mining property like any Mexican, with the single exception of the lands situated in a zone of 80 kilometers in breadth upon the frontiers of the United States. The Mexican Courts are the only ones that have cognizance of actions that concern foreigners living in the country; consequently diplomatic intervention can occur only in case of denial of justice perfectly proved and after all legal resources have been exhausted. Peace and security have long since reigned in this country; to-day its credit in America comes immediately after that of the United States, it is surpassed upon the monetary markets of Europe only by that of the three or four great powers of the World. It will be proper, perhaps, to notice the privileges granted to immigrants that come as such to Mexico. Every colonist wishing to avail himself of the law upon the subject, must naturally present a certificate of good conduct and make declaration of the occupation he followed in his own country. Colonists who settle there are exempt from all military service and from all taxes except federal ones; they enjoy, besides, the following advantages. Exemption from import duties and town dues upon provisions, instruments of husbandry, tools, machinery, food for men or animals, furniture, animals for service or for breeding, intended for the colonies; personal and untransmissible exemption from export duties upon produce raised by colonists; bounties upon notable works; bounties and special protection for the introduction of new kinds of husbandry and of industries; exemption from fees for the authentication of signatures upon passports delivered by consular agents to persons coming to Mexico as colonists, by virtue of contracts between the Government and an authorized company. The colonies are established

Original from

under the municipal régime in vogue in the confederation of the States; colonists enjoy, in general all the civil rights granted by the Constitution. National lands are provided to colonists under the following conditions: 1st, by sale at the tariff rate, payable in ten yearly instalments commencing from the second year of the settlement; 2nd, by sale for ready money; 3rd, gratuitously, and, in this case, the land given can not have an area of more than a hundred hectares and the final title-deeds therefor can be delivered to the colonist only after he has proved he has kept it in his possession and has cultivated at least a tenth part of it for five consecutive years. Lands for sale are divided into 1st, 2nd, and 3rd class, and the price of them varies according to the State wherein they are situated. I believe, Gentlemen, that no other country of the world offers to every comer 100 hectares of land gratuitously, and very few possess the conditions of climate and of fertility, of which we shall speak presently, and the mineral riches of which, for want of time, we shall be unable to give any idea. Throughout the whole country, agriculture and industry are intimately connected with the people and the Constitution that governs it, and are so much, and more so, with its geography and with its physical and geological constitution. Let us look at Mexico from the latter standpoint. Mexico extends from the 15th to the 32nd degree of North latitude and from the 89th to the 120th degree of longitude West of Paris. Bounded on the North by the United States, on the East by the Gulf of Mexico and the Caribbean Sea, on the South by Guatemala, and on the West by the Pacific Ocean, its greatest length is about 1,900 miles and its greatest breadth 750. Its superficial area is about 778,590 square miles with a population of 12 million souls, say 15 inhabitants per square mile. Japan has, I believe, a population of 40 million souls, over an area of 147,526 square miles, say some 271 inhabitants per square mile, some regions in the West having as many as 435. According to its geographical position, Mexico ought to be three quarters of it tropical, the rest of it semi-tropical, which however is not the case. The cause of this phenomenon is the immense mountain formation that traverses the two Americas, North and South. In that chain there are two depressions and two narrowings, at Panama and at Tehuantepec; which explains the colossal project of uniting the two oceans, the Pacific and the Atlantic. The isthmus of Tehuantepec belongs to Mexico; a railroad is being built there and it is there that the great American engineer Eads, formed the project of making his ship railway. From Tehuantepec, this chain of mountains once more resumes its colossal grandeur, rising abruptly and bifurcating into two immense chains which, while tending towards the North, separate further and further, the one following the coast-line of the Gulf of Mexico, the other that of the Pacific Ocean. The two branches rise to heights of from 17 to 18,000 feet, like the Peak of Orizaba upon the eastern formation. These two chains, in raising themselves, have also raised the ground comprised between them, forming in this way, a high plateau upon which are situated the capital, at an altitude of 7,300 feet, and most of our large cities. It results from this geological upheaval, as you will see upon the altimetric map which is before you, a series of heights from the level of the sea, which is the tropical region, up to eternal snow. And, whoever says different heights, says different climates, which, besides, are divided into three, namely, tropical, temperate, and cold regions. The average temperature of each one is about 27, 21, and 16 degrees centigrade respectively. Nothing is more interesting, more picturesque, more imposing than the journey from the port of Vera Cruz upon the Gulf, to the City of Mexico, over a railroad that is only 423 kilometres long, but which rises in a very short time, by grades of up to 4 per cent, incline, to a height of 8,300 feet. It is one of the finest railroads in the world and one of the most daringly laid out. In a few hours one passes through a series of various temperatures and through all the different vegetations of the globe. In going from the City of Mexico to the Pacific there is the same height to be descended and the variation of climate to be met with. I think, however, that this western slope is drier and warmer than the eastern one, which is bathed by the moist winds that blow from the Gulf. We thus have the two principal elements of the remarkable climate, or remarkable climates, rather, of Mexico; its geographical situation on the one hand and its physical conformation on the other; tropical heat cooled by various altitudes of the ground. You have here a map that, in different colours, denotes the climates of the country. There are other causes that affect the temperature of these regions: for instance, the East and North-East trade winds that blow continually from the tropics, especially in summer.

sea and deposit their humidity upon the slopes of the great mountains, cool themselves there and reach the central plateau so fresh and cool that the summer of these regions is entirely modified by them and remains mild and pleasant all the year. At the same time, the moisture that comes from the East makes these slopes very fertile. The direction of the secondary chains and their geological formation also affects the climate and vegetation. Thus the valleys that run East and West have a better climate than those that run North and South. Naturally too, lands of calcareous origin are less moist and hence less rich than those in which clay predominates. Here is a map that will give you a general idea of the geology of the country. It is necessary to well examine this altimetric chart, for upon the physical constitution of the country depends not only its climate, that allows almost every plant of the globe to flourish there, but also the general condition of the country: its agriculture, its industries, and its social and political constitution even, are affected thereby. The abrupt elevation of the central plateau does not allow the existence of large navigable rivers, which are found only upon the Pacific and Atlantic coasts. In return, these rapid waters can be utilized as motive power and for irrigation. This configuration of the land, makes the construction of roads costly and difficult: so we have no easy modes of communication nor transportation at cheap rates; that is to say that commerce is expensive, that our provision markets are difficult to reach and, consequently, that agriculture lacks stimulant and industry more so. But railroads are now in process of changing that state of things, by opening up a market for every kind of agricultural and industrial production and by bringing with them, throughout their long lines, life and comfort. In those regions, railroads have cost more than they have elsewhere, but the profits on their return are by so much the greater. See the map of the railroads already in existence three years ago, a map that does not show the roads under construction.* Ten years ago we had scarcely 500 kilometres of railroad, to-day we have 11,000, and as many under construction. The principal lines run from the South to the North: the length of the longest is 2,000 kilometres and puts the whole central plateau in communication with the United States. From these lines, roads start at right angles and connect various regions with the coast. These latter lines, three of which reach the Gulf, open the temperate and the warm regions, to the markets of America and of Europe; unfortunately, the construction of the lines that run towards the Pacific coast, was begun later than the others and is not yet finished, but there are five of them. The Tehuantepec line will probably be the first that will unite our Pacific shores to those of the Atlantic; the one that goes from the port of Guaymas upon the Gulf of California or of Cortes, in the North, is the only one, up to now, which, by connection with the American roads, puts our Western coast in communication with the vast system of the continent. For the commercial relations of Mexico with Japan and with China, the roads that terminate at the Pacific are of great importance since they place us in direct communication with those countries, whilst now, we are obliged for the exchange of our products, to make use of the way of San Francisco, which naturally makes merchandise dearer. Whilst in the past and until the commencement of this century Mexico imported direct the silks, porcelains, and tea of China and Japan, we go for those articles to-day to San Francisco, London, or New York, having to pay, in consequence, considerable commissions and freight charges. What we really lacked formerly, to enable us to increase our riches, were easy and cheap modes of communication. Since they have come into existence, the aspect of the country has changed: its population increases continuously; capital is attracted by the ever increasing facility of finding sure and lucrative employment; the revenues of the State and the export of our productions have doubled. However, there is much left for us to do. As I have just pointed out to you, Gentlemen, we are far from having the population necessary for the development of our natural riches; we require a large immigration of people accustomed to work. To have every kind of climate, is as much as to say that every kind of cultivation can be carried on, that of the warm, that of the temperate, and that of the cold regions. For strangers who may desire to visit us, the most interesting kinds of cultivation to know, are those of the following plants, that offer the greatest future and profit for cultivators. Coffee, which sells to-day at 25 cents a pound, the cost of which does not exceed 8 cents; the India-rubber tree, that yields a profit in a few years; Textile plants, such as hennequen, a

fibrous plant, which grows in the arid regions and makes the richness of our largest States; tobacco, the quality of which is exceptionally good in the warm lands. I mention these plants because their products are in great demand in the markets of the world, and that their consumption seems to increase more rapidly than does their production; but there are others which return handsome profits upon the markets of the country itself, such as, the sugar cane, cotton and rice, the high price of which arises from a pretty bad method of cultivation and from the fact that their production is below the needs of the country. There is, too, in Mexico a fine future for the cultivation of tea, for the reason that we import it from the United States of America and from England, paying the exorbitant duty of 50 cents a kilo. There is a similar future for the cultivation of bamboo and for the innumerable articles manufactured out of this product. But Mexico is perhaps the most protectionist country there is, I am sorry to say, and the duties are levied without regard to the origin of the goods, that is to say, for instance, that silk from Japan or from China pays the same duty as does silk from France. I would have liked to speak to you a little about our industries, but time does not permit it; and I will limit myself to saying that they are as yet young and limited, notwithstanding the enormous import duties that protect them. The mining industry is the only one that for a length of time has been of great importance, Mexico having furnished about two-thirds of the silver that exists in the World. This year, the production will, without doubt, be in the neighbourhood of 50 million dollars. Perhaps, Gentlemen, I might have made this little talk less dry, by relating to you either the history of the country or by giving you an account of the habits and life of the people, but I wished above all to profit by this occasion to endeavour to give you a glimpse of the physical side of the country. Besides, I shall be happy to give you, at all times, all the information at my command that you may be pleased to ask of me. I think that Mexico can only gain by being known, especially by you, Gentlemen, our new but already good friends.

NEW ORIENTAL BANK CORPORATION.

On the 20th inst. a meeting of the creditors of the New Oriental Bank Corporation, Limited, was held in the Great Hall, Winchester House, the object being to select three creditors to represent English and Irish claims, in conjunction with three gentlemen representative of the Scotch creditors, who, combined, are to form a committee to assist the liquidator in guarding the interests of all concerned. The attendance was large.

Mr. T. A. Welton, the liquidator, who presided, said that before asking the committee to consider which three gentlemen they would choose to represent them, they might like to hear a few remarks from him. The gentlemen chosen by the Scotch creditors to sit on the committee were Mr. John Blair, Writer to the Signet, Mr. Pitman, Writer to the Signet, and Mr. Horsbrough, chartered accountant. He had seen these gentlemen, who had come as a deputation from Edinburgh, and believed them to be able men of business. He might also mention that a number of proxies had been sent in supporting Mr. Low as a candidate at the present meeting. Their position, so far as he had been able to gather it in the short time that had elapsed, was that the creditors' claims were likely to amount to four and a half millions. The assets included about one and a half millions of total banking assets which would become cash in four or six months' time, another one and a half millions that it would take time to realise, and assets to the extent of £1,847,000, the realisation of which would take considerable time, and the result of which was doubtful. At the very extreme they ought not to reckon that more than £55 in the pound would come to the creditors of the corporation. He was very sorry that this would be so, but the condition of trade in the East did not justify one in hoping for any brilliant recovery, and it was better to acquaint them with the conclusion at which he had arrived. He had allowed the Scotch committee to have absolute power to decide what money remuneration it should propose, and to make whatever inquiry it desired in investigating the way in which the Bank came to its present position. Two out of the three Scotch representatives were lawyers—able men, who desired to make all possible investigation into this matter, so far as it could be done without disadvantage to the interests of the Bank. With regard to some of the questions that would come before them, one would be whether, the situation being such as it was, it would

* The maps in question in this lecture have been presented by M. Rascon to the Japanese Society of the French Language.

be desirable that there should be what was called a reorganisation; whether, in their interests—not in the interests of the shareholders, which were too remote—it were better to reopen at certain places and reconstitute the concern as a creditors' company. That was a question on which the committee would have to be very nearly unanimous before he considered himself warranted in putting forward such a scheme, but if they were practically unanimous he would submit the result of their deliberations to all that it concerned. Nothing could be done except by the vote of three-fourths of the value of the whole of the creditors. This committee would be of their own flesh and blood, and their advice could be followed with safety. If he had any doubt as to the proper course to pursue in any other matter, such as the question of realising the premises, which he believed were worth more than the amount of the debentures placed on them, he would go to the committee. In the ordinary course of procedure if this committee acted as the statutory committee of the English Bank of the River Plate did they would leave him pretty much to follow his own course, not considering themselves called on to direct, but to simply hear what he proposed to do. He thought that this would probably be a wise course, and he would be very careful in no way to excite the hostility of the committee. The committee in the case of the old Oriental Bank had a right to appear before the judge, and, having differed on one or two points, the minority did so appear, and the judge decided that he was in the right and they were in the wrong. The result was that they saw that better treatment could be got for the concern than by simply slaughtering the assets, and came to an understanding with him that up to a reasonable point his policy should prevail, and from that time forward they were always able to agree on a temperate and reasonable course, which ended in a result that far exceeded their anticipations. With regard to creditors at a distance, it was obviously impossible to take them into council at present, and if the committee appointed to-day were able to sit down and at once formulate a scheme, it would require to be laid before the whole of the creditors, and sufficient time would have to be provided by the Court so that a circular could reach the remotest creditor in Japan. But the time would be well spent in obtaining a reasonable and well-matured scheme. He had received a letter from a creditor, who objected to the supervisory order under which he was now acting, and no doubt it was a fashionable thing to attack an auditor, but he felt absolutely easy in mind as to any attack of the kind, as the directors who were chiefly responsible for whatever had happened of a preventible character had ceased for some time to be on the board, and those who remained had had an anxious regard for their interests, and had worked as if they had been creditors. He did not press them in the slightest degree to choose one man more than another, and he hoped that they would act with absolute freedom in selecting those whom they believed to be competent men.

Mr. Hile at once proceeded to propose the name of Mr. Drury. Mr. Drury, he said, was connected with commercial matters in India for over thirty years, and was a depositor in the bank to the extent of over £7,000.

A Voice—Who is Mr. Drury?

A Gentleman, rising in the front seats—I am Mr. Drury—(Cheers and laughter.) My position is this. I have been connected with railways in India for thirty-one years, and am home now on sick leave, my doctor stating that it is death for me to go back to India. I put my savings for thirty-one years, to the amount of £7,000, into the bank. Two thousand pounds were due on the day after the bank stopped; £5,000 were due in August on my fiftieth birthday, when I had arranged to purchase a joint annuity for myself and my wife. If you elect me you will have an honest man on the committee to look after your interests, whose great endeavour will be to do the best for himself, and what he does for himself he does for all.—(Cheers.) I am quite prepared to tell you that I would come to Mr. Welton and work as a clerk if necessary without any expectation of remuneration.—(Hear, hear.)

The nomination of Mr. Drury was seconded by several gentlemen.

A Creditor asked if the committee were to work gratuitously or for an honorarium, and, if the latter, at what rate and out of what money.

The Chairman said that no proposal had been made, but precedent showed that if the committee did its work in a manner satisfactory to the company and the creditors, the chairman would sanction some reasonable proposal for remuneration in due time.

A Depositor of £4,500 and another of £4,000 objected to taking any new shares in a reconstituted company.

Chairman said that he had not the slightest personal interest in the proposal, but it was concerning the interest of the creditors. Some of the branches were in very good order, especially those in Mauritius and Ceylon, which were the cause of the failure of the old Oriental Bank. The mischief in this case came from the Straits and Singapore way; from Australia, where there had been a very serious lock-up of assets; and from China and Japan, where trade was in a state of extreme collapse. India was in much better order than they might imagine. It would be open to the committee to consider the merits of every one of the branches, and if any good could be done by keeping alive a partial extension of their business.

A Depositor said that neither the branches nor the central office should be opened until they were paid two thirds of the money invested on deposit.

The Chairman—To whom do you look to pay the two-thirds?

The Depositor—That was proposed when we were invited to go into voluntary liquidation.

The Chairman—I know nothing about that, and it is quite certain that the hands of this meeting are perfectly free. You can only be paid out of the assets, and they are your property. (A Voice: "When we get them.") You have them practically. ("No, we have not got them.")

That's the point, and cries of "Order." You are yourselves masters, and it is for you as masters to determine what is to be done. But this is a matter for the committee to consider; we cannot debate these points in a meeting like this. You may take it that they will not propose anything that is not to the majority of your interests.

Mr. Long said that the failure took place through the lunacy of somebody in Australia, and he thought that there must have been a good deal of lunacy in the board in London. He suggested that the palatial buildings as large as the Cannon-street Hotel—(A Voice: "With salaries to match")—erected as branch offices in places where there was no business to be done, should be sold to Messrs. Cook for hotels.

The Chairman—It is to our interest to make the most of these premises if they exist.

Proposals to nominate Mr. Rohde, the late general manager, and Mr. Shaw, the late chairman—the latter gentleman receiving Mr. Low's support—were not favourably entertained, and ultimately the meeting elected Mr. Drury and Mr. Low, leaving it to these gentlemen to select a third committee-man, subject to the approval of Mr. Welton.

A vote of thanks to Mr. Welton terminated the proceedings.—*L. & C. Express.*

CHESS.

(All Communications to be addressed to the Chess Editor.)

ANSWERS TO CORRESPONDENTS.

J. W. E., Digma, and M. A. W.—Your solutions of No. 32 are wrong. If Black plays 11 to 11 sq., how are you to mate next move?

Ed. B.—You have also fallen into the snare laid by the composer. Regret your name was omitted from the list of solvers last week.

SOLUTION OF PROBLEM No. 32.

WHITE.	BLACK.
1—B to Q Kt 4	1—B to B sq.
2—Kt to K Kt 8 mate	if 1—K x Kt
2—R x P mate	if 1—P to Kt 4
2—Kt to Kt 8 mate	if 1—Q 11 moves
2—Q x P mate	

Correct solution received from Omega, Scacchi, W.H.S., Omicron, and J.D.

PROBLEM No. 34. BY W. A. SHINKMAN.

WHITE.

White to play and mate in two moves.

We notice that a match by correspondence has been arranged between Mr. P. A. Reuten, as representing Singapore, and Mr. T. T. Hazeland, for Hongkong.

The only event worth noting in local Chess circles is the auspicious marriage of Mr. Oscar Balk, the well known Secretary of the Yokohama Chess Club. This took place on Tuesday, 30th ultimo; the President and several members of the Club attended at Christ Church and are prepared to certify that the Secretary was duly mated with a Queen on the occasion.

As usual in this climate the Yokohama Chess Club has suspended its meetings during the summer months, but the new season will open on the first Monday in October and there is every prospect of a brilliant winter session. Our enthusiastic friend and member Mr. Keil has generously provided a magnificent specimen of the silversmith's art in a large Champion Cup which will be contended for "vi et armis." All conditions for gaining and holding the Championship will be circulated among the members in due time.

Chess in England seems also to have languished somewhat during the customary holiday season there; but we give two very interesting games clipped from the *Illustrated London News* of 23rd July.

CHESS IN THE CITY.

Game played at the City Club between Mr. Herbert Jacobs and Mr. Owen Jones in a match now in progress.

(QUEEN'S GAMBIT DECLINED.)

WHITE. (Mr. Jones.)	BLACK. (Mr. Jacobs.)
1—P to Q 4th	1—P to Q 4th
2—P to Q B 4th	2—P to K 3rd
3—Kt to Q B 3rd	3—Kt to K B 3rd
4—P to K 3rd	4—P to Q 4th
5—Kt to K B 3rd	5—Kt to Q B 3rd
6—B to K 2nd	6—B to K 2nd
7—P takes Q P	7—P takes P
8—P takes P	8—B takes P
9—Castles.	9—Castles.
10—P to Q Kt 3rd	10—P to K R 3rd

In an opening of this kind, where development of force is the object chiefly aimed, this is waste of time. 11 to Kt 5th or P to Q Kt 3rd might be played with advantage.

11—B to Kt 2nd	11—B to K 3rd
12—Q R to B sq.	12—B to K 2nd
13—B to Q 3rd	13—Kt to K sq.
14—B to Kt sq.	

A fine reply to Black's last move.

15—Kt to K 2nd	14—P to K B 4th.
16—Kt (K 2nd) to Q 4th	15—B to Q 3rd
17—Kt takes Kt	16—Kt takes Kt
18—Kt to Kt 5th	17—B to Q 2nd

A very clever move, against which it is difficult to find a satisfactory defence.

18—B takes R P (ch.)

Ingenuous, and apparently turning to his own advantage White's last stroke. In reality, however, it loses the game, the open way for the K R being presently of fatal consequence.

19—K takes B	19—B takes Kt
20—K R to R sq.	20—B to B 3rd
21—Q to Q 4th	21—Q to Kt 4th
22—K to Kt sq.	22—Kt to B 3rd
23—R to R 3rd	23—R to B 2nd
24—Kt to Kt 3rd	24—Kt to Kt 5th
25—B takes P	25—Q takes B
26—R takes Kt	26—Q takes P (ch.)
27—K to R sq., and wins.	

Black has tried hard to maintain his compromised position, but White now quickly obtains a credible victory.

CHESS IN BRIGHTON.

Consultation game between Messrs. Moriau and Curriock, blindfold, against Messrs. Rup Stevens and Percy Healey.

(HAMPE-ALLGAIER GAMBIT.)

WHITE. (Messrs. M. and C.)	BLACK. (The Allies.)
1—P to K 4th	1—P to K 4th
2—Kt to Q B 3rd	2—Kt to Q B 3rd
3—P to K B 4th	3—P takes P
4—Kt to K B 3rd	4—P to K Q 4th
5—P to K R 4th	5—P to Kt 5th
6—Kt to Kt 5th	6—P to K R 3rd
7—Kt takes P	7—K takes Kt
8—P to Q 4th	8—B to Kt 5th

This is an old and abandoned line of play, which modern analysis generally regards as fatal. P to Q 3rd or P to Q 4th is safe, and, properly followed, ultimately gives advantage to the defence.

9—B takes K B P	9—P to Q 4th
10—B to Q Kt 5th	

An excellent move, which appears a novelty, and is certainly equal to B to K 2nd, the usual play at this point.

11—P takes B	10—B takes Kt (ch.)
Kt to K and seems somewhat a better move.	11—Kt to K B 3rd

12—Castles
13—P takes P
14—B takes Kt
15—B to K 5th
16—Q to Q 3rd

Another well-timed move. The blindfold allies play with an accuracy worthy of a Blackburne.

17—P to R 5th
18—Q to Kt 6th (ch.)
19—Q takes P (ch.)
20—Q to Kt 6th (ch.)
21—B takes Kt (ch.)
22—Q takes R (ch.)
23—Q to Kt 6th
24—R to B 2nd

Worse than useless; but their game is utterly hopeless.

25—R to B 3rd
26—Q to B 6th (ch.)
27—R takes P.
28—Q to B 7th (ch.)
29—Q takes R, and wins.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, August 28th.

The Right Hon. John Morley has been re-elected for Newcastle-on-Tyne.

The cholera is increasing on the Continent, and has appeared in England.

London, September 1st.

A terrible epidemic of cholera has broken out in Hamburg, and a ghastly confusion prevails, the doctors and nurses being totally inadequate to the occasion. A thousand deaths have already occurred, and the corridors of the cholera hospital are blocked with corpses, besides 400 dead bodies lying unburied in one shed.

(FROM THE "MANILA COMERCIO.")

Madrid, August 6th.

Sr. Bergamin has left for San Sebastian to study, together with Sr. Romero Robledo, at scheme of reforms in the Philippines.

Cholera is spreading to an alarming extent in France and Russia.

Madrid, August 9th.

Cholera is invading St. Petersburg and Piedmont.

The solicited canonization of Christopher Columbus has been refused at Rome.

(FROM THE "SINGAPORE FREE PRESS.")

London, August 16th.

It is understood that, notwithstanding her apparent composure, China has made a strong protest to St. Petersburg regarding the advance of the Russian force in the Pamirs.

Benlarig, British steamer, 1,452, Boutillier, 2nd September.—Hongkong via Kobe, Sugar.—Butterfield & Swire.

Camelot, British steamer, 1,864, Thomas, 2nd September.—New York via ports, General.—Smith, Baker & Co.

Hyacinth (8), cruiser, Captain R. W. Craigie, 2nd September.—Vancouver, B.C.

Timandra, British ship, 1,500, Mowatt, 3rd September.—Tacoma, Wash., Tea.—Mouillyan, Heinaum & Co.

Verona, British steamer, 1,878, F. H. Seymour, 3rd September.—Hongkong via Kobe and Nagasaki, Mails and General.—P. & O. S.N. Co.

PASSENGERS.

ARRIVED.

Per Japanese steamer *Nagato Maru*, from Otaru via ports.—Mr. F. Steanes, Miss M. Pease, and Mr. Tomohara in cabin; 27 passengers in steerage. For Oginohama: Mr. Caldwell in cabin.

Per British steamer *Empress of China*, from Hongkong via ports.—Rev. Dean Warren, Mr. and Mrs. E. S. Webber, Miss Farwell, Miss Owen, Miss Forbes, Mr. and Mrs. H. McC. Price, Messrs. A. A. Thomas, Bieber, Stewart, W. R.

Garrison, McCorkell, and Stern in cabin; Mr. Webber's servant, Mr. Kwong Chi, Captain J. Witt, Mr. and Mrs. Wimbury, Messrs. E. M. Bier, Graffunder, and C. Morgan, Jim., in second class, and 5 European and 146 Asiatics in steerage. For Vancouver, B.C.: Mr. and Mrs. Lingle, Mr. H. Wallis, R.N., Mr. Brandtgar, Miss Hu King Suy, Mrs. Sites, son, and daughter, Miss A. K. Murray, Miss M. D. Murray, Mr. Murray, Miss Hilton, Mr. N. Takasugi, Prof. C. M. Cody, and Mrs. Cody and family in cabin.

Per British steamer *Verona*, from Hongkong via ports.—Vet. Captain J. A. Nunn, Mr. C. D. Pennant, Mr. W. D. Llewellyn, Mr. C. H. Hobart Hampden, Mr. and Mrs. Cuthbertson, Miss Gush, Messrs. Theodore Morrison, J. Pestonjee and servant, D. Nowrajee and servant, and Howie in cabin.

Per Japanese steamer *Yamashiro Maru*, from Otaru via ports.—Mr. Hyam and Mrs. Hyam in cabin; and 27 passengers in steerage.

Per French steamer *Melbourne*, from Marseilles via ports.—Mr. Tanabashi, family, and infant, Mr. Ichiku, Miss Read, Mr. Richardson, Mr. Sommers, the Misses Sommers, Mr. G. de Bruyn, Mr. and Mrs. Mess, Messrs. Huggett, Yoshi, Aigi, H. Veaux, Consul Guycyraud, family, 4 children, and 2 servants, Lieut. Millard, Messrs. Annot Reid, de Gungburg, Kerr, Mrs. Isogai, Mr. Kan-nojo, and Mr. I. Xavier in cabin; 2 Japanese in steerage.

Per British steamer *Devawongse*, from Tacoma, Wash., via Victoria, B.C.:—2 Japanese and 3 Chinese in steerage.

Per Japanese steamer *Yokohama Maru*, from Shanghai and ports.—Messrs. H. F. Biyan, B. E. Thurston, Diack, M. Beigan, Captain R. N. Walker, Mr. J. R. Cornish, and Mr. R. Ingles in cabin; Mr. Y. Shiraiishi and Mr. Y. Wakamatsu in second class, and 38 passengers in steerage.

DEPARTED.

Per French steamer *Yangtsé*, for Shanghai via Kobe.—Messrs. Welton, Rosenzweig, Nicolas Wasili, André Zanacopoulos, Philippe, Blanchard, Mrs. X. Salabelle, Mr. Kwan Kinn, Mr. Kwan Che Kwong, Lieut. Colonel Cogan, Lieut. Colonel H. B. Wilbraham, and Mr. J. M. Dientel in cabin.

Per British steamer *Empress of China*, for Vancouver, B.C.:—Miss Buchanan, Mr. A. S. Broadwood, Mr. C. G. Broadwood, Mr. Brandtgar, Dr. Cookling, Mr. Cookling, Miss Cookling, Mr. H. Coulson, Mr. Couch, Rev. Mr. and Mrs. Cady and 3 children, Mr. W. G. Dawson, Miss Hu King Eng, Mrs. T. H. Garrett, Mr. J. W. Garrett, Mr. H. W. Garrett, Mr. R. Garrett, Jun., Miss Hilton, Mr. Luis Holé and 2 servants, Mr. and Mrs. Lingle, Dr. and Mrs. Lefferts, Prof. G. T. Ladd, Mr. W. D. Murray, Miss R. K. Murray, Miss M. D. Murray, Messrs. J. B. McCue, J. Nugent, J. Ono, C. A. Pennington, Paterson, Colonel and Mrs. Rennick, Mr. and Mrs. B. Rawle, Mr. H. de Raasloff, Mrs. Sites, Master Sites, Miss Sites, Mr. Takasugi, and Mr. H. Wallis in cabin; Miss H. Adams, Messrs. Aoki, Adachi, Chivoret, Collins, F. Graffunder, Mr. and Mrs. Lawrence, Messrs. C. Morgan, McBrier, Nakayama, W. Pile, Miss R. Staples, and Mr. Ukita in second class.

Per British steamer *China*, for San Francisco via Honolulu.—Mr. C. S. Bragg, Mr. C. F. Bragg, Mr. R. W. Brown, Mr. H. Beale, Mr. R. Blunt, Captain B. C. Greenman, Mr. D. McCune, Mr. H. Y. Dean, Mr. L. R. Ellis, Mr. D. Fraser, Mr. J. Fraser, Miss Fincher, Lieut. C. A. Foster, U.S.N., Mrs. Godfrey-Belt, Miss Godfrey, Mr. J. A. Gasser, Mrs. E. J. Grant, Mr. J. B. Gaylord, Mr. Wm. Haly, Dr. Hopendyl, Mr. Otto Hamburg, Mr. and Mrs. H. J. Hunt, Mr. Heinaum Jensen, Mrs. M. A. Kellog, Mr. M. Kuru, Mr. I. Kumao, Mr. and Mrs. L. von Kapff, Mrs. S. Montgomerie, Mr. Marsh, Mr. H. S. Miller, Mr. John Nelson, Lieut. Commander B. F. Richards, U.S.N., Mr. and Mrs. W. Simpson, Mr. Percy Simpson, Mr. Earl Scott, Mr. Jas. Steward, Mr. S. Southam, Mr. J. C. Siegfried, Mr. W. H. Seabury, Mr. A. A. Thomas, Mr. J. Turcas, Master Sydney Wheeler, Rev. Dr. Woodhull, Mrs. M. Wheeler, Miss Wilcox, Mr. T. Uchida, Mr. J. Wood, and Mr. Y. Yaube in cabin.

Per Japanese steamer *Kobe Maru*, for Shanghai and ports.—Miss Little, Mrs. D. Muddust, Miss Bielfield, Mr. and Mrs. Isaacs, Miss M. M. Canthy, Dr. Harris, Messrs. J. Barber, W. B. Johnduff, D. E. Brown, M. Hillier, and Rev. D. Murray in cabin; Mrs. Shibata, Messrs. Tomita, F. J. Black, J. Miyaki, and Kovaki in second class, and 38 passengers in steerage.

Per British steamer *Verona*, for Hongkong via ports.—Miss Carrie Rose, Vet. Surgeon J. A. Nunn, Baron Luitwitz and servant, Miss and Miss Paterson, Surgeon-Colonel Paterson, Lieut. W. H. Paterson, Lieut. Carey, R.A., Messrs. G. Campbell, A. H. Groom and servant, A. S. Garfit, W. F. Madley, P. Sturdee, J. Xavier, and Raury, Lieut. W. G. H. Stirling and native servant, Mr. J. Robertson, Madame Sathon, child, and native

servant, Miss Webb, Captain Hawkins, R.A., Rev. F. T. Beckwith, Mrs. Beckwith, 2 children, and 2 servants, Miss French, and Mrs. Ah Yow in cabin; 5 Chinese and 1 Japanese boy in steerage.

CARGOES.

Per Japanese steamer *Yokohama Maru*, from Shanghai and ports:—Treasure, \$130,000.00.

Per French steamer *Yangtze*, for Shanghai via Kobe:—Raw Silk for France, 860 bales. Waste Silk for France, 59 bales.

Per British steamer *Empress of China*, for Vancouver, B.C.:—

REPORTS.

The French steamer *Melbourne*, Captain Vimont, reports:—Left Marseilles the 24th July at 4 p.m.; called at Alexandria the 29th and the same day at Port Said; entered the Suez Canal the 30th at 7.04 p.m.; experienced very fine weather during the passage throughout the Red Sea. Arrived at Aden the 3rd August at 8 p.m. and left the 4th at 7.40 a.m.; passed Socatra the 5th at 11 p.m., had light monsoon and rough sea for two days; thence to port fine weather. Called at Colombo the 10th at 7 p.m. and left the 11th at 2.01 p.m.; had fine weather and light W.S.W. breeze with a favourable current and smooth water. Arrived at Singapore the 16th at 11.30 a.m. and left the same day at 10.30 p.m.; thence to Cape St. James calm; anchored at Cape St. James the 18th at 7 p.m., awaiting the slack water to pass through the canal shoal where there are dredgers. Proceeded to Saigon the 18th at 11.04 p.m. and came along side the M.M. wharf the 19th at 3.30 p.m., and left the 20th at 11.30 a.m.; had fine weather and smooth water till the day before arrival in Hongkong, during which we experienced strong wind with moderate sea from E.N.E. Arrived in Hongkong the 23rd at 6.30 a.m. and left the 24th at 2 a.m.; passed Green Island at 2.30 a.m. and Waglan Island at 3.40 a.m., had fine weather and N.E. breeze with rain squalls; thence to Woosung fine weather and smooth sea; passed Turnabout the 25th at 7 a.m., Steep Island the 26th at 7 a.m., Guizaff at 10.30 a.m., and anchored at 2.30 p.m. at Woosung. Left the 27th at 3.30 p.m.; fine weather but hazy on the approach of the Goto Islands; passed Iki-shima the 29th at 1 a.m. and Shimonoseki at 7.30 a.m. Arriving at Kobe the 30th at 1 a.m. and left the same day at 4 p.m.; had fine weather and light breeze; passed Tomagai-shima at 6.8 p.m., head wind and a little pitching and rolling; passed Oshima the 31st at 12.14 a.m., heavy current against us with clear weather to Rocky Island, passing at 1.12 p.m. Arriving at Yokohama the 31st August at 6 p.m.

The British steamer *Devapangsa*, Captain Anderson, reports:—Left Victoria, B.C., the 15th August at 3 p.m.; experienced for the most part moderate westerly winds and overcast weather; on the 20th and 21st strong westerly gale and heavy head sea. Arrived at Yokohama the 31st August at midnight.

The Japanese steamer *Yokohama Maru*, Captain Swain, reports:—Left Shanghai the 26th August

at 1 p.m. and arrived at Nagasaki the 28th at 7.30 a.m.; had fine pleasant weather. Left Nagasaki the 29th at 5 p.m. and arrived at Shimonoseki the 30th at 7 a.m. and left the same day at 11 a.m. Arrived at Kobe the 31st at 9 a.m.; had fine weather throughout the passage. Left Kobe the 1st September at noon; had moderate easterly winds with heavy swell throughout the passage. Arrived at Yokohama the 2nd September at 7.20 p.m.

LATEST COMMERCIAL.

IMPORTS.

The improvement in the market reported last week has continued in other directions, and it would almost seem that Japanese dealers were beginning to realise that the supplies of Goods this season are small, and with every prospect of good trade that prices are more likely to advance than to decline, which has stimulated operations recently. In Italian Cloths rather a large business has been reported at improved prices, and there has been a fair enquiry for various Fancy Cottons. Sterling Exchange is quoted 2/10½ for demand Bank draft on London. Sales for the week comprise 1,000 bales English Yarn, 30 bales Bombays, 5,250 pieces glb. Shirtings, 100 pieces Washed Shirtings, 250 pieces White Shirtings, 2,000 pieces Turkey Reds, 450 pieces Velvets, and 7,500 pieces Italian Cloth.

COTTON PIECE GOODS.

Wire Nails, assorted	4.80 to 5.00
Tin Plates, per box	5.00 to 5.20
Pig Iron, No. 3	1.25 to 1.30

KEROSENE.

Not so much business has been done owing to the firmness of sellers, who continue to be masters of the situation. Even with further supplies prices are not likely to recede much as the native demand must commence shortly, which will act as a check to any serious fall in quotations.

QUOTATIONS.

Chester	\$1.57½ to 1.60
Devon	1.52½ to 1.55
Russian Anchor	1.52½ to 1.55
Russian Moon	1.50 to 1.52½

SUGAR.

Sales have continued at full rates, and, with small supplies, holders have been able to keep the market up to good figures.

	PER PICUL.
Brown Takao	\$4.70 to 4.80
Brown Daitong	3.40 to 3.50
Brown Canton	3.60 to 3.70
White Java and Penang	6.25 to 6.40
White Refined	5.50 to 7.60

EXPORTS.

RAW SILK.

Our last issue was of the 26th August. Since that date, the large business has continued, settlements during the interval amounting to 1,946 piculs, divided thus:—Hanks, 110 piculs; Filatures, 1,186 piculs; Rereels 358 piculs; Kakeda, 292 piculs. In addition to these, direct shipments have been 370 piculs, making the total business for the week for export 2,316 piculs.

As will be seen from the above figures, a very heavy business has been done, and our quotation list will show that prices have still further advanced. We have apparently reached, however, the top notch. Shippers are very cautious about going on at present rates; and if we should see a quiet market for a few days prices would probably decline a little. Exchange and the scarcity of dollars work against shippers and tend to make the market more quiet.

The business done has been pretty equally divided between Europe and America, good silks being most in demand, best Filatures destined for Lyons reaching the price of \$830 per picul. \$815 has also been paid for something extra in full sizes, but it has not been, so far, repeated.

There have been three shipping opportunities since we last wrote. The French mail steamer *Yangtze*, on the 28th August took 860 bales for Europe; the Canadian mail *Empress of China*, on the 29th August, had 777 bales for New York, and the Pacific mail steamer *China*, leaving on the 30th August, carried 1,162 bales for the same destination. These departures bring the present export figures up to 8,949 piculs, against 8,752 piculs last year and 2,767 piculs at the same date in 1890.

Hanks.—There has been less doing in these, but long prices have been paid. Best *Shinshu* are held for \$610, and a parcel of *Chichibu* has actually been weighed at \$585; *Shibukawa*, \$575; ordinary *Shinshu*, \$560 and others in proportion. The quality of Hanks leaves much to be desired this year, and it seems in every succeeding season that all the best cocoons will be taken up for Filatures, leaving only the inferior kinds to be reeled into Hanks sorts.

Filatures.—These have again enjoyed the lion's share of buyers' patronage, more than half the settlements taking place in this department. Fine size and full size have alike been sought after, prices being advanced to a very high basis. In European sorts plenty of sales at prices ranging from \$830 to \$740, those at the latter figure being of medium quality and poor colour. In full sizes, one purchase of extra quality *Shinshu* was made at \$815. This seemed to check the advance. *Rujokan* have been done at \$780; *Tokosha* is held for the same figure—(probably some slight reduction might be made on this); *Kameisha*, *Hakusuru*, and similar silks are quoted \$810. Probably with a firm offer in hand something better could be done.

Rereels.—A fair amount of business took place in these, \$720 being paid for silk equal to *Five Girl* chop. Holders now ask \$725 for similar silk, but without any takers at the moment. Medium grades, both *Foshu* and *Bushu*, have been in rather strong demand, with prices a fraction higher than those of last week.

Kakeda.—Another smart rise here upon the best classes. The latest transactions are as follows: *Daruma*, \$770; *Single Horsehead*, \$740; *Double Horsehead*, \$690. It remains to be seen whether things can be maintained on this basis.

Oshu.—Nothing done this week, the pretensions of holders being exorbitant. The price asked for best *Hamatsuki* is now \$600, which no one seems able or willing to pay.

WASTE SILK.

A small business only, amounting to 363 piculs, of which 245 piculs *Noshi* and 118 piculs *Kibiso*.

Arrivals come in freely from day to day and the stock is now over 13,000 piculs. The general features of the market are unchanged. Holders are very strong and persist in asking figures much above shippers' limits. Our Japanese friends do not seem to recognize the fact that fashion in Europe and America is at present adverse to articles which are made of anything but pure silk; consequently while Raw Silk is at a premium, Waste is at a discount for the time being.

There has only been one shipping opportunity, the French mail *Yangtse* taking 102 bales for Europe. Her departure brings the present export figures up to 2,083 piculs, against 1,010 piculs last year and 908 piculs to the same date in 1890.

Pierced Cocoons.—The dead lock still continues, and nothing has been done. Holders affirm that they cannot sell at the present price offered by shippers, and the consequence is there is no business whatever done. It remains to be seen which side will give way. Stocks are larger now than they were at the same date last year, but as then the market still remains unopened.

Noshi.—A fair amount of business was done, principally *Yoshu Noshi*, at from \$63 to \$68 per picul. This is represented to be a fair assortment without being anything special.

Kibiso.—Business in *Filatures* still goes on, prices ranging from \$87 to \$97 per picul, according to quality. In *Yoshu Hira*, a small parcel has been taken up at \$29, and this ends the record.

In other sorts no business.

THE GREATEST WONDER OF MODERN TIMES.
HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says:—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. Courser, in his account of his extraordinary travels in China, published in 1871, says:—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors the throughout World.

Established a Quarter of a Century.

Contractors to the British Admiralty, Foreign Governments, Leading Steamship Companies, & Yacht Owners in all parts of the World.

STEAM LAUNCHES & YACHTS

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 40 tons and upwards. We also build small light draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. We are also sole makers of the

KINGDON PATENT LIGHT PORTABLE ENGINE

Stock sizes, 1½ to 6 H.P. Burns less fuel, and gives three times the power, weight for weight, of any other engine. Awarded First Prize by Royal Agricultural Society England, 1890, in competition open to all makers. Illustrated Catalogue in English, French, or Spanish. Send for Copy to

YOKOHAMA: SATURDAY, SEPT. 10TH, 1892.

SUMMARY OF NEWS.

H.I.H. PRINCESS KOMATSU left the capital on the 5th inst. for Sano.

A JAPANESE coolie was murdered on Monday at Honmoku by a foreign sailor. The man is in custody.

H.I.H. THE CROWN PRINCE proceeded to the Botanical Garden of the Imperial University at Koishikawa on the 4th inst.

H.I.H. PRINCE FUMI, who has been staying at Miyanosita for some time, is expected to return to the capital at the close of this month.

THE government has granted a charter to the Kushiro Railway Company for opening the section between Chaato and Sato for traffic.

THE shareholders of the Sangu Railway Company propose to extend the Company's line to Maruyama by way of Mazuta.

A COMPETITIVE exhibition of lacquer will be opened at the Nishi Honganji Temple, Tokyo, for twenty days, commencing on the 19th inst.

A FALL of hail-stones occurred at Kanazawa, Senhoku-gun, Akita on the afternoon of the 28th ult., lasting for nearly twenty minutes.

A FIRE broke out on the 28th ult. at 11 a.m. in a house at Orikabe-mura in the East Iwai District of Iwate Prefecture, destroying 39 houses.

A MARRIAGE has been arranged between Lady Mitsuko, second daughter of Prince Shimadzu Tadayoshi, and Mr. Matsudaira Naosuke, ex-chief of the Yatsuye clan.

COUNT GOTO, Minister of State for Agriculture and Commerce, who was for some time confined to his residence through illness, has been able to attend business since the 3rd inst.

H.I.H. THE EMPEROR will leave the capital on the 22nd on the 23rd October to witness the

Autumn Manœuvres of the Imperial Body Guards, which will take place in the north.

THE property of the Shinagawa Glass Company, Tokyo, has been attached by Mr. Nishimura Minosuke, a coal merchant, for a debt amounting to yen 750.

ARRANGEMENTS are being made by the members of the Japan Fine Art Society to open an exhibition of pictures in the gallery of the Society in Ueno Park for thirty days, commencing on the 1st prox.

DURING a severe thunder storm on the 27th ult. a destructive forest fire occurred on Aso-san in Kumamoto Prefecture, and the flames had not died out by ten o'clock on the following morning. A large number of trees were destroyed.

THE annual trial of the pyx will take place in the Osaka Mint about the 11th inst. Mr. Arishima, Chief Commissioner of the National Debt Bureau in the Finance Department, left the capital on the 6th inst. to witness the examination.

VICE-ADMIRAL ARICHI, Commander-in-Chief, Captains Ichiji and Togo, and some twenty-six other officers of the Japanese Standing Squadron, who lately returned from a visit to various Chinese and Korean ports, were admitted to Imperial audience on the 5th inst. at 10 a.m.

THE price of ice in the capital is steadily increasing. The following are the quotations for the 2nd inst. as compared with the previous day:—Natural ice, yen 3.50 per hundred *hin* on the 2nd inst. and yen 2.50 on the 1st, artificial ice, yen 3.00 on the 2nd inst. and yen 2.10 on the 1st.

ABOUT five o'clock on the afternoon of the 27th ult. lightning descended at Donagawa-mura in the East Kubiki District of Niigata Prefecture, and six residences and one godown were burnt. A man and a woman were struck by lightning, and killed at Tatsumine-mura, Yatsushiro-gun, Kumamoto Prefecture, the same day.

SOME 6,048 visitors were admitted to the Tokyo Library during last month, of whom 5,455 were ordinary and 593 special visitors. The above total shows an increase of 836 as compared with the previous month. The number of books inspected during the month was 39,143, of which 2,244 were foreign, and 36,899 were Japanese and Chinese works.

CAPTAIN H.I.H. PRINCE ARISUGAWA TAKEHITO of the *Takao Kan*, has been transferred to the *Chiyoda Kan*, his place in the former ship having been taken by Captain Nakamizo, a Sectional Chief in the Second Bureau in the Naval Department, who has been succeeded by Lieutenant Hayasaki Gengo. Captain Ichiji, of the *Takachiho Kan*, has been transferred to the *Itsukushima Kan*, and his position has been given to Captain Chidzumi, of the *Chiyoda Kan*.

ON learning the spread of an infectious disease among cattle in various parts of Keisho-do, Korea, the Superintendent-General of the Metropolitan Police has issued instructions to the effect that cow-hides imported from the district should undergo examination and be disinfected at the Police Station within whose jurisdiction the purchaser resides, in order to prevent the introduction of the disease.

MESSERS. MURATA TEI, Katsura Jiro, and several others have decided to establish a shipping company to be called the Kominato Kisen Kaisha at Kominato in Aomori Prefecture, with

a capital of 150,000 yen, the object of the Company being the transport of Hokkaido products. It will be remembered that investigations have been made by the authorities with the view of establishing a naval port at Kominato. The future prosperity of the port is believed in by the leading merchants.

THE funeral of the late Mr. Hagi Tomogoro, Manager of the Nineteenth National Bank and a Director of the Tokyo Godown Company, took place in the capital on Sunday, and was attended by a large body of merchants, including Messrs. Fukuzawa Ichitaro, who represented Mr. Fukugawa Yakichi, Iwasaki Kyuya, who represented Mr. Iwasaki Yanosuke; Obata Takujiro, Yoshikawa Taijiro, Nakakamigawa Hikojiro, Soda Heigoro, Abe Taizo, and several officers of the Mitsubishi Kaisha. The interment took place at the Cemetery attached to the Kaianji Temple at Shinagawa, the ceremony being conducted in accordance with Buddhist rites.

A JAPANESE named Nakahara, settled at Quel-part, in Korea, in order to catch *namako* (sea-cucumbers) with permission of the Authorities. He is said to be very skilful, and was making much money. This, however, did not please the Governor of Hakusei-Shimpo, who, it is stated, instigated the people of the district to interrupt the business of the Japanese fisherman. Early in the month of August last a large number of Koreans made a sudden attack upon the Japanese and endeavoured to seize his diving apparatus. Nakahara and seven other fishermen fought their assailants, but being out-numbered could not protect themselves, and were ultimately obliged to make their escape, leaving all their property with the exception of the diving arrangement. They at once made their way to the Japanese Consulate and gave the Consul a full report of the occurrence, with the intention of seeking redress.

THE Import trade continues in a healthy condition, and the critical period of the rice crop having passed to the satisfaction of the farmers, a bountiful harvest is anticipated which inspires great confidence in dealers. The consequence is that buyers are tumbling in with orders, and, besides taking supplies that have been recently landed, have entered into contracts for future arrival; and, much to the satisfaction of holders, have cleared out a lot of ancient goods that have been an eyesore to their owners for a long time. Prices are generally higher, and where no distinct rise has taken place, are full and firm—but with one exception, namely, Yarns, which are freely offered to arrive at low figures. In the Metal trade, the past firm attitude of holders has had its effect, and there is a steady current business, though not of great dimensions, and the feeling is that there must shortly be a fair demand. There is a distinct rise in Kerosene, and even at improved rates holders are not pushing, as there is every indication of higher values close at hand. The Sugar trade is in fair condition, prices being higher for certain Browns and all sorts being firm. There has been a decline in the quantity of Silk taken, the late high rates and large quantities sold having produced their natural effect. The market is in this condition, however, that another "boom" might come at a moment's notice, indeed, a sensible reduction in the present rates demanded could not fail to stimulate purchases. There has been more done in Waste, mainly owing to one buyer having taken several big parcels of Cocoons, but there is a tremendous stock on hand. The Tea trade is quieter, with plenty of leaf on offer, and buyers holding off. Exchange has been steady and firm during the week, and remains so at the close.

EDITORIAL NOTES.

THE JAPAN BEER BREWERY COMPANY.

ON Monday last the Japan Beer Brewery (*Yebisu*) Company held a general meeting in the Nihonbashi Club. Mr. Umakoshi Kyohei took the chair, and stated that in the accounts as published in the seventh report, the profit realised by the Company was put down as 761,058 *yen*, but a careful examination had produced quite another result; the Company had actually incurred a loss of 1,591,283 *yen* for the period in question. The present committee who were elected in May last had fully investigated the previous accounts, and had found that the total loss amounted to 18,712,547 *yen*, and their debts to 12,011,955 *yen*. Several shareholders rose to demand particulars, and the meeting became somewhat noisy, but finally settled down with a request for the committee to get them out of their difficulties. The Report for the first half of the present year, which showed a loss of 921,333 *yen*, was then read. The shareholders appeared surprised and disappointed, and two or three questions were asked, after which the future policy of the company was discussed, and the meeting separated.

The shareholders had some justification for their surprise at the result of the half-year's working. The *Yebisu* Beer is generally acknowledged to be one of the best in the market, and has grown greatly in public favour during the last twelve months. It is now found in every nook and corner of the empire, and together with *Kirin* Beer, has absolutely usurped the field formerly held by the ubiquitous "Stock." Doubtless the accounts for the second half of 1892 will have a more soothing effect upon the shareholders.

THE GRIEVANCE OF JAPANESE MERCHANTS IN KOREA.

IT is now three years since the Korean Government, without any previous notice, issued an order forbidding the export of grain. It is true that there was an urgent reason for taking this step. A famine existed at the time, which demanded extreme measures. But, on the other hand, the Japanese export merchants of Gensan, who had advanced large sums of money on corn, suddenly found themselves in serious difficulties. They could neither obtain the money advanced nor corn in lieu thereof. The amount owing to them is stated to have been 170,000 *yen*. This sum the Korean Government was asked to refund. It was argued that it was the duty of the Government to give notice before issuing such an order or to make good the losses caused by it. The Korean Government, after tedious delay, commanded the officials who had issued the order forbidding export to pay the money claimed by the Japanese. But this policy was condemned by public opinion in Korea, which maintained that no State could require officials to make good losses incident to the carrying out of measures calculated to benefit the nation. Mr. Kajiyama, the Japanese Minister, has suggested to the Gensan merchants that they should reduce their demands and be prepared to take any sum that Korea may offer. Naturally, they object to such a method of settling the question. They argue that their claim is just and ought to be met, and that the Korean Government is well able to pay. The *Fiji Shimo* writes earnestly on the subject, urging the Foreign Office to insist on a speedy settlement of this much discussed question.

A LAW SUIT AGAINST THE GOVERNOR OF TOKYO.

MR. TOMITA TETSUNOSUKE, Governor of Tokyo, issued a notification in June last relating to the method of collecting taxes on business, and the Headmen of *Gun, Cho, and Son* proceeded to put this method into force. According to the notification, every member of a bank or company is required to pay the tax individually. This provision being considered unjust, Marquis Ikeda, Director of the Fifteenth National Bank and 75 other bankers, have now instituted a

suit against the Governor, in the Administrative Court. The plaintiffs are represented by Mr. Okayama Kanekichi and Mr. Okamura Teuhiko. The notification in question runs as follows:—"Every officer of a business firm, falling under the Commercial Code's appellation of *Gomei-kaisha* (joint name company), or *Goshi-kaisha* (joint-stock company), and every superintendent of a *Kabushiki-kaisha* (shareholders' company), shall pay a business tax according to the value of his dwelling, which tax shall be levied from the latter half of the 25th year of *Meiji*." One of the principal objections advanced by the plaintiffs against this notification is that their appointment as bank directors is made either by the Government or by the shareholders, and that, as holders of such an office, they do not belong to the category of business men contemplated by the imposers of the tax. Moreover, they claim that Art. 9 of the Commercial Code, determines the class of men who are to be called business men, and that they, the plaintiffs, cannot possibly be included in that class. These facts are published by the *Choya Shimbun*.

THE LAND TAX IN JAPAN.

WE observe that Mr. Garrett Droppers, whose interesting essays on the Japanese fiscal system have been the subject of some comment and criticism in this country, repeats, in the July number of the *Quarterly Journal of Economics*, his statement as to the ratio of land tax to the net produce of the land. "This land-tax," he writes, "is by far the most important source of revenue in Japan, generally yielding about 40,000,000 *yen* out of a total of 75,000,000 *yen*. The tax amounts to about 25 per cent. and in some cases to 30 or 35 per cent. of the net crop, and its reduction to 2 per cent. is striven for by the representatives of the farming class." We find it impossible to credit this statement. It has been combated by writers in the local English press and Mr. Droppers has answered them. But neither he nor his critics seem to have examined one signification of his estimate. Taking the lowest figure given by Mr. Droppers we have this equation

$$\frac{1}{2} \text{ of the assessed value of the land} = \frac{1}{2} \text{ of the net produce} \\ \text{or the assessed value of the land} = 10 \text{ times the net produce.}$$

This means that the arable and building land throughout Japan is assessed at ten years' purchase for purposes of taxation, that being also the minimum assessment. We cannot pretend to say that the conclusion thus obtained from Mr. Droppers' estimate is absolutely incorrect, for, strange to say, Japanese statisticians have never collected figures sufficiently full and accurate to establish the point one way or the other. But if we understand what Mr. Droppers has advanced on the subject, he relies chiefly on information furnished by farmers in certain districts of the country, and it is impossible to feel that isolated assertions coming from such an obviously biased source and unchecked by independent research can be accepted as conclusive. To attach faith to Mr. Droppers' figures is to assume that the total net income derived by the Japanese people from arable and building lands throughout the empire does not exceed a hundred and fifty million *yen*, or, say, twenty-five millions sterling. Is that credible? We cannot think so. In our opinion the question of the Japanese Land Tax requires wider and more minute investigation than it has hitherto received.

CRIMINAL WOMEN AND CRIMINAL MEN.

PSYCHOLOGISTS have often propounded the question, are women more or less prone to crime than men. It seems, at first sight, a singular question, seeing that the number of male criminals is everywhere so much larger than that of female. Thus in Germany, 100 men are convicted by the courts for every 19 women; in France and England the figures are 100 to 20, and in Austria 100 to 14.8. Differences in national laws and social customs make it impossible to draw any safe deductions from these figures as to the various countries concerned, but their general teaching is unmistakable, namely, that incomparably fewer women violate the laws than men.

Does it follow, then, that the moral sense of the female is higher than that of the male? This is precisely what psychologists have long desired to determine, and Mr. Ludwig Fuld now answers very decisively that the weaker sex has no such advantage. He sets the plea aside altogether as quite untenable. "Woman's restriction to domestic life," he writes, "her non-participation in politics, her fewer opportunities and temptations, and finally her want of physical strength, are the chief causes of the comparative freedom of her sex from participation in crime. Whenever social conditions become unfavourable for women, the percentage of women criminals increases. Whenever the woman has to take part in the bread-winning and to compete with man in the struggle for existence, the disparity rapidly diminishes." Indeed, Mr. Fuld pronounces a still stronger verdict on the subject, for we find him writing, later on:—"Participation in the struggle for existence does not operate favourably on woman; her powers of resistance are not strong enough to withstand the temptations and dangers of her position victoriously, when principle and self-interest are opposed; and it may be safely concluded that, if woman were subjected to precisely the same conditions as man, she would contribute more than her full complement to the statistics of crime. Once embarked on the downward course, woman glides rapidly to its close, she sinks deeper and deeper; and the number of women criminals capable of redemption and of social regeneration is extremely small. In spite of the comparatively small number of female convictions, there is no very great disparity in the actual numbers of male and female habitual criminals. The figures of criminal statistics should, however, be not only counted, they must be weighed also; and to estimate the problem fairly it is necessary to take account of the offences in which women participate. We gather, then, from the German official statistics, that the majority of offences for which women are convicted, are against person and property, there being but few convictions for offences against the State or public order. A close investigation shows that the greater number of offences of which women are convicted, are among the more grievous, while as regards the most grievous offences against life, the number of women concerned is actually greater than that of men. The offences against life of which women are guilty, consist for the most part of the murder of children and family connections, near or remote. This fact alone constitutes a very decisive reply to the widely promulgated view that the altruistic sentiment is more highly developed in woman than in man. This view is confirmed neither by statistics nor by history. On the contrary, they both afford irrefragable evidence that woman outstrips man in utter want of feeling, and in the revolting nature of her crimes. We need only refer, in evidence, to the first French Revolution and the Paris Commune. In the absence of feeling during the perpetration of murder, in cold-blooded thoughtfulness in concealing the traces, in lying and deceit after the deed, woman far exceeds man; and rarely, indeed, are the motives of men-murders so demoniac as those of women-murderers.

COUNT OKUMA AS THE LEADER OF A POLITICAL PARTY.

THE *Keisei Shimo* writes a powerful article eulogising Count Okuma. It says that politics are neither more nor less than war in time of peace, and that the leader of a political party is a captain conducting a veritable campaign. The qualifications required in a perfect leader of a party are first that his spirit should be dauntless in the face of difficulties, however great; secondly this liability should be so conspicuous as to attract all able men to his standard; thirdly, that his chivalry should go the length of devoting all his wealth to his cause; fourthly, that his erudition should guide him to a full understanding of the times; and fifthly, that his strategic skill should suffice to deceive and baffle his adversaries. Count Ito's learning is extensive, and his knowledge suits the times. He is one of Japan's ablest and most

Original from

prominent statesmen in these constitutional days. But has he ever shown that he possesses the qualifications necessary for the leader of a political party? Count Inouye, on the other hand, is conspicuously competent to fight single-handed like a brave general, but is he gifted with the qualifications necessary in the leader of a political party? Count Itagaki of the *Fuyu-to*, Viscount Torio of the Conservatives, and Count Saigo of the National Union—these are all actual leaders of political parties. Count Itagaki, has the gift of winning popular sympathy, but he is without the art of collecting able men about him. Viscount Torio has the courage of attack, but he, too, lacks the faculty of attracting able supporters. And Count Saigo has influence and spirit, but his knowledge is limited. What then is to be said of Count Okuma? His natural talent is not very great; his learning is not very extensive, and his ability not very exceptional. Yet none will deny that he is one of the best leaders of a political party in Japan. In 1881 he resigned his office in the Government, and at once the *Kaishin-to* was organized. Into its ranks were speedily gathered numbers of men whose abilities had either been proved already or recognised as full of promise, who at once conferred great power on their leader. Evidently, therefore, the Count is endowed with the faculty of winning clever followers. He then directed his weapons against the *Sai-Cho* Government, and little by little his power and influence increased until, when Count Ito failed in 1888, he became Minister of State for Foreign Affairs. No sooner had he attained that position than he plunged into treaty revision. Every member of the Cabinet hesitated, but the Count stood undaunted. Finally his leg was shattered by a bomb, but his spirit was not enfeebled. He continued to fight bravely with the Government. Evidently, therefore, he possesses spirit to struggle against any difficulty. Lying on his sick bed he patiently bided his time, and when the Diet assembled and his party was strong enough, he arranged a meeting with Count Itagaki, and the union of the *Kaishin-to* and the *Fuyu-to* was effected. Therefore he evidently possesses strategic talent to baffle his opponents. His wealth was lessened by the bankruptcy of Mr. Nakamura, and he incurred debts of some 500,000 *yen* to distribute to his followers. Therefore he evidently possesses a chivalric disposition. So far as erudition and talent are concerned, he is not, perhaps, to be reckoned among the ablest Minister Presidents of State which the country can furnish, but no one is greater as a leader of a political party.

JAPANESE FIRE INSURANCE COMPANY.

It is only within the last two years that the Japanese have begun to realise the value of Fire Insurance Companies. The earliest Japanese Company was, if we are not mistaken, founded in 1886. But for the first few years of its existence it had little business to do. Four years ago a second Company was formed, which is reported to be doing well. As a rule it has been the experience of these companies that the application for policies have been more numerous in the winter than in the summer. But this year the reverse is the case. The reason alleged is that the Japanese have discovered that by insuring houses they qualify them to be offered as security for money borrowed. The value of a house for mortgaging purposes has hitherto been practically *nil* in Japan.

THE TOKYO MEDICAL SOCIETY.

The annual meeting of the above Society was held on the 1st inst. at 8.0 a.m. About 400 persons were present. After the reading of the report by Dr. Osoma Kenji, and the transaction of the usual business, addresses were delivered by several members of the Society. Dr. Takata Koan spoke on "Vaccination." He said that, according to popular and even medical opinion in Europe and Japan, it was unnecessary for persons who have suffered from small-pox to undergo vaccination. This theory he believed to be false. He had taken the trouble to col-

lect statistics on the subject, some of which he would lay before the meeting. Out of 293 cases of small-pox under treatment in the Honjo and Komagome hospitals, in no less than 30 instances the patients suffered from a second attack of the disease. This was a very large percentage, and he believed that it was by no means an extraordinary occurrence. The establishment of the fact that persons are liable to be attacked twice by this virulent disease made it necessary for the Government to alter the rules relating to vaccination, so as to make it compulsory for all persons to undergo periodical vaccination. In order that they might have an idea of the kind of rules it was necessary to enforce, Dr. Takata said that he had translated and distributed among his friends the German Vaccination Regulations. The next address was on "Dysentery," Dr. Saigo Yoshiyoshi being the speaker. Dr. Saigo observed that this disease prevailed in Japan in an endemic form during the whole year. The number of cases in each province or district was regulated by the water supply. As a rule the Japanese constitution is much more seriously affected by an attack of dysentery than the constitution of foreigners. The type prevailing at the present time is virulent, and compared with last year the deaths have been numerous. Dr. Sakaki Junjiro followed with an Address on "Rice and Beriberi." He said that it was generally held that a rice diet was conducive to the development of *beriberi*, but this notion was not altogether accurate. Only certain kinds of rice produced *beriberi*. In order to test this question various experiments had been tried in the Tokyo *Beriberi* Hospital. Japanese rice may be classified according to the places where it is grown, as follows: (1) Tokyo and vicinity, (2) Tokaido, (3) Hokurikudo, (4) Uzen and Ugo, (5) Northern Japan and Hokkaido. By the experiments, which extended over 12 years (1869-1891), it was proved that only rice grown in the North or that produced in Ugo and Uzen is conducive to *beriberi*; the reason being that this grain contains more moisture than rice grown in other parts. There is every reason for thinking, the experiments on this point are not yet concluded, that rice cultivated in high dry land where there is no irrigation, would be perfectly free from any tendency to produce *beriberi*. The subject of the next address, delivered by Dr. Uno Ro, was Dr. Koch's Remedy. Dr. Uno said he had recently returned from Germany and hence was in a position to inform the meeting as to the state of medical opinion in Europe on the Koch cure. The general feeling among professionals is that the success of the remedy is doubtful.

ROUND THE CAPE.

A NORWEGIAN steamer, the *Guernsey*, Captain Olsen, has performed what has, since the opening of the Suez Canal, generally been considered to be a work of supererogation, having rounded the Cape. She arrived this morning, says the *Singapore Free Press* of the 24th ult., with a cargo of coals consigned to Messrs. Paterson, Simons & Co., from Barry Dock, which place she left on the 25th June. Leaving the Cape of Good Hope on the 25th ultimo, she arrived in the Rho Straits after 58 days 6 hours steaming, passing Anjer on the 10th instant. She reports all well. This is, however, a departure of no little significance—to the directors of the Suez Canal. As already stated the time occupied in coming out was something more than 58 days. The object, of course, was to save the canal dues, which are considerable, and in the case of the *Guernsey*, and including pilot's fees, the total charge would have been probably something like £500 or £600. The saving thus effected it was anticipated would more than cover the cost of the additional time occupied—about 15 days—rounding the Cape, and we have it on good authority that several other ships that are to follow, will come out by the same route. The departure, too, may ultimately prove of interest politically, especially in view of the motion to be moved by Sir Charles Dilke on the reassembling of Parliament for the evacuation of Egypt. It is interesting also in view of the determined

opposition which is being brought to bear against the carriage of petroleum in bulk through the Red Sea and the Suez Canal, and the results of the experiments in the case of the steamers still to follow will doubtless be closely watched.

POVERTY IN THE PEERAGE.

Among the members of the House of Peers, the Princes and Marquises receive no salary, but the Counts, Viscounts, Barons, and all other members are paid. The Princes are in fairly good circumstances, as they received considerable grants of money from the Emperor some years ago. But many of the Marquises are as poor as the poorest noblemen of the lower ranks. Yet they are so loyal that they attend the House regularly, carrying their tiffin with them in a *dento* box. On the other hand, noblemen below the rank of Count attach pecuniary importance to their appointment as members of the House of Peers. Whenever there is an election to fill a vacancy in those orders, the competition is very spirited, and it is now actually rumoured that an association is to be formed for the purpose of entering into an agreement with any candidate who desires to be nominated. As such a proceeding would be a great disgrace to the Peers, a certain Prince and some other noblemen, says the Central New Agency, are consulting with the idea of introducing, in the next session of the Diet, a Bill to abolish the salaries of members. There is little chance however, that the Bill will be carried for the opponents muster very strong.

TERRIBLE ACCIDENT ON MAYA-SAN.

LAST Tuesday night the annual festival on Maya-san (known among foreigners as the Moon Temple) was held, and the lights at the different rest-houses on the mountain were easily to be seen from Kobe. The weather being fine, a very large number of people made the ascent, and we regret to say that a very serious accident occurred near the summit. As those who have made the ascent know, the temple is approached by several flights of stone steps amounting to about two hundred and fifty in all. The steps are very steep, and rough and uneven, requiring some care even when there is no noisy jostling crowd, so that they are very dangerous when being ascended or descended by crowds of people many of them under the influence of *saké*. About half-past eleven on Tuesday night a man slipped and fell when near the top of these steps, and his fall brought down others until thirty people were rolling down the steps in a confused mass. Assistance was at once rendered to the unfortunate people, but of the thirty who fell we hear that five were killed instantly, one or two of these having fallen over the cliff at the side of the steps. Others had arms and legs broken, and their plight, far away from medical assistance, must have been terrible. These accidents in the night ascent of Maya-san occur almost every year, but they do not appear to diminish the attendance at the festival.—*Kobe Chronicle*.

STEAM COMMUNICATION.

THE main line from Tokyo to Amori having been completed, and the Muroran railway in Hokkaido having also been constructed, some people in Muroran propose to run a new service of steamers from Amori Harbour to Muroran *via* Tsugaru Bay, so as to enable passengers from Tokyo to reach Sapporo within 73 hours. If the above project be carried out, not only will much time be saved, but the cost of travel will also be much decreased. According to the estimate of the projectors, a third-class ticket from Ueno station to Sapporo will be only \$6.79. They have determined to establish a central goods office in Muroran, and a branch office in Amori, and they hope to secure the bulk of the goods hitherto carried by the Nippon Yusen Kaisha's steamers. We take these details from the *Kokkai*.

A NEW PRACTICAL MEN'S ASSOCIATION.

THE *Nichi Nichi Shimbun* now reports that the "practical men" of Tokyo who failed to elect their representatives in the Chamber of

Commerce, have united with the members of the *Shodan-Kai*, and established a new association under the name of the *Dosei-Kai*, not the *Doyu-Kai* as was originally proposed. The details of the split amongst the members of the Chamber of Commerce were given in our Saturday's issue. Already some sixty five members out of whom sixteen are members of the Chamber of Commerce, have joined the new association. At a meeting held on Saturday last, Mr. Oku Saburobei was elected President, and Messrs. Nakazawa Hikokichi, Ii Kichinosuke, Takashima Kanroku, Kobayashi Yoshimori, and Katabami Heibei, a committee of management.

LARGE FIRE IN SHANGHAI.

THE *Shanghai Mercury* publishes the following account of the large fire which occurred there on the 22nd ultimo:—"In last night's issue we gave a short account of what was one of the most extensive fires that has occurred in Shanghai for a considerable time, but up to the hour we went to press the extent of the damage had not been fully ascertained, and the number of houses burned, then placed roughly at between fifty and sixty, is now known to have been much nearer if not quite, a hundred. It is on a day like yesterday, a stifling afternoon in the middle of summer, that the pluck, endurance and efficiency of our firemen are really put to the test, and we venture to say that whenever such an occasion has arisen, our red-shirted heroes have always proved themselves as equal to the emergency as they were yesterday. They are no carpet knights, our firemen, and though their frequently inestimable services are given voluntarily, and are sometimes, we fear not quite sufficiently appreciated, no motive but the high one of saving life and property from the fire-fiends ever actuates them when summoned to duty. No vain-glorious notions of show or desire to hear their praises sounded,—there is only one idea in the mind of the Shanghai fireman when a house is burning, and that is, go to work and put the fire out. Yesterday the bell rang about 11.30 a.m., and from that hour till near dinner time the members of the various companies stood at their posts like men. The blazing sun poured down on their heads all day long; they were frequently half suffocated by clouds of smoke and scalding steam arising from the hot debris among which they stood, the stenches of the Defence Creek and the unsavoury alleyways branching off Canton Road assailed them, and their lives were not infrequently imperilled by the falling walls and roofs, but still they worked on like Trojans, and did not take a moment's rest during all those fatiguing hours, until the fire was subdued, when the area cleared though large, was, thanks to their efforts much smaller than would have been the case had they given up a fight for which they will probably not be thanked. Commencing in a small Native shop close to the junction of the Canton and Yunnan Roads, the fire, aided by various circumstances, spread rapidly upwards towards the Creek. The wind was just strong enough to kindle the flames nicely among the timbers of which those small houses were principally composed. The wood itself was as dry and inflammable as tinder owing to the long spell of scorching weather we have had, and to cap all, when the firemen arrived (and a good many contrived to be on the spot before the somewhat refractory ponies got there) with their engines and hose-reels, the water supply was found to be inadequate. The four corners of the streets were blazing by the time the first streams began to play, and it soon was shown to be impossible to prevent the flames extending, for though the Mih-ho-loong and Deluge Companies worked away with a will on Yunnan Road, the smoke and steam were blown into their faces and they were compelled slowly to retire. The other companies were in the thick of the fray at an early period also, but the fire literally drove them up the Canton Road before it, both sides blazing so fiercely that looking from the Creek the thoroughfare appeared like an open furnace. At the corner of the Canton Road and the Defence Creek, the popular German pastor, Dr. Faber, had his residence. The Doctor evidently never counted upon his house being attacked

until it was too late to save many valuable books and part of a collection of botanical specimens which it had taken Dr. Faber years to acquire. These were partially destroyed; and we sympathise heartily with him in the loss of these literary and scientific treasures, for it will be next to impossible for him to replace them, especially the specimens. At length after blazing with unmitigated fury for hours the fire practically spent itself, and by half-past six the greater number of the firemen were enabled to take a well-earned rest. Fortunately, there are no casualties to report, but all those engaged in combating the flames suffered terribly from the heat; many of the firemen fainted and had to be carried away to some shady place, where upon the untimely application of ice, we are glad to say, they recovered without exception. The origin of the fire is at present unknown, but it is believed to have been caused by some joss-paper having been accidentally ignited in the small shop before-mentioned. Among the houses destroyed were the residences of quite a number of native police constables. A large number of insurance offices are interested in the fire, the damage being generally estimated at about Tls. 20,000; 86 houses altogether were destroyed. The contents of Dr. Faber's house were insured in the Transatlantic for Tls. 2,000, and among the other companies which will have to share the loss are the Royal, (Tls. 6,000) the North British and Mercantile (Tls. 2,000) the China Fire (Tls. 2,000) and the New Zealand (Tls. 3,000). Messrs. Cushing, Sassoon, W. Lang, and Chen Chuen-Sieh, we understand owned the bulk of the property. With the exception of Dr. Faber's policy all the insurances were on buildings, there being no insurance on the contents of the Chinese houses destroyed.

SILK INSPECTORS.

It is stated in the *Shogyo Shimpō* that among the items included in the Budget to be submitted to the Diet during its next session by the Department of Agriculture and Commerce is one amounting to 30,000 yen for silk inspection. It is reported that the Department purposes establishing two inspecting offices; one at Yokohama and the other at Kobe, and that the services of foreign and Japanese experts will be sought, the aim being to render the silk stamped by the inspectors thoroughly trustworthy and to insure exporters against loss on their goods when sold abroad owing to portions of them proving to be of inferior quality. The promoters of the scheme are confident that they will be able to persuade even the most callous of members that it is the duty of the Diet to support a measure so essential to the further development of the silk trade.

THE STEAMER "BENGLOE'S" EXPERIENCE.

By the safe arrival last night, says the *Hongkong Daily Press* of the 24th ult., of the *Bengloe*, one of the well-known "Ben" Line of steamships owned by Messrs. William Thomson & Co., of Leith, certain sinister rumours which had obtained currency during the day regarding her safety were set at rest. These rumours doubtless had their origin in a report which appeared in a Shanghai contemporary furnished by Captain Hutchison, of the *Whampoa*, who stated that at 3 p.m. on the 18th inst. he had observed a large steamer with a yellow funnel, flush deck, and straight stem on shore at the Hieshan Islands. This is an exact description of the *Bengloe* (though in several other particulars Captain Hutchison is at fault), and when in addition it was known that the vessel was at least two days overdue, the utmost anxiety was felt for the safety of Captain Farquhar and his crew. The *Bengloe* left Moji with a cargo of coals on the 14th, and having on board one European passenger, Mrs. Lyons. With a moderate breeze and a southerly swell all went well till the 17th, when a stiff gale and heavy south-easterly sea, with wind backing to the eastward, were experienced. At 11.30 a.m. the ship took several very heavy rolls, shifting the cargo to starboard and throwing her on her beam ends. The engines were immediately

slowed down and the trysail and jib were taken in, while the vessel's head was hauled to S.E. All hands were set to trimming the coal in the hold and bunkers. With a list of 28 degrees which submerged the deck 18 inches on the lee side, this was no light task. About 3 p.m. a tremendous sea swept over the ship filling the engine-room and stoke-hole bilges (on lee side) about 5 feet above flooring plates and with the heavy rolling and pressure of water in the bilges a considerable part of the flooring was burst up and the felting washed off the main boilers, and it was deemed necessary to cut the auxiliary pump suction pipe and reset it into the lee bilge to try and reduce the water. This sea also carried away the No. 3 boat, the gangway ladder, teak rails, the harness cask, and everything moveable on the starboard side of the deck. At 5 p.m., being unable to get the ship trimmed, a start was made to jettison the coal out of the starboard bunkers. Up till 9 p.m. heavy seas washed over the deck casing of the engine department, bursting in the donkey-house door and increasing the water in the bilges to the extent of washing the ashpits of the starboard wing furnaces. At 6 p.m., at which time the ship became somewhat steadier, the pumps were unable to reduce the water in the bilges, and through the rolling of the ship and the excessive list it was with much difficulty that 40 lbs. of steam could be maintained to work the engines at quarter speed. At 11.30 p.m. the ship was hove to, heading S.W., all hands (including the lady passenger, who worked with perfect composure and with an energy which the others could but emulate) working in the holds and jettisoning the coals out of the bunkers until 1.30 a.m. on the 18th. At 6.30 a.m. in 30 fathoms of water, the engines were stopped and fires cleaned, and at 7.55 the vessel made slowly for the Haeshin Islands, the crew continuing the jettisoning of the cargo. At half-past twelve she anchored in the North-West Bay of Sha-ho Island, with a list to starboard of 26 degrees. The deck hands continued all day trimming the coals, and the following morning an endeavour was made to arrange with the islanders to work in the vessel, but seeing the heavy list they were evidently afraid and the negotiations fell through. At half-past five the crew refused to work any longer having had a continuous spell of some 30 hours, and being tired and worn out. Next day's negotiations with the natives were more successful and fourteen were employed, who worked to such advantage that by 5 p.m. the ship was sufficiently upright to proceed with safety. The anchor was weighed, and without further misadventure Hongkong was reached last night.

THE WEATHER.

THE tail of the summer—or the *sansho*, as it is called in Japan—has been so hot this year that the impression of a generally hot season prevails among the public. But it would seem that, so far as maximum readings of the thermometer are concerned, there has been nothing special to complain of. The following table shows the highest readings of the thermometer and the days on which they were registered during the past sixteen years:—

Year.	Days.	Reading of Thermometer.
1877	July 8th	94° 5 F.
1878	August 31st	95° 2
1879	August 15th	93° 0
1880	August 1st	91° 8
1881	September 3rd	93° 6
1882	July 27th	93° 6
1883	August 13th	93° 6
1884	September 16th	91° 7
1885	August 31st	89° 2
1886	July 14th	97° 9
1887	August 28th	97° 1
1888	August 21st	91° 0
1889	August 3rd	89° 2
1890	June 25th	92° 0
1891	August 15th	93° 9
1892	August 16th	92° 5

It is possible, of course, that before the summer takes leave of us altogether, we may have a day hotter than the 16th of August was. But the presumption is to the contrary. Except as a matter of statistical curiosity, however, the above figures are of no special value. They do not convey any idea of the heat of the season as

a whole. The thermometer may register a great height of mercury on one particular day, and yet, speaking generally, the season may be cool. Persistent heat without a break, even though the range in degrees be not exceptionally high, is the really important factor in determining the nature of a season.

EXPORT OF OX-HIDES FROM KOREA.

MR. MUROTA YOSHIBUMI, Japanese Consul at Fusan in Korea, sends a disquieting report about the export of ox-hides, which constitute one of the principal staples of the Korean outward trade. He says that having heard rumours of the prevalence of a cattle plague in Korea, he endeavoured to obtain the facts of the case from Korean officials and from his own nationals trading at the ports, but met with no success. Nevertheless, while it was clearly ascertained that the number of cattle slaughtered was less than in the summer of last year, the export of hides showed no diminution, the quantity shipped from middle of July to the middle of August being 45,800 lbs., valued at 6,500 yen. Apprehending that among these 4,000 skins, a number of diseased cattle's hides might be included, the Consul had one examination made, with the result that he found about a fourth of the skins to be as he suspected. The report explains that in the case of cattle which have died of disease, the skins are always found to have more meat attaching to them than in the case of slaughtered cattle, the stench being often so great as to be distinctly insanitary, while the chances of curing the skins properly are doubtful. These evidences were present with respect to about a thousand skins. The destination of the hides is usually Osaka and Himeji. The report does not say what further steps, if any, were taken.

CRAFTY POACHERS.

A TALE, quaint in respect of some of its incidents, is recounted in the columns of the *Kokkai*. At a time not mentioned but presumably recent, a schooner having the appearance of a whaler put into Oshima in Wakayama Prefecture. Being warned by the local officials that the port was not open to foreign vessels, her master alleged that scarcity of fresh water and the necessity of repairing his vessel had compelled him to seek shelter. These excuses being unavoidably allowed, the crew commenced to amuse themselves, daily engaging the services of such Phrynes as the place could furnish. To these fair playmates, however, their maximum gift was ten sen, and as a rule they gave nothing at all, explaining that they intended presently to go out whaling, when they would certainly return furnished with ample means to be generous. Finally, the time came for departure, whereupon they produced six skins, and a pair of boots, which they valued at 40 yen. Leaving these behind in payment of all claims against the schooner, they sailed merrily away, having had their fun uncommonly cheap. For when the skins were brought to market, they proved to be the hides of dogs, of a total value of 2 yen, which was probably twice the realizable price of the abandoned boots. The *Kokkai* naturally suggests that steps be taken to check these graceless marauders, and mentions that the ports where their visits may be chiefly looked for are Oshima in Wakayama, Miura in Kanagawa, Tateyama in Chiba, Kinokuni in Myagi, and Shimoda in Shizuoka.

BAGGAGE OF RAILWAY PASSENGERS.

A warning is addressed by the *Fiji Shimpō* to travellers by rail. The rule on the Government lines, and indeed on all Japanese lines so far as we know, is to allow each first-class passenger to carry 100 catties of baggage without charge; each second-class passenger 60 catties, and each third-class passenger 30 catties. But it is presumed that baggage carried under this arrangement shall consist entirely of clothing and articles required for the journey, on which hypothesis the responsibility of the Railway Authorities in case of loss is limited to 50 yen. It appears that, ignoring this condition, people have been carrying all kinds of valuables, with

the assured conviction that if any loss occurred the Railway Authorities would make it good. A certain banker, the other day, took with him a parcel of several thousands of yen, and the *Fiji* says that the Railway people discovered the nature of the parcel and levied freight upon it. Pickpockets, too, having become aware of the license practised by travellers in this respect, frequent the carriages, especially those of the Japan Railway Company, where they find an excellent opportunity to ply their trade in the crowded state of the compartments and the multiplicity of hand baggage. It is evident from the *Fiji's* statement that the law which determines the responsibility of carriers for goods entrusted to their care is very different in Japan and England. In all parts of the world a pecuniary limit to such responsibility is necessarily fixed, but a limit of fifty yen, or some seven guineas, is almost ridiculously small. It barely represents the price of one evening suit or of a dozen shirts, to say nothing of jewel cases or other luxuries which fine folks carry about with them now-a-days. It has been ruled in the West that if a man gives a parcel to a friend to carry as a mere matter of courtesy, the latter can nevertheless be held legally responsible for the parcel's safe delivery. This is a somewhat violent stretching of the principle underlying the question, but the Japanese rule seems to err still more on the side of laxity. If a passenger is allowed to carry 133 lbs. of personal effects, the notion of valuing the whole lot at a maximum of 50 yen appears somewhat farcical.

PRAYERS FOR RAIN ANSWERED.

THE farming classes, never satisfied with the weather which heaven sends them, are crying out loudly about the long continued drought, and praying for rain. Invocations to the Deity to hasten or retard the processes of evaporation and precipitation by which the earth is watered, are resorted to with just as much zeal and trust in the West as in the East, and it may be taken for granted that an incident which occurred recently in Miyazaki Prefecture gave rise to not a few superstitious inferences. A number of people had collected to pray for rain, and were doubtless accompanying their prayers with beating of drums and other necessary performances supposed to propitiate heaven. While they were thus engaged the rumbling of thunder was heard, which presently grew louder, and at last a flash of lightning killed four of the suppliants. Had the much wished for rain followed, the farmers would probably have regarded this catastrophe as an intimation that the Deity exacted some sacrifice for his merciful concession to the wants of the parched fields, but, strange to say, with thunder cracking overhead and lightning in deadly proximity, the rain clouds refused to break and the drought continued as obdurate as ever. It is probable that the farmers of Ayamura, if they have any real faith in heavenly intervention in climatic arrangements, will hereafter hesitate to invoke special favours from a deity who sends such answers to supplications.

CONSULS AND THEIR SIGNIFICANCE.

THE term "Consul" has come to be so intimately associated by the Japanese with the exercise of judicial functions that the announcement contained in the *Official Gazette* of the 27th ultimo seems to have caused much misapprehension. That announcement said that the present Chargé d'Affaires of France had been appointed to discharge the duties of Portuguese Chargé d'Affaires and also of Portuguese Consul-General. Hence the conclusion was immediately formed that Japan had agreed to re-habilitate the extraterritorial clauses which, by an Imperial Ordinance issued in July, she publicly abrogated. But it ought to have been easily understood that the step taken by Japan last July was irrevocable. No doubt could be entertained on that point from the outset. The measure was adopted deliberately and in the most firmly binding fashion that could be chosen. At any time before the promulgation of the Imperial Ordinance it was within Portugal's competence to avert the loss of her nationals' extraterritorial privileges by taking a course precisely similar

to that which she has now taken. During the many months that intervened between the date of her decision to remove her Consul-General from Tokyo and the day of Japan's conclusive measure, Portugal could easily have arranged for the discharge of Consular-General functions by a qualified official of some other Treaty Power, and any Consul-General duly nominated by her at that time and recognised by Japan would have been competent, *de facto*, to exercise judicial duties. Such is not the case now however. So far as Portugal is concerned the extraterritorial clauses, by the authority of which her Consuls formerly discharged judicial functions, have no longer any existence, and when she delegates the French Chargé d'Affaires to act as her Consul-General in Japan, she no more invests him with judicial competence than does Great Britain invest with judicial competence her Consuls in France or Germany. It seems surprising that this should not be generally understood, and that the *Fiji Shimpō* should now be obliged to explain that a Consul-General is not necessarily a judicial officer, and that Portugal's Consul-General in Tokyo cannot possibly be a judicial official unless Japan publicly recedes from the position publicly taken by her six weeks ago.

THE "CHOYA SHIMBUN'S" PROTEST.

THE *Choya Shimbun* justly protests against the idea that when the Japanese press and the Japanese people speak of a "treaty of equality," they mean a treaty which gives exactly as much as it gets, and exacts precisely as much as it concedes. That is not at all what they desire to convey, as, indeed, every one giving the matter a moment's serious thought must be well aware. The expression "*taito joyaku*" is employed in the sense of a treaty the parties to which stand on the same level of international rights and international recognition. It is obviously unwarrantable for Mr. Oi Kentaro and his followers to speak of a "*taito joyaku*," because the Japan which they contemplate lacks one essential title to be classed with civilized and independent States. But the overwhelming majority of the nation, as represented by the *Choya Shimbun* and other leading journals, has no sympathy with Mr. Oi's exclusive fantasies, and is prepared to throw open the whole empire to foreign trade, travel, and residence. The men constituting this section, the comparative magnitude of which entitles it to be regarded as the whole nation, claim for Japan that she should be treated as an equal by Western States: not necessarily as an equal in respect of strength or resources, but only as an equal in respect of the sovereign rights universally recognised to be integral features of national independence. From this point of view the United States and England, for example, might approach each other with the object of concluding a *taito joyaku*, though the former should be minded to retain her protective tariff, her cabotage restrictions and so forth, in their integrity. What we have always understood Japanese journals or Japanese politicians to signify when they talk of a *taito joyaku* is a treaty recognising Japan's title to exercise to the full the sovereign rights of which she is at present deprived in the matters of jurisdiction and the tariff.

THE STATE OF TRADE IN YOKOHAMA.

THE *Fiji Shimpō* gives a very disheartening analysis of the state of trade in Yokohama, the origin of the trouble being attributed by it to the violent depreciation in the gold price of silver. Owing to the operation of this factor, the sale of imports has been greatly checked, for whereas the foreign merchant, dealing on a sterling basis, is obliged to obtain constantly increasing silver prices in order to cover the original gold cost of his goods, the consumer has no more silver to pay than he ever had, and finds just as much difficulty as ever in procuring it. All this is a familiar story, however. The interest of the *Fiji's* account is that it considers the export trade also to have been injuriously affected by the same cause, though it does not explain the particulars of the process. In point of fact the depreciation of gold ought to impart as much

impetus to the export trade as it imposes checks on the import, though that is small comfort to the importer. However, without entering into details, the *Fiji* says that tea-exporters are in a bad way, and that although the high prices they are paying and the quantities they are purchasing suggest a profitable trade, they are in fact confronted by the prospect of heavy losses. Our contemporary's idea seems to be that the whole course of commerce has been dislocated by fluctuations in exchange, and that foreign markets are in too unhealthy a condition to afford steady custom, but though this is true to some extent, we are inclined to think that the *Fiji* pushes its deductions too far. It is undoubtedly correct, however, when it notes that the losses suffered by banks trading with the East have compelled them to act with greater caution, and that the diminished accommodation obtainable by merchants is affecting the volume of transactions. But it is decidedly a novel piece of intelligence to learn that the local banks have sealed over a hundred godowns of foreign merchants since the spring, and that the Hongkong and Shanghai Bank will not purchase any bills of large amount. The *Fiji Shimpō* has been misled as to these items. If any godowns have been sealed up, it has been on a very small scale, and our information with regard to the Hongkong and Shanghai Bank is that it is prepared to undertake, and is actually undertaking, transactions as large as ever. Probably the East never passed through a worse time than the present, and it is not quite easy to see whence speedy help may be looked for. Great sums of money are locked up in imports not immediately salable, so that not only is the inward trade crippled, but the temporary fixing of this large amount of capital supplementing the operation of other factors, compels the banks to restrict their operations to an inconvenient extent.

PRICES AT NIKKO.

SOME very useful advice is given by the *Kokkai* to Japanese trades-people at Nikko. The beautiful scenery of the celebrated summer retreat, says our contemporary, its easy accessibility, and its coolness combine to attract a large number of foreign visitors. At no time during the present season have there been less than from 180 to 200 foreigners staying there, and it is not an excessive estimate to say that they spend a total of from two to three hundred thousand *yen* during the season. How much of this goes into the pockets of the Nikko folks it would be difficult to calculate exactly, but the sum cannot be inconsiderable. Blinded, however, by the prospect of immediate gain, they not only take no pains to cultivate and develop such a splendidly lucrative source of income, but are even sufficiently reckless in their covetousness to disgust the foreigner. Were they content with a profit of from thirty to forty per cent., there would be comparatively little to complain of, but they do not hesitate to charge twice, thrice or even four times the value of an article. A case is recorded of fifty *yen* being recently asked for a bear's skin which might have been purchased in Tokyo for seven. This system of extortion must ultimately have the effect of driving foreigners away, if not altogether at least in great part, and were Nikko deprived of its stream of foreign visitors in summer, it would soon be reduced to a condition of pecuniary sterility.

This is the *Kokkai's* view, and in a general sense it is valuable. But our contemporary does some injustice to the enterprise and foresight of the Nikko folks. In point of fact the chief necessities of life are decidedly cheap this year in Nikko. Beef and bread may be had at Tokyo prices, and milk is only 37 per cent. dearer than in the capital. Vegetables are proportionately the most costly item, which seems strange, for they might be grown at Nikko without much difficulty. The Japanese curio-dealer is always at hand to take the down off the wily tourist, and the Japanese coolie knows how to make hay while the sun shines. But there is an excuse for both the former and the latter. The curio-dealer has to procure all his goods from

Tokyo, though the silly traveller fancies them Nikko heirlooms, and the coolie knows that only for a very brief season of say three or four months can he hope to make anything by carrying tiffin-baskets, toiling along under *kagos* or in *jinrikisha*, and playing the part of horse-boy. In truth one has always to remember with reference to the prices charged at summer resorts, that they are the prices of summer resorts. Once the season is over the people have to hibernate. They must gain while the sun shines enough to sustain life while the snow falls.

A POACHER'S DODGE.

THE *Kokkai* says that a British schooner lately came to anchor off the shore of an unnamed prefecture in the north-east of Japan. The police immediately took steps to warn the master that he had come to an unopened port and that he must take his departure at once. But he, pretexting the necessity of obtaining a supply of fresh water, showed no signs of getting under way. The police then inquired further into the schooner's movements, and were informed by those on board that they had received from the British Consul, under authority from the Japanese Government, a permit to engage in fishing in Hokkaido, and that they had just arrived from thence. In proof of this assertion they showed a document measuring about six inches by four, but the police, though unable to read it, were convinced of its falseness since they knew that the Japanese Government had never invested any foreign Consul with such authority. They therefore fell back on the indisputable fact that the schooner was visiting a place not accessible under the treaties, and she finally had to take her departure. If all this be true, the master of the schooner must have been a person of resources more manifold than scrupulous. But is it all true? An English-speaking Japanese who is not also an English-reading Japanese, is a *rara avis*. We have met many Japanese who could read a foreign language, though their attempts to speak it were distinctly bad, but an individual conversely instructed has not come under our observation. If then the police of the unnamed port in an unnamed prefecture could hold converse with the master of the schooner, they ought to have been able to decipher the pretended permit; unless, indeed, we admit another hypothesis, scarcely less incredible, namely, that the master of the schooner knew enough Japanese to talk about permits from Consuls under Government authority.

COUNT ITO'S FATHER.

WE are glad to be able to state that, according to accounts published in the vernacular papers, Mr. Ito Juzo, the aged father of Count Ito, is very much better and, it is hoped, will soon be in the enjoyment of his usual health. The old gentleman is said to be extremely attached to his simple rural life. His tastes have not been in any way changed by the brilliant career of his son. Farming has been his delight from his youth up, and until very recently he was often to be seen with a mattock on his shoulder wending his way to the fields whose cultivation he still superintends with keen interest. When congratulated on the success of his son, he seems surprised, and speaks as though he could not conceive of any higher enjoyment than a simple agricultural life. Not long ago, one of his neighbours, a man of no rank or influence, saluted Mr. Ito as the latter was employed in the fields. In acknowledging the salutation, the old man said:—"I have to thank you for your great kindness to my son Hirobumi. I am deeply indebted to you for what you have done."

THE EASTERN RADICALS.

NOR much has been heard of the Eastern Radicals (*Toyo Ji-yu-to*) since their secession under the leadership of Mr. Oi Kentaro from the ranks of the *Ji-yu-to*. Beyond the fact that they are opposed to mixed residence, and would keep the interior closed against foreign ingress, no one outside their own circle seems to know very clearly what they contemplate or what principles they profess. Our own suspicion is that their only hope of making a political mark is either

to follow in the footsteps of the men whose Korean scheme attracted momentary attention and secured for themselves a term of imprisonment some years ago, or else to organize a campaign on *soshi* lines, as seemed to be contemplated by Mr. Oi's *apologia* at the time of his rupture with the *Ji-yu-to*. At all events the inaction of the little party since it became independent, has not greatly surprised any one. The News Agency now reports, however, that Mr. Oi and his lieutenants are making arrangements to commence a political campaign from the middle of this month. But apparently their methods of warfare will present none of the novelty or incisiveness that might be expected from such doughty champions of the *fortiter in re*. They are merely going to despatch delegates to stump the provinces after the approved though hackneyed fashion, and they further propose to publish a newspaper under the title of *Shintoyo*, or the "New Orient." The names of Messrs. Miyazaki Seiran, Jibiki Junzo, Fukuda Tomosaku, and Suzuki Shugo are mentioned in connection with this journal, and the first number is expected to appear on the 15th instant.

MR. PIGGOTT'S WORK ON EXTRATERRITORIALITY.

THE English press has accorded much praise to Mr. F. T. Piggott's work on extraterritoriality. The *Law Library* says that "the reputation already acquired by him as a sound and thoughtful writer upon questions of constitutional and international law will be materially enhanced by his latest publication." Mr. Piggott shines chiefly as an essayist; the enunciation of legal axioms and the compilation of authorities tempt him ever and again into the field of criticism and of speculation whither the reader cannot but follow him with interest and profit. "To those who study, and to those who administer, extraterritorial law, this book will be of great use." The subject dealt with is one of ever-increasing interest, both theoretical and practical; and jurists, whether English or foreign, are to be congratulated that it has been treated by so deep a thinker and so able a writer as Mr. Piggott. The *Solicitor's Journal* says:—"To handle the subject of extraterritoriality in its purely legal aspects without either touching the debatable points as to the justification of consular jurisdiction in the East and the probable term of its continuance, or undertaking a special review of the texts of the several treaties and Orders in Council which provide for the extraterritorial action of the English Courts, is a task of no common difficulty, and Mr. Piggott has accomplished it with conspicuous success. His book is a valuable monograph on a subject of great curiosity and public interest." Many other journalistic utterances, not less favourable, show that Mr. Piggott's work is fully appreciated by men of learning in England.

ALLEGED CHRISTIAN PERSECUTION IN KUMAMOTO.

THE *Mainichi Shimbun* writes in indignant terms on an alleged case of Christian persecution. The facts given in a Kumamoto newspaper are that a policeman discovered one of the pupils of the Yamaga Elementary School in the act of reading the Christian Bible, and on this being reported to the Director of the school the pupil was summarily dismissed. The *Mainichi* not doubting the accuracy of the story, despite its improbability, goes on to draw the unwarrantable inference that the School Director was backed by the Governor of Kumamoto. This official, our incensed contemporary attacks stoutly. Is the Governor unaware that Art. XXVIII. of the Constitution provides that "Japanese subjects shall within limits not prejudicial to peace and order, and not antagonistic to their duties as subjects, enjoy freedom of religious belief?" Is the Governor ignorant of the fact that Mr. Miyoshi Taizo, formerly Vice-Minister of Justice, is a Christian, as was also the late Viscount Mori. Did not the Governor of Kumamoto when stationed in Sendai take an active part in establishing a Christian School? Thus the conduct of the Kumamoto Governor in sanctioning a flagrant case of persecution is no less unconstitutional than the original sin with his own professed belief.

The fact is that since last February (the time of the general elections) government in Kumamoto has been non-existent. So writes the *Mainichi*. But its last remark furnishes a clue to the whole story. The chief editor of the *Mainichi* is a prominent *Kaishin-to* politician and Christian, and the soreness displayed by the writer is, no doubt, due to the electioneering experiences of the party to which he belongs. The story looks as if it had been trumped up to annoy the Governor of Kumamoto, whose late political doings have not met the approval of the *Kaishin-to* leaders.

SILK.

BOTH the *Fiji Shimpō* and the *Kokkai* write about the Silk market and the very exceptional prices ruling at present in Yokohama. These two journals agree in attributing the high figures paid by foreign exporters to short crops in Europe and China as well as in Japan, the produce for the last named country this season being estimated at thirty per cent. less than an average crop. The *Kokkai* is further disposed to think that the duty imposed by France upon Italian silk has helped the situation, but of course that factor cannot be reckoned as more than a mere bagatelle, if it has any effect at all. Great satisfaction, according to the *Fiji*, is felt by the sericulturists in the interior as well as by the silk-brokers in Yokohama, for it is now evident that although the quantity of the staple available for export will be less than the figure for last year, the pecuniary result will be even better; and considering that Japan received over thirty-two million dollars for the silk which she sent abroad in 1891, this forecast is naturally welcome. The *Fiji* is very confident that prices will be sustained, and says that the boom in the silk market goes far to compensate the stagnation caused by the unwillingness of the banks to afford accommodation. It says that from six hundred to a thousand bales (Japanese) are daily coming into the settlement, and the stocks on hand are only 8,403 bales (Japanese), being 6,778 bales less than the stocks at the same time last season, which fact also it adduces as evidence of a prosperous state of affairs. But we cannot altogether endorse this last deduction, since the mere smallness of the stock on hand proves nothing unless it be shown at the same time that the quantity already disposed of is also proportionately large. However, as the returns published in our market report of last Saturday put the total Settlements and Direct Export from July 1st at 11,800 piculs against 8,900 piculs at the corresponding date last year, the *Fiji's* view of the situation may be warranted. What is certain, at all events, is that not for many a year has there been such a boom in the silk market. Possibly from this branch of the country's foreign trade is to come the medicine which shall heal the general debility of commerce at present.

SCANDAL AT A SCHOOL IN TOKYO.

WE mentioned some time ago that the *Yomiuri Shimbun*, ventilator of all kinds of incredible marvels and miserable scandals, had published a highly ornate account of certain immoral proceedings in which a foreign Professor and also the Principal of an important school in Tokyo were implicated. The names of the school and of the man concerned were not accurately given, but there could be no manner of doubt as to the identity of both the place and the persons. A considerable interval separated the original publication from our reference to it, and in that interval the natural expectation was that steps would have been taken to contradict the *Yomiuri's* assertions and to punish it for giving publicity to such a libel. But no step was taken in that direction, and what is still more astonishing, the same journal now recurs to the subject in an article which seems to indicate that the first scandal is neither to be punished nor to be fully withdrawn. The *Yomiuri*, in this latest article, indicates the Tokyo School of Music as the scene of the incidents previously related, but says that they occurred under the régime of the former Principal, and then proceeds to detail a story which cannot for a moment be said to justify the gross libel related

in the original article. According to this new version, the foreign Professor (whose name is given) desiring to marry one of the graduates (whose name also is published in full), submitted proposals to her relatives, who, however, did not return any immediate answer. Subsequently the proposals were repeated, and as they soon became public property, all sorts of damaging rumours were circulated about the relations that had existed between the Professor and the young lady. Matters remained *in statu quo* until the appointment of the present Principal, Mr. Muraoka, when the affairs of the School were placed on a very strict footing. The Professor now once more broached the subject, this time to the Principal himself, whom he asked to push his suit with the young lady's relatives. But the Principal declined to do so, and declared himself altogether opposed to marriages between Professors and pupils, whether the latter had graduated or were still going through their course. The Professor is represented as having accepted this decision, though disagreeing with it, and as having given up any further thoughts of the young lady, "despite his previous relations with her." The *Yomiuri* is good enough to add that under Mr. Muraoka's direction the school is now conducted according to the highest principles of strict morality, and that the publication of the story impugning its reputation had caused much concern to the faculty as well as to the students. We should think so, indeed, but what of the unfortunate foreign Professor who was the prominent figure in the sensational journal's first story and upon whom the villainous libel is now again fixed? His perfectly straightforward and reasonable conduct—pace Mr. Muraoka—in asking for the hand of a young lady whom he had doubtless learned to love and esteem, suggested to prurient, mischief-mongers rumours which the *Yomiuri Shimbun* prostituted its columns to ventilate, and this brutal attack upon his honour as well as upon the virtue of the lady whom he sought in marriage, is now deliberately renewed in the context of an explanation which, to casual readers, must inevitably convey the impression of having been inspired by the Principal of the School. It is hard to conceive any patient and deliberate course in the face of such an outrage. The lash seems to be the only weapon for dealing with a writer like the *Yomiuri Shimbun's* graphist. There is, of course, the alternative that the worst part of the story is based upon fact. But that is scarcely credible. What astonishes us most is that a scandal so abominable should be left legally unnoticed. When are Japanese journals of the *Yomiuri* stamp to be taught the nature of their responsibilities? They can never learn it if the victims of their outrages submit quietly to be libelled and traduced.

THE POLICY OF THE NEW CABINET.

THE *Fiji Shimpō* and several other journals express disappointment that as yet the new Cabinet has enunciated no radical change of policy. Beyond the removal of a few Governors, says the *Fiji*, the new Government has done nothing to satisfy popular expectations. The ability of the men in power has led people to anticipate that they would effect great changes. But these anticipations do not seem destined to be realised. The *Fiji* thinks it very important that the Government should declare its policy prior to the assembling of the Diet and give the country an opportunity of judging between it and the Opposition. In its opinion, if nothing is done to meet the wishes of the parties in opposition, the antagonism between the Government and the Diet will, in the coming session, be as great as ever.

JAPANESE IN HAWAII.

THE *Nichi Nichi Shimbun* contains a paragraph describing an incident which is said to have occurred in Hawaii. A Mr. Henry Cochy (?), who has a sugar plantation on the island of Kawaii, employed about 170 Japanese labourers, some under contract, others on the free system. When the change in the United States Tariff imposed a duty on Hawaiian sugar, the margin of profit derivable by the cultivators of that

staple became so narrow, that work had to be abandoned on several plantations, among them being that of the planter whose transliterated name assumes the above form. The whole of the hands employed by him were thus thrown out of work and have been subjected to the greatest suffering. Several of them have wives and children, and these, despite unremitting efforts to obtain employment are said to be in a starving condition. The *Nichi Nichi Shimbun* does not explain how it happened that contract labourers met with such a fate. We must assume that the contracts were different from those which, according to the system now existing between Japan and Hawaii, the Government of the latter is pledged to see carried out.

THE PORTUGUESE QUESTION.

THE following information bearing on the above subject is published in the *Kokkai*. A short time ago a telegram was received by the Japanese Foreign Office from the Governor of Macao which announced that the French Chargé d'Affaires in Tokyo had been appointed Chargé d'Affaires and Consul-General for Portugal. The Foreign Office referred the matter to Lisbon, but before an answer could arrive, a telegram reached the Office confirming the intelligence communicated by the Governor of Macao. To this telegram the Foreign Minister replied *Shochi shimashita*, "we acquiesce." The *Kokkai* adds that the details will be published in the *Official Gazette* within a day or two. With the exception of the *Nihon*, the Tokyo journals which discuss the subject all maintain that the appointment does not affect the question of jurisdiction. The *Nihon* argues that undoubtedly the object of the step taken is to restore the right of extraterritorial jurisdiction to the Portuguese. Consul-Generals in the East invariably possess jurisdiction over their nationals and others who may be placed under their care, and there is no reason for thinking, says our contemporary, that the rule will be departed from in the present instance.

THE SUSPENSION OF THE "NIPPON."

A PERUSAL of the *Nippon* of the 31st ult. reveals the cause of its suspension. It publishes an article purporting to give the *ipsissima verba* of Count Okuma respecting the character and policy of the members of the present Cabinet. How far the *Nippon's* account of Count Okuma's private utterances is correct it is impossible to say. A correspondent in the *Yomiuri Shimbun* (a *laishin-to* organ), writing over the signature of mo-no-jo, seems to be of opinion that the *Nippon* has rightly represented the Count's views, and argues that the Authorities ought to take steps to prevent the expression of such opinions as those held by Count Okuma rather than suspend the newspaper which reproduces them. This is palpably absurd. It is for the editors of newspapers to exercise discretion as to the matter published by them. If they fail to do this the Authorities are obliged to interfere. Much of the criticism of the present Cabinet which the *Nihon* has put into Count Okuma's mouth is unworthy of that great statesman, and its reproduction in the columns of that paper for the sake of sensation is unexcusable. Some time ago, when the *Nihon* was under a similar ban, we pointed out how the inconvenience was avoided—rendered nugatory, in fact—by the proprietors having another paper called the *Dai Nihon*, which they published during the period of suspension of the *Nihon*. This ruse is to be allowed no longer; the *Dai Nihon* has also been suspended.

IMPERIAL NOMINEES OF THE HOUSE OF PEERS.

ACCORDING to the *Fiji*, there is considerable agitation with regard to the Imperial Nominees of the House of Peers. The Law of the Houses defines these Nominees to be men who have rendered meritorious services to the state, or men of distinguished erudition. The terms of this definition could not be said to have been violated by the nomination of the members of the former Senate, who might fairly be considered to possess both of the qualifications contemplated by the law. But the agitators

claim that nominations were subsequently directed chiefly with the object of obtaining Government supporters in the Upper House, and that the Chamber threatens, under these circumstances, to become a retreat for officials who have shown no special administrative aptitude and possess no qualification for membership except loyalty to the Cabinet which appoints them. Apparently the question has received prominence owing to the nomination of two retiring Governors of Prefectures who were regarded as among the principal offenders in the matter of official interference in elections. The idea of the agitators is that the law should be changed so as to limit the term of parliamentary service in the case of these nominees to seven years, thus placing them on the same footing as the highest tax-paying members, instead of making their life members as at present. The *Yiyu* says that pressure has been brought to induce the Government to introduce a Bill in the above sense, and that, failing Government action, a Representation will be submitted in the House by the members themselves. What is abundantly plain is that the exercise of the privilege of nomination, as provided by the present law, is sure to provoke hostile criticism among some sections of the official or political world. Even supposing, which is more than improbable—that the strictest care were invariably observed so as to comply rigorously with the intention of the law, it would still appear to some that favoritism or political interest had influenced the nominations. On the whole the Government itself should not entertain any special objection to altering the term from life to seven years, for where a power is obviously liable to abuse, the limits of its exercise ought not to be needlessly wide.

THE STORM OF THE 4TH INSTANT.

THE typhoon of the 4th instant seems to have wrought much injury in Shizuoka, Aichi, and Gumma Prefectures, reaching them in the order here set down. It began to develop destructive violence at 9 a.m. in Shizuoka, and continued raging until 6 p.m. when there was a lull, only to be followed, after night-fall, by another outburst. At Hamamatsu the Local Court-house, the Elementary School, sixty-two dwelling houses and two warehouses were blown down, the same fate overtaking the railway shed, although it was built of brick. Two persons were injured at the station, and more than ten were crushed to death. It is related that in one house six people, old and young, sleeping in the same room were all killed. A great number of trees were overturned, but so far from the crops being injured, the *Nichi Nichi* says that the farmers are pleased at the advent of the gale, since it has cleared away the insects from the rice. These figures of the *Nichi Nichi* are not, however, entirely confirmed by later intelligence, which puts the total number of deaths at seven. Many persons must have been wounded, but no record is to hand. The Tokyo News Agency, whose report was published at 4 p.m. on the 7th instant, says that the total number of dwelling houses completely overthrown throughout the Prefecture of Shizuoka was 413; the number partially destroyed, 389; the number of bridges washed away, 6; the number of embankments broken, 4; the number of houses swept away, 7; and the number of godowns and other stores destroyed, 71.

In Aichi Prefecture the fury of the gale began to be felt at 2 p.m., the district most affected being Mikawa Province, in the Atsumi Division of which five persons were killed and two wounded. At the reclaimed lands of Yoshida the embankment was broken, and seventy dwellings were swept away, the number of killed and injured being unknown. Much damage was done in other parts of the province also, houses and trees being overthrown and the crops laid. Eastward of Toyohashi the telegraph line was broken.

In Gumma Prefecture the trouble began at 5 p.m., the Kanru Division suffering most. Ten dwellings and four stores were completely overthrown, and eight persons were injured more or less severely. From all these accounts it is

evident that the storm was of a very exceptional character, scarcely second in violence to the tempest which, aided by the sea, recently wrought such terrible devastation in Tokushima.

THE LEADING MEN IN THE VARIOUS POLITICAL PARTIES.

A CORRESPONDENT of the *Keisei Shimpō* has compiled a list of the most distinguished men in various political parties and distributed the portfolios of State among them. There is a great deal of imagination about the distribution but it is decidedly interesting to observe who are considered the most influential men in each party:—

MINISTER PRESIDENT OF STATE.

Count Soyejima Tanemichi (Conservative).
Count Okuma Shigenobu (*Kaishin-to*).
Count Itagaki Taisuke (*Fuyu-to*).
Count Saigō Tsugumichi (National Union).

MINISTER OF STATE FOR FOREIGN AFFAIRS.

Viscount Tani Tateki (Conservative).
Count Okuma Shigenobu (*Kaishin-to*).
Mr. Matsuda Masahisa (*Fuyu-to*).
Mr. Watanabe Kunitake (National Union).

MINISTER OF STATE FOR HOME AFFAIRS.

Viscount Torio Kiyata (Conservative).
Mr. Inukai Ki (*Kaishin-to*).
Mr. Mutsu Munemitsu (*Fuyu-to*).
Viscount Takashima Tomonobu (National Union).

MINISTER OF STATE FOR FINANCE.

Mr. Tomita Teisunosuke (Conservative).
Mr. Ozaki Yukio (*Kaishin-to*).
Mr. Yamada Bunio (*Fuyu-to*).
Viscount Shinagawa Yajiro (National Union).

MINISTER OF STATE FOR WAR.

Viscount General Soga Sukenori (Conservative).
Viscount General Soga Sukenori (*Kaishin-to*).
General Yamaji Masaharu (*Fuyu-to*).
General Kawakami Soroku (National Union).

MINISTER OF STATE FOR THE NAVY.

Admiral Nakanuma Kuranosuke (Conservative).
Admiral Nakanuma Kuranosuke (*Kaishin-to*).
Admiral Arichi Shinanosuke (*Fuyu-to*).
Viscount Admiral Kabayama Sukenori (National Union).

MINISTER OF STATE FOR JUSTICE.

Mr. Inouye Ki (Conservative).
Mr. Kitabatake Harufusa (*Kaishin-to*).
Mr. Hoshii Toru (*Fuyu-to*).
Mr. Watanabe Koki (National Union).

MINISTER OF STATE FOR AGRICULTURE AND COMMERCE.

Viscount Kaiyeda Nobuyoshi (Conservative).
Mr. Kono Togama (*Kaishin-to*).
Mr. Takenouchi Tsuna (*Fuyu-to*).
Mr. Matsudaira Masanao (National Union).

MINISTER OF STATE FOR COMMUNICATIONS.

Viscount General Miura Goro (Conservative).
Mr. Mayejima Mitsuru (*Kaishin-to*).
Mr. Oi Kentaro (*Fuyu-to*).
Mr. Toyama Mitsuru (National Union).

MINISTER OF STATE FOR EDUCATION.

General Yamakawa Ko (Conservative).
Mr. Yano Fumio (*Kaishin-to*).
Mr. Kono Hironaka (*Fuyu-to*).
Mr. Sasa Tomofusa (National Union).

MINISTER OF THE IMPERIAL HOUSEHOLD.

Count Higashikaze Michitomo (Conservative).
Prince Konoye Atsumaro (*Kaishin-to*).
Marquis Saionji Kimochi (*Fuyu-to*).
Mr. Iwamura Michitoshi (National Union).

PRESIDENT OF THE PRIVY COUNCIL.

Count Oki Takao (Conservative).
Count Kuroda Kiyotaka (*Kaishin-to*).
Count Katsu Awa (*Fuyu-to*).
Count Matsugata Masayoshi (National Union).

PRESIDENT OF THE AUDIT BUREAU.

Mr. Maruyama Sakura (Conservative).
Mr. Taketomi Tokitoshi (*Kaishin-to*).
Mr. Ohigashi Giteisu (*Fuyu-to*).
Mr. Sone Arasuke (National Union).

SUPERINTENDENT-GENERAL OF METROPOLITAN POLICE.

Mr. Ando Sokumei (Conservative).
Mr. Kawashima Jun (*Kaishin-to*).
Mr. Hayashi Yuzo (*Fuyu-to*).
Mr. Yasuba Yasukazu (National Union).

THE SAPPORO EXHIBITION.

PRIZES were given to the successful competitors at the Sapporo Exhibition on the 25th ult., in presence of the Minister of the Imperial Household Department, and various Hokkaido high officials. The exhibits which obtained medals or certificates of merit amounted to 10 per cent.

of the total number. First prizes consisting of gold medals were awarded to 15 exhibitors; second, consisting of silver medals to 130; and third, consisting of copper medals to 350; while 600 exhibitors received certificates of merit. The report read by the Chairman of the Committee of judges states that the Exhibition furnishes evidence of great progress in the growth of cereals and roots, but shows that mining in the Hokkaido is still in a backward state. Sericulture and the collection and preparation for export of marine products are said to have made rapid strides since the last exhibition. A lack of enterprise in the use of foreign agricultural implements and the slow development of manufactures and industries are referred to as among the discouraging features of business in the Hokkaido.

THE "SOSHI."

THE *Yiyu* writes in a spirit of sympathy with the difficulty of controlling the *soshi*. They are indeed a puzzling problem are these gentry, for the common law of the land contains no provisions suitable to their case, and whenever the Administration enacts any special regulations for dealing with them, the Diet speedily rebels. Much of the Secret Service Fund is employed in obtaining information about the *soshi* and retaining touch with their projects and affiliations. But the Secret Service Fund is hateful in the eyes of the Diet, as is very natural. The fact is that the *soshi* are altogether incongruous with constitutional institutions, and that constitutional methods cannot suffice to control them. The *Yiyu* talks of sending them to the South Sea Islands or to Mexico, and doubtless they would make excellent citizens were they once removed beyond the sphere of political influence. But the real trouble, we venture to think, is not with the *soshi* themselves, but with conditions that create them. It is within the power of Japanese politicians at any moment to kill this uncivilized excrescence simply by depriving it of nourishment. Nobody imagines that *soshi* could exist for a month if they received no pecuniary aid from those in whose interests they are supposed to waste their energies.

THE FOREIGN OFFICE.

SEVERAL changes of officials are announced in the Foreign Office. Mr. Kurino Shinichiro, Director of the Political Bureau, is relieved from his additional post of Director of the Law Bureau, and is succeeded in the latter office by Mr. Hara Kei, Director of the Commercial Bureau. Mr. Nakada Keigi, Chief of the Private Secretariat, is appointed a Counsellor of the Law Bureau. Mr. Inouye Katsunosuke, hitherto Secretary of Legation, becomes a Counsellor of the Foreign Office, and the following alterations also are announced:—

Mr. Kato Masao, hitherto Private Secretary, to be Counsellor.
Mr. Torii Tadabumi, hitherto Secretary of the Foreign Office, to be Secretary of Legation.
Mr. Yakiyama Masanosuke, Student Interpreter in England, to be a Probationer.
Mr. Sato Fu, Probationer, to be Counsellor.
Mr. Kure Keida, Probationer, to be Private Secretary.
Mr. Ijuin Hikokichi, Probationer, to be a Translator.
Mr. Hata Ryotaro, Probationer, to be a Diplomatic Probationer.
Mr. Sugimura Toraiichi, Counsellor (now in Russia), to be Secretary of Legation.

THE WORLD'S FAIR.

In the World's Fair Notes we read that "a separate building at the World's Fair for the shoe and leather industry exhibit is now an assured fact, as the required \$100,000 has all been raised. Leather dealers and manufacturers in all parts of the country have contributed to the fund. The building will be one of the handsomest on the grounds, having been designed by Sandier, an eminent French architect, now connected with the Fair. It will measure 150 by 575 feet, and will contain everything in the way of leather and the products of leather, exhibited at the Fair. The most improved machinery used in leather manufacture will be shown, as also the manufacturing processes. The visitor may watch this from the raw hide to a

finished shoe or dainty slipper. It is likely, too, that rubber goods and their manufacture will be shown in this building. Altogether the exhibit will be far larger and more complete than anything of the sort ever before attempted."

COUNT OKUMA'S CRITICISM OF THE CABINET.

COUNT OKUMA'S strictures on the present Cabinet, for the publication of which the *Nippon* was suspended, have been commented on by the *Nichi Nichi Shimbun*. The following is the gist of our contemporary's remarks:—Among modern statesmen no one is to be compared to Count Katsu in the power of uttering incisive remarks. But to Count Katsu's home-thrusts no one objects, perceiving, as people do, how thoroughly disinterested is the speaker, and how far removed from the world of politics on which he comments is this venerable politician. Next to the criticisms of Count Katsu those of Count Goto are worthy of note. The asperity which they would otherwise bear is removed by the kindly disposition and unsophisticated nature of the speaker. Count Okuma is no mean critic, but it is impossible to overlook the fact that his observations are those of a man seeking his own interest. He has allowed to be published in a newspaper a violent attack against the Cabinet which is altogether unworthy of a man of his reputation for statesmanship. He has singled out Count Ito as a special target to shoot at. He has predicted various things concerning the Cabinet recently formed. These predictions are about as likely to be fulfilled as Mr. Takashima's divination by means of the *Peki*. He has accused Count Ito of being a man of limited ideas and aspirations and of lacking in courage. Much depends on the definition of these terms. If by courage is meant, adds the *Nichi Nichi*, a determination to carry out resolutions without regard to fitness of time and place, without considering the feelings and rights of others, then we are glad to know that Count Ito does not possess this characteristic. The courage which Count Okuma accuses the Minister-President of lacking is, we are inclined to think, a little out of date. No doubt Count Okuma considers himself more courageous than Count Ito, but the transactions in which the two statesmen have figured tend to show that rashness rather than courage would be the proper epithet to apply to the part which the Waseda Count has played in modern politics. Count Okuma can hardly expect that his strictures on Count Ito will be allowed to influence thoughtful people. So writes the *Nichi Nichi*. For our own part, we find it very regrettable that Count Okuma should have been made to figure in the rôle of a critic of his former and perhaps future colleagues.

THE "JIJI" ON BUDDHIST DISSENSION.

THE editor of the *Jiji Shimpō* is essentially a preacher. Of late years he seems to have taken considerable interest in Buddhism, and we now find the *Mita* prophet denouncing in strong terms the priests of the Zen sect for their lack of proper feeling and for their pettiness. The text for the *Jiji*'s sermon on the need of charity is a long existing contention between the priests of the Eihei-ji, in Echigo, and those of the Sojiji, in Hoto. Both these temples belong to the Soto-shyu, one of the Zen-shyu sub-sects. The Eihei-ji is the older temple. But of late years the power of the Sojiji has increased so much that its priests claim a title to be released from subordination to the parent establishment. In order to attain this end they have applied to the Home Minister. It is not the custom of the Bureau of the Home Office which exercises jurisdiction over ecclesiastics to mix itself up with their dissensions. Hence the applicants were informed that the relationship of which they wished to rid themselves could only be changed with the consent of the priests of the parent temple. This consent being withheld, nothing was gained by referring the case to the higher powers. The Sojiji priests, however, were not to be silenced. They appealed to public opinion by means of speeches and newspapers, and so great is the commotion they have made that they go by the name of the *Soto*.

noisy—instead of the Soto, sect. It is one of the boasts of the Zen Sect that it attaches far more importance to personal virtue in its priests than to preaching power. The two great sects, the Zen and the Shin, frame different methods of enforcing their doctrines. "Preach and you will make converts," say the Zen teachers. The great attention paid to personal piety and strictness of religious observance by the Zen teachers is well illustrated by a notice inscribed in large letters over many of the entrances to their temples: "Let no eaters of flesh, fish, vegetables of strong odours, or drinkers of saké enter here." The early hours at which they perform their devotions, the earnestness with which they make their alms-begging rounds in the coldest weather, are calculated to impress people with the reality of their self-renunciation. This semblance of zeal is very telling with the masses. There is much truth in the saying that the religion of the Zen priests is seen, while that of the Shin priests is only heard. Now is it not to be deeply regretted, asks the *Jiji*, that a body of men who wield so much influence should injure their reputation by descending to the petty bickerings and contentions for superiority which characterise ordinary folks. We do not advocate the austerity which these men practise, says our contemporary, but we cannot deny that they have obtained an immense power over their fellow-men, or refrain from expressing regret that they should be doing their best to lose this power by disputations on utterly insignificant points, such as the superiority of one temple to another. If priests have no higher sense of their position and duties than has been displayed in this stupid controversy, we, concludes the *Jiji*, would recommend them to give up the profession of religion altogether.

THE DISMISSAL OF 27 MAYORS.

THE head of the Tonami district, in Toyama-Ken, has dismissed the mayors of 27 places situated in the district for having sent letters to Mr. Kono Hironaka, of the *Jiyu-to*, and Mr. Shimada Saburo, of the *Kaishin-to*, congratulating them on the success of their efforts as popular representatives. These Mayors were informed that their conduct was to breach of the rule which required local officials to abstain from party politics, and it was suggested that they should publicly withdraw the letters they had sent. This they refused to do and were consequently dismissed. The organs of the parties concerned maintain that the head of the Tonami-gun has exceeded his rights and recommend the dismissed officers to take legal action against him.

MIRACLES.

HERE is a concise statement of the Orthodox Christian's view of miracles in this nationalistic age; it is by the Rev. M. L. Young:—

Those who deny the possibility of miracles, or place a low estimate upon them, ignore God's purpose and power in the plan of redemption. The objector who says: "After the development of the creation was completed, and the actual order of things definitely established, the Creator could not again interfere with His work without acknowledging it incomplete, and He himself imperfect," seems to forget the existence of a moral world and free agency. Because man is a free agent sin is possible; and sin, as an actual fact, demands Divine intervention, either for the destruction or salvation of the sinner. "It must be remembered," says Dr. F. Götze, "that the culminating point of the development of nature is a free and independent spirit—man. There are, then, two free beings face to face with each other—man and God; and any further intervention of God in the realm of nature, in which He has established man, must depend upon the future relation between these two free beings. If man takes the course which will lead him to the realization of the Divine idea, God can confine Himself to simply allowing the human race to develop in history, under the guidance of the Spirit, those multitudinous germs He has planted in it. But if man takes another course, and starts an abnormal development leading to his own ruin and frustrating the Divine purpose of the creation, God must either destroy that lost creature, replace him with another, or do something to draw him away from his bad course. In the latter case the door is opened for Divine intervention, even in the form of miracles; and no imperfection of God is thereby implied. On the contrary, that which makes His renewed intervention necessary—the human freedom—will still continue the most beautiful expression of the perfection of His works."

Miracles must be subjected to such tests as are ap-

plied to other facts of history. Among the necessary criteria are the number, honesty, and competency of the witnesses, their opportunity to know the facts, and the absence of motives for imposture.

There can be no doubt that Jesus Christ claimed supernatural power. When John's disciples came inquiring, "Art thou he that should come, or do we look for another?" He answered, "Go and show John again those things which ye do hear and see; the blind receive their sight, and the lame walk," etc., etc. To the Jews he said, "The same works that I do bear witness of Me that the Father hath sent Me." Christ plainly says that He did work miracles. Can we believe Him? His own Resurrection, the greatest of all miracles, is the assurance that "all that in their graves shall His voice, and shall come forth." The miracles can never be separated from the Christian system. They are like stones built into the perfect arch of Christianity. Tear them away from their place, and the structure either falls into ruins, or stands, robbed of its beauty and strength, ready to fall. Take miracle out of Revelation, and the fundamental facts of Christianity are gone.

THE PHOENIX HALL.

WE learn that a part of the model of the Hōodo (Phoenix Hall) is to be shipped by the *Belgic* for the Chicago Exhibition. Our readers doubtless remember that the despatch of this building—which is intended to convey an idea of Japanese architecture to the western public—forms part of the World's Fair scheme as recommended by the House of Representatives. The original of the Hall is at Uji, and the model consists of a main building with two lean-to ends, the verandah supported by copper-covered posts ornamented with lotus blossoms of gilt metal in relief. The construction of the model was entrusted to the Doboku Kaisha, and the duty of shipping it to the Naigai Yotatsu Kaisha. Skilled workmen are to go from Japan for the purpose of erecting the edifice in the grounds of the World's Fair, where it is to remain permanently, Japan charging herself with the responsibility of keeping it in repair. The interior decoration is by the Fine Arts School (*Bijutsu Gakko*). It shows three ages of Japanese decorative art, as represented in the *chefs-d'œuvre* of the Ashikaga, Tokugawa, and Fujiwara Schools. The total cost is to be sixty thousand yen, and the portion which goes forward by the *Belgic* weighs 350 tons.

MR. SUEHIRO ON THE KOREAN FISHERY QUESTION.

MR. SUEHIRO, hitherto editor of the *Kokkai Shimbun*, who recently left Japan on an extensive tour, has written to the *Kokkai* relative to the Quelpart fishery question. Mr. Suehiro is unaware, he says, whether the negotiations between the Japanese Foreign Office and the Korean Government have gone beyond proposals. If not he advises the Japanese not to agree to the proposition that the right to fish at Quelpart be foregone on consideration of Korea's consenting to open the port of Taitong for settlement and trade. This port, observes Mr. Suehiro, who writes from Korea, is about 150 miles distant from Seoul. The trade there is almost exclusively in the hands of the Chinese, and Japanese would stand no chance whatever against such rivals. Even at Chemulpo, where Japanese traders are much more favourably situated, it is all they can do to hold their own against the Chinese. The Quelpart fisheries are a source of revenue to Japan for which it would not be easy to find a substitute, and Mr. Suehiro strongly recommends the Foreign Minister not to yield an inch on the point.

SILK.

It would certainly be a matter of much interest to know exactly to what extent and by what stages sericulture has increased in Japan since the opening of the country. The *Jiji Shimpō* refers briefly to the subject. It says that the business of sericulture has developed steadily during the *Meiji* era, and that the number of households now engaged in it is about eight hundred thousand, while the area of land under mulberry cultivation, which in 1886 was 350,000 acres, is shown by the statistics of last year to be 600,000 acres, being an increase of over 70 per cent in five years. Moreover, numbers of persons hitherto unconnected in any way with silk, hearing how profitable the occupation is, have lately begun to employ instructors and visiting

the regions of sericulture in order to obtain practical information, the consequence being a great development of general interest. As an evidence of growth in new directions, the *Yiji* refers to the Kurayoshi silk of Hakushu, which has been selling for such fine prices in Yokohama this season. Hitherto quite unknown, the Kurayoshi silk, which by its fineness and general quality is specially adapted to the French market, has won the palm from the well established products of Shinshu and Joshu, and has commanded as much as 800 *yen* per bale, whereas the highest figure for other varieties was 770 or 780 *yen*. It appears, from our contemporary's account, that the company by whom this Kurayoshi silk is put on the market, has exercised the greatest care in preparing it, every process from the hatching of the eggs onwards having been most accurately superintended. The result is an article of exceptional excellence, which fact, the *Yiji* adds, fully accounts for the high price commanded, without recourse to any of the curious theories advanced by certain brokers of Yokohama. The *Yiji* expects that as sericulture develops, similar incidents may be looked for in the history of the trade.

GALE IN OKINAWA PREFECTURE.

THE gale which swept over southern and central Japan last month, inflicting such terrible damage in Tokushima Prefecture, seems to have devastated the Riukiu Islands also. A report sent from Okinawa gives the following figures:—

Houses completely overthrown	1,549
Houses partially overthrown	1,106
Outhouses blown down	1,350
Outhouses injured	645
Schools overthrown	2
Boats swept out to sea (over 300 <i>koku</i>)	23
Sailors and passengers lost or missing	24
Persons crushed to death	400
Persons injured	1
Goats killed	79
Oxen killed	2
Horse killed	1
Trees blown down (1½ in diameter and upwards)	3,340

The crops also are said to have been greatly injured, and the above figures do not seem to include the devastation wrought in the smaller islands of the group.

A telegram from Hokkaido, dated at 4.15 p.m. on the 7th instant, says that owing to a tempest on the 1st instant, the Toyabeni River in the Yezashi District overflowed, inundating 241 houses and carrying away 2. During the night of the 3rd instant, also, Sapporo and Otaru were the scene of a storm of wind and rain, which caused heavy floods in the Kachifu and Okobachi Rivers, 9 houses being swept away, 8 partially broken, and 700 inundated. Four lives were lost and much damage was done to property. The railway and telegraphic services between Otaru and Sapporo were suspended, and though the latter service was again in working order at the time of the despatch of the telegram, it was expected that a day or two more would be required to re-open the railway.

A SIMPLE REMEDY.

PROFESSOR PARISI, of the University of Athens, whilst travelling in Abyssinia, suffered severely from tapeworm, and learned from native doctors that a very simple remedy would cure him, namely, the milk and substance of the ordinary cocoanut. It was not with much faith that Professor Parisi took his first draught of cocoanut milk, afterwards eating nearly the whole of a fresh nut, but his astonishment was great when the following morning he got rid of a large tapeworm, head and all. Since his return to Athens, Professor Parisi has prescribed the cocoanut in many cases, not one of which has failed.

SILK HANDKERCHIEFS.

APPARENTLY the rapid increase exhibited of recent years in the export of silk handkerchiefs has brought with it the usual temptation to adopt faulty methods of manufacture. The *Kokkai* says that the province of Echizen in Fukui Prefecture is the chief centre for the

weaving of the *habutaye* of which the handkerchiefs are made, and that, during the first six months of the present year, the people of the province wove three hundred thousand pieces (*hiki*) of that material, the total value of which was about eighteen hundred thousand *yen*. But on the arrival of the *habutaye* in Yokohama, it was found to be of inferior quality, so that not only is the price reduced, but also the reputation of the article will suffer abroad. The *Kokkai* wisely warns the weavers of Echizen that unless they correct this fault in good time, they may lose a fine permanent trade for the sake of a paltry and temporary gain.

THE BUDGET.

It is reported by the *Chuo Dempo-sha* (News Agency) that the Expenditure Estimates of all the Departments in the forthcoming Budget greatly exceed those of last year, and although reductions may be effected by the Cabinet there is sure to be a hot discussion over the figures in the next session. The following are some of the principal items:—

DEPARTMENT OF FOREIGN AFFAIRS.

A sum of 40,000 *yen* is demanded for Colonization Investigation Expenditure. Viscount Enomoto projected this measure, which has met the approval of Mr. Mutsu, but as both the *Fiyu-to* and the *Kaishin-to* are opposed to it, a hard tussle in the Diet is anticipated.

DEPARTMENT OF HOME AFFAIRS.

A sum of 1,890,000 *yen* is demanded for the improvement of the river courses. Both the Government and the Diet are in favour of this undertaking.

DEPARTMENT OF FINANCE.

No new enterprise of any importance is projected, but the ordinary expenditures for the Bureau for the Examination of Accounts, and for the Privy Council are somewhat increased.

DEPARTMENT OF EDUCATION.

A sum of 90,000 *yen* is demanded for the establishment of a School of Industry in Osaka, and a certain sum as subsidies for other Industrial Schools throughout the empire.

DEPARTMENT OF JUSTICE.

A sum of 253,000 *yen* is demanded for the Compilation of Registry Books. A sum of 1,200,000 *yen* is actually required for this undertaking, but it is proposed to spread the expenditure over a period of five years.

WAR DEPARTMENT.

A sum of 400,000 *yen* is demanded for the Land Survey expenditure, and another sum of 1,080,000 *yen* for the Construction of Fortresses. Hitherto the public have regarded the surveying of land as only of service for military purposes, but its public utility is now more generally recognized.

NAVAL DEPARTMENT.

The principal items are a sum of 2,802,700 *yen* for the Construction of men-of-war, and 580,000 *yen* for Public Works. These were rejected by the Diet last session so that another hot fight over them may be looked for.

DEPARTMENT OF COMMUNICATIONS.

The expenditure for the construction of a Submarine Cable to Okinawa Prefecture, and for the Parcel Post are the principal items.

DEPARTMENT OF AGRICULTURE AND COMMERCE.

Particulars of the requirements of this Department have not yet been ascertained.

MURDER AT HONMOKU.

A JAPANESE, who was subsequently recognised as a jinrikisha coolie named Shimizu Tetsugoro, was taken out of the water at Honmoku on Monday night, dead, with seven cut and stabs apparently inflicted with a knife, one alone—in the throat—being sufficient to have caused death. It appears that a foreigner was seen to come out of the water just prior to the finding of the body, who was heard to sing out "*Hito shin-danji*," and then make off. The foreigner and the Japanese had apparently been bathing, and the former in his hurry to get away, left behind him a shirt and other articles by which has since been traced. He is a native of Holland, named Peter Schoenberg, and deserted from the *Ti-mandra*, a vessel recently in this harbour. The man at present denies the charge, but the evidence that has been collected so far against him is considered quite sufficient for a charge of murder to be laid against him. Schoenberg engaged the deceased to take him to

Honmoku, as he said, to have a swim, and they were seen together on the way to that place, and at the scene of the tragedy, between the two bathing houses. About eight o'clock, some fishermen in the vicinity were startled by a scream, and on arriving at the water's edge were met by a foreigner coming out of the sea. He was understood to say some one was dying. They then went into the water, while the foreigner came ashore and disappeared. The body in the meantime was brought to land, and the police arriving shortly after, took possession of it and a shirt, collar, and necktie found on the beach. The latter were taken to various saloons in Yokohama, until a place was reached kept by a man named Keefe, where a man known as Antonio said the shirt belonged to him, adding that he had lent it to Schoenberg and that the necktie had been given him by Keefe. When Schoenberg returned the same evening shirtless, he was asked by Antonio what he had done with his shirt, when he replied that he had sold it for 20 cents. He came in shivering at about 10 o'clock, and when asked if anything was the matter with him, he replied in the negative, but thinking he was sick, they gave him some brandy and put him to bed. During the next day he expressed a desire of going on board some ship, and as it was suspected that he wanted to escape, he was shadowed by detectives, and finally arrested in the evening at his lodgings at No. 136. On being examined, scratches were found on his right breast, which Dr. Rokkaku said were caused by finger-nails. The police are very reticent, but they say they have all the evidence necessary to prove that they have the right man.

The preliminary evidence in the Honmoku murder has now been obtained, and the depositions were forwarded on Thursday by the Police to the Dutch Representative in Tokyo. It is not by any means certain, however, that the man Schoenberg will be recognised as a subject of Holland. His claims to such recognition have still to be considered, and if they are rejected, jurisdiction will devolve upon Her Britannic Majesty's Court in consideration of the fact that the man came to Japan in a British vessel. Under no circumstances, however, will the trial take place before a Dutch tribunal in Japan, for the judicial competence of the Netherlands Representative is limited to cases where the penalty does not exceed four years' penal servitude, and of course a charge of murder cannot be included in that category. Should Schoenberg's Dutch nationality be recognised, the course pursued will be merely to collect the evidence here, and submit it to Batavia, where an adequate sentence can be pronounced. A point seems to have been stretched to secure the man's arrest. The Japanese Police are not vested with authority to arrest any subject or citizen of a Treaty Power unless they take him in *flagrant delicto*: a Consular warrant has to be obtained by way of preliminary. Evidently, when the nationality of an offender is doubtful, a considerable interval may elapse before any Consul or Minister can be induced to issue a warrant, and in the interval it is quite on the cards that the offender may effect his escape from Japan. However, where all are anxious to further the ends of justice, as is the case in this country, no very serious inconvenience is likely to arise from this cause. We presume that, in Schoenberg's case, the Netherlands Representative, whom an emergency is not likely to find resourceless, waived ceremony in the interests of justice. Meanwhile, the mystery of the man's alleged crime remains. The story now runs that the murder was perpetrated at the instigation of a woman who owed money to the unfortunate *jinrikisha*-coolie. But is it credible that a motive so paltry can have inspired a crime so serious? The debt, if it existed at all, must have been very small; certainly not larger than the reward supposed to have been promised to Schoenberg for making away with the creditor. The current version of the affair is exceedingly incredible. It is curious that now for the

first time in the history of foreign relations with Japan, the murder of a Japanese by a foreigner on shore should be recorded. Deaths by violence have happened at sea, but we cannot recall any previous case of a murder on shore. And it is still more curious that two such cases should have occurred almost simultaneously, for if Schonenberger is lying in the Kanagawa jail awaiting trial for a capital offence, Webster is incarcerated at Niigata for the same offence, and will soon be cited before Mr. Consul Hall, who proceeds from Hakodate to Niigata for the purpose. Webster has now been travelling about Japan for several years in the capacity of a wrestler. He is a man of enormous corpulence and considerable strength, but when he appeared in the ring in Tokyo in 1889, he failed to stand against any Japanese wrestler of tolerable force. Coming to Japan from America, he has always hitherto been regarded as a United States citizen, and, indeed, unless we are mistaken, he obtained his passport through the United States Legation. However, Great Britain seems to have taken charge of him at the crisis of his career.

Matters in connection with this tragedy have advanced a stage. On Friday, the Netherlands Minister, Count von Bylandt, came down to Yokohama, and the man in custody was brought before him at the Netherlands Consulate, No. 92, Mr. van der Polder, Secretary of Legation, being also present. After an investigation into Schonenberger's claim to Dutch jurisdiction, His Excellency refused to recognize him as a national. The Japanese Police Authorities then took the matter into their own hands, and Schonenberger was removed to the Chihō Saibansho. Here a charge of wilful murder was preferred against him, and the Public Procurator remanded him to Tobe Prison pending the preliminary inquiry. It seems probable that the man's claim to Dutch nationality is well founded, for he speaks Dutch fluently, and shows a tolerably accurate knowledge of certain parts of Holland. But he has nothing whatever in the form of documentary evidence to establish his claim. The only papers in his possession are two discharges from ships in which he served during the past two years, and these of course, prove nothing as to his nationality. It does not follow, however, that because the Netherlands Minister has declined, at this stage, to recognise the man's alleged nationality, the case is definitely excluded from Dutch jurisdiction. Schonenberger, when arraigned before the Japanese Authorities, will doubtless repeat his claim of Dutch allegiance, and will have another opportunity, —which he may then be in a better position to utilize—of substantiating the allegation. If he succeeds in convincing the Japanese Court that he is Dutch, whether by procuring documentary proof or furnishing references, he will be handed over finally to the Netherlands tribunal, which would then, presumably, make no difficulty about assuming jurisdiction. Such a case as this strongly emphasizes the fact that the really practical and simple method of procedure in regard to all foreign offenders against the law is to entrust to the Japanese Authorities the duty, not only of arresting them, but also of determining their nationality. There ought to be no obstacle of any kind opposed to the speedy and certain apprehension of a culprit, and, for the rest, since the right of jurisdiction belongs originally to the territorial Authorities, it seems most natural and proper that they should decide, in the first place, their competence to exercise it. In the case of Schonenberger there has been a suggestion that, failing Dutch jurisdiction, the British Authorities might step in and claim him as a deserter from an English ship. But though he might possibly be cited before the British Court in respect of the offence of desertion, his connection with a British vessel, even though that connection had not been severed—as it has in the present instance—could not render him judiciable by a British tribunal on account of a crime committed on Japanese territory. The Ross case disposes of anything of that kind. Except as a British subject, the man cannot come under the juris-

isdiction of H.B.M.'s Court for Japan. His case rests with either the Dutch or the Japanese.

THE ST. LEGER.

On reading the telegram giving the result of the Leger, the first question that naturally occurs to one is—where was Orme? Not being in the first three, it is reasonable to suppose that he did not start, especially when his victory in the Eclipse Stakes is remembered, notwithstanding the fact that there are people who say that race was no gift, and that it was as much as he could do to get his nose in front on the post. There is something curious about the betting of the last few days of July, as on the 25th Orme was backed at 11 to 10 on, whereas on the 29th he had receded to 6 to 4 against, Watercress being quoted at 7 to 1, and Sir Hugo at 100 to 14, La Flèche not being in the quotations. This latter is also a curious circumstance, as Baron Hirsch's filly had an unbeaten record as a two-year old, and this year landed the One Thousand Guineas and the Oaks, besides running second to Sir Hugo in the Derby. However, the flying daughter of St. Simon and Quiver has turned the tables on her Epsom conqueror by repeating the performance of her full sister, Memoir, on the Town Moor two years ago, and following the footsteps of the Oaks winners Jannette, Apology, Marie Stuart, and Hannah. We have previously given the pedigree and performances of both La Flèche and Sir Hugo, but do not remember Watercress as a winner. He is a brown colt by Springfield—Wharfedale, and belongs to Baron Rothschild. He only ran once as a two-year-old, starting at the First October Meeting at Newmarket in the Rous Memorial Stakes and failing to get placed.

AUTUMN MANŒUVRES.

It has been already announced that autumn manoeuvres, at which the Emperor himself will be present, are to take place in the north-east, the troops taking part in them being the Imperial Guards, and the First, Second, and Third Divisions. We now learn that the Guards and the First and Second Divisions will leave Tokyo about the 20th of next month, from which it may be inferred that the manoeuvres will take place about the 25th. The exact locality is kept secret.

THE NOBLES' SCHOOL.

We learn that the Faculty of the Nobles' School (Gakushū-in), Tokyo, have appointed Mr. John Trumbull Swift, B.A., to be Professor of English Language and Literature. Mr. Swift resides in Tsukiji, and has hitherto been discharging the duties of Secretary of the International Committee of the Young Men's Christian Association, New York. He is a graduate of Yale College, and was engaged, some years ago, as teacher in one of the Upper Middle Schools.

THE DEPARTMENT OF EDUCATION.

The following changes are announced in the Department of Education:—

Mr. Kimura Masakoto, Secretary, to be an Instructor in the College of Literature.
Mr. Kataoka Naoteru, Secretary of the Home Department, to be Private Secretary to the Minister of State for Education.
Mr. Yanagisawa Masataro, Private Secretary to the Minister of State for Education, to be Secretary of the Department of Education.

THE PORTUGUESE QUESTION.

The appointment of Mr. Collin de Plancy as Chargé d'Affaires and Acting Consul-General for Portugal is announced in the *Official Gazette*. The new arrangement does not affect the question of jurisdiction. While the Ordinance of the 14th July remains in operation, it seems almost superfluous to point out that all parties concerned must necessarily understand that judicial functions are not attached to the appointment.

A COSTLY EXPERIMENT.

A stupid attempt has just been made by a man named Sudo Jiro to defraud the Post Office of one cent. He received a post-card from a friend, obliterated the contents with Indian ink, and wrote his reply in red over it. This he returned to the Post Office with a slip attached to

say that the addressee had left. Two months imprisonment and police surveillance for six months is the reward of his ingenuity.

STEAMER ASHORE.

The *Hesperia* reports seeing a large two-masted steamer on the rocks close to the Lighthouse at Rock Island. Only the upper part of the vessel's topmasts were visible, with a pennant flying from one of them. It is thought that she must have got there recently as she was moving backwards and forwards with the heavy swell. The *Hesperia* passed Rock Island at 1 p.m. Sunday.

MR. HIRANUMA'S PERSECUTORS.

The *soshi* crusade against Mr. Hiranuma, the Yokohama usurer, continues, and unless stopped by the police, may bring about serious results. A band of these self-constituted mentors, to the number of over one hundred, threaten to make an attack on Mr. Hiranuma's house at Iseyama, Yokohama, at an early date.

THE PICTORIAL EXHIBITION.

It now appears that the Exhibition of Japanese pictures contemplated by the Fine Arts Society, will be held from the 7th of next month in Ueno Park, and that it was not opened on the 1st instant as previously stated.

THE "ANGERS."

The steamer referred to in the telegram as having been on shore, left here on Saturday last for Moji to load coal. She is a British vessel of 2,077 tons, and is under the command of Captain Pinkham.

MR. IWASAKI'S SMELTING WORKS.

On the 23rd ult. a fire broke out at Kitakata-mura, Higashiusuki-gori, Miyazaki, in Mr. Iwasaki's smelting works, damaging the machinery and other property to the extent of 20,000 yen.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The Opposition papers continue to be impatient about the Cabinet's silence on the policy it intends to pursue. Article after article is published urging upon the Ministry the necessity of taking the people into its confidence at the earliest possible opportunity. A new development in the situation has been inaugurated by the Progressionist organs, which are gradually beginning to break the somewhat ominous silence hitherto observed by them as to the particular reforms they would have the Government carry out. This conspicuous silence seemed to confirm a report very generally circulated, that the Progressionist leader had avowed his Party's resolve not to entrust any part of its programme of reform to the direction of a Clan Cabinet. A significant circumstance is that a report of precisely opposite character is current about Mr. Hoshi Toru, President of the House of Representatives, and right-hand man of Count Itagaki. He is said to have declared that his party is ready to give friendly support to any Ministry, clan or otherwise, which consents to carry out the reforms demanded by the voice of the people. The frankness of the Radical papers, on the one hand, and the apparent reluctance of the Progressionist organs to speak out, on the other, seemed to confirm the truth of the reports just alluded to. Be that as it may, the Progressionist organs are beginning to assume an attitude of greater openness. For instance, the *Mainichi Shimbun*, now the leading organ of that Party, has commenced an interesting series of articles on the Policy of the Second Administration of Count Ito. The series is not yet finished, but what has thus far appeared amply warrants us in expecting that the whole criticism will be marked by the same excellent sense and moderation manifested in the opening articles. Our contemporary begins by according to Count Ito the foremost place among statesmen of clan complexion, and by acknowledging his conscientiousness and great ability. Further on it observes that the Count's defect is lack of decision, but admits that in strength of judgment he is far above every one of his colleagues, whom

he also surpasses in sincere anxiety to avoid mistakes of all kinds in the conduct of business. So much for personal character. The Count is then congratulated on his return to power at an extremely favourable opportunity. The nation, thoroughly weary of weak and incapable governments, was in a mood ready to welcome even a Clan Ministry provided it was better than its predecessor. Count Ito further found a Treasury, not indeed overflowing with surplus, but showing a substantial sum of 10 million yen ready to be used for some useful purpose. It is then natural, continues the *Mainichi*, that the public should expect his Cabinet to achieve something good and brilliant. But unfortunately the Count has not yet announced his programme, and since he declines to declare his policy, the Progressionist organ ventures to offer some hints as to the course he ought to pursue. First, with regard to the policy to be adopted towards the Diet, the *Mainichi* distinctly tells the Premier that it does not wish or expect him to follow the programme of the Popular party in every respect. It would, on the contrary, like to see him manfully reject such proposals of the Opposition as he may think injurious to the national interests. But in one matter he is told that it will be imperatively necessary for him to be guided by the popular wishes; namely, in the revision of the Public Meetings, Newspapers, and Publications, Regulations. Towards this question but one attitude is possible. If in this single direction he is ready to follow the lead of the Opposition, he may, according to the *Mainichi*, in all other matters use his own discretion in dealing with the Diet. Surely this is a moderate demand. Next, our contemporary proceeds to discuss the financial problem. It recommends the Premier to carry out the plan of economy so courageously announced by him in 1885. In the remaining articles the *Mainichi* proposes to discuss the policy that ought to be pursued with reference to the control of Local Authorities, the question of the Codes, and that of Treaty Revision.

In view of the incessant clamour on the part of Opposition papers for the announcement by the Government of some picturesque and dazzling policy, the *Nichi Nichi Shimbun* thinks it necessary to repeat what it has already written to explode the illusion under which these journals labour. What is required is not an attractive programme, but the steady prosecution of solid and genuine work. The *Nichi Nichi* acknowledges that there are abuses and evils calling for effective remedy. But the undesirability of any hasty and precipitate action at the present juncture is amply illustrated by the past history of the Meiji Government. The *Nichi Nichi*, therefore, advises the members of the new Cabinet to be as deliberate and earnest as possible in carrying out reforms. It will of course take them some time to mature their schemes of reformation. Nothing, therefore, can be more absurd or unjust than to complain of their tardiness in announcing a programme. In short, the *Nichi Nichi*'s advice to the Ministers of State is that they should shun all heroic and brilliant performances and be contented with plain and substantial work.

The *Choya Shimbun* also points out the unreasonableness of demanding an early declaration of Ministerial policy. The Cabinet system of Japan being purely monarchical, no incoming Cabinet should be asked to announce its programme. The proper occasion for it to declare its policy is when the Diet assembles. This practice was invariably followed by the Yamagata and Matsukata Cabinets, and will be followed by the present one.

The activity of the Radicals attracts much attention. Their representatives in the Provinces of the northwest recently held a successful meeting at Morioka; while those in the localities round Tokyo are about to meet at Mito by way of counterblast to the movements of the Eastern Radicals under Mr. Oi Kentaro. The Radicals now enjoy a considerable amount of popular confidence, while their allies the Progressionists

are in a less enviable position. The consciousness of increasing strength seems to make the former more and more sober and rational in their attitude towards the Government, while an exactly opposite feeling produces correspondingly opposite results in the case of the latter. The Radicals now declare through their organ, the *Jiyu*, that the time has arrived when the destructive tactics of the past must be abandoned in favour of a constructive policy, and that "their aim is not to contend for political power but to effect political improvements." "A change," says the *Jiyu* further on, "has already taken place on the political stage, and political parties must now bid farewell to the tactics hitherto pursued by them." It is, we are told, to effect this desired reform in the attitude of the Radicals that they have of late been holding conferences in various places. No careful observer can fail to discern the true import of these significant declarations. There is no reason or necessity to suppose that any understanding exists between the Ito Cabinet and the Radicals, or even that there is a tendency to practical reconciliation between the two. But we may safely infer from the public avowals of the Radicals that they are ready to deal with the Ministry in an open and candid manner.

The Progressionist organs refrain from making any direct allusion to the above mentioned declarations of the Radicals. They have, already noticed, become somewhat more frank and open in their own criticisms of the present Cabinet. But there are indications that they do not view with equanimity the peaceful avowals of their allies, the Radicals. The *Hochi Shimbun*, for instance, finds fault with the members of the *Shichi Shu Kai* of the north-east and of the *Doshi Kai* of Kyushu. The two associations are composed of local politicians of progressive tendency, the majority of whom belong to the Radical party. The formation of the associations was avowedly preliminary to an alliance between the Radicals and the Progressionists. At first the members made it their common aim to attack Clan Government, but of late, influenced doubtless by the Radicals, they seem to be less ardent in their anti-official crusade. Such a state of things is peculiarly distasteful to the *Hochi Shimbun*, which roundly rebukes the members of the two associations for their indifference to the common aim that brought them together.

The dismissal of 27 Headmen in the Rural District of Tonami in Toyama Prefecture, on account of their having addressed a joint letter of thanks to Mr. Kono and Mr. Shimada, Parliamentary leaders of the *Jiyu-to* and the *Kaishin-to* respectively, has evoked strong condemnation from the Opposition press. Such a step is declared to be a gross and unjustifiable encroachment upon the rights of self-government vested in rural communes. Not only is there no provision of law prohibiting the despatch of such letters to public men, but there have been instances in which similar acts on the part of Headmen were approved and even encouraged by the Local Authorities. One of these instances was the sending of a letter of condolence to the Russian Crown Prince at the time of the Otsu incident. Numerous other precedents are said to exist for the sending of letters of thanks to Governors by Headmen representing their respective communes. The Headmen in the present instance have appealed against the act of their *Guncho*, and the question may possibly come before the Court of Administrative Litigation. The vernacular press, in connection with this matter, fails to note the wholesome rule prevailing in the Occident, that all documentary combinations of officials for political purposes are strictly interdicted. It was precisely against the Headmen of Districts and Divisions that the Opposition railed on account of their supposed interference in the general elections of February last, and yet the Opposition organs would now encourage unions among these very Headmen for political purposes. It is predicted that the central Government will reinstate the dismissed Headmen, but

if it does, a very evil precedent will, in our opinion, be established.

The report of anti-Japanese demonstrations in Idaho has caused great excitement in Japan. The papers as yet hesitate to credit the accuracy of the story. If there be truth in the statement that the Japanese concealed cases of small-pox, it was natural that the people of Idaho should strongly object. But, continue the metropolitan papers, they had no justification for acting in the manner reported. Believing the tale to be essentially true, the vernacular papers still decline to think that an unreasonable prejudice against Japanese is found anywhere except in the lawless and unrefined States of the West. Nevertheless, the conduct of the mob in the present instance cannot be passed without notice by Japan. The Government is strongly urged to make investigations and take measures to prevent the repetition of such acts of lawlessness. It is feared that, should the anti-Japanese movement in the States be suffered by the Washington Authorities to grow unchecked, the Japanese will be forced to resort to acts of reprisal against Americans residents in this country. Such a result would be extremely awkward and regrettable, especially as the Japanese have hitherto regarded the Americans as the best of their foreign friends. The papers, therefore, call upon the Government to employ all reasonable honourable means of averting such a calamity. On the other hand, should things reach a stage where dignified and peaceful methods of remonstrance are unavailing, the Americans, say the Tokyo papers, will find the Japanese very different from the Chinese. There will be no hesitation in this country to make a manly stand against the American Republic.

The announcement that M. Collin de Plancy, French *Chargé d'Affaires*, had been appointed Portuguese *Chargé d'Affaires ad interim* and Consul-General at Tokyo, caused some papers to imagine that France had taken up the cause of Portuguese jurisdiction. Of course the appointment could not, in any way, affect that question, the abrogation of the jurisdiction clauses of the treaty having been irrevocably resorted to by Japan after mature consideration. But the present week has witnessed much parade of Japanese courage and patriotism. The *Nichi Nichi Shimbun* cautions its contemporaries against making any more fuss about this question, which it describes as a simple matter limited strictly to Japan and Portugal. The *Nichi Nichi* adds that the step taken by Japan was in the interests of the Portuguese residents no less than of Japanese subjects, and pooh-poohs the idea of the thing being taken up by any third Power.

The Korea problem has been discussed during the week by the *Hochi Shimbun*, which holds Counts Ito and Count Inouye principally responsible for the decline of Japanese influence in the peninsular Kingdom. That decline, we read, dates from the *émule* of 1884, in which the two statesmen are alleged to have been more or less implicated, and upon them, therefore, devolves the task of restoring the lost prestige of Japan in Korea.

The *Fumuri Shimbun* discusses the present condition of light literature in Japan. It is inclined to believe that a literature which at one time gave earnest of rivalling that of the eras of *Genroku* and *Kyôhô*, the Elizabethan Age of Japanese letters, now shows signs of decline. Men like Haru-no-ya Oboro, Kôyô, Bimyo, Kôson, Nansui, Roban (all *noms de plume*) and others are certainly novelists of whom any age or any country might be proud. But of late there is much dearth of originality in their work. The fact is that the sources from which they draw inspiration are limited, and they have already exhausted the narrow circle of their study. Their yield of observation has been confined to life among students and danseuses, with occasional excursions into historical romance. They are advised to turn to other departments of life, and also to peruse the masterpieces of European literature.

JAPANESE JUSTICE.

IT is pleasant to find that the *Hyogo News* claims to be "a sincere admirer of the Japanese race" and to be "willing to accord to them all the praise that is their due for the extraordinary strides they have made and are making towards placing themselves on a level with Western civilization." Readily accepting this declaration in its integrity, we are nevertheless constrained to point out the extreme difficulty of reconciling our contemporary's methods with the friendly and generous mood which it now professes. Among Japan's critics the severest have never previously gone farther than to assert that several years of training are needed before the Japanese Judiciary can be trusted to administer Codes framed after Western models and adapted to the requirements of modern trade and usages. But the *Hyogo News* attributes fundamental moral obliquity to the whole Japanese nation. The problem, according to our contemporary's showing, is not merely one of educating among Japanese Judges familiarity with codes of intricate provisions and novel structure. What has to be done is to radically change the moral nature of the nation. For not alone are the Judges incompetent to administer justice as Occidentals understand the term, but, what is incomparably more important, their deficiency is innate not accidental. They belong to a people who "view justice from an entirely different standpoint to Europeans," and whose "laws are fundamentally opposed to our notions of right and wrong." Now it would be difficult to advance a more injurious charge than this against any people. If the Japanese are lacking in the first element of civilized intelligence, the sense of justice, and if this fatal defect in their moral endowment is proved by their enactment of "laws fundamentally opposed to Western notions of right and wrong," they are in truth a barbarous people, not for a moment fit to associate with the nations of the Occident on anything like terms of equality. Surely it would not have been reasonable on our part to attribute any sentiment of friendliness to a critic whose condemnation so completely distanced the sentence of all previous writers, and who, on the strength of an exceedingly brief acquaintance with Japanese laws and the manner of their administration, pronounced a wholesale verdict of moral obliquity against the entire Japanese nation. However, we have no desire to insist ungraciously on the apparent discrepancy between our contemporary's practice and its professions. Its avowal of a friendly purpose to correct rather than to condemn must be accepted in the spirit that presumably dictated it. To one point only would we draw attention, namely, that even the language of this amicable avowal contains evidence of

the hyperbole which often obscures the professed intention of our contemporary's writing. "To tell the Japanese," says the *Hyogo News*, "that in thirty years they have achieved a position which it has taken Western nations centuries to attain is merely to pander to conceit and to puff pretension, a rôle far more pernicious than that of frank censure." When and by whom has such an extravagant statement been made to the Japanese; a statement worthy to be catalogued with the verdict of the *Hyogo News* itself, that the people of this country are incapable of understanding justice in the Western sense of the term, and that their laws are fundamentally opposed to our notions of right and wrong? Does the *Hyogo News* seriously intend the sentence we have quoted to be a true description of the attitude assumed by any rational critics towards Japan? If it so strangely and comically misinterprets the writings of its own countrymen, then indeed we cannot greatly wonder at the notions it has formed as to Japanese justice and the moral views of the Japanese people.

The whole interest of this question centered, as we very clearly stated at the outset, in the conclusion advanced by the *Hyogo News* with reference to the character of the Japanese nation. The premises on which that conclusion was based were examined by us simply with reference to the inference that the Japanese people are incapable of understanding justice in the Western sense of the term. It is an old experience that every suitor's estimate of a law court's impartiality and competence depends chiefly upon the success of his suit. Never yet did the party that was cast in a case avow confidence in the justice of the tribunal that tried it. There is nothing novel in the discontent of unsuccessful foreign plaintiffs in Japanese courts, neither is it surprising to find a local foreign newspaper invariably advocating the cause of its foreign clients. The ties of race are strong, and every one of us is naturally disposed to assume that his own countrymen must be right in a dispute with Orientals. Moreover, previously to the operation of the new Code of Civil Procedure, much injustice was undoubtedly suffered by foreign suitors in Japanese law courts; not because, as we think, the Judges were incompetent or unwilling to judge justly, but because the machinery for giving effect to verdicts was utterly inadequate. In point of fact, the foreign suitor usually obtained a verdict, but in the issue had only his trouble for his outlay. Even now we find it impossible to believe that, pending the operation of the Civil and Commercial Codes, Japanese Courts are in a position to adjudicate efficiently and satisfactorily the various cases coming before them. Some discontent is therefore inevitable, and, as a rule, we should be the last to challenge its expression. But the

sweeping inferences of the *Hyogo News* as to the moral type of the Japanese race, carried the question into a different domain, and induced us to examine in detail the cases advanced by our contemporary. In the first of those cases a Japanese tribunal was denounced in the strongest terms for allowing a Japanese firm to plead that a certain foreigner was not its agent, and that a contract made by him did not bind it. This accusation is now repeated by our contemporary in even more unpromising language. "The setting up of such a defence, the permitting of such a plea to be urged and the decision on that plea, would never," we are told, "have been tolerated by any European Court unless it was wholly corrupt." We trust that the *Hyogo News* will not again accuse us of "sneaking out of the argument" if we confess our inability to understand this reasoning. That European Courts constantly admit a precisely similar plea—namely, the binding character of the relation between a firm and its self-professed agent—and constantly adjudicate cases on it, is a fact familiar to all. Further, that a contract concluded and signed by a foreigner cannot, under existing circumstances, be recognised by any Japanese Court as legally binding on a Japanese firm, is a fact familiar to every one who understands the treaties and their operation. Unless some other instrument existed pledging the *Nippon Semai Kaisha*, no legal responsibility devolved on it in respect of the contract concluded by WILKINSON. Those things are perfectly plain. The *Hyogo News* now alleges that "it did not matter whether WILKINSON was in the defendants' employ or not;" that "if he had been totally unconnected with the firm it would not have mattered;" that "the *Nippon Semai Kaisha* accepted the contract" and that "there the responsibility of WILKINSON ended." Here, then, we are on totally new ground. The charge is that the firm itself first accepted the contract and afterwards shuffled out of it by denying responsibility for WILKINSON'S act. How did the firm accept the contract, and what evidence that it had accepted it was submitted to the Court? We have only the *ipse dixit* of the *Hyogo News* in this matter, and that does not suffice. For, speaking frankly, we do not observe much disposition on our contemporary's part to be just. With reference to this very case we were careful to premise that we made no allegation whatever as to the conduct of the firm, and that, for ought we knew to the contrary, the action of the *Nippon Semai Kaisha* might have been entirely wanting in good faith. Yet the *Hyogo News* actually pretends to think that we defended the firm, and is so courteous as to express fear that "absence from England has developed obliquity in our moral vision."

We shall refer to one other point only.

It is connected with the kerosene oil case

recently tried in Yokohama. Concerning this we are accused of "sneaking out of the argument," the ground of the accusation being that we took advantage of our contemporary's general reference to "vouchers" whereas it ought to have specified "delivery order"? Truly we know not how to deal with such singular freaks of imagination. The terminology employed by the *Hyogo News* never entered for a moment into our argument. The facts are these:—When kerosene oil is lodged in the Official Warehouse, a document is handed to the owner of the oil setting forth the number of cases deposited and other particulars. Each delivery subsequently made is duly entered upon this document, and when the total of the deliveries equals the sum of the cases originally deposited, the document passes finally into the possession of the Warehouse Authorities. It remains in the hands of the owners of the oil just so long as any oil remains in the keeping of the Warehouse Authorities, and its final transfer from the former to the latter is *ipso facto* evidence that the whole of the oil has been delivered from the Warehouse. This document constitutes the sole evidence of deposit, and the plain duty of the depositor, through whatever agents he withdraws the oil, is to see that the delivery entries are correctly entered, that they tally with his own accounts of sales, and that the document does not finally leave his possession until he has recovered all the oil represented by it. On the other hand, the return of the document to the Warehouse Authorities is to them an assurance that all claims have been satisfied in respect of it, and inasmuch as, by parting with it, the original owner parts with his only evidence of title, the Warehouse people are no more bound to preserve the document than the Japanese Treasury is bound to preserve coupons representing payments of interest on Consolidated Bonds. When, therefore, the Yokohama Court was asked to order the production of a number of such documents by the Warehouse Authorities, it could only refuse the application, for obviously no legal tribunal is competent to order the production of documents which may or may not have been destroyed at the option of their holder, and the existence or non-existence of which does not affect their holder's position *vis-à-vis* the tribunal. We are persuaded that if the *Hyogo News* will dispassionately consider the nature of these documents and of the Court's position with regard to them, it will greatly modify its sweeping condemnation. For our own part, we entirely agree that the ends of justice would have been better served could the documents have been produced, but we cannot see how the Court could have acted differently under the circumstances.

But however opinions may differ as to these details, surely nothing could be more extravagant than to adduce such cases as

evidence of general moral obliquity on the part of the Japanese nation, innate incompetence on the part of Japanese Judges to administer justice according to the Western sense of the term, and inability on the part of Japanese legislators to frame laws that accord with the principles of right and wrong. There is no manner of proportion between such premises and conclusions, and the Japanese might well be excused if they retorted by telling their critics to obey the most ordinary dictates of justice and fairness themselves before uttering sweeping condemnations of the injustice of others.

A STRIKING EXAMPLE.

THE editor of the *Kobe Nippo* forwards to us copies of some issues of his journal, containing an account of an interview between a reporter and Judge YOSHIDA, who recently conducted the preliminary examination of a man called YAMAMOTO, accused of stealing tea. The *Hyogo News* has very frankly translated and published the interview, and we now proceed to describe the circumstances which it establishes. They will repay perusal, since they furnish an exceptionally striking example of the methods adopted by some local foreign journals in criticising Japanese tribunals.

Recently the *Hyogo News* collected a number of cases tried by Japanese Law Courts, and made them the basis of sweeping charges not alone against the Japanese Judiciary, but also against the Japanese people. It declared the former to be wholly incapable of administering "Justice," according to the Western acceptance of the term, and the latter to be equally incapable of appreciating it, and it rounded off this comprehensive denunciation by adding that Japanese laws are fundamentally opposed to European ideas of right and wrong. Among the cases cited in proof of this wholesale verdict, one related to a supposed attempt to steal tea from a foreign firm in Kobe. In respect of this case our contemporary was particularly confident, declaring it to be a palpable miscarriage of justice, and adding that it "eclipsed all the others in blundering stupidity." Reading the *Hyogo News*' comments, it struck us as somewhat remarkable, though by no means unprecedented in the East, that such criticisms should be penned about a Court whose proceedings were not published; that, in short, the verdict of a tribunal should be sweepingly condemned by a journal possessing no knowledge whatever of the evidence adduced before that tribunal. We ventured to point out this obvious flaw, and the reply of the *Hyogo News* was as follows:—

What we do not profess to know has nothing to do with our argument. What we do know is that a coolie, taken in the act of stealing and seen by three witnesses who gave evidence in Court, was acquitted. According to the evi-

dence of the *banto*, the coolie was not acting under his instructions, and the godown man gave similar testimony. If acquitting the man under such conditions is Japanese law and justice, then it is entirely foreign to European ideas, and that is all we wish to prove. But what was exceedingly mysterious in this mysterious case was that the Court agreed that the tea had been stolen from Messrs. Thomas & Co., and took the strange course of sending the key of the place back to an employé of the firm instead of to the principal who brought the charge. Thus the Court decided: first, that the coolie was not stealing; secondly, that though he was not stealing, the tea had been stolen; and thirdly, that to send the key direct would be a damaging admission. Consequently, they sent it back in a roundabout way! If the *Mail* thanks this is on the basis of European ideas of justice, all we can say is that it would be a charity for Japanese and foreigners to get up a subscription and send the editor on a tour through Europe, so that he might relearn much that he has apparently forgotten.

Here is a very clear statement. The *Hyogo News* declares its knowledge that a coolie was taken in the act of thieving; that three witnesses had seen him; that these witnesses gave evidence before the Court, and that the Court, nevertheless, acquitted him. Now observe. The Judge who tried the case is interviewed, and for the first time the public learns what really occurred, the interview being published, as we have said, in the *Kobe Nippo*. To begin with, no coolie was arrested at all. The man arrested was one YAMAMOTO, a tea-merchant. He was arrested at the suggestion of Mr. GREEN, a member of the firm of Messrs. A. A. THOMAS and Company, who, finding him apparently superintending the transportation of certain tea, a portion of which belonged to the firm, handed him over to the police on suspicion of being a thief. When YAMAMOTO was brought before Judge YOSHIDA for preliminary examination, five witnesses appeared. Two, Messrs. THOMAS and GREEN, were members of the prosecuting firm. They proved that five packages at least of the tea transported were the property of the firm. Two other witnesses, a Chinaman, LO, and a Japanese TAKIMOTO, were employés of the firm. LO declared that he himself had hired the house to which the tea was transported, and that it had been transported thither under the orders of three Japanese, of whom YAMAMOTO was not one. TAKIMOTO declared that a mistake had been made as to the destination of the tea, packages which should have been transferred to a different godown having been confounded with packages purchased by himself and others. Finally, the head of a guild of coolies declared that he had received orders from the Chinaman LO to carry the tea to the house in question. Thus there was not the smallest fragment of evidence to convict YAMAMOTO, and the Judge accordingly dismissed the case against him. So much then for the "what we do know" of the *Hyogo News*. So much for the "coolie taken in the act of thieving." So much for the "three witnesses who saw him and gave evidence in Court." All these things existed only in the imagination of the *Hyogo News*. But no: we do our contem-

porary an injustice. These things existed in the version given to it by Messrs. THOMAS and Company, which version, the *Hyogo News* frankly admits, "totally differs in nearly every respect" from the account given by the Judge who tried the case. Thus, then, the matter stands exactly as we suspected. On the strength of a story told by two foreigners, doubtless in all good faith, and without any information whatever as to the proceedings which took place in Court, the Kobe journal not only undertook to declare positively that a man had been arrested who never was arrested; that three witnesses had seen him stealing tea who never saw him do anything of the kind, and that certain evidence had been produced which never was produced at all, but also asserted positively that the verdict rendered by the Court was a parody of justice because it did not conform with evidence which had never been submitted to the Court at all! Is it possible to be more reckless in preferring accusations? Imagine a journal after indulging in such sweeping and wholesale condemnations of the Japanese Judiciary's incompetence to administer justice and of the Japanese people's incapacity to understand justice—imagine such a journal falling back on an excuse like the following:—"Messrs. THOMAS and GREEN made statements to us which were almost identical; Mr. YOSHIDA (the Judge)—and we believe his to be an accurate statement—gives altogether another story." In other words, the *Hyogo News* is compelled to admit that the story, on the strength of which it condemned the whole Judiciary of a nation and the whole nation too, "totally differs in nearly every respect" from the facts really elicited in Court. The comicality of the whole affair is increased, if that were possible, by the incident concerning the key. The "mysterious" action of the Court in sending back the key to Mr. GREEN is construed by the *Hyogo News* into a finding that "the tea had been stolen," but that, since "to send the key direct would have been a damaging admission," the Court "sent it back in a roundabout way." Now hear what the Judge has to say to this. "Mr. GREEN gave the key to the police originally. The law directs that when a charge is dismissed at the preliminary examination, any articles which may have been attached must be returned direct to the person or persons who gave them originally to the Court. Therefore the key was returned to Mr. GREEN." So much for the "exceedingly mysterious" feature discovered by the *Hyogo News*. So much for the contradictory conclusions deduced from this key. So much for the "damaging admission" which the Court sought to shirk. So much for the "roundabout way" chosen for sending back the key. Yet the bathos of the whole business does not end here. For even with the Judge's

statement before it—a statement which the *Hyogo News* "believes to be accurate"—our contemporary asserts that its own original "contention is substantiated in every point." We appear to be dealing with miracles. Radical and far reaching deductions are drawn from one version of a certain event. Then there comes to light another version which "totally differs in nearly every respect from the first," but which is nevertheless "believed to be accurate." Yet this second version substantiates the original deductions in every point. Evidently any story would fit the *Hyogo News* condemnatory theory. How is the trick managed? Simply by a fresh stretch of imagination. "By the Judge's own admission," writes our contemporary, "there were two witnesses to the fact that YAMAMOTO had in his house tea belonging to a foreign firm. In Europe this would be sufficient to convict him of harbouring stolen goods." So it would, doubtless, save for one slight difficulty, namely, that the house where the tea was found was not shown to belong to YAMAMOTO at all. On the contrary, the two witnesses LO and TAKIMOTO declared that the house had been hired by LO, and LO explained that YAMAMOTO'S connection with the place was limited to procuring a key at his (LO'S) request. So that even with the facts before it in black on white the *Hyogo News* cannot be accurate, and must needs base unjust charges on its own errors. Doubtless these details are wearisome, but they are also wonderful. This case of the *Hyogo News*, as our contemporary truly says, "eclipses all the others in its blundering stupidity," but our readers will have little hesitation in deciding by whom the perverse obtuseness and marvellous blundering have been displayed. And these are the judges of a nation! By such critics are the competence of the Japanese Judiciary and the morality of the Japanese race to be determined!

"I have no other but a woman's reason;
"I think him so, because I think him so."

THE TROUBLE IN TOYAMA PREFECTURE.

WE have already related in very brief outline the complication that has arisen in Toyama Prefecture. In the last session of the Diet, the leaders of the campaign against the Government on the subject of official interference in the general elections, were Mr. SHIMADA SABURO, representing the *Kaishin-to*, and Mr. KONO HIRONAKA, representing the *Fiyu-to*. After a defeat on the question of memorializing the Throne, these gentlemen succeeded in getting the House to pass a Representation which practically amounted to a Vote of Censure upon the Government. Thereupon the Headmen of thirty-five Urban and Rural Divisions of Tonami District in Toyama Prefecture, addressed a joint letter of

congratulation to Messrs. SHIMADA and KONO, applauding their exertions and expressing satisfaction with the result achieved. This singular procedure was not allowed to pass unchallenged. Mr. CHICHIIWA YEIICHI, Headman of the District, pointed out to the signatories of the letter that the step they had jointly taken was unbecoming their official position, and asked them to withdraw the document. This, however, they emphatically declined to do. They maintained, in the first place, that it was out of the question to talk of withdrawing a letter which had been signed, sealed, and publicly forwarded; and, in the second, that precedents existed for the course they had adopted, since on the occasion both of the *Normanton* affair and the attack on the *CZAREWITCH* in Otsu, local officials had attached their names to joint letters of condolence. From this position it proved impossible to move them, and finally Mr. CHICHIIWA, on the 31st of last month, addressed to twenty-seven of them a despatch, saying that, as they had behaved in a manner incompatible with their duty, and as they declined to reconsider their act, nothing remained for him except to exercise the power vested in him by the 128th Article of the Local Government system, and to remove them from office. We cannot tell how the original number of thirty-five dwindled to twenty-seven; but the point is immaterial. The dismissed Headmen are reported to be much discontented, and to have presented an appeal to the Prefectural Council. This is precisely one of those questions of principle which excite most interest in Japan, and we look to see much controversy before the public makes up its mind, especially as the dismissed Headmen of Divisions are popular nominees, whereas the District Headman by whom they have been dismissed is a Government official. Already, indeed, the *Fiyu* has expressed in very strong terms its dissatisfaction with the act of the District Headman, whose procedure it denounces as an unwarrantable interference with the rights of individuals. But the basis of the Radical organ's criticism seems to us to be singularly unsound. When these thirty-five Headmen set themselves to address a joint letter of approval and support to two leaders of political parties who were carrying on a crusade against the Cabinet in the Diet, they were themselves adopting a course precisely analogous to the action which they professed to condemn as so uncompromisingly in others. For by what subtle system of discrimination can a difference be established between attempts on the part of Divisional Headmen to influence the electors in their localities, and combined support publicly give by the same Headmen to the leaders of political parties in an anti-Government onset? The two things are not distinguishable in the light of any impartial judgment. If local officials are at liberty to unite for the

purpose of swaying the actions of the people's representatives in the Diet, then assuredly they are not less competent to exercise their influence for the purpose of securing the election of representatives whose principles they approve. One thing cannot be right and the other wrong. It cannot be right that local officials, as such, should seek to direct the voting of the members of the Diet, if it is wrong for them to seek to direct the voting of the men who elect those members. The *Fiyu's* failure to detect that precisely the same principle is involved in each case must be attributed to bias of a very blinding nature. But even though no political issue were at stake, a combination of officials for the purpose of addressing a document to public men in their public capacity, is entirely opposed to the ethics of official propriety as observed in Western states. Nothing of the kind would be tolerated in Great Britain, for example, and we fail to see why it should be tolerated in Japan. The twenty-seven Headmen having been elected by the people of their divisions, and the District Headman being an official of the Central Government, some superficial observers will probably construe the trouble into a struggle between liberty and officialdom. But it is in fact a conflict between plain propriety and palpable impropriety. If the people of Tonami District re-elect the dismissed officials, or if the Prefectural Council reverses the decision of the District Headman, Toyama Prefecture must henceforth maintain silence as to the necessity of a neutral attitude on the part of officials towards politics.

JAPANESE IN THE UNITED STATES.

THERE have been indications for some time past that the anti-Japanese movement in the United States may at any time become a source of trouble and anxiety to Japan. Intelligence from Idaho, which appears in the vernacular papers of the 4th instant, reports the existence of the bitterest animosity against the Japanese labourers who have been settled in different parts of that territory, and states that in various places they have been ordered to leave, and have been threatened with violence if they refuse. At a place called Nampa, 18 miles from Boise, great umbrage was given by the Japanese concealing three cases of small-pox, and about 100 Japanese labourers were collected and conveyed to an uninhabited part of the country, where they were left to fare as best they could. At Caldwell, a town about 30 miles from Boise, 50 Japanese were forced into a train bound for Portland, Oregon, and an anti-Japan Society has been organized called the "Cross Society." At Mountain Home 100 Japanese received orders to take their departure within 48 hours, violence being threatened in case of disobedience. The agitation in every

instance originated with workmen, who regard the Japanese as rivals. It is stated that the Japanese work for less wages than the Chinese, and that consequently they are greatly sought after. The movement is represented as rapidly spreading, and it is anticipated that no ordinary representations to the United States Government will lead to effective measure being taken for its suppression. The *Kokumin Shimbun* further reports that the anti-Japanese agitators in San Francisco are gaining ground, and that, though the better class Japanese residents have entered the lists against the stump orators who represent the American working men, it is difficult to foresee what the final issue may be.

We cannot at all wonder that the news of these occurrences has caused considerable excitement in Japan. Such a strong feeling of friendship has always been entertained by the Japanese people towards the citizens of the United States that it comes to the former as a sharp and most disagreeable surprise to find their nationals treated as the settlers in Idaho have been treated. Speaking generally, the American nation is under no conventional obligation to allow the free ingress of Japanese into its territory. The treaty between the United States and Japan contains a great many clauses providing for the unrestricted residence and trade of United States citizens in certain fixed portions of the Japanese empire. But it does not contain so much as one provision securing similar privileges for Japanese subjects in the United States. In this respect it is an essentially partial covenant. China is differently situated so far as international conventions are concerned. Her treaty of 1880 with the United States provides that, although the Government of the United States may regulate, limit, or suspend the coming or residence of Chinese labourers under certain circumstances, such coming or residence may not be absolutely prohibited; while for the rest, all Chinese subjects, proceeding to the United States as traders, students, merchants, or from curiosity, together with their body and household servants, "shall be allowed to go and come of their own free will and accord, and shall be accorded all the rights, privileges, immunities, and exemptions which are accorded to the citizens and subjects of the most favoured nations." The terms of this treaty confer very definite privileges on Chinese subjects within the territory of the United States. Japan has no such treaty, and it would therefore seem that if the Government of the United States were minded to exclude Japanese labourers, it might freely legislate in that sense. But before absolutely endorsing this inference, it is necessary to look at the matter a little more closely. When Western Powers conclude treaties for the first time with Oriental states, the idea of reciprocity

finds little if any expression. The dominant motive of the Occidental is to obtain access to the country of the Oriental and liberty to trade there. Moreover, since in all civilized Western countries aliens are free to come and go, trade, travel, or reside, on virtually the same terms as the people of the country, it seems a work of supererogation to formulate treaty stipulations in that sense. Hence we find that, as in the treaty of 1858 between Japan and the United States, so in the treaty of the same year between the latter and China, no provisions were introduced securing to either Japanese or Chinese subjects the privileges of trade, travel, or residence in American territory. This defect, if such it may be called, still exists to Japan's prejudice. But in China's case independent circumstances led to the conclusion, in 1868, of a convention containing articles supplementary to the original treaty, and in these articles, perhaps because they were drafted at Washington, beyond the reach of the atmosphere that generally pervades Occidental dealings with the Orient, perhaps because Chinese diplomats had become better educated, the principle of reciprocity found expression. In the sixth article it was laid down that "citizens of the United States visiting or residing in China, should enjoy the same privileges, immunities, or exemptions in respect to travel or residence as might there be enjoyed by the citizens or subjects of the most favoured nation; and reciprocally, Chinese subjects, visiting or residing in the United States, should enjoy the same privileges, immunities, or exemptions in respect to travel or residence as might be there enjoyed by the citizens or subjects of the most favoured nation." Twelve years later, when the immigration of Chinese labour into the United States assumed such dimensions as to call for special control, the American Government, in view of the obligation imposed on it by the treaty of 1868, was obliged to open negotiations with China before enacting restrictive laws. Hence it is apparent, *inter alia*, that prior to the prominence of the labour problem there never was any reluctance on America's part to extend by treaty to Chinese subjects the same privileges of trade, travel, and residence as are enjoyed by her own citizens in China. If Japan does not enjoy similar privileges by convention, the fact is due to mere accident, not to any want of friendliness on America's part. When, therefore, we admit that America's hands are not tied by any treaty in this matter, and that she might unhesitatingly legislate to exclude all Japanese from her territories, we note, at the same time, that such a course would be to show less consideration towards Japan than has been showed towards China, and that the Government at Washington is most unlikely to adopt it. Meanwhile, however, no such legislation exists, and even though it did exist, the measures taken in

Idaho would be inexcusable, supposing them to have been accompanied by threats and violence as the telegrams state. In every civilized Western country Japanese subjects are just as much entitled to protection against mob intimidation and mob lawlessness as are the people of the country, and the American Authorities will be the last to deny this. It may prove that the accounts given by wire are exaggerated. Information has been sought, but not obtained, from both Washington and San Francisco, and the Japanese Consul at the latter place is now engaged conducting personal investigations. Pending the receipt of his report, judgment must be suspended. We anticipate, however, that this affair will probably bring conspicuously on the tapis the whole question of Japanese immigration into the States. In so far as concerns objectionable social habits, combinations for lawless purposes, opium smoking, and so forth, the Japanese are not open to any of the criticisms uttered in America against Chinese settlers. Indeed it will be at once conceded, and by none more readily than by the Americans, that the Japanese are in every respect most desirable immigrants. But all this is beside the real question. People who talk about "high binders," opium dens, slavery in prostitution, and so forth, only seek to find plausible excuses for antipathy which has its roots solely in the labour problem. Japanese and Chinese settlers are equally objectionable to the lower classes in America from the point of view that both alike will sell hard manual labour for a pittance utterly insignificant in the eyes of the United States citizen. Competition of that kind will not be brooked. The labouring people of the United States will rid themselves of it by any means, however violent, and the Japanese nation would be very unwise did it close its eyes to the fact. Of course there are many unpleasant inferences to be drawn and many awkward contrasts to be set up. Let them be frankly admitted. If at times the West preaches to the East some pretty creed of universal brotherhood and international liberality, let us not look for any corresponding practice on the part of the preacher. Human nature is the same everywhere. On the other hand, the Japanese will be mistaken if from these Idaho experiences they deduce any inference that American friendship has grown cold. The American working man never shared that friendship. The American working man knows little and cares less about international amity. He is bent solely on securing for himself good wages and easy circumstances, and against everything that interferes with the consummation of that programme, he will wage relentless war. Whether his inconvenient competitors be Japanese or Jews is a wholly trivial incident in his eyes. Everything standing in his light has "got to go:" the details or personalities are of

matters of supreme indifference. We trust, therefore, that the Japanese will view the matter philosophically, recognising it as part of the great problem which is perplexing the whole civilized world at present. If America declines to utilize Japanese cheap labour, and if other Western countries share the prejudice, what Japan has to do is not to grapple with impossibilities or fight against the inevitable, but to proceed with progressive measures at home, so that her own industries may profit by the economical and dextrous artisans of whom she possesses so many.

AN ENGLISH STATESMAN ON THE JAPANESE CONSTITUTION.

IT is curious and interesting to find a prominent English statesman making use of the Japanese Constitution to illustrate a political speech. The fact would be more gratifying had the Constitution been quoted in a complimentary sense. But unfortunately such was not the case. What happened was that Mr. JOHN MORLEY, criticising, in a speech delivered at Huddersfield, the provisions of the Irish Local Government Bill as introduced by the Conservatives, said that the Bill might be compared to the Japanese Constitution inasmuch as both instruments alike contained provisions enabling the Government to withdraw, at any moment, with one hand, what it had seemingly given with the other. We need not consider what particular clauses of the Irish Bill evoked this comment. It is enough to know that the portion of the Japanese Constitution which induced Mr. MORLEY to describe it vicariously as a sham and an unreality was the Article providing that, in cases of urgency, the EMPEROR has power to enact his own laws and vote his own supplies. Mr. MORLEY was not responsible for this rendering of the Constitution. He merely quoted, or imagined that he quoted, Mr. BRYCE. The latter, however, is not at all content to be thus interpreted. We have his authority for the explanation that what he really meant was this:—"The Irish Local Government Bill professed, and appeared, to give much more than it did actually give, and I compared it in that respect with the Japanese Constitution, which leaves a reserve of power in the hands of the SOVEREIGN. In the case of the Japanese Constitution, this is perfectly right and wise. But in the case of the Local Government Bill this was entirely wrong. The element of hostility or contempt whichever it be called, in this comparison, was directed towards the doing wrongly in that Bill what has been done perfectly properly, considering the difference of circumstances, in the case of Japan." It is not, perhaps, wonderful that Mr. MORLEY'S version of this somewhat delicate distinction departed slightly from the intention of Mr. BRYCE. Meanwhile, Mr. F. T.

PIGGOTT, writing in *The Imperial and Asiatic Quarterly Review* for July, has entered very fully into a general discussion of the Japanese Constitution from the point of view of Messrs. BRYCE and MORLEY. How completely he disposes of the erroneous conceptions of these gentlemen, may be appreciated by anyone perusing his able essay. With Mr. BRYCE'S exposition, indeed, as now furnished by himself, there is less fault to be found. But whatever fine distinctions may have existed in the depths of Mr. BRYCE'S mind when (20th May, 1892) he addressed the House of Commons in the sense afterwards quoted by Mr. MORLEY, it was certainly unfortunate for the Japanese Constitution that he should have adduced it as an example of legislation which, in the case of his own country, he condemns as a sham and no reality. To illustrate one man's deformity by likening it to that of another is a proceeding which does not lose much of its sting by a subsequent explanation that, in the case of the second person, deformity is quite right and proper since he lives in a country fitted only for cripples. A comparison derives its point chiefly from the saliency of the standard's attributes. We say that a thing is as bright as the sun, or as chilly as ice, because our hearers are perfectly familiar with the brilliancy of the former and the coldness of the latter. If the sun were not bright or ice cold, it would be absurd to choose them as standards for such a purpose. Similarly, if the leading idea in Mr. BRYCE'S mind had not been that the Japanese Constitution is a deceptive and specious piece of legislation, he would have been both illogical and inartistic in attempting to fix the faults of unreality and hypocrisy upon an English Bill by likening it to the Japanese Constitution. That must have been the impression produced on the minds of his audience, and that is the impression that will remain—the burr that sticks, as Mr. PIGGOTT pithily puts it. It seems to us, further, that Mr. PIGGOTT is justified when he observes that this "feebly facile" criticism of Mr. BRYCE'S would never have been uttered had the Constitution of a Western country been in question. Being very cognisant of the somewhat morbid tendency of the Japanese people at present to suspect national disparagement where, perhaps, impartial criticism alone is intended, we do not readily read Mr. BRYCE'S comment in such a sense. But Mr. BRYCE cannot possibly have assumed that his hearers had any knowledge of the Japanese Constitution. He cannot possibly have imagined that their own private researches had taught them to regard it as a flagrant specimen of sham and unreal legislation. When he cited it as a standard of those bad qualities, he must have relied not on the House's knowledge of its actual merits, but principally on the fact that it was Japanese. Every Oriental State is a kind of Galilee to the average

Occidental. He does not believe that anything good can come out of it, and Mr. BRYCE doubtless felt that to associate the Irish Local Government Bill with an effort of Oriental legislation would at once discredit the Bill in the sight of the House of Commons. It is a pity that this prejudice should exist: a still greater pity that it should blunt the faculty of discrimination in the minds of men like Mr. BRYCE. Happily Mr. PIGGOTT was at hand to protest against the injustice and to dispel the delusion.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

KARUIZAWA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR.—The sixth day of the conference gave us a paper on methods of evangelization by Dr. Thompson, in substance as follows:—

No one uniform method is to be insisted on. As in the early church, so now, each one is to use his own special gifts, and mission work shows a great variety of methods. Christ himself adopted a variety of methods, as he taught in the open air, in synagogues, in private houses, in the temple, and to individuals wherever they happened to be. The disciples, especially Paul, show like variety. There was much field preaching during the Reformation and during the great revivals of more modern times. Variety is inevitable, due to circumstances of custom, character, climate, civilization; street preaching is common in India, and China. Processions with music are often formed in India, akin to Salvation Army methods.

In Japan variety also is needed; medical missions were very useful in the past. Bible translation, colporteurage, education, charitable efforts, are examples of this good work.

Work done in and through organized churches. This work is often stationary and even retrograde, and there is much room for improvement, and yet organized churches may have to do the major part in evangelization. There is need for sound work in schools so as to give to the church good pastors, preachers, leaders, and officers. Thus educational work receives a great emphasis.

Lecture meetings have been successful but are attended with growing difficulty. Addresses often become political, philosophical, scientific, and have no vital relation to Christianity.

The passport system makes it difficult to improve on present methods. Evangelistic tours through the country, preaching in halls, theatres, &c., often lead to disorderly conduct, especially when *soshi* attend. A missionary may sometimes do well to keep silent and plead where possible legal restrictions on public meetings. The speaker mentioned an incident of a drunken lawyer coming unsolicited to his assistance. Missionaries ought to be thankful for protection hitherto accorded against dangers from crowds but should avoid all such occasions, as they give rise to international complications and criticism of missionary methods, as illustrated often in China. "If persecuted in one city, flee to another."

The speaker advised preaching places in Tokyo selected so as to take advantage of the *ennichi*. A suitable preaching place should face the street and have an open space for standing room between it and the street. Thus many classes may be reached. This method is sometimes criticised as not sufficiently dignified, but it is not incongruous with the customs of the people otherwise. The restraints often imposed by superiors against attending regular religious services, would on these *ennichi* evenings present no difficulty. Tract distribution might be united. Reference was made to a pamphlet compiled by Mr. Curtis from answers to questions sent out by him to various pastors and missionaries on methods of evangelizing. Miss Graham spoke at length on methods pursued in China:—Christians formed into bands would go out under leaders on set days week after week into surrounding towns. Large audiences had thus been gathered, and preached to. Tracts and books were distributed and on their return these bands would give a report to their church. The discussion took up subjects like suitable rooms for preaching places, rowdyism, tract distribution, attendance of missionaries on Japanese services, services on

Matsuri days, which were to be from 1 to 3 p.m., rather than in the evenings when disturbances from drunkenness would be likely to occur.

The meeting in the evening was led by Mr. Pierson, who spoke on the seven principal mountain experiences of Christ's life as illustrative of as many important stages in the Christian's life.

August 31st, 1892.

The last day of this conference was opened by Rev. E. Crumney who spoke on "The Holy Spirit in Character Building."

There are times when the words of man fail to introduce us into God's presence. God himself must appear in such supreme moments. The last step is that of simple trust in God's promise to make his presence felt. So there seems to reign at this moment a state of expectancy of a special manifestation of God.

The phrase *character building* is not a scriptural one. A plant is to be well rooted and nourished, but not built up by external additions. Hence we ought to use the phrase *character growing*.

According to his character, a Christian is strong or weak for work. As an example witness the sainted Morrison of Chelsea, so remarkably successful in impressing religious truths and experiences.

How does the Holy spirit assist in growth of character?

Power is one manifestation of his presence. This was Christ's special promise to the apostles, and naturally so, judging from their needs and their deep sense of weakness. We, though weak now and helpless in ourselves, have such a heritage of power in the Holy Spirit and his many manifestations in the church's past and present. Another manifestation is what is called *entire sanctification*. This must not contradict progress in sanctification here and hereafter. Paul's prayer is that we might be sanctified wholly, and that now. This rather lays the foundation for more rapid and real growth in grace, and means that our nature, as at present constituted, is entirely sanctified. Another term is *perfect love*, see 1 Cor. 13. This love, as described by Paul, cannot be improved and yet is capable of indefinite expansion.

Christian perfection is another term. This implies perfect cleansing from all sin.

There was a new and miraculous manifestation of the Holy spirit after Christ's departure. The speaker here gave the usual explanation of why miracles are needed to substantiate the advent of a new dispensation, rather than later. But when once perfect love and the Christian graces reign in the heart, no other miracles are needed, as none can be greater. Hence prophecy is the greatest of the spirit's gifts (see 1 Cor. 14).

Second blessing is still another term. As there is a difference between *sin in act* and *in state*, and a double meaning in *atonement* (see Rom 3, 25, and Eph. 5 25-27) so there is a two-fold salvation; 1, Repent and be converted; 2, Be perfect and holy. Do not label as ideal promises and commands which are unlabelled. The second blessing comes no doubt usually at a different time from the first, *eg.* Pentecost. Difference in Peter before and after, was not due to a more proper conception merely: higher power and manifestation are exemplified. Frequently, no doubt, because not believed in and so not accepted, the second blessing is not attained until death.

We do sin against the perfect law of righteousness, the Adamic law, through weakness of judgment at least, but we are under the new law of faith and love.

The testimony of the speaker on how after long seeking, since 1879, with many alternatives, he finally, during the late Methodist Conference at Aoyama, believed that he at length graciously received this second blessing. Bishop Wm. Taylor's words led on to this end. Now unimpeded growth is the step, or steps rather, to be yet taken. Internal opposition, sin, is not needed for growth, is indeed the greatest impediment. Compare Christ's life, who was without sin, "Is this vile world a friend to grace, to help me on to God." Enough opposition to stimulate growth is still left without sin.

The closing meeting was let by Rev. M. S. Vail, who on the subject "Jesus only," led the audience's mind to look to Jesus only and ever, if we are to be conformed to his likeness.

Thus ended the first session amid such universal satisfaction to all concerned, that it was thought best to appoint a committee at once of members resident in Tokyo, to prepare for a similar conference, God willing, next summer. This committee consists of Mr. Vail, chairman, Mr. Landis, secretary, Dr. Thompson, and Misses Goepf and Claggett.

Yours truly,

September 1st, 1892.

GAMMA.

YOKOSUKA RAILWAY.

TO THE EDITOR OF THE "JAPAN MAIL"

SIR,—I was down at Yokosuka yesterday and saw, at the station there, a notification in Japanese, saying "that, for the present, on Sundays, there would be a late train for Tokyo." I did not notice what time it was to leave Yokosuka, but, if I remember correctly, it was timed to leave Kamakura at 9.26 p.m. As I have not noticed this train mentioned in any of the papers, I thought you might like to call the attention of the travelling public to it. It must prove a boon to many this warm weather.

I remain, Sir, yours truly,

E. F.

Tokyo, September 2nd, 1892.

LETTER FROM BOSTON.

(FROM OUR OWN CORRESPONDENT.)

Boston, Mass., August 8th.

At this time the astronomical talent is directing its vision and its imagination toward the planet Mars. A good part of the educated community, and no small part of the uneducated are interested in the movements of the fiery planet that made us such a close visit on the third of this month, when at one o'clock in the morning, numbers of people were out of bed and gazing at the planet. A few days later, it was learned on the authority of a scientific astronomer that one o'clock on August 3 was not the time of nearest approach. Some remarkable discoveries are expected, or else the astronomers have wasted much blarney. The theory is set up that certain brightly illuminated spots on the face of Mars may show that the inhabitants are trying to communicate with us—building big bonfires, perhaps, to call attention. This is gravely discussed in the papers as a bare possibility—very bare. The Lick telescope will bring the planet within eighteen thousand miles. This is the opportune time of observation, for the planet will not call so near again for many years, and if we do not scrape an acquaintance with the inhabitants now, we must wait a long time for another chance, unless the big telescope, bigger than anything yet made, said to be in process of construction, may enable us or our vision to leap space and bring the planet Mars into our front yards. We can then find out all about it.

But things a little nearer claim our attention in this temperature heated to one hundred degrees of Fahrenheit in the shade. There was never in the history of the large cities so much sickness and so many deaths, especially among children. Shore and mountain places are crowded, and the down shore or the up country landlord is in good spirits. He gives his price and visitors may accept or not: it is of no consequence to the lord of all he surveys.

A terrible tragedy has been enacted in Fall River, this state, and all New England, if not a good part of the country, is interested and eager for details. Last week, Andrew Borden and wife, each about sixty years of age, wealthy, retired, respected, were murdered in their house in a public and much travelled street, about eleven o'clock in the forenoon, each struck down and given twelve blows on the head with some instrument supposed to be an axe. No murderer has yet been found—no one was seen enter to the house or to leave it. A servant girl was in the house at the time and a daughter was in the barn near. Borden was observed to enter his house, and fifteen minutes later, his murder was announced by the daughter who discovered it on her return to the house. It is such an awful and mysterious deed that the interest is wide. It might be supposed that the murderer striking his victims each twelve blows, every blow cleaving the skull and every blow sufficient to cause death, would have been spattered and covered with blood, but if he was, he disappeared red-handed leaving no trace, not a drop of blood. The instrument with which the deed was committed has not been found. Fall River is in a fever of excitement. It is not reassuring to think that a man may enter a house in broad daylight, commit two murders and escape. Nothing so terrible and mysterious has disturbed the community for years. The Boston papers print columns about it and the public reads with increasing interest.

The new cruiser, No. 12, named *Columbia*, has just been launched at Cramp's ship-yard in Philadelphia. When completed the *Columbia* will be the most formidable engine of war in the possession of the United States. She is 400 feet long; 58 feet beam; displacement, 7,300 tons; speed, 21 knots; horse power, 20,500. The main battery consists of four six-inch breech loading rifles, eight four-inch breech loading rifles, and eighteen machine guns and six torpedo tubes. The *Columbia* is propelled by twelve screws, one placed amidships

as in ordinary vessels, and two a little farther forward. The vital parts of the ship are protected by four inch steel plates. The chief points of excellence of the *Columbia* are her speed and endurance. There are few coaling places for men-of-war, and in time of war a still less number. The *Columbia* can take on board coal enough to send her around the world if she is not more than 100 days in making the trip. We shall soon have a navy to compete with any nation in the world, if we have it not already.

The strike and the riot at Homestead, Pennsylvania, in the Carnegie mills, referred to in the last letter, have been kept down, but affairs in that place are in a "touchy" condition. Non-union men have been employed to take the place of the strikers, and they have been allowed to go to work, but this may be due to the fact that the militia are still in the field. Some of the strikers declare that as soon as the militia are withdrawn, they will blow up the Carnegie works. This shows the temper of a section of the strikers; but it is no indication of their courage, for they are abject cowards. It exhibits the anarchist, and assassin element, the element that controls the "foreign part of the strikers." Mr. Frick who was stabbed and shot several times by a crank and Russian anarchist, as reported in my last letter, has recovered sufficiently to attend to business. Several arrests have been made as the result of the killing that ensued on the arrival of the Pinkerton detectives. Strikers are under arrest charged with murder, and now Frick is threatened with arrest as responsible, primarily, for the riot and the murders. The soldier who cheered when he heard of the assault on Frick, was strung up by the thumbs and then drummed out of camp. He has caused the arrest of several officers of the regiment responsible for his ill treatment, and will prosecute in the courts. Matters are not settled at Homestead and the outcome, when the troops depart, is uncertain. At Duquesne, Pa., non-union men were assaulted as they were going to work and a detachment of troops was sent to preserve order.

In New York, the "building" strike is still in progress, and very little work is going on new buildings. This strike includes all workmen in iron, wood, or stone, or anything that goes into the construction of a building. Hundreds of cars and boats remain unloaded and will so remain till there is a compromise, or the strikers yield.

In my last letter, reference was made to possible complications with Canada in regard to the canal tolls and the use of waterways. The Canadian government apprehended trouble and took action to prevent it. For by a new order in council the Welland Canal is open to the United States to be used on the same terms as Canada uses it, and that little war cloud is no longer in the horizon.

The Cunard Steamship Company provided the following for the consumption of passengers while in transit in their steamers during one year: Fresh meat, 2,919,754 pounds; ham, 53 tons; bacon, 20 tons; poultry, 32,705; eggs, 831,693 dozen; tea, 21,000 pounds; coffee, 71,770 pounds; sugar, 208,100 pounds; mustard, one and a half tons; pickles, 7,216 bottles; sardines, 8,000 tins; salt fish, 30 tons; jam, 4,192 four pound jars; marmalade, 15 tons; raisins, 222 tons; peas, 18 tons; barley, 15 tons; rice, 17 tons; oatmeal, 34 tons; flour, 490 tons; biscuit, 23 tons; bread, 196,000 pounds; cheese, 15 tons; potatoes, 930 tons.

This is a free country, but the press is crying out against the too free speech of the anarchist loafer. A lot of these fellows met in New York after the man Bergman had made a murderous assault on Frick at Homestead and "talked." They spoke of Bergman as a "hero." The people demand that these enemies of peace and decency be first washed (that would be severe punishment for some of them) if there be soap enough to go around, and then be put to work in some of our institutions. Washing and a little hard work would soon rid the country of the foreign anarchist vagabonds.

The Treasury Department will soon issue five million half dollar pieces, souvenirs of the World's Fair, as authorized by Congress. The same bill also provides for the issue of fifty thousand bronze medals with appropriate emblems at a cost of \$60,000, and fifty thousand vellum impressions for diplomas.

The World's Fair machinery will be started by the only living descendant of Christopher Columbus. He is in Spain, too old or feeble to travel to this country, but by cable connection he will merely press a button in Palos, Spain, and the great motor at the World's Fair will be set in motion. On August 3 there was a celebration in Palos in memory of Columbus who on that day set sail for America four hundred years ago. The State official of Spain and our Secretary of State exchanged congratulatory telegrams on the occasion. Congress, the fifty-second, has adjourned. This

Congress appropriated money to the amount of five hundred and seven million dollars in round numbers. The appropriation for the World's Fair of five million dollars was cut down to two and a half millions. One of the closing acts of the House was the passage of a resolution inviting the King and Queen of Spain to be present at the opening of the World's Fair, and the same invitation was extended to the descendants of Christopher Columbus.

JAPAN AND HER CONSTITUTION.

By F. P. PIGGOTT,

(Late Legal Adviser to the Japanese Cabinet.)

I walked recently through the spacious halls of the king of auctioneers in London, and I saw upon the walls, waiting the fall of the hammer, a canvas on which was depicted the counterfeit presentment of a Japanese lady. A more gruesome counterfeit I never yet beheld. Her garments, and the colour of them: her features and the lines of them: her figure and the pose and draping of it, all were caricatured. Yet the picture was the work of somebody they call a "Master," and had helped to pass current in bygone days the fiction that Mr. Whistler knew something about Japanese art.

I read recently through the spacious columns of the king of newspapers in London, and I saw in a speech delivered at Huddersfield, to influence the fall of the beams in election vases, the counterfeit presentment of the Japanese Constitution. The words were not a less gruesome counterfeit of the spirit and the letter of that Constitution than the "Princesse du Pays de la Porcelaine" was of the ladies of Japan, of the art of Japan, and be it added also, of the art of Europe. The letter of that Charter and the meaning of it: the spirit of that Charter and the influence of it: the law laid down by both, and the Emperor's expressed intention to observe them, and his actual obedience to them, all were caricatured, in supercilious fashion. Yet the speech at Huddersfield was the speech of somebody we call a "Statesman," and will help to pass current, in the belief that he knew what he was talking about, the absurd parody of the Constitution which he uttered.

Mr. Morley was criticising the provisions of the Irish Local Government Bill; he was scoffing at the "safeguards" which the Bill contained, contending that they made the proposals a sham and no reality. To emphasize his meaning, to give an example of legislation which appeared real and yet was unreal, he had recourse to the new Constitution of Japan. He said—though it is fair to add that he did not speak as of his own knowledge, but quoted a dictum of Mr. Bryce—that this Bill reminded him of the provisions of that Constitution, "wherein, as Mr. Bryce tells us, 'among many very excellent provisions for the exercise of the franchise, is a 'little article' which enables the Mikado, in cases of urgency, he himself being the judge of urgency, to enact his own laws, and vote his own supplies.' Was anything more needed to show how unreal, what a sham, this Constitution was? Bah! let him pass quickly from this atmosphere of sham to the atmosphere of reality contained in his Huddersfield audience.

This present article, or rather, with the Editor's permission I should say, this series of articles, is not specially devoted to the refutation of Mr. Morley's and Mr. Bryce's pleasantries about Japan; but rather to a critical examination of the constitutional work which, after many years' preparation, was begun on the eleventh of February, 1889, with the promulgation of the Constitution, and which, with many developments, some natural and to be expected, some very unexpected, is going on at a very rapid rate in that far-distant Empire. Mr. Morley's utterance—I will not do him the injustice to call it a critical utterance—may however serve as a convenient peg whereon to hang certain remarks of a general nature which apply not only to the article in question, but to the whole Constitution.

I gather that the sinister, or from the sarcastic point of view, the dexterous, "little article" which destroys the value of the Imperial gift to the people of Japan, which takes back with one hand what has been given with the other, is the eighth. It is not hidden away in the remote recesses of seventy-eight articles, but stands out quite clearly and as near the beginning of the first chapter as it could be placed. It runs thus in the English translation:—"The Emperor, in consequence of an urgent necessity to maintain public safety, or to avert public calamities, issues, when the Imperial Diet is not sitting, Imperial ordinances in the place of law." Paraphrased, the principle is that the Emperor, while he has given to the

people a full constitutional voice in the legislation of their country, reserves to himself the power of issuing ordinances to deal with cases of great urgency which may arise when the Diet is not sitting. It is not stated in so many words, but I am quite willing to admit, that the Emperor himself may determine whether the urgency exists, and what amounts to urgency. The principle which is laid down in the eighth article with regard to general legislation, is, in the seventieth article, applied specially to financial affairs. This article runs thus:—"When the Imperial Diet cannot be convoked, owing to the external or internal condition of the country, in case of urgent need for the maintenance of public safety, the Government may take all necessary financial measures, by means of an Imperial ordinance." I am willing to admit, as before, that the question of "urgency" must be determined by the Emperor and his Government; and also, in this case, the question whether "the external or internal condition of the country" [one of those awkwardly literal translations of the original which unfortunately abound in the English version of the Constitution] is such that "the Imperial Diet cannot be convoked." Both to the eighth and the seventieth Articles, however, an identical and important proviso is attached. In the case of general laws—"Such Imperial ordinances are to be laid before the Imperial Diet its next Session, and when the Diet does not approve the said ordinances, the Government shall declare them to be invalid for the future": and in the case of the special financial legislation—"the matter shall be submitted to the Imperial Diet at its next Session, and its approbation shall be obtained thereto." The seventy-first article is also important in this connection, though it has a wider application: it runs thus: "When the Imperial Diet has not voted on the Budget, or when the Budget has not been brought into actual existence, the Government shall carry out the Budget of the preceding year." Here then is the actual verbal check to the Imperial abuse of the power which is retained in the Crown; the balance-weight in the hands of the people to prevent any kicking of the beam by too great a license in the exercise of the Imperial will and pleasure.

I pass over the fact that hasty and hap-hazard criticism has ignored the existence of these verbal checks. I will in fact refer its author, and its recapitulator, to the extraordinary powers which the Government possesses in the matter of proroguing either House of Parliament: "The Government may at any time order the prorogation of either House for a period of not more than fifteen days. When either House again meets after the termination of the prorogation, the debates of the last meeting shall be continued" [Article xxxiii. of the "Law of the Houses"]. I will go further and admit that the Government by successive uses of this power, might keep the meeting of the Diet in continued suspense, so that it should never have a chance of expressing an opinion adverse to the Emperor's "urgency ordinances": that the power contained in this Article might, on the face of it, be said to destroy the value of the verbal checks which the Constitution contains. But I say that in dealing with a great national charter, this is not the true critical spirit which a philosopher on Constitutions like Mr. Morley, or an analyst of Constitutions like Mr. Bryce, ought to adopt. Words are as bad almost as figures: they may be made to prove anything. But a Constitution, though a fundamental law, is in one sense not a law. As against the Imperial grantor it is to be construed rigorously, to the dotting of the "i's," and the crossing of the "t's"—the rights of the People, being in question: but in favour of the Imperial grantor, the words in which these rights have been granted must be allowed to expand under the influence of custom; custom itself being the creature of convenience, expediency, policy, and wisdom; and the words cannot be nor ever are, except in extreme cases, pushed to their extreme significance. The *vox populi* is in one sense, and in one sense only, divine. It holds, in its clamour, the ultimate sanction of the law of interpretation of all great charters—rebellion—and in such sense becomes the voice of the very devil.

These glib commentators of their People's rights, of other Sovereigns' charters, do they realize what the writing of a Constitution means, the struggle between language and intention which is always going on? Turn for a moment to the well-worn topic of our own Constitution, the veto of the Crown: The hardest democratic expositor would not go further than saying that its disuse for so many years warrants the statement that it is "practically extinct." But in settling a Constitution on the English model, would any statesman omit that cardinal doctrine from his draft? Would he not write down in so many words that the power of veto in all matters of legislation is, and

remains in, the Sovereign; trusting—and he would cease to be statesman if he could not trust—to the wisdom of Sovereign and of people, and chiefest of all, of the advisers of both who stand between, to build up an interpretation of the words; to create, out of mutual forbearances, a custom which shall wield a stronger power than any mere words can do.

Is not this precisely what we ourselves have done in granting what is practically legislative autonomy to the greater Colonies of our own Empire, and yet in making it subject to the veto of the Crown? Or, to take another instance of more modern application, the legislative functions of the Upper House. The Party of Progress is busy building, it can hardly be called a custom, but an interpretation of the power which the Constitution of England assigns to the House of Lords. It is not at present too clear how this interpretation is to be worded, but judging from the noise which any throwing out of Bills by the Lords creates, it will go to great lengths: but not the noisiest of the shouters, nor the hardest of the "neopoliticians," were he set down to write an exposition of the British Constitution, but would on this subject resort only to an interpretative "gloss"; he would explain how the legislative power exists, "but is," or "ought to be," "rarely exercised" adversely to the Commons: and he would support his statement by references to well-known examples of mutual forbearances of Lords and Commons which the solemn functions of "conferences" had fostered.

It was inevitable therefore that, in drafting a Constitution for Japan, this great difficulty of language should present itself: the difficulty of expressing accurately, and above all, concisely, in words, what words and custom combined had in other countries already effected.

Let me say this now distinctly: Whatever blemishes the Japanese Constitution may possess in its details, however imperfect it may be, admitting that there are both blemishes and imperfections, there was a wish to incorporate, so far as could be done, the fundamental principles which prevail in our own fair land of freedom. But those who had to frame the words were compelled to trust, and those who advised them, *quorum pars parvula fuit*, bade them so to trust, to a certain aftergrowth of custom, the lichen on the trunk which is incorporate with the tree we look upon, to goodwill on both sides which in cases of friction would promote mutual forbearances, which should make the Constitution what it was intended it should be.

And so first to repel the particular charge before establishing the general principle. The statement that the words bear the meaning so contemptuously assigned to them is not warranted: for, as I have shown, they have certain important provisos. And the suggestion that the Emperor, or the Government on his behalf, deliberately inserted a "little article" which—apparently harmless until some acute English observer discovered its true import and exposed it—was intended to nullify the effect of the grant of representative government, absurd. It is a deliberate insult to the Emperor, not so much as a ruler of men, but as a sane human being, endowed with a certain instinct of government, and surrounded by men of wisdom, of learning, and of experience in the craft of State.

If it had been the Constitution of any other country but Japan, this feeble facile criticism would never have been uttered. But for Japan, the pretty plaything of the globe-trotter from which no serious thing can come, for Japan the Oriental which can never change the crookedness of her mind, it was quite good enough. In most commonplace language, "it is too bad." Burrs stick. Years hence, if anybody is kind enough to bestow a passing thought on Japan and the Constitution, this particular burr of Mr. Bryce will be remembered and repeated, and will pass as sober and thoughtful criticism. Curiously enough, however, the principle of the "little article" was based on English precedents (see note A).

My general proposition then is this: That a written Constitution must be construed in the same way as an unwritten Constitution, that is to say, by the light of customary interpretation which grows up around it: and that there is no reason to suppose that this necessary growth of customary interpretation will be in any way checked in Japan by undue interference of the Imperial will. The constitutional spirit of all parties was shown in a remarkable manner in the very first debate in the Lower House. One of the members had been arrested on a charge of fraud: a question of privilege thereupon arose, and one of some nicety:—Should the question be raised before the House proceeded to elect its President? The debates were of a distinctly high order and compared very favourably with debates on similar subjects at Westminster. There were displayed both constitutional knowledge and legal acumen which were remarkable, without there being any

necessity to add "for the first parliamentary debate in the East." And so, in the recent dissolution of the Diet, which the hostile critics of the Government have called a high-handed proceeding. The Opposition had shown a hostility to the Government of a somewhat violent obstructionist type, not to one measure but to several. The Cabinet had the power, the hostile critics' case depends on this, to dissolve the Diet at the first signs of such opposition: but it was not until it had been borne with patiently for a long time that the moment arrived for striking blows. One of the measures which had been thrown out was the Government proposal to establish a large relief fund for the sufferers from the terrible Gifu Earthquake last year. After the dissolution the Government treated this matter as one of urgency and immediately voted the sums necessary for relief on a large scale? The bearing of this example on my general proposition is this: There was no high-handed dealing with the Diet, but in a constitutional spirit a dissolution was determined on to avoid a deadlock, and to enable the Ministers to appeal to the country.

It is time now to give a brief summary of the Constitution.

The first chapter deals with the prerogatives of the Emperor. As to those, one thing only calls for special remark: first the use of the term "Ordinance" as distinguished from "Law." The Ordinances are those enactments which proceed directly from the Sovereign. The Laws proceed from the Sovereign and the Diet. The Ordinances in case of urgency I have already dealt with. Article IX. reproduces the English principle that the Sovereign may, by proclamation, reinforce the law, may give vitality to a law by calling special attention to it. But in the case of all the Imperial Ordinances they may not in any way alter any of the existing laws. The doctrine that the Sovereign has no inherent power of legislation could not be expressed in any stronger way.

The second is the important chapter: it deals with the rights and duties of subjects. The following are among its chief provisions:

All Japanese subjects are equally eligible for all public offices, whether civil or military.

They are to have complete liberty in the choice of their abode. They are to be arrested, detained, tried, punished only according to law. They are to be tried only by the Judges appointed by law. The house of the Japanese is henceforth to be his castle. The secrecy of letters is not to be violated. The right of property shall be respected. Freedom of religious belief shall be enjoyed, and also liberty of speech, writing, publication, public meeting, and association. The right of presenting petitions is conferred. All these things are taken out of the sphere of interference of an autocratic Sovereign, and are put within the sphere of the law: that is, these liberties and rights can only be interfered with by the joint act of the people, through their representatives in the Diet, and the Sovereign. The Imperial Diet is constituted by Chapter III.: in the Upper House the principle of election is partially introduced. By the law of the House of Peers, Counts, Viscounts, and Barons are elected by their respective orders: and a certain number of Commoners, one for each City and one for each Prefecture, are to be elected by and from among the highest tax-payers. The Emperor also possesses the power of nominating members of the Upper House for meritorious services, or for erudition.

The share which the Diet has in the legislation is again stated: Every law requires its consent. The Diet is to be invoked every year, a session lasting three months: but this may be prolonged in case of necessity by Imperial order: and extraordinary sessions may be convoked by the same means. In the House of Representatives no debate can be opened, or vote taken, unless one-third of the members are present. The deliberations of both Houses are to be public, but the Government may demand, or the House may resolve to hold, secret sittings. Petitions may be presented to both Houses by subjects. Freedom of debates is ensured to members: but this does not cover the printing and the publishing of speeches delivered in the House, which are left subject to the general law. Freedom from arrest is also ensured, except in certain heinous crimes, unless either House assents to the arrest of one of its members.

The Ministry is distinct from the Diet, but members of the Government, or Delegates from the Government may sit and speak in either House.

Chapter V. deals with the Courts of Law and the Judges. Law is to be administered in the name of the Emperor, by judges appointed by law. The judges are not removable except by sentence of a Court of Discipline. Trials are to be conducted in public, except where such publicity may be prejudicial to peace and order, or to the maintenance of public morality. Infringements of rights of property, or of other rights, are to be dealt with solely by a "Court of Administrative Litigation."

dealt with solely by a "Court of Administrative Litigation."

Chapter IV. deals with the Privy Council and the responsibility of ministers: and Chapter VI. with Finances; but these may be conveniently left to the next article.

(TO BE CONTINUED.)

NOTE A.—The eighth and seventeenth articles which have been scoffed at were in reality based on certain statements made by writers of some authority as to what could in fact occur in England. The following two quotations are taken from Todd's "Parliamentary Government of England":

"Legislation of this kind [Acts of Indemnity] is a parliamentary acknowledgment of the principle that, in times of danger or emergency, the Crown, acting under the advice of responsible ministers, may properly anticipate the future action of Parliament, by a temporary suspension of certain classes of statutes. Abstractedly the Crown has no right to issue any such orders or proclamations: but in the words of Sir Robert Peel, 'Governments have assumed, and will assume, in extreme cases, unconstitutional power, and will trust to the good sense of the people, convinced by the necessity to obey the proclamation, and to Parliament to indemnify the issuers.' And again:

"In the words of Mr. Macaulay (Secretary to the Board of Audit), cases must constantly arise in so complicated a system of government as ours, where it becomes the duty of the executive authorities, in the exercise of their discretionary powers, boldly to set aside the requirements of the Legislature, trusting to the good sense of Parliament, when all the facts of the case shall have been explained, to acquit them of all blame; and it would be, not a public advantage, but a public calamity, if the Government were to be deprived of the means of so exercising their discretionary authority."

We have probably "seen the last" of the exercise of these discretionary powers; we have seen the last of so many things lately: England is "going so fast." But there was at least warrant for Japan desiring to establish the constitutional existence of a power which had not been entirely unknown in England.

THE BRITISH CONSULAR TRADE REPORT FOR HYOGO AND OSAKA FOR 1891.

Consul ENSLIE to the Marquis of SALISBURY.

Hyogo, April 8, 1892.

MY LORD,—I have the honour to furnish your Lordship with my Report on the Foreign Trade of this Consular District for the Year ended December 31, 1891, accompanied by the customary Returns based on Statistics compiled by the Bureau of Customs, and by a Return of the number of registered British and other foreign residents and of firms.

I have, &c. (Signed) J. J. ENSLIE.

REPORT ON THE TRADE OF HYOGO FOR THE YEAR 1891.

GENERAL REMARKS.

The trade of the past year compares with that of 1890 as follows:—

	1891.	Value.	1890.
Imports	4,064,201	5,740,503
Exports	3,657,781	2,902,560
Total	8,621,982	8,652,063
Decrease in imports			785,302
Increase in exports			755,221

Net decrease in 1891..... 30,081

The unsatisfactory nature of business generally during the past year is, with the exception of silk, exported in particularly large quantities from Yokohama, due to causes similar to those which affected the trade of 1890, namely, fluctuations in exchange, the high price of rice, tightness of the Japanese money markets, &c.

Notwithstanding temporary disadvantages the foreign trade of this district has during the past 10 years made considerable progress, greater, in fact, than that of Yokohama, as shown by the following return, which, owing to the impossibility of fixing a fair average exchange rate, is given in Mexican dollars or Japanese *yen*, the currency of this Empire.

	1881.	Value.	1891.
	Dollars.		Dollars.
Hyogo and Osaka	14,377,332	52,600,027
Yokohama	42,626,090	78,523,709

INCREASE DURING THE LAST 10 YEARS.

	Value.
	Dollars.
Hyogo and Osaka	38,222,695
Yokohama	35,807,019

The silk, silkworm egg, and cocoon trade is, owing to the power of the Japanese middleman, as explained in a former report, almost exclusively confined to Yokohama.

Table showing Value of Silk, &c., Exported during the under-mentioned Years.

	Value.	1881.	1891.
		Dollars.	Dollars.
Yokohama	12,978,161	31,740,826
Hyogo and Osaka ...	3,922	435,058

The increase in the volume of general business is, therefore, greatly in favour of Hyogo and Osaka.

In this connection it is well to state that the two ports of Hyogo and Osaka must, for the purposes of foreign trade statistics, be taken as one district,

all the business at Osaka being done by foreigners residing exclusively at Kobe (Hyogo).

The remarks regarding the frequent absence of commercial morality, made in last year's report in the interest of trade generally, were carefully worded, rest on their own merits, and are not confined to Kobe and Osaka only. They have attracted considerable attention, are endorsed by the Chambers of Commerce, and will, it is hoped, prove beneficial to honest Japanese and foreign merchants, whose duty and interest it is rigorously to ostracise the native or alien rogues, who break contracts, imitate trademarks and chops (notably one favourably known for many years in the Japanese market), flourish on "moral assets," or otherwise earn for themselves unenviable reputations.

IMPORTS.

Exceptional depression marked the opening of the year, and though now and again there were periods of slight improvement and activity, general disappointment is characteristic of the entire 12 months.

After a period of feeble inquiry, both in English and Bombay yarn, the market became fairly active, considerable attention being paid to Indian, and although operations seemed restricted to actual requirements, the sales compared favourably with the similar period in 1890. During June the market was greatly disturbed by fluctuations in exchange, but a small business was done at weaker quotations for English, with a slight improvement in Bombay; this state of things continued more or less during the remaining months of the year.

Business shows up very badly compared with 1890, there being a falling-off of upwards of 9,000,000 lbs., estimated at 400,000l.; this is due to increasing activity in the Japanese cotton spinning mills, some of which, however, suffered rather severely during the earthquake of October last.

Table showing Sales of Yarn during the under-mentioned Years.

Year.	Quantity. English.* Bales.	Indian. Bales.
1886	23,003	—
1887	39,697	—
1888	50,300	—
1889	50,416	—
1890	30,434	—
1891	15,780	—

* Reliable statistics not obtainable.

Business in cotton, raw and unspun, has increased very largely during the last 6 years, owing to the numerous spinning associations which have sprung up in this neighbourhood.

Imports of cotton during the last 6 years were—

	Lbs.
1886	4,691,621
1887	10,684,002
1888	24,434,453
1889	71,985,039
1890	55,780,886
1891	21,758,050

The accompanying return, showing the increase in the number of cotton spinning mills in Japan, will be of some interest.

At the opening of the year some little business was done, the demand being, however, chiefly confined to one or two qualities, while fancies were extremely dull, later on T-cloths were asked for at low prices, velvet showing a slight improvement, and there also being some inquiry for Italians, printed goods, and white shirtings. On the whole, this line of business has been insignificant as compared with former years, the only article showing a slight increase being Turkey-reds.

After much general dullness in woollen goods there was a considerable trade at low prices in Italians, as also a small demand for mousselines. As the season advanced a fair amount of mixtures changed hands, flannels also showing better results than were at first expected.

The total trade in these articles during the past year shows, however, a decrease of 130,000l.

The business of this port must be recorded as generally unsatisfactory, importers having had to contend with a weak and declining home market, as well as with the heavy falls in sterling exchange, which often seriously enhanced the cost of goods after sales were made, thus converting an expected profit into an actual loss.

The volume and value of bar and rod iron imported shows an improvement over previous years, and there is no reason why this increase should not continue, the Japanese trade requiring annually large quantities of manufactured iron, which can apparently be best supplied by the North of England rolling mills.

Pig-iron would seem to have fallen-off in importance, but the fact that some cargoes were overdue at the end of the year will explain this difference in the statistics as compared with 1890. The chief importations continue to be from Mid-

dlesborough, and Redcar No. 3 is the standard brand.

Wire nails show a small increase in the quantity imported as compared with last year; but the only feature of interest in the trade in this article is the fact that prices advanced about 10 per cent. in November, owing to the exceptional demand caused by the great earthquake.

Sheet zinc, chiefly used in lining the boxes in which matches are packed for export, does not occupy so important a place as it did last year, but as the manufacture of matches is steadily increasing, this article will, no doubt, continue to be required in large quantities.

The importation of metals, which has heretofore been in the hands of foreigners, has, it is to be remarked, been lately attempted by Japanese firms; but from what can be learned of the results of such ventures it seems quite evident that they are far from satisfactory.

Metals generally show a decrease in value of 150,000l.

The dullness in kerosene oil in the last two months of 1890 was, at the opening of this year, lessened by some excitement caused among importers and those generally interested in this branch of foreign trade, by a movement to compel the removal of heavy stocks from the warehouses at Onohama, considered and recognised, since the time when kerosene first became an article of import and consumption among Japanese, as the only site adapted for the storage of such inflammable merchandise; one of the causes which led to this movement was, it is believed, the danger to the houses, which of late years have been erected in rapidly increasing numbers in the neighbourhood of those warehouses.

The new scheme, to which the attention of importers was indirectly called at the close of 1890, contemplated the immediate removal of all stocks and the future storing of kerosene in warehouses erected by a local Japanese company, at a considerable distance from the centres of business, and objectionable in regard to surroundings, landing facilities, and insufficiency of storage room. This important matter having been promptly brought to the notice of the proper authorities, was during the course of the year satisfactorily settled.

During the next few months, the general features of the market were depression and inactivity, but towards October some improvement took place, and there was a marked increase in the quantity taken for distribution. The following return shows the movement in oil during the last two years:—

	CASES.
1890.—Stocks on January 1	356,445
Arrivals (American)	1,857,329
Arrivals (Russian)	258,370
Total	2,115,699

1891.—Stocks on January 1	653,623
Arrivals (American)	1,450,948
Arrivals (Russian)	313,387
Total	1,764,335

1891.—Stocks on December 31 740,105

The temporary decrease in the volume of trade is due to cheap and regular communication by sea between Yokohama and the important distributing centre of Owari.

Last year's imports show an increase of 500,000 cases over that of 1888.

Soon after the commencement of the new year a reaction occurred in a fall in the prices of sugar which had marked the close of 1890; considerable sales were effected at better values, but continued fluctuations in prices, and the requirements of dealers seriously affected business until August, when some heavy transactions were put through. Considerable activity at lower prices marked the close of the season.

The crop having been good, there was less demand for foreign rice; hence a falling-off of nearly 600,000l. in this commodity.

In volume the export trade for 1891 shows an increase of upwards of 755,000l. Rice alone being in excess by 83,000 tons, representing a sterling value of nearly 680,000l. The general results of transactions do not appear to be up to expectations.

The year opened with a scarcity of rice, and business was further prevented by the higher demands of dealers, though importations from Saigon continued on a large scale. The scarcity referred to was no doubt, in a great measure, due to the fact that the farmers were hoarding up their stocks, owing to a dread on their part that the exceptionally warm weather experienced towards the end of 1890 would bring about a failure of the wheat and barley crops, this created an exceedingly uneasy feeling, and a present disinclination to part with the recently harvested rice.

Early in February the grain came in more

freely and a fairly large business was done, but prices soon went up, owing doubtless to an active demand on a poorly supplied market. This caused much embarrassment to some importers, who, on the strength of reports about the prospects of a remarkably prolific crop had temporarily spoiled the foreign market by making contracts at ruinous prices.

Favourable weather for the growing wheat crop, together with considerable importations of Saigon and Rangoon rice, caused a slight decline in quotations, which resulted in a moderate amount of business during the following three months, although there was some stagnation in May, due to the marked difference of opinion between buyers and sellers, the former having evidently made up their minds that a heavy drop was going to take place.

Abundant rain in July to some extent compensated for the previous remarkably dry weather, still, though the young plants looked their best, prices went up all round, and there was no enquiry for undressed rice, with very little doing in mill-dressed.

A fair amount changed hands for America and Australia in August, and the weather continuing very propitious, growers in the principal rice district, Kiushiu, began to look forward to an excellent harvest. These hopes were, however, somewhat blighted by a disastrous storm in September, doing much damage to the growing crop. The early one was sufficiently far advanced to withstand the effects of the bad weather, but the later rice suffered severely, and the market was for a time wildly excited.

During the remaining portion of the year business was on a very moderate scale, with a constant upward tendency in prices, owing in a great measure to confirmation of reports about extensive damage to the late rice, by far the larger portion of the crop.

Export during the year was divided as follows:—

To Europe.	United States and Canada.	To the Colonies.
TONS.	TONS.	TONS.
72,315	21,742	10,300

The accompanying return gives the fluctuations in the price of rice, the total cereal crops, and an analysis of Japan rice.

Up to the end of February some 2,500 piculs of old tea were sold.

The new teas were first offered on April 27, and found buyers at prices ranging from 1 dol. to 3 dol. above what had been paid for early tea during the previous year. The crop from the best districts began to be offered during the second week in May, and by the middle of that month the market was fully supplied.

A very active business amounting to 127,000 piculs was done up to the end of July, when the common teas monopolised the attention of buyers. The enormous demand for these teas caused the teamen to hurry forward supplies, without paying care to the style in which they were brought to market, and for some time prices were higher than in 1890, whilst fine teas were no dearer.

The total quantity of tea sold during 1891 was 162,534 piculs, or about 5,000 piculs more than during the previous year, the average price paid being 17 dol. per picul, whereas a few years ago it was about 20 dol. per picul.

The quality of the crop generally was not so good as in 1890, and the teas also showed careless preparation.

Of late years there has been a falling-off in the style of the higher grades from the best districts, due in a measure, probably, to the diminished demand. It is advisable for those interested in the business to see that more care is taken in the growth and manipulation of these fine teas, in order to maintain the reputation they have enjoyed for many years in the consuming markets.

The increasing volume of the tea trade here is as follows:—

1882.	1888.	1889.	1890.	1891.
Piculs.	Piculs.	Piculs.	Piculs.	Piculs.
96,790	137,000	144,000	157,154	162,534

The year opened with a dull and dragging camphor market, constant fluctuations in price, and a fair amount of business being the prominent features until August, when heavy purchases, principally for America, were made at well maintained quotations.

The next two months were exceedingly quiet, but later on there was rather more life, with a steady demand at advancing prices.

Reduced stocks and firm holders rendered transactions in vegetable wax at first impossible, but a reduction in prices resulted in some sales, which were, however, only of short duration, owing to rise in exchange.

Later on some business was done, chiefly for China, but a small advance being established dealers again became firm and operations ceased.

Very early in the year rates for antimony being

low and considerable purchases effected, nothing further of note occurred till the latter end of the year when heavy transactions were reported, and quotations rose rapidly, available stocks being almost nil.

Business in copper opened with a downward tendency in prices, and a good demand, chiefly for India, setting in, nearly all the available stocks were taken up at higher rates. Later on there were again large settlements, clearing the market, when prices became firm with but little on offer.

July was weaker in quotations, but there was very little doing, and no disposition to buy.

This continued to be the condition of things during the latter part of the year, dealers being disposed to accept lower prices, which were, however, still too high for business of any particular dimensions.

Owing to greater facilities offered to shippers at Moji, opposite Shimonosaki in the immediate vicinity of important coal districts, the export trade in coal from this port has been decreasing during the past two or three years, and will probably soon entirely cease.

While on the subject of coal, it may be well to state that the Hongay coal has been unfavourably reported on, as compared with English, Scotch, Welsh, Takashima, and Mike.

The report in my possession states that with every care and attention not more than 115 lbs. of steam were obtainable with 47 per cent. less horsepower, and of course a corresponding loss of revolutions and speed.

It is to be noticed with pleasure that the importance of the floor matting industry has nearly doubled during the past year, and there is every reason to believe that the demand from foreign countries is largely in excess of the present production.

The plant from which matting for export is made also supplies the mats universally used for the same purpose by the Japanese, and the chief producing districts are situated in the provinces of Bizen, Bitchu, and Bingo on the borders of the Inland Sea, and Bungo and Chikugo in Kiushiu.

The seed is planted in December, and the crop is gathered in June and July; the manufacture from the new grass, commencing in August, continues actively until early in the following year, during which interval the chief shipments are made.

An interesting feature in the making of this matting is the introduction of a warp of cotton threads, numbering in the finest qualities some 360 to the yard, thus producing a fabric which is almost as soft and pliable as cloth; in the cheaper kinds, however, native grown hemp is used for this purpose, and the difference in the finish is at once apparent. The machines on which the matting is made are all of home manufacture, and of rather complicated and ingenious construction; they are worked by the foot of the operator, two or three persons being required for each machine.

Aniline dyes are used in colouring, and such is the skill with which this work is done that there is seldom the slightest variation in shade in any number of rolls in the same order.

The beauty and variety of the designs offered to the foreign purchaser is somewhat surprising, considering that the trade may still be considered to be in its infancy, one foreign firm having stated that they sent away over 4,000 different patterns.

The Japanese are so clever and industrious in work of this description that they have before them the prospect of a very large and profitable trade, with little fear of injurious competition from Canton matting, which is altogether a different article.

Prices for a roll of 40 yards in length by 1 yard wide vary, according to quality and workmanship, from 3 dol. to 15 dol., the principal demand being for qualities costing from 6 dol. to 10 dol. The rolls vary in weight from 35 lbs. to 100 lbs. each.

The United States are by far the best customers at present, but shipments to the Australian market are becoming more and more important, and before long Japan matting will probably be in demand all over the world.

The following return shows the gradual increase in value of this article of export:—

	1886.	1887.	1888.	1889.	1890.	1891.
89	5,307	22,113	25,389	57,941	104,369	

The export of matches is increasing rapidly, the business being principally in the hands of Chinese. The value for the year under review was 283,703¹/₂, that for 1890 having been 239,715¹/₂.

In order to give some idea of the distribution of foreign trade in this district, I enclose a return showing the approximate percentage of some of the principal articles imported into and exported from Hyogo and Osaka by foreign firms and Japanese. I also enclose a return of imports showing origin and destination.

In the returns which accompany this report the value of the Mexican dollar has, under instructions, been taken for imports at 38.4d., and for exports at 38.2¹/₂d.

The accompanying return shows the fluctuations of exchange during 1891.

The increase in the total foreign shipping of 1891, as compared with 1890, is 13 ships of 24,311 tons; the increase in British tonnage is 3,249 tons, though there is a decrease of five in the number of ships.

The percentage of foreign ships entered during 1891 is as follows:—

Nationality.	Number.	Tons.
British.....	67,748	69,957
French.....	9,925	14,329
German.....	16,603	12,059
American.....	1,908	1,718
Norwegian.....	1,908	1,193
Austrian.....	9,954	0,435
Other nationalities..	0,954	0,309

During the year under review the principal increase in shipping is:—

	Tons.
Japanese.....	59,739
French.....	16,541
German.....	14,285
Norwegian.....	9,533
Austrian.....	3,805

There is a notable decrease in American shipping amounting to 25,500 tons.

The increase in French tonnage is due to the larger size of the subsidised mail steamers running on this line.

An important item in the general shipping of this district is the German, and the following return shows the increase, during the last 10 years, of the shipping of that Empire as compared with British:—

	1881.	1882.	1883.	1884.	1885.	1886.	1887.	1888.	1889.	1890.	1891.
British.....	114	125,743	355	610,642							
German.....	7	3,139	87	105,260							

This increase has been gradual but steady. It is mainly due to the fact that German ships compete very favourably with British, as they are run more economically and are exempt from restrictions with regard to load line and other matters, except in the case of deck-awning vessels.

The importance of the shipping in this district is shown by the following returns for 1891 compiled from customs statistics:—

TOTAL FOREIGN AND JAPANESE SHIPPING.

Consular District.	Number of Vessels.	Tons.
Hyogo and Osaka.....	852	1,178,549
Yokohama.....	470	826,018

TOTAL FOREIGN SHIPPING.

Consular District.	Number of Vessels.	Tons.
Hyogo and Osaka.....	524	872,870
Yokohama.....	408	734,269

BRITISH SHIPPING.

Consular District.	Number of Vessels.	Tons.
Hyogo and Osaka.....	355	610,641
Yokohama.....	209	496,020

I enclose a return of the registered foreign population of this Consular district.

Return of Principal Articles of Import to the Port of Hyogo during the Years 1891-90.

NOTE.—In the above A, B, and C refer to unhulled, and D to hulled rice.

longevity. Yet, I am convinced there is much to be said in favour of "a day in bed" now and then, as an aid to health in the middle-aged, and as a measure tending to prolong life in the old.

In bed, the whole muscular system is at ease, and the wear and tear of the body is reduced to a minimum. The processes of getting rid of waste matters are in abeyance; there is less waste to get rid of, and lungs, skin, and kidneys have a measure of comparative repose. The nervous system, above all, is soothed and comforted by the "day in bed." Anxieties and worries disappear after the rest, and the individual returns to the work-a-day world refreshed and renovated, physically and mentally, in a degree such as the action of no medicines could have accomplished. In a word, the person who enjoys "a day in bed" is in the position of an engine whose fires are damped down, and whose energies are recruiting for the renewal of the work of to-morrow.

There need be little hesitation, then, in saying that, for old persons, "a day in bed" is a health-measure of vast importance. If the aged person is wise, he (or she) will make it a regular practice to spend a couple of days per week in the repose which a sojourn in bed alone can give. Rest in a chair or on a sofa will not suffice. These procedures are too nearly akin to the every-day practice to be of any service. Countless temptations to exertion await the person who is out of bed; while conversely, if he is in bed, the idea of work or of labour and movement is essentially abolished. Such repose is absolute; and if rest is a great medicine, as all know it is, for old folks, "a day in bed," as a regular and not occasional practice, may be regarded as invaluable beyond comprehension.

I go further in my advocacy of "a day in bed" as a health-measure. I happen to know the case of a busy man whose life is one long period of physical and mental activity, and who has found, of late years, that no measure possesses anything like the recuperative effects which follow a day's rest in bed. Even in his holiday season this person is given to taking an occasional *siesta* in his bedroom. Provided with light literature he enjoys his repose as another man delights in an outing, and his mental and physical energy is recruited in an easy and satisfactory manner by this practice. Hence, not for the old alone, but for those in middle life, "a day in bed" may be recommended as a measure worth trying in the light of physiological experience of its value.

It will be seen that in this view of things one may go further than John G. Saxe, who despises and condemns the practice of early rising. Possibly a new generation of poets may be found to extol the value of repose as an aid to health. Poets are beginning to show a practical spirit nowadays. But whether aestheticism be found upon my side or not, I affirm, without fear of contradiction, that, when occasion offers and business allows, there is no measure which will repair the body and recruit the mind of the middle-aged more readily or more thoroughly than the simple expedient of remaining "a day in bed."—Dr. ANDREW WILSON in the *Herald of Health*.

Correct solution received from Omicron, Scacchi, J.D., and Omega.

Other correspondents have overlooked Black's defence of R to K B 3 or R to Kt sq. in their proposed solutions of this intricate position.

PROBLEM No. 35.

By C. A. L. BULL.

BLACK.

WHITE.

White to play and mate in two moves.

The *Field*, of July 23rd, gives a very interesting and full account of the play in progress in the Master's tournament at the Dresden Congress of the German Chess Association, which opened on the morning of July 18th. It seems that originally there were two dozen entries, but only eighteen competitors actually went into the combat. Some of the most recent notabilities were conspicuous by their absence, especially Tschigorin and Lasker. Very few English or American masters were on hand, in fact Blackburne and Mason were the only representatives of the Anglo-Saxon brigade. At the seventh round Tarrasch, Makovetz, and Winawer were leading, with Blackburne only half a game behind them.

We give a couple of smart games from the second round, both score and notes being copied from the *Field*.

RUY LOPEZ.

WHITE.	BLACK.
S. Winawer.	Th. v. Scheve.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—B to Kt 5	3—P to Q R 3
4—B to R 4	4—Kt to B 3
5—Castles	5—B to K 2
6—Kt to B 3	6—P to Q 3 (a)
7—B x Kt ch.	7—P x B
8—P to Q 4	8—P x P
9—Kt x P	9—B to Q 2
10—P to B 4	10—Castles.
11—P to K 5	11—Kt to K sq. (b)
12—Q to B 3	12—P to Q 4 (c)
13—P to B 5 (d)	13—B to B 4
14—B to K 3	14—R to Kt sq.
15—P to Q Kt 3	15—Q to K 2
16—Q to Kt 3 (e)	16—P to B 3
17—P to K 6	17—B x Kt
18—B x B	18—B to B sq.
19—Kt to R 4	19—R to Kt 4
20—Q to K 3	20—Kt to Q 3 (f)
21—Kt to B 5	21—R to K sq.
22—P to Q R 4	22—R to Kt 5
23—P to B 3	23—R to Kt sq.
24—P to K Kt 4 (g)	24—P to R 3
25—P to R 4	25—P to Q R 4
26—P to Kt 5	26—K to R 2
27—R to R 2	27—R to B sq.
28—P x B P	28—R x B P ch.
29—R to K Kt 2	29—B to Kt 3
30—B x R	30—P x B
31—Q to Kt 3	31—Resigns.

(a) P to Q Kt 4 yields an easier defence than that selected by Black.

(b) He has nothing better now than 11—P x P, 12—P x P; Kt to Kt 5, etc. Of course a player submits only to a double pawn or isolated pawn on the Q side under compulsion, but this is a case in point.

(c) Capture of the pawn was still compulsory.

(d) White's game may be considered won now.

(e) Forcing advance of the B pawn and preventing 16...Q to R 5.

(f) Under great difficulties Black seems at last to get some elbow-room, but White's next move paralyzes him again.

(g) It will be observed how carefully Herr Winawer played this game, even with the superiority of force he obtained in the early part of the development. Only now he commences the final attack, having left nothing to chance.

(h) If 27...P x P, then equally so—R to B Kt 3; R to K sq. 28—R to Kt 6; R x R. 29—P x R ch. and wins.

VIENNA OPENING.

33—B to B sq.	33—B x P
34—Q to K sq.	34—Q to Q 5 (i)

and White resigned.

(a) Mr. Blackburne wants to avoid the usual variations of this opening, to which Herr Mieses is very partial. The right move for Black is B to B 4.

(b) Castling seems premature; but he has nothing else. To develop for Castling, Q R, is not advisable, owing to the diagonal secured by White's bishop.

(c) Intending B to B 3, and Kt to Kt 2 which White obviously does not permit.

(d) He had plenty of time to play 17—K to Kt sq. with the better game.

(e) 18—P to Kt 3 offered better chances.

(f) Better would have been 20—B x Kt, 21—Kt to B 5 ch., etc.

(g) An ingenious resource which frees Black's game and gives him even the advantage. It is a position peculiarly suitable to Blackburne's style.

(h) Perhaps it would have been better to attack the Knight with Q R, and sacrifice the exchange.

(i) A pretty ending, played in Blackburne's old style.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL"]

London, September 2nd.

The fear of cholera epidemic in New York has caused a panic on the Stock Exchange.

The deaths from cholera in Russia now total 150,000.

London, September 5th.

It has been officially declared that England is now free from cholera.

The cholera is spreading in Germany.

London, September 6th.

The Czar is indignant at Colonel Yanoff's aggression, and has wired an order to avoid a conflict with the Afghans and Chinese, and not to explore beyond the Mustags Mountains.

[The Mustags, or Mustagh, Mountains lie partly on the borders of Kashmir trending in a semi-circle towards Kabul and forming part of the Hindoo Koosh. These mountains are the principal barrier between Northern India and Turkestan.—Ed. J.M.]

London, September 7th.

The St. Leger Stakes, run this afternoon, resulted as follow:—

La Flèche 1

Sir Hugo 2

Watercress 3

The cholera has disappeared from Great Britain.

REPORTS.

The Japanese steamer *Tsuruga Maru*, Captain Yoshizawa, reports:—Left Yokkaichi the 2nd September at 5 p.m.; had fine weather with south to easterly swell; passed Omai-saki the 3rd at 2.30 a.m. and Rock Island at 5.57 a.m.; had passing showers and moderate breeze. Arrived at Yokohama at 1.20 p.m.

The Japanese steamer *Nagato Maru*, Captain Ekstrand, reports:—Left Kobe the 2nd September at noon; had moderate southerly and N.E. winds with strong southerly swell. Arriving at Yokohama the 3rd September at 7.20 p.m.

The British steamer *Oceanic*, Captain Smith, reports:—Left San Francisco the 16th August at 4.25 p.m. and Honolulu the 23rd at 7.5 p.m. Arrived at Yokohama the 4th September at 11.40 a.m.; experienced fine weather throughout the passage; met the steamer *China* at 9.30 p.m. on the 1st September. Passage from San Francisco, including detention at Honolulu 18 days, 1 hour, and 47 minutes.

The Japanese steamer *Omi Maru*, Captain Brown, reports:—Left Kobe the 3rd September; had light variable winds and southerly swell; passed Oshima the same day at 9 p.m., same weather to 5 a.m. on the 4th wind east, increased to heavy gale; barometer falling to 29.28, high sea and heavy rain; at p.m. wind shifted to the south blown hard very high sea; at 5 p.m. wind S.W. decreasing, clearing off, sighted Omai-saki Light;

at 11 p.m. passed Rock Island Light. Arrived at Yokohama the 5th September at 6 a.m.

The British steamer *Belgie*, Captain Walker, reports:—Left Hongkong the 30th August and Amoy the 1st September. Arrived at Yokohama the 5th September at 9:37 p.m. Passage from Amoy, 4 days, 14 hours, and 11 minutes. Had light N.E. winds to moderate gale and smooth sea; passed American ship 35 miles S.W. of Rock Island showing KGMW. The above ship is the *Robt. R. Belknap* from New York with oil to C. & J. Trading Co.

The German steamer *Nuernberg*, Captain B. Blanke, reports:—Left Hongkong the 31st August at 9:45 a.m.; at the commencement of the voyage had frequent rains with light variable winds and heavy S.E. swell; afterwards fine weather with light variable winds and heavy S.E.-N.E. swell. Arrived at Yokohama the 5th September at 7:50 p.m.

The Japanese steamer *Yamashiro Maru*, Captain Young, reports:—Left Kobe the 4th September at noon; had light E.N.E. winds, shifting shortly to W.N.W., and dying away freshening throughout the night to S.W. and blowing a moderate gale, moderating at day break and continuing fine until arrival at Yokohama the 5th September at 7:30 p.m.

The Japanese steamer *Sendai Maru*, Captain R. Tittle, reports:—Left Kobe the 6th September at 1 p.m.; passed Oshima at 11:07 p.m. the same day, and Rock Island the 7th at 4:33 p.m. Arriving at Yokohama the 7th September at 11:23 p.m. Had fresh S.E. and easterly winds with heavy rain showers at times.

The Japanese steamer *Sagami Maru*, Captain Hussey, reports:—Left Otaru the 4th September at 1 p.m.; had from gentle to fresh light breeze to midnight from N.W. and S.E. with cloudy weather; passed Okushiri Light at 11:30 p.m. the same day; thence to port light S.E. winds and heavy rains. Arriving at Hakodate the 5th at 11 a.m. and left the 6th at noon; had gentle S.E. breeze and fine clear weather; passed Shirai-saki at 3:28 p.m.; thence to port moderate breeze and heavy S.E. swell; passed Yamada Head the 7th at 2:30 a.m. Arriving at Ogiuohama the same day at 11:20 a.m. and left the same day at 1:15 p.m.; had gentle S.E. winds, fine weather, and heavy S.E. swell; passed Imboye Light the 8th at 5:50 a.m., head swell and ship rolling heavily, with moderate S.E. winds and fine clear weather; thence to Noshima, which was passed at 1 p.m.; had gentle breeze and fine weather and S.E. swell; thence to port light, similar weather. Arriving at Yokohama the 8th September at 4:15 p.m.

LATEST COMMERCIAL.

IMPORTS.

The weather has been very favourable for the Rice Crop, the 210th day has been passed to the satisfaction of farmers, and so far as can be judged, there is every appearance of a bountiful harvest, which is a great factor in the trade of the country. Business has continued active, and some large lines have been booked of late, not only in contracts for arrival and in supplies recently landed, but considerable quantities of "welly old thing" in the shape of Yarns, Italians, etc., have been transferred to dealers' risk, and their clearance will leave a healthier market in the future. Prices, here and there, are slightly higher, and mostly firm where no actual advance has taken place, so that sellers have had the advantage generally, excepting as regards Yarns, which have been freely offered for arrival at low prices. Sterling Exchange has been steady at 2/10½ for Bank Bills on demand, Bar Silver 38½d. per oz. Including some omissions last week, sales reported comprise 1,000 bales English Yarn, 100 bales Bombays, 10,000 pieces glb. Shirtings, 1,000 pieces 8½lb. Shirtings, 1,500 pieces T.-Cloths, 1,600 pieces Velvets, 2,500 pieces Prints, 7,500 pieces Turkey Reds, 800 pieces Silk-faced Satins, 7,500 pieces Italian Cloth, 5,000 pieces Mousseline de Laine, and 12,000 pairs Blankets.

COTTON PIECE GOODS

Nos. 16/14, Bombay	55.00 to 65.00

METALS.

The continued firmness of sellers has had its effect, and prices are gradually showing an improvement in their favour. While transactions cannot be considered large, the stagnation heretofore existing has given way to steady current trade at prices apparently remunerative to importers, and as the cold weather approaches a still better feeling will no doubt prevail.

	PER PICUL.
Flat Bars, 1 inch	\$2.85 to 2.90
Flat Bars, 1 inch	2.95 to 3.00
Round and square up to 1 inch	2.85 to 3.00
Nailrod, assorted	Nom.
Nailrod, small size	Nom.
Iron Plates, assorted	2.95 to 3.15
Sheet Iron	3.55 to 3.80
Galvanized iron sheets	6.60 to 6.90
Wire Nails, assorted	4.80 to 5.00
Tin Plates, per box	5.00 to 5.20
Pig Iron, No. 3	1.25 to 1.30

GROSGRINE.

We have heard of sales at full quotations given below—which are 10 sen up all round—but sellers are not anxious to dispose of stocks even at the prices now current, indications at the moment pointing to a still further advance. Deliveries are good, distributions through the country for winter days have commenced, and prospects are very encouraging.

QUOTATIONS.

Chester	—
Comet	\$1.67½ to 1.70
Devoc	1.62½ to 1.65
Russian Anchor	1.62½ to 1.65
Russian Moon	1.60 to 1.62½

SUGAR.

Market for Browns still well maintained, with quotations up 10 sen on some brands. Whites are also enquired for, and sales fairly active.

	PER PICUL.
Brown Takao	\$4.70 to 4.80
Brown Datong	1.50 to 1.70
Brown Canton	3.70 to 3.80
White Java and Penang	6.10 to 6.20
White Rehued	5.50 to 7.60

EXPORTS.

RAW SILK.

Our last issue was of the 2nd instant. Since that date settlements on this market amount to 490 piculs, divided thus: *Filatures*, 137 piculs; *Re-reels*, 328 piculs; *Kakeda*, 15 piculs; *Oshu*, 10 piculs. In addition to these purchases direct shipments are 156 bales, weighing 160 piculs, so that the total export trade for the week is 650 piculs.

From the above figures it will be seen that there has been much less business doing during the week. Buyers seem to have stocked themselves fairly well for the present and are not eager for fresh purchases. It would look as though we had passed the top for the present, if not indeed for the season. Our expectations of last Circular have been fulfilled, and with a few days' quiet market, we see the prices for some classes of silk have declined \$20 per picul.

Arrivals come in on a free scale, and the stock shows an increase of 1,700 piculs. Holders are certainly a little nervous and would like to be moving; although they make a strong show of firmness, and say that at present quotations they would only sell a very small portion of their stocks. A few days more of calm may perhaps decide them upon selling more freely.

The demand for Europe has fallen off considerably, although in this direction prices are well maintained, the reduction noted above being almost confined to full-sized *Filatures* and *Re-reels*.

There have been four shipping opportunities

since we last wrote. The English mail steamer *Verona*, 3rd instant, took 427 bales for Europe; the N. P. steamer *Victoria*, on the 7th instant, took 207 bales for the New York trade, and the *Belgie*, which left port yesterday, had 927 bales for the same destination. The German mail steamer *Nuernberg*, which left port this morning, carried 55 bales for Genoa in transit. These several departures bring the present export figures up to 10,608 piculs, against 9,153 piculs last year and 3,011 to the same date in 1890.

Hanks.—Nothing done in these during the week. Prices are unchanged but nominal, in the absence of business.

Filatures.—These give very small settlements compared with previous weeks, buyers having come to a decided pause at the high level which prices had reached. In fine sizes for Europe many small parcels have been taken at very full rates, \$835 being marked for one small lot *Hakusei-sha*. *Mino* and *Tajima* have brought \$815; *Goshu*, \$810; *Bishu*, *Koshu*, and *Bushu*, \$800, with lower grades in proportion. As to silk suitable for the United States, no large transactions have been done. Just as the mail left, some good *Shinshu* were weighed up at \$760—a reduction of \$20 to \$30 upon the last price paid. Holders are not willing to go on at the same prices, they say, but we think a firm offer in hand would be acceptable. Medium and lower grades are also neglected at the moment, the heavy buyers standing out for the time. *Kaimisha*, *Hakusuru*, and similar sorts now quoted at \$780, and it is possible that this quotation may be slightly shaded for real business. Good second-class silks have been done to some extent at prices ranging from \$740 to \$720.

Re-reels.—This kind of silk has had the preference of late and half the settlements this present week have been in this class. *Five Girl* *Re-reels* are held for \$730; *Kanra* have been done at \$727½; medium grades of *Joslu* show even a slight advance, *Ichimurashia* being entered at \$660.

Kakeda.—A small business; prices well maintained. Probably *White Horsehead* could be bought at \$715, with other brands at proportionate prices. Holders do their best to maintain quotations in this department, but in the absence of important purchases they will have to give way.

Oshu.—A small business herein, holders being very strong. About 10 piculs good *Hamatsuki* have passed the scales at \$580 and this is the only recorded transaction.

QUOTATIONS (NEW SILK.)

WASTE SILK.

There has been rather more doing, principally in Cocoons, and settlements for the week are 611 piculs, divided thus: *Cocoons*, 377 piculs; *Noshi*, 81 piculs; *Kibiso*, 153 piculs.

The chief feature of the week has been the opening of the Cocoon market at prices which give about \$105 per picul for good *Shinshu* Cocoons.

One buyer has had the field all to himself, the price paid being generally considered dear.

The stock is still further increased and we have on hand 14,200 piculs of all descriptions. Shippers continue to complain that the market quotations here are beyond their reach and much above the limits which they received from their customers in Europe.

There have been two shipping opportunities, the English mail taking 66 bales for Europe, and the German mail of this morning 81 bales for an Italian port. These departures make the present export 2,554 piculs, against 1,820 piculs last year and 1,080 piculs at the 9th September, 1890.

Pierced Cocoons.—The market has at last been opened by the settlement of about 400 piculs good *Shinshu* Cocoons at 14 *kahi*, which would give \$105 per picul for 75 per cent. yield. These prices appear dear when compared with other classes of Waste, and it remains to be seen whether they can be maintained or no.

Noshi.—A small business; *Hachoji*, \$117½, with medium *Joshu* at \$64. The stock is large; demand small. It looks as though prices must recede in the near future.

Kōiso.—A small business in *Filatures* at \$90; *Zaguri* at from \$55 to \$72; *Hachoji*, \$29.

Nothing done in other sorts.

THE GREATEST WONDER OF MODERN TIMES. HOLLOWAY'S PILLS.

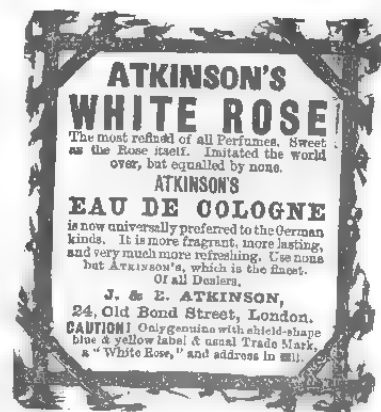

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN! HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Coates, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World.

Perfect blendings of the Choicest Brands of the Highest Classes of Fine Old Whiskies in their Native Purity, as produced in Scotland, absolutely untempered with.

MATURED IN SHERRY CASKS.

A LUXURY IN PURE SCOTCH WHISKIES.

The letters BOS are the Name, Brand, and Registered Trade Mark of this Matchless OLD SCOTCH WHISKY.

BOS

*** Gold Capsule.

** Blue "

* Green "

Esquisite blendings, possessing a flavour so rare, a character so novel and so entirely their own, that they may fairly claim the very first place among high-class stimulants. Clever judges pronounce them *unique and unrivalled*.

BOS Whiskies are remarkable for their "delicious individuality of flavour," mellowness and softness on the palate.—"A very Nectar," in marked contrast to ordinary blended Whiskies, which are more or less dominated by one or other of the Whiskies used in blending.

BOS is sold in square white bottles, labelled and capped, the quality being notified by a small label on each bottle.

The Proprietors are skilled blenders of Scotch Whiskies, but in all the experience of their Firm, extending nearly over the present century, they have never been able to accomplish anything so fully complying with the most exacting tests, as is now presented in these special blends of BOS.

Correspondence invited from Firms who desire to handle our Whiskies.

YOKOHAMA: SATURDAY, SEPT. 17TH, 1892.

MARRIAGES.

At Napanee, Ontario, on the 15th August, by the Rev. G. M. Meacham, D.D., assisted by the Rev. S. J. Shorey, M.A., CHARLES VINCENT, son of George Sale, of Yokohama, to MARY MAUD, daughter of W. A. Rose, of Napanee.

At Nagasaki, on the 9th instant, by the Rev. Henry Stout, BESSIE F. HOTCHKISS-WEBB and ARTHUR H. BOTTENHEIM.

SUMMARY OF NEWS.

THE *Chishima Kan* left Alexandria on the 9th inst. for Japan.

H.I.H. THE CROWN PRINCE visited the Fukiage Garden on the 11th inst.

THE Yokohama Poor Asylum, which was lately established at Honmoku, will be opened on the 20th inst.

COUNT ITAGAKI is at present confined to his residence through illness said to be disease of the brain.

THE Government offices in the capital will be opened at 9 a.m. and be closed at 4 p.m. on and after the 12th inst.

It is stated that the carpenters of Tokyo are making preparations to go on strike in order to obtain a rise in wages.

MR. MUTSU, Minister of State for Foreign Affairs, had an interview with H.I.M. the Emperor on the 9th inst. at 11 a.m.

H.E. THE MEXICAN MINISTER, and Mrs. Rascon, will leave for home shortly. H.E. is in mourning for the death of his elder brother.

A FIRE broke out on the 3rd inst. about 4 a.m. at West Kinami, Yoshiki District, Yamaguchi Prefecture, destroying 38 dwellings and 7 out-houses. Some 16 residences and 2 sheds were

burnt on the night of the 7th inst. at Myoko in the Nakakubiki District of Niigata Prefecture.

THEIR Imperial Highnesses Princesses Kane and Tsune, who have been staying at Nikko for some time, returned to the capital on the 13th inst.

THE sum of yen 33,600 has been granted from the Famine Relief Fund towards the relief of sufferers in the inundated districts of Okayama Prefecture.

VISCOUNT INOUE, Chief Commissioner of the Railway Bureau, who had been on a tour of inspection in Hokkaido, returned to the capital on the 9th inst.

HIGH waves have rolled up on the shores of Nagasagun, Chiba Prefecture, since the 4th inst., and more than 30 houses were washed away at Kamogawacho.

COUNT YAMAGATA, Minister of State for Justice; Viscount Kagawa, Grand Master of Services to H.I.M. the Empress; and Mr. Iwasaki have returned to the capital from the country.

THE postal and telegraph receipts throughout the Empire during the month of August last amounted to yen 451,367, showing an increase of yen 27,262 as compared with the previous month.

THE work of laying the lines of railway between Kokubuji in the North Tama District of Kanagawa Prefecture, and Kawagoye, Irumagun, Saitama Prefecture, was commenced on the 12th inst.

MESSES. Y. NAKAMURA, N. Osawa, and a few other promoters of the Musashino Bank have applied to the Kanagawa *Kencho* for permission to establish the bank at Hachioji with a capital of 50,000 yen.

THE receipts of the Sanyo Railway Company during the month of May last amounted to yen 40,827,088, of which yen 32,497,263 was realized in the shape of tickets and the remainder from freight.

MR. KUMASHIRO DENSUKE and two others claim to have discovered gold veins at Kusano and Yokoyama, in the Districts of Yamato and Kamidzuma, in Fukuoka Prefecture, and have applied to the Authorities for permission to mine.

THE business of the Honolulu agency of the Yokohama Specie Bank is increasing, and two officers of the Head Office in this port are under orders to proceed there to assist the two Japanese at present in charge of the Agency.

EARLY on the morning of the 3rd inst., a fire broke out in a public bath-house at Fukuramura, Adzumi-gori, Fukushima *Ken*, which involved the destruction of a post office, and twenty houses, while a police station and twenty dwellings were partly damaged.

THE Superintendent of Police in Toyama Prefecture has brought an action in the Tokyo Local Court against the *Hochi Shimun*, alleging that an article referring to him and relating to official interference in the last parliamentary elections in the Prefecture is libellous.

VISCOUNT HIGASHIZONO, who had been despatched by the Emperor to inspect the suffering in the inundated districts of Osaka, Hyogo, and Okayama, returned to the capital on the 13th inst., and proceeded to the Palace immediately to lay his report before His Majesty.

THE number of telegraphic messages and receipts throughout the Empire during August last, as compared with the corresponding month of the previous year, were:—Inland: messages,

495,872 (an increase of 134,162), and receipts, yen 105,691,935 (an increase of yen 26,363,475); Foreign: messages, 4,023 (an increase of 543), and receipts, yen 10,368,474 (an increase of yen 1,683,524.)

LIEUTENANT-GENERAL KODAMA, who returned from Europe lately, Mr. Yoshida Masaharu, an Inspector of the Communications Department, who had been travelling through various parts of Korea on official business, and more than twenty officers of the *Musashi Kan* and the *Yayama Kan*, which arrived at Shinagawa lately, after visiting the ports in China and Korea, were received in audience by the Emperor on the 10th inst. at 10 a.m. They afterwards worshipped in the Imperial Sanctuary.

DETAILS of the damage caused in Aichi Prefecture by the violent storm on the 4th inst. have been received. The number of houses completely overturned was 791, houses partly blown down, 1,557, persons buried under the ruins of buildings 9, persons wounded 27, houses damaged 5,021 houses submerged 236, embankments destroyed 6,033 *ken* (one *ken*=6 ft.) in length, boats wrecked 82, bridges washed away 106, houses swept away 134 and telegraph posts blown down 33.

THE reports of the Gifu Meteorological Observatory on the severe earthquake which occurred in the town on the 7th inst. at 5h. 41m. 7s. show that strong tremors with quick vibrations were felt for three seconds after the commencement of the shock. This was followed by a violent horizontal motion having a range of 36 millimetres per second from N.E. to S.W. This was the severest movement. At the same moment a vertical motion, having velocity of 11.5 millimetre per second was felt. The whole duration, as recorded by seismograph, was 45 seconds. More than 20 feeble after-shocks were experienced.

THE Import trade continues in a healthy condition, and since the clearing out of the old stock referred to last week, a much more comfortable feeling prevails amongst holders, who are ready to commence a new lease of business. Yarns have been taken to the extent of fully 1,000 bales, only 50 of which were Bombays, and heavy Shirts have been in good demand at full rates, as have also Prints, Turkey Reds, and Velvets at a distinct advance. A large variety of other goods have also been sold, and the general feeling is that a strong and healthy autumn trade is being inaugurated. There is at last a good demand for Metals, but holders are very stiff and will make no concessions whatever, consequently the business actually concluded is not great. Steady sales continue in the Kerosene trade, and holders have the pull of the situation. The demand is good and is likely to continue so, notwithstanding the arrival of 82,000 cases during the week, which had no effect whatever on the market. The Sugar trade has been quieter, but prices are well maintained, and stocks are not heavy, though some arrivals have been landed. The Silk trade has again been large—close upon 2,000 piculs. Buyers have had to pay big figures, and holders are not pushing, having done a good stroke up to the present, settlements since July 1st having been close upon 15,000 piculs. There is a comparatively small stock actually on this market, though it is stated that a large quantity could be brought in if it suited the Japanese to place it on offer. Business in Waste has increased, mostly due to sales of Cocoons, of which over 1,000 piculs have been taken. The Tea trade is not very active, but shipments amount to 24,000,000 pounds, which is about the same as last year to date. Exchange, which has been steady, closes firm.

EDITORIAL NOTES.

THE STUDY OF ENGLISH IN ELEMENTARY SCHOOLS.

It will be remembered by many of our readers that it was owing principally to the influence of the late Viscount Mori that, some years ago, the study of English was made compulsory in all the higher elementary schools. During the past few years a reaction has set in, and it has been deemed unnecessary to insist on a foreign language being included in the curriculum of every elementary school. New regulations issued by the Department of Education on this subject have been in force since April 1st. According to these the study of English is optional. Where it is felt that the means of obtaining a livelihood demand that the pupils should know English, there is no objection to a local School Board including the subject in the curriculum, but otherwise its omission is considered preferable. The considerations which led the Department of Education to adopt this course were, first, that a large number of the teachers giving instruction in English were not qualified for the task, and hence much of what they taught had to be unlearned by the pupil in after years; and, secondly, that quite half of the pupils who learned a little English were too poor to continue their studies after leaving the elementary schools, and hence the time spent in puzzling out the meaning of a few simple foreign books would have been better employed in extending their knowledge of subjects likely to prove useful in their subsequent careers. One is disposed to think that the change inaugurated last April should find favour in the eyes of those whose burdens it was intended to lighten. But not so. Creatures of habit, the school teachers, the pupils, and their parents are stated by the *Fiji Shimpō* to be averse to the reform, and they regard those schools where English is excluded as inferior institutions. However badly taught, the English language is supposed to supply a standard to the school which it cannot obtain in any other way. This feeling it is that has led prefectural and village boards to speak in tones of deep regret of the necessity of abolishing English, and to the same sentiment is to be attributed an endeavour to find an excuse for retaining it among the subjects taught, wherever possible. Thus it has turned out that what was designed by the Department of Education as a relief has proved a source of complaint.

THE "NICHU NICHU SHIMBUN" ON THE PORTUGUESE QUESTION.

The following important article, which appeared recently in the *Nichi Nichi Shimbun*, seems worth translating in full, more especially as exceedingly erroneous versions of it have been given in the columns of local English papers:—"The Portuguese Government, on the ground of unavoidable necessities of State, removed its Consul-General, who was invested with judicial authority in regard to the 140 Portuguese subjects residing in Japan. Accordingly, there being no properly qualified official to discharge the functions contemplated by the Treaty provisions relating to jurisdiction, the Government of this Empire informed Portugal that those provisions had ceased to be operative, and announced that an interval elapsing on the 1st of July would be allowed for the receipt of a reply. In the event of Portugal's failing to reply within that interval, it was plainly intimated that her silence would be construed as assent to the intentions of the Japanese Government. The allotted time passed, however, without any reply whatever. Nevertheless, the Government of this Empire, desirous of showing the utmost friendliness to Portugal, did not issue an Imperial Ordinance abrogating the jurisdiction clauses of the Treaty until two more weeks had elapsed, namely, on the 14th of July. Simultaneously with its issue, Minister Nomura was instructed to convey intelligence of the fact to the Portuguese Government. The gist of the communication made through him was that, inasmuch as, with reference to the exercise of the jurisdiction provided for by Treaty, no atten-

tion had been paid by Portugal to the request of the Japanese Government (preferred, from January 1st onwards, either through Minister Nomura direct to the Portuguese Government, or through the Portuguese Representative in Japan)—the request, that a properly qualified consul should be appointed to discharge judicial functions,—the Portuguese Government had forfeited the privilege of its subjects' exemption from Japanese jurisdiction. Still, our Government, anxious to avoid any detriment to the friendly relations existing with Portugal, had waited several days after the departure of the Portuguese Chargé d'Affaires and Consul-General, Mr. J. Loureiro, and had intimated to the Portuguese Government that the 1st of July was the time fixed for carrying out Japan's intentions in the matter. Even after the advent of that date, a further delay of two weeks had been made, and finally, on July 14th, the Imperial Ordinance had been issued. In the above sense the intimation was couched. Such having been the importance attached by the Government of this Empire to its relations with Portugal, and so deliberate having been its course of procedure, the Portuguese Government cannot reasonably raise any objection. Nevertheless, as it would be a matter of very great regret to our Government that any misapprehension, however small, should exist between the two countries, a memorandum, setting forth in detail the circumstances that necessitated this course and the precise views of our Government, has been prepared and presented to the Portuguese Government. Affairs having reached this stage, a communication was received from the French Government on or about the 25th of July, to the effect that the Chargé d'Affaires of France in Japan had been appointed Chargé d'Affaires and Consul-General for Portugal, and at the same time a telegram came from the Japanese Minister to Portugal in Vienna, saying that the French Chargé d'Affaires had been directed to manage the affairs of the Portuguese Legation and Consulate-General in Japan. Of course it was out of the question that Japan should decline to recognise the Chargé d'Affaires or Consul-General of a friendly Power. On the contrary, she was bound to extend a hearty welcome to him. But, as stated above, one message spoke of the offices of Chargé d'Affaires and Consul-General in Japan; the other spoke of managing the affairs of those offices—an obvious difference of meaning. Moreover, there existed also the doubt whether judicial functions were intended to be attached to the office of Consul-General. Accordingly, our Government asked the Portuguese Government for a distinct explanation. So far as concerned the office of Chargé d'Affaires, there was of course no question, and our Government therefore intimated, on the 27th ultimo, that it recognised the French Chargé d'Affaires in that capacity. But with regard to the office of Consul-General, an answer was returned that if, on the part of the Portuguese Government, there existed no intention of connecting the appointment with the discharge of judicial functions, then Japan would be glad to recognise it. Doubtless therefore, the notification of the appointment of the Consul-General, with this restriction, will appear in a day or two in the *Official Gazette*. At present there is no reason to apprehend any difficulty between this empire and Portugal. But should it happen that the latter country prefers a request to be again placed on the same footing as other Treaty States with regard to Consular Jurisdiction, it will suffice that our Government should reply distinctly that simultaneously with the loss of the privilege of Consular Jurisdiction provided by the Treaty, the equal privileges and immunities contemplated by the most-favoured-nation clause were also forfeited. Whoever may be Minister of Foreign Affairs, this view cannot be altered. We take the opportunity to add a few words. The *Dai Nippon* alleges with regard to our writing, that although, to outward appearances, the abolition of the jurisdictional stipulations is asserted, their restoration is being secretly arranged, and that the Government intends to lay the responsibility of the situation on the shoulders of the former Cabinet. In reply

to these evil suspicions, we have only to say that, if a pledge given by means of a State document to another Power and conveyed to the people at home by means of an Imperial Ordinance, were to be treated as waste paper because the responsibility for it devolves on one Cabinet only; or if one course were to be adopted openly and another in secret, we should be the first to attack such a Government. Again, the *Fiji Shimpō* writes as though all the Foreign Powers were prepared to assist Portugal in this matter, and talks of a prospect of strong negotiations being opened. We cannot learn that anything of the kind is really to be anticipated. Moreover, of the 140 Portuguese subjects residing in Japan, only one is a native of Portugal; the remaining 139 are not Europeans. From this point of view alone, it is doubtful whether all the Foreign Powers will act as Portugal's allies. The *Kokumin*, under the caption, "Improper demands must be rejected," writes as though the main question were to remove obstacles. But there has been nothing in the nature of preferring improper demands through the agency of the French Representative. (Here follow some other remarks disposing of blunders made by the *Kokumin*.)

* * *

Since the above article appeared, the *Official Gazette* has contained the announcement that Japan recognises the French Chargé d'Affaires in the capacity of Consul-General for Portugal, but from what the *Nichi Nichi* says, as well as from our own independent information, there can be no doubt that the recognition was accompanied by a distinct proviso that judicial functions are not included in the office as recognised by Japan. With regard to the brief reference made in our contemporary's article to the most-favoured-nation clause, the elaboration of the argument advanced would appear to be, first, that a privilege abrogated by special legislation cannot possibly be recovered under the provisions of a general clause; and secondly, that, although the most-favoured-nation clause provides against unfair discrimination between the Powers to which it refers, it does not furnish to any country a title to recover privileges which she has forfeited through her own laches. The most-favoured-nation clause has always been a bug-bear to Japanese publicists. Even now they appear to forget that from the moment when the Mexican Treaty went into operation, the most-favoured-nation clause became as dead a letter as was ever buried in the pages of ancient history.

THE JAPANESE POLICE SYSTEM.

The Opposition organs have for some time past been agitating for a change in the police system. They are in favour of the abolition of the *Keishi-cho*, or Inspectors, and of placing the *Keibu* or Superintendents, under the control of provincial and district officers. Such a reform, say the *Min-to* journals, would render the improper interference of the police with elections and political meetings an impossibility. The *Nichi Nichi Shimbun*, in a temperate article, traverses the arguments of the advocates of change. Our contemporary points out, in the first place, that the motive of those who wish to see the power hitherto wielded by the Central Government entrusted to local officials is by no means disinterested. The advocates of the change are of opinion that in the majority of cases local officials would side with the Opposition, and that were the police under their control the position of anti-government parties would be much better than it is now. The *Nichi Nichi* does not deny that the Police system is capable of improvement. There are not wanting cases of severity on the one hand and of excessive leniency on the other. But would abuses of this kind become less frequent were the superintendence of the police entrusted solely to the local authorities? On the contrary, they would certainly be increased a hundred-fold. The present inspectors of police are well versed in the laws which have to be enforced and are entirely free from party bias. In neither of these particulars are local officials or mayors worthy of the confidence of the public.

If, with the present stringent rules and close inspection, the latter conducted by specially trained men, abuses cannot be avoided, is it to be anticipated for a moment that anything but gross miscarriages of justice would result were the change advocated to be effected and were amateurs invested with the power now wielded by professionals? The evils, continues the *Nichi Nichi Shimbun*, of which the Opposition organs complain, are not to be got rid of by the abolition of inspectors and by compelling the police to follow the whims of local magnates. Where the police have acted unwisely it has been the result of ignorance. What is required is the education of the usually excellent men of which the service consists to the required standard. With this object in view a special training school has lately been opened, and by its means the new race of policemen are gradually learning the duties that pertain to their office in the new era on which the nation has entered. The popular cry, concludes our contemporary, has ever been "change the rules, reform the laws," but we say, "educate the men." Not new regulations, but men equal to the task of impartially observing of those in existence, are the desiderata of the age.

THE SPECIE BANK.

In the midst of the general depression from which local banking institutions are suffering, the Specie Bank has a bright record to show for the first six months of the year. Its profits are said to amount of over a million *yen*, which sum, if devoted entirely to the payment of dividend, would mean forty-six per cent. for the lucky shareholders. The Bank's fortunes during recent years have not always been unchequered, however, and the Directors are expected to refrain from any specially large allotment on account of dividend, so as to utilize the funds now at their disposal for the purpose of strengthening the Bank's position. The idea is that a sum of 310,000 *yen* will be devoted to the payment of a dividend at the rate of 15 per cent. per annum, and that the greater part of the remainder will be carried to the reserve fund. No conjectures are hazarded as to the reasons of the Bank's remarkable success, but it is probable that the fall in the gold price of silver has contributed materially to the result. The Bank's policy for many years has been to reckon on the appreciation of gold, and its only unsuccessful seasons were when events militated against this forecast. But whatever may be the explanation, Mr. Sonoda, the Director, is to be heartily congratulated on a result which surprises no one conversant with his abilities and judgment.

ONE LAW FOR ME, ANOTHER FOR THEE.

THE extravagance into which some of our local writers are betrayed by the stern necessity of either ridiculing or denouncing the Japanese, from time to time, is well illustrated in the columns of the *Japan Gazette*. News having been received in Japan that at four places in the state of Idaho communities of peaceful and industrious Japanese settlers had been driven out with threats and at a few hours' notice, a Japanese journal referred to the matter in terms of some indignation, and expressed the very natural apprehension that unless the question were taken up diplomatically, strong anti-American feeling, and possibly even an anti-American demonstration, might be excited in Japan. Of course, if the folks subjected to such arbitrary and heartless conduct in Idaho had been British subjects, the whole of the United Kingdom would have rung with indignation. Everyone knows what effect is produced upon the patriotic Britain by the phrase "*civis Romanus sum*," the formula with which Palmerston so successfully conjured on the occasion of the disgraceful Don Pacifico incident. Everybody knows, too, what kind of flaming denunciations the press of the "tight little island" indulges in when even one hair of a British subject's head falls in foreign lands. That display of spirit is perfectly natural and proper. Long may the sentiment that dictates it prevail, for it is the sentiment underlying the greatness of the British Empire. But when it is

three to four hundred law-abiding Japanese settlers in an American state are suddenly ordered to clear out at a few hours' notice and under dire threats if they disobey, a hundred of them being driven into the Sage Bush Plains, the comparatively quiet remonstrances of a Japanese journal are declared by the *Japan Gazette* to be "a very fair sample indeed of pure distilled Japanese hysteria;" and are compared to the spitting of a kitten when its tail is trodden on by a Newfoundland dog; Japanese journals are told that they "would be a little more careful how they write if they knew how ridiculous their flustering, blustering indignation at a fanciful indignity and supposed insult are in European eyes;" their sentiments are dubbed "stilted, narrow-minded, and bombastic;" their editors are likened to "children firing up over a broken toy;" and the progress of the country is said to be "clogged with overweening and intolerable egotism and conceit." Our contemporary's mood when it penned this singular diatribe must have been strangely distraught. To call the forcible expulsion of four unoffending colonies of Japanese subjects "a fanciful indignity and a supposed insult;" to compare the ruin and suffering brought upon three hundred Japanese subjects in a civilized country to the breaking of a child's toy, is certainly one of the most extravagant and heartless criticisms ever penned. Every demonstration of national feeling on the part of the Japanese, even though it be not a tithe of the excitement which a similar incident would arouse in our own country, must be regarded, apparently, as "pure distilled hysteria;" the "spitting of a kitten;" "stilted, narrow-minded, bombastic sentiment;" "flustering, blustering indignation;" "overweening and intolerable egotism and conceit." It would be interesting to read the string of adjectives and epithets which would be ventilated by this same critic if half a dozen Europeans suffered at Japanese hands what some three hundred Japanese suffered at American.

ANNEXATION OF THE GILBERT ISLANDS.

News from Sydney, dated July 24, says:—Mr. H. Grosser, manager of the German line of steamers carrying on business in the Marshall Group, who is now in Sydney, confirms the news of the hoisting of the British flag at Gilbert Group, by Captain Davies, of H.M.S. *Royalist*, who had been commissioned by the Imperial Government through Admiral Scott. The British flag was hoisted at all the principal islands. Only at one island was any objection raised, that of the Butaritari, the king of which recently went to America to request that an American protectorate be proclaimed over the island. In the meantime the *Royalist* hoisted the British flag. The king threatened that an American cruiser would shortly arrive and annex the island, but Captain Davies informed him that it would now be useless. The *Royalist* also arrested and shot a native of the Gilbert group for the murder of a Chinaman some nine years ago. The man-of-war suppressed a native war which had broken out on one of the islands in consequence of the chief of one tribe being murdered by the men of another tribe. Previous to the suppression of the feud there was considerable bloodshed. A Mexican vessel was at the islands recruiting. Another vessel, which had previously recruited 400 natives for Mexico, capsized off the Californian coast, and all on board were drowned.

TYPHOONS.

THE remarkable accuracy of the divisions which long experience has taught the Japanese to make of the seasons, is well illustrated this year. The *Nihyaku-toka* (210th day) fell on the 31st ultimo, and the *Nihyaku-hatsuka* (220th day) falls to-day. On one or other of these days, or at some time in close proximity to them, the advent of storms is always anticipated, and is always especially dreaded, because the state of the crops at that period renders them particularly susceptible to damage. The *Nihyaku-toka* passed, this year, calmly and peacefully. But four days later (September 1st)

a violent gale suddenly sprang out of the Pacific, and striking Owari Bay, passed across Central Japan, making its way out to the West and North. Four days afterwards (September 8th), again another typhoon dashed against Shikoku, working much damage, and now it seems that we are on the eve of another bad blow, for a heavy barometric depression is announced from the south of Kiushu, and its northward course is very probable. The crops cannot fail to suffer considerably in the track of these three tempests.

NOTES FROM OKI.

A CORRESPONDENT who has lately visited this outlying and little visited portion of the empire writes as follows:—"I think the reason more people don't get to Oki is on account of the wretched little steamer that makes the journey—the most uncomfortable craft ever launched; however, she is swift and strong, and makes her trip of ninety-five miles from Sakai in between five and six hours. As the Izumo and Hoki mountains fade from sight, the high cliffs of Oki come into view, topped with clouds. Defining from grey to blue, and from blue to dull green, the coast appears as jagged and broken and grim as that of Izumo, approaching Kakura; but the rocks are a reddish grey instead of black. Steaming into this high archipelago one sees no sign of life; neither fields, paths, nor felled timber,—only naked grey cliffs sheering up from blue-black depths of water, and above sombre and savage vegetation. Nevertheless, there is beauty here. The sea becomes still as glass; and the steamer glides on between headed heights and sea-caves into a sort of interior sea, formed by the three islands of Chiburishima, Nishinoshima, and Nakashima;—these form the group called Dō-Zen. On the coast of Chiburishima, the steamer first touches at a tiny village called Chiburimura,—which comes quite suddenly into sight. Then she proceeds to Urago in Nishinoshima and stops an hour. Urago is a very pretty little town, with houses all facing the sea, and wharves of stones rising out of deep water. I dined at a hotel (Watanabe) and was astonished at the excellent dinner. I had not eaten a better Japanese meal anywhere. The price was only seven *sen*, and the landlord did not want to take what he was offered. The hotel itself was very pretty. Hishi-ura, in Nakanoshima, is the next port at which the *Oki-Saigo Maru* stops. This also resembles Mionoseki a little. Its semicircle of wharves face the clearest and most inviting seawater. The buildings are very neat. The best hotel is the Okazaki. It is a delightful little town. I think the scenery among these islands is much finer than that of the much boasted Inland Sea on the whole. The glimpses between high islands, opening of straits, vistas of tender blue distance between rugged high cliffs, are beautiful. Everything is high. Rice fields are scarcely visible. The steamer leaves Hishiura for Dogo across 8 *ri* of dangerous sea, passing Matsushima, Omori-shima, a number of small, lofty, steep, uninhabited islands on the way. Some of the scenery is fantastic. There are several remarkable sea caves,—one is a ragged hole and washes clear through a high promontory. The Oki Islands form four *ko*, Nishino-shima, and Chiburishima,—with the very small outlying Haka-shima from Chibu-gori; Naka-shima in Ama-gori, and the great Dogo island is divided into Ochi-gori and Shi-gori. Dogo is quite as steep and rugged as its neighbours. The harbour of Saigo has heights all round it. It is pretty, like all the Oki ports. Saigo is partly on a small river—the Yabigawa,—and it lines the bay and the mouth of the river in a most curious way, so that the streets twist about like snakes, to a prodigious length. It is quite a walk to go through the town. There are nearly 1,000 houses, and I suppose fully 5,000 "souls"—though the exact figure I have not yet been able to learn. There are no *kuruma*. There are many remarkably fine houses, one of which, the hospital, is probably the handsomest Japanese house of its size in all Shimane-Ken. The streets are handsome. Sakai is only a dirty hole compared with Saigo. The best hotel is the *Yabigawa*, and the food is very good. Fo-

reign cooking can be had. The city is fresh and new. It was burned to the ground a few years ago, and completely rebuilt for the better. The Oki house carpenters are skillful and tasteful. The depth of the harbour is complained of as an inconvenience; but Saigo is a busy and very prosperous port. Three hundred ships at a time may be seen riding in its harbour. Russian and English men-of-war have visited Saigo; but I am the first foreigner to enter a Saigo hotel and dwell in the town. Outside the city are a few rice-fields. The Island cannot feed itself: it imports much in the way of provisions. Cuttle-fishing is the great industry; cuttle fish, the great staple. The dialect of the people is peculiar. There are said to be 30,196 inhabitants in Oki. The three principal streets of Saigo are Nishimachi, Nakamachi, and Higashimachi; with many cross-streets. There are no remarkable temples in the city. Outside of it, however, are several celebrated shrines; and some curious places,—such as the Dangyo-taki, a famous water-fall in Ochigori, 5 *ri* from Saigo. But all these places are bad to go to. The paths are unspeakably bad, and there are no *kuruma*, and everything is rocks and mountains. Horses, however, abound. There is a celebrated lakelet,—about which exists the wonderful black stone—*bataiseki*, the *meibutsu* of Oki. Beautiful jet-like articles are cut from it. I bought a small cup made of it for \$2.35, and several other trifles. They are made in the prison. The distance from Sakai to Saigo by steamer is 39 *ri*, and the 1st class fare is 80 *sen*.

OZONE.

It is not so very many years since people first began to talk of ozone as a new discovery, and since it became the fashion to describe exercise in the open air as a process chiefly for removing the ozone in the blood. Things have marched, however, since these days. The advertising columns of newspapers now assure us that chemistry has succeeded in liberating ozone, and that the "soul of the air is at our call, even as its sister spirit, electricity, to do us service." Of course many flowers of rhetoric are employed to popularize this new health-giver. We are told that it is "the essence of life," "the breath of the pine-clad hills and of the freshening ocean brought to our firesides with healing on its wings, and that disease and drugs both vanish at its coming." But if ozone be what the physicists tell us, the benefits of being enabled to inhale it into the lungs in large quantities should need no eloquence to be welcome. The public, however, has come to be sceptical about advertised panacea. The art of advertising has been developed into a mere trick to exploit the ignorant and the credulous, just as newspapers themselves, in so many instances, have been perverted into vehicles for ventilating scandal, selling sensation, or gratifying private spite. Our first feeling is one of amused incredulity when we read an announcement like the following:—"The immediate effect of the inhalation of bi-ozone is a systematic disinfection of the blood. The circulation becomes freer, and as the congested and festering organs come under the influence of the regenerated, buoyant blood, the morbid irritants are gradually absorbed and cast out through the natural channels of secretion and excretion, and the general system becomes naturally energized and toned up to the ideal pitch of normal health." Yet, who knows? Perhaps in these days when bread-winning has become so difficult, when so many physical and mental wrecks are cast up by the fierce tide of competition, science may have really discovered something which will re-brace the limp nerves and renew the worn-out cells of gray tissue. In spite of rhetorical advertisements, perhaps!

THE RESPONSIBILITY OF THE DIET.

THE *Fiji Shimpō* expresses anxiety on the subject of railway construction. The bill which was passed last session does not give sufficient power to the executive to decide on the order in which different lines shall be made, and the amount of money which shall be appropriated by each section. The necessity of consulting the Diet on every detail of the *Fiji* railway is

unmixed evil. It is far preferable to allow the specialists free scope. If the interest which members of the Diet take in certain sections is to be allowed to become a factor in deciding the course to be pursued, the complications resulting will render rapid progress impossible. Our contemporary believes the Diet is always apt to err on the side of claiming too much power. The sum of 60,000,000 *yen* has been voted for the construction of nine lines within twelve years, but the matter stands now, the Diet has to be consulted as to the manner and amount of the expenditure of each year. This leaves the door open for obstructionists, of whom there is no scarcity.

ETHICS AND THE NEW CODES.

For some time past certain prominent members of the Japanese Education Society have been turning their attention to the ethical bearings of the New Codes. Like the lawyers who have taken part in the Code controversy, educationalists are divided into two schools. The one school asserts that the tendency of the new laws is to undermine Japanese morality by changing the relations which the different members of the social body have hitherto borne to each other. The introduction of the individual principle and the subjugation of social rights to questions of property, say writers of this school, must prove injurious to the Japanese. Mr. Nose is its recognised leader. His chief opponent is Mr. Motoru Yujiro, who maintains that the Codes have been compiled so as not to do violence to Japanese moral sentiments. Mr. Motoru adds that the principles on which the law of persons rests are recognised in all Codes, and no canon of Japanese ancient morality can claim greater authority than these. It is said that the Council of the Japanese Education Society is about to discuss these two views, and that members will be expected to vote in favour of one or the other. We fail to see the utility of such discussions. It is highly improbable that the majority of the councillors are acquainted with the provisions of the New Codes. The voting is therefore not likely to amount to more than a blind following of the few councillors who have studied the subject, and will be no indication of the tendency of enlightened public opinion on the subject.

MESSINGERS FROM THE SKIES.

THE recently published news that diamonds have been found in meteorites recalls the fact that not very many years have elapsed since the idea of any solid body reaching our planet from space was scoffed at by scientific men. It is true that in very ancient times men never dreamed of disputing the advent of such bodies. The Greeks and the Romans, the Chinese and the Arabs, all placed on record accounts of falling meteorites, and in the middle ages a custom prevailed of committing to paper a statement of the time and place when and where a body of the kind found its way to earth. European museums contain meteorites accompanied by "pedigrees," the oldest of them being a very substantial mass that made its descent in Germany on November 7th, 1692. This meteorite fell near Ensisheim in Alsace, and not only was a precise account of the incident compiled and hung in the church at that place, but a poem also was composed to celebrate the event, and, as everything found Latin expression in those days, a legend was added "*De hoc lapide multi mulla, omnes aliquid, nemo satis*" (of this stone many know much, all something, and no one sufficient). Other meteorites subsequently received similar attestation, but despite all this accumulation of evidence, the theory that bodies fell to the earth through space was scouted by scientists from the middle till nearly the end of the 18th century; that age when reason made its memorable revolt against superstition. In 1794, however, Chladin of Göttingen published a work in which he declared, as a matter of scientific exactitude, that meteorites had fallen and might fall again. At first the thing was ridiculed and treated as a joke, but the great astronomer Zach announced his agreement with Chladin's views about

"world-splinters." Others followed suit, as did the geologist Werner, and Nature helped by sending a fall of meteorites. 'Chladin'—we quote from M. Falkenhorst's essay, 'now gained fresh adherents, and the opposition to his views was weakened, except in France. The Parisian Academy would not listen to any such absurdity as that stones could fall from heaven until the heaven itself bore testimony in favour of Chladin's view by the fall, near L'Aigle, in Normandy, of an enormous fiery meteor, which burst with a terrific noise, raining down about two thousand fragments. The Maire made an official communication of the occurrence, and one of the Parisian papers lamented that the Maire of L'Aigle was so sunk in superstition. The Academy of Sciences, however, sent out its youngest member, the acute Biot, to the scene; and Biot's report convinced the Academy that it must lay down its arms. And so as a contemporary (Benzenberg) pithily expressed it, the "enlightenment which denied the heavenly origin of the meteorites had to bow to the enlightenment which proclaimed it." Thus not a hundred years have passed since people scoffed at the phantasy that stones and iron masses could fall upon the earth from space. But now astronomers tell us of the perpetual occurrence of titanic cataclysms, one consequence of which is that from ten to twelve million solid bodies traverse our atmosphere daily, the larger rushing past as brilliant meteors, the smaller as falling stars, and that two or three meteoric stones strike the surface of the earth every twenty-four hours. And what is more, diamonds have been found in these meteorites, suggesting that the falling masses came from worlds which have been subjected to geological changes such as those that make our earth what it is; worlds where, perhaps, people burn coals and wear brilliants just as we do. Yet it has been said that science has no new realms to conquer!

TOKYO CHAMBER OF COMMERCE.

THE proceedings of the Tokyo Chamber of Commerce at its general meeting on the 26th ultimo were published in our Tuesday's issue. Towards the end of the meeting, however, Mr. Masuda brought forward an urgent motion recommending an alteration in the train times between Tokyo and Osaka, which was carried unanimously. The representation was accordingly prepared and presented to Count Kuroda, Minister of State for Communications on Tuesday. Hitherto there have been three through trains from Tokyo, viz., at 6 a.m. 11.40 a.m. and 9.50 p.m. and from Osaka at 4.40 a.m., 1.07 p.m., and 10.46 p.m. But by this arrangement letters despatched from Tokyo during office hours do not reach Osaka in time for business on the following day, and *vice-versa*. The Chamber of Commerce hopes that one of these trains may be made to start between 4 p.m. and 5 p.m. and thereby greatly facilitate business.

THE HAKUBUNSHA.

WE are glad to observe from the vernacular papers that Mr. Nagao, of the Hakubunsha, has succeeded in making an arrangement with his creditors whereby the business will be allowed to go on as heretofore. The debts of the firm are said to amount to 80,000 *yen*. One fourth of this sum is owing to the Mitsui Bank and the remainder to 19 creditors. The Bank is to be allowed to take over the buildings in Ginza and will henceforth rent them to the Hakubunsha. The proceeds of the books which have been sold since the levying of a distrait on the property of the firm is to be divided among the creditors and the balance of the debt to be paid off by annual instalments.

MEETING OF THE "JIYU-TO."

THE Radical members of the House of Representatives now in Tokyo, held a general meeting on the 9th instant, the principal attendants being Messrs. Hoshi, Tateishi, Kudo, Ito, Suzuki, Nishiyama, Saito, Yebara, Shiota, and Ishida. Two subjects came up for discussion. The first was a report compiled by Mr. Yeguchi on the Bourse Question. So far as

we can gather from the somewhat meagre details furnished by the vernacular press, the report—which received the endorsement of the meeting—did not recommend drastic measures in the sense of abolishing the present Exchanges and substituting Bourses. It maintained that, in order to correct the abuses now complained of, namely, trading by officials of the Exchanges, suspension of business owing to fluctuations in the market, and so forth, complete recasting of the Regulations was not necessary. The Exchanges might be continued as they are now, with the exception of the Rice Exchanges, concerning which some special suggestions seem to have been offered. It would suffice if slight modifications of the Regulations were made, though in what the proposed modifications consisted, we cannot discover.

The second subject of debate was peculiar. It appears that for some time back the Eastern Radicals (*Toyo Jiyu-to*), in other words the Radical section under the leadership of Mr. Oi Kentaro, have been making great efforts to spread their influence in Ibaraki Prefecture. To counteract this campaign, certain members of the Radical Party proper, conceived the idea of organizing a big friendly gathering (*Konshin-kai*) of their associates in that Prefecture, Count Itagaki and other prominent members being present. Hearing of this, Mr. Oi's followers adopted the unprecedented course of asking permission to be present at the same meeting. They addressed to the *Jiyu-to* proper the following letter, which was submitted for the consideration of the meeting on the 9th instant:—

GENTLEMEN—We learn from your newspaper organ that Count Itagaki, Messrs. Kono, Matsuda, Yamada and others, intend to be present at a friendly meeting to be held by the *Kwan-to Jiyu-to* at Mitochi in Ibaraki Prefecture. For our part, we entertain views more or less at variance with those of your Party, and it is our desire to be present at the meeting attended by the above gentlemen, and to deliver lectures there. This proposal being entirely consistent with the principles of constitutional institutions, we trust that it will elicit your unhesitating approval.

(Signed) KOKUBO KIMICHI, } of Ibaraki
IWASAKI HIRATAKO, } Prefecture.

The *Jiyu-to* naturally declined to accede to this bold proposal. The idea is quite novel in Japan, and would doubtless develop lively issues were it entertained.

A MUSICAL TREAT.

THE rather prolonged dearth of any form of musical entertainment in the colony, says the *Hongkong Daily Press*, will shortly be relieved by a visit of some artistes whose fame is world wide. The concert company of Signor Foli, the great bass singer, is now on its way to Hongkong, Shanghai, and Yokohama, in which places it is intended to give some concerts *en passant* to the States. The company has had a most flattering reception in Australia, the colonial papers speaking in high terms of praise of the performers. A glance at the names on an old programme we have received assures us that a very high class treat is in store for Hongkong. Mr. Orlando Harley, the famous American tenor, Madame Valleria, Madame Pechois, Madame Madeline Schiller, Madame Vander-vour-Green, the charming contralto, and others may be expected. Miss Bertha Rossow, who was here with Madame Patey some time ago, also accompanies the party, and will be cordially welcomed again in Hongkong. The announcement that "seats may now be booked," which will appear in due course, will no doubt cause a rush for places.

LI HUNG-CHANG.

THE *Shanghai Mercury* relates the following good story of the shrewdness and common sense occasionally evinced by Li Hung-chang. When early in 1885 the complications with France which subsequently resulted in the blockade of Formosa and the destruction of the Chinese fleet at Pagoda Anchorage were pending, an enthusiastic American inventor sent the Viceroy a plan and specification of a new type of submarine boat which he had designed, and requested permission to come out to China and build

some of the boats at a Government dockyard at government expense. To this the Viceroy replied that the inventor might, if so disposed, build one boat at his own expense, which, if successful, the Viceroy would buy; and as an additional inducement it was added that the Viceroy would pay the inventor a bonus of Mexican \$100,000 for every French ironclad and Mexican \$50,000 for every French wooden ship that might be destroyed through the agency of this submarine boat. Somehow or other the boat appears not to have been built. Possibly the inventor was unable to raise the necessary funds. The Viceroy's suggestion as to payment by results was characteristic.

FLOODS IN HOKKAIDO.

By intelligence published in the *Fiji Shimpo*, dated the 7th instant, we observe that the Hokkaido suffered from severe gales and floods on the 1st and the 3rd instant. In the neighbourhood of Zesashi, the river Toyobenai overflowed its banks and 241 houses were flooded and 2 carried away, and great damage was done to roads and bridges. On the night of the 3rd instant a heavy gale, with rain, raged between Sapporo and Otaru, which did a good deal of damage to the railway and to ordinary roads, 9 railway and other bridges were carried away, 8 houses destroyed, and 700 flooded, 4 persons were drowned. The injury to the line has been considerable and it is anticipated that traffic will be interrupted for some days.

JAPAN'S EXHIBITS AT CHICAGO.

It would seem that Japan's preparations for the great World's Fair at Chicago have now reached a stage sufficiently advanced to warrant a detailed statement of the weight and value of the goods despatched from each principal manufacturing centre in the Empire. The following list is published by the News Agency:—

Place.	Weight of Exhibits.	Value of Exhibits.
	TONS.	YEN.
Tokyo	250	451,800
Kyoto	187	271,283
Saga	166	57,659
Aichi	153	491,024
Hyogo	140	58,114
Kanagawa	130	324,280
Osaka	111	100,994
Ishikawa	100	133,190
Shizuoka	33	42,622
Gifu	31	28,007
Wakayama	13	5,361
Fukuoka	11	6,746
Niigata	9	15,019
Kagawa	9	941
Fukushima	8	4,122
Chiba	8	4,084
Fukushima	8	3,839
Toyama	8	6,049
Hokkaido	8	51,197
Okayama	7	1,391
Yehime	7	46,010
Oita	6	Not declared.
Hiroshima	6	4,014
Nagano	6	13,480
Kochi	6	2,581
Gumma	6	11,722
Ibaraki	5	6,830
Tochigi	5	7,050
Saitama	5	4,158
Yamagata	4	6,080
Nara	4	4,487
Akita	4	1,681
Fukui	4	24,976
Nagasaki	4	6,820
Miyagi	3	2,844
Shiga	3	10,350
Okinawa	2	Not declared.
Tottori	2	3,305
Shimane	2	3,305
Yamaguchi	2	1,110
Miyazaki	2	2,328
Aomori	2	651
Iwate	2	1,992
Yamanashi	2	10,324
Totals	1,500	2,228,854

Among the above Exhibits, there are,

Silk and silk goods, 9,885 cattie.

Fine Arts and Manufactures 250 tons.

The exhibitors aggregate 6,923, of whom the art exhibitors are 223, and the miscellaneous exhibitors 6,700. With regard to the Art Exhibits, the following table is given:—Tokyo,

56 tons; Kyoto, 60 tons; Osaka, 7 tons; Kanagawa, 2 tons; Hyogo 16.6 cubic feet; Niigata, not declared; Saitama, 4.36 cubic feet; Gumma 29.2 cubic feet; Chiba, 1 ton; Tochigi 31.1 cubic feet; Nara 3 cubic feet; Miye 1 ton.

The above figures bear out the comment made by us when Japan's share in the World's Fair was first determined, namely, that the country will have to pay a great deal for advertising itself, since the returns directly obtained from the exhibits cannot aggregate more than a fraction of the total outlay. A considerable portion of the goods sent to the Fair will not be for sale. Out of the 2½ million yen given in the table, it is probably a very liberal estimate to say that fifteen hundred thousand represent articles likely to be offered for sale. Suppose the whole disposed of, and further suppose a profit of 20 per cent., then we have a return of three hundred thousand yen to set against the country's outlay of more than double that amount. However, no nation expects to recoup at once its expenditure on account of a World's Fair. The indirect advantages of opening up new markets and attracting new customers are supposed to make up the difference.

NEW P. AND O. STEAMER.

MESSRS. CAIRD and Co., of Greenock, launched from their yard on July 30th a new steamer of 7,000 tons for the P. and O. Steam Navigation Company, named the *Australia*. This vessel is 470ft. long, by 50ft. in breadth, and her engines indicate 10,000 horse-power, which will be capable of driving her at sea at a speed of 19 knots. The ship will be elaborately fitted up, and the different saloons, library, music-room, &c., will be ornamented with beautiful carvings by the famous Italian artist, Signor Cambi, of Siena, the designs having been executed by Mr. T. E. Colcutt, the architect of the Imperial Institute. This latest addition to the P. and O. Company's fleet will accommodate 413 saloon passengers, and is intended for the India, China, and Australian mail services carried on by the company. A special feature in the ship will be the spray-rooms, which are fitted with douche, spray, wave, and needle baths. She is a sister ship to the company's steamship *Himalaya*, which will shortly leave for India on her maiden voyage.

THE WAKEFUL GUILD.

HERE is another of the wonderful stories for the accuracy of which our truthful contemporary the *Pomfret* is responsible. In Fukuyama, Bingo, there has lately been formed an Association called the *Nenarenu-sha*, or Wakeful Guild. After the manner of more august bodies, the Society has issued its rules, which run as follow:—(1) The object of this Guild is the Commission of acts of violence. All persons approving of this object are free to join the Guild. (2) The enemies of the guild are humanity in general and policemen in particular. (3) Members should be residents of Fukuyama and between 16 and 24 years of age. (4) The head of the Guild, hereafter to be chosen, shall possess sufficient property to be able to pay for a legal defence of the members who may be arrested. (5) The meetings of the Guild will be held every night between midnight and day-break at Momen-bashi. (6) The business to be carried on at these meetings will be the attack of passers by—women in particular—and the insulting of policemen.

CURIOUS MARRIAGE CUSTOMS.

It is said that a very curious method of choosing a wife is followed in Kameshima, Bichiu. When a man has set his affections on a girl, he seizes her in some public thoroughfare and carries her off to his house. It is the duty of onlookers to report the circumstance to the girl's parents or near relatives. If the match is not approved of the girl is fetched home at once, but if it proves agreeable to the presents, they take a *sho* of rice and present it to the future husband, and arrangements for the wedding ceremony are forthwith made. A

similar practice has prevailed in various countries, especially in times of war, but as far as we are aware, this odd custom exists nowhere else in Japan. Another curious custom is said to be still observed at Kameshima, namely, that of smearing with ink the face of a young man who is about to marry into another family. This is done when the bridegroom is on his way to the house of the bride.

THE CANADIAN MAIL PASSENGERS.

THE Canadian mail steamer *Empress of Japan* arrived here Tuesday, bringing a very large number of passengers, amongst whom we notice the names of Mr. and Mrs. Montague Kirkwood, who have returned to Japan after a tour of the Continent and a visit to England. Many of the passengers by the *Empress*, some on business, some on pleasure, and some combining both, are visiting Japan for the first time, amongst whom are Professor Hirschberg, the famous oculist, of Berlin University; Mr. Louis Prosperi, the great caricaturist of *Vanity Fair*; the Hon. George Nathaniel Curzon, M.P., Parliamentary Secretary of the India Office, in the Marquis of Salisbury's late Government; Professor Raymond, who occupies the Chair of Elocution in Princeton College; Mr. Henry D. Pierce, special correspondent of the *Inter-Ocean*. Mr. Pierce, who is on a big holiday, and anticipates a very extensive tour in the East, was formerly Assistant District Attorney for Indiana, and late a partner of U. S. Senator Turpie, is a nephew of the late Vice-President Hendricks. Professor Jno. L. Stoddard is also among the passengers. Mr. Stoddard, who is in the front rank of the popular lecturers of the United States, is travelling to obtain material for an entirely new set of lectures, and will be absent from America for a lengthened period, his intention being to visit all the countries of the globe before he returns home.

MILITARY PUNISHMENT.

WHEN the news of Mr. Frick's attempted assassination reached Homestead, it was received with undisguised joy by some of the strikers, though others, more thoughtful, perceived that their cause must be seriously injured by the bad effect which such an act would produce on public opinion. The strangest and most graphic incident connected with the affair occurred in the camp at that place, the principal figure in it being Thomas Iams, a private soldier in Company K of the Tenth Regiment. This is the story, as told by a New York journal:—

Iams is less than 30 years of age and comes of a good family. His father was at one time Commissioner of Green county and quite wealthy. The young man is a drummer for a Pittsburgh house, and although his home is in Waynesburg he is in Pittsburgh most of the time and has a large circle of friends there. He was standing in front of his tent in the company street, cleaning his rifle. There were dozens of soldiers standing and sitting about in idleness. Lieut.-Col. Streater, while Col. Hawkins is acting as commander of the brigade, is in command of the Tenth Regiment. He approached a group of men and said:

"We've just heard terrible news from Homestead. Mr. Frick has been shot."

Other men approached the group. Iams stood his rifle against his tent and hastened to the group also. He said to the first man he met:

"What's that Streater says?"

"He says Frick was shot."

"Who did it?" Iams asked eagerly.

The soldier to whom he put the question did not know, and Iams returned to his tent, took up his rifle again, and stood for a moment buried in thought. Then he raised his voice and cried:

"Boys, let's give three cheers for the man who shot Frick. Hooley!"

All voices ceased and the men looked at one another in consternation. Col. Streater had started to walk off. He turned and looked Iams full in the face. Iams stared at him defiantly. The other members of the company, anticipating trouble, walked slowly away to be out of hearing. The Colonel walked to where Iams stood.

"Young man, what did you mean by that?" he asked. Iams looked down sulkily and answered, "I meant that I was glad that Frick was shot, and I am too."

"Now, my friend, you're a soldier and you have no business to make such remarks. Do you want to retract it?" Iams thought for a moment and then raised his head and said: "No, sir; I am glad that Mr. Frick was shot, and I cannot retract; anything I said I really meant."

The Colonel turned and left him. Five minutes

later he gave the order for the regiment to assemble without arms. The men of Company K felt what was coming and assembled with serious faces. The other companies, unaware of what had happened, answered the call; asking one another what was the matter. There had been no such order before since the organization of the camp.

When the regiment was finally assembled, Col. Streater addressed the men thus:

"When the news of the attempt on Mr. Frick's life was announced here a few minutes ago, a member of the regiment offered three cheers for the assassin. I want that man to advance two paces."

There was deep silence, but no one moved.

"I know the man," the Colonel continued, "and he can gain nothing by keeping silent. I order him to step forward at once."

There was another moment of suspense, and then Iams advanced two paces, saluted respectfully, and stood at attention. In spite of the severe discipline of the camp the other soldiers could not refrain from looking around at Iams. Col. Streater advanced to where Iams stood, took out his penknife, and, amid the most profound silence, cut the buttons from the soldier's uniform. When he had finished and retired a few paces to look at him Iams saluted again in a most respectful manner.

"Corporal of Company K," called the Colonel. A corporal advanced and saluted. "Take a guard and take this man to the guard tent. Ask the surgeons to stand by, and string this man up by his thumbs until he can stand it no longer."

Iams, who up to this point had stood flushed but entirely self-possessed, turned the colour of chalk and trembled, but he never flinched. With another salute to his Colonel he turned and followed the corporal to the guard tent. The men were dismissed, and with awed faces retired to their tents. They did not dare discuss what had taken place.

Three regimental surgeons followed Iams to the guard tent. The young man soon regained his self-possession, and held out his thumbs for one of his fellow soldiers to tie. A stout piece of twine was tied tightly to each thumb and Iams raised his arms while the corporal drew the line over the tent pole. The cord was pulled by three men until Iams stood on tiptoe, and then it was made fast. The surgeons took turns counting his pulse beats. They had to stand on a chair to do so. Not a word was spoken. The young man's face was deathly white, but his eyes were brilliant with determination. His arms were rigid with his weight. The twine was cutting into his flesh, but he pressed his lips firmly together and did not allow a moan to escape him. The soldiers and the corporal turned their faces away. The sight was too painful. The surgeons, watch in hand, kept their fingers on his pulse. The beats came faster, and slowly the man's head fell forward on his breast and his eyes closed. He could no longer press the ground with his toes. This dead weight hung heavy on the twine.

Minute after minute passed, and his pulse beats were constantly increasing. At last one surgeon said: "One hundred and twenty beats. Let him down." Iams had hung for nineteen minutes. A surgeon held him firmly while the soldiers cut the cord. The young man fell into his arms and was laid gently on the ground. His eyes opened soon, and Iams said: "Let me lie here. I feel sick."

They covered him with a blanket and withdrew, and Iams lay there in the guard tent all night. Col. Streater made his report to Col. Hawkins, who endorsed it, and sent it by an orderly across the river to Gen. Snowden. Gen. Snowden read it over carefully and endorsed it:

"Dismiss this man in disgrace from your regiment, and drum him out of camp to-morrow morning."

These were written orders. But to the orderly he added: "Tell Col. Hawkins to have the man's head shaved on one side before he is dismissed."

Early this morning the provisional brigade under the command of Col. Hawkins was ordered to assemble on parade. Three regiments of infantry and a battery of artillery turned out and drew up in two lines facing each other on the parade ground. The disgraced soldier was brought out by a corporal of the guard.

He presented a pitiable appearance. His uniform had been taken from him and he wore a pair of cheap overalls and a ragged coat, which could not hide his undershirt. He held a tattered straw hat in his hand. The top of his head, on the right side, had been shaved to the scalp, and had it not been for his pale face and his bruised thumbs the assembled soldiers could not have refrained from laughing.

The corporal turned him over to a Lieutenant, who with twenty men proceeded to march him from one end of the parade ground to the other and then back again. The soldiers looked at him curiously, but there was no anger or displeasure in their glances. They all pitied him. He was brought before Col. Hawkins and an Adjutant proceeded to read the report which had been submitted to Gen. Snowden and the orders which the General had given. Iams listened to it with an air of indifference. His face betrayed no emotion whatever. When it was finished, Col. Hawkins said to him: "My man, this has been an exceedingly painful duty for me to perform, but I think the punishment was just. You are now discharged in disgrace from the service. You will be escorted to the limits of the camp. If you ever dare enter it again you will be summarily dealt with."

The regimental drum corps then fell in line and began to play the Rogue's March. Iams was ordered to march behind them, and he was followed by his regiment. This strange parade moved over the hilltop and down for as the railroad station. A freight train was slowly passing, and Iams was told to jump aboard. He climbed into a box car and was soon lost to view. The drums and the fife ceased, and the men returned to camp in silence. No one here knows where Iams has gone. His discharge from the militia in disgrace deprives him of his franchise. He cannot cast a vote, nor can he ever hold public office. The soldiers will not discuss his case, and all that any officer will say is, "Well, discipline must be maintained."

COOLIES FOR HAWAII.

HITHERTO the labourers sent to the Sandwich Islands have come from Kumamoto, Yamaguchi, and Hiroshima prefectures. We now read in the *Yomiuri Shimbun* that it is proposed to substitute Niigata prefecture for Kumamoto as a place from which to export labourers. The disfavoured into which Kumamoto men have fallen is traced by the *Yomiuri* to three sources. (1) They lack perseverance. (2) They gamble. (3) They show a tendency to form guilds and hold out for high wages. The reason for selecting Niigata-Ken men rather than any others, as given by the *Yomiuri* is not very satisfactory. It is the result, we are told, of the interest taken in emigration by the late Prefect of Niigata, Mr. Senda, and the present secretary of the Prefecture, Mr. Murakami. Nothing is said by our contemporary as to the special suitability of Niigata men to become emigrants.

THE UNITED STATES RICE CROP.

DAN TALMAGE'S Sons Rice Crop Bulletin of August 15th, says:—The season of growth is rapidly merging into harvest time and planters are about to reap the fruit of their labours and justify their faith in this cereal. In the Carolinas the growth during the past month has been so rapid that the largest crop since the war is now in sight. In Georgia conditions have been such as to more than make up for the ground lost in the early part of the season. Florida, Texas, Alabama, Mississippi, Arkansas, though possibly indicating less interest in the culture than in the older rice states, report excellent prospects wherever planting has been entered upon. Louisiana, as noted in our last, is the banner state; prospects were flattering then, but now they exceed the most sanguine predictions of early spring and fully bear out our estimates of June. Harvesting will soon be general, and planters will have all they can do utilizing the labour at hand in taking care of the ripening grain, even if weather during cutting season should be in every way propitious. The most critical period is ahead, and during the next sixty days planters will watch wind and weather with as anxious an eye as ever did a sailor ploughing the waves, for disasters may arise from rain storms and gales very materially changing the present cheerful aspect.

ENTERTAINING AND BEING ENTERTAINED.

THE desire to see the world is very strong with most Japanese. So much so that it is not uncommon for a *fiurikisha*-man to suggest to his employer that he should be allowed to accompany his master to some foreign land. The capacities in which lovers of the world set out on foreign tours frequently display no small amount of ingenuity on the part of their projectors. A case in point is reported in the vernacular papers. About 20 of the pupils of the noted fencer Sakakibara Kenkichi, with that energetic foreign tourist Mr. Suzuki Keikun as their guide, have determined to explore the Western world. Having no funds to speak of at their disposal, they propose giving exhibitions of their fencing skill at the places visited and utilising the proceeds for travelling expenses.

SEQUAH.

SEQUAH is achieving great and deserved success among all classes of the Yokohama public. Every evening his stand, pitched opposite No. 272, is surrounded by large crowds of many nationalities, who derive both benefit and amusement from the exhibition. Dozens of teeth are drawn gratis every night, while several persons

who have been martyrs to rheumatism for many years have received immediate benefit from his hands. Possessing a distinguished, gentlemanly presence, with a winning and fine delivery, his orations are listened to with great interest, while his reputation as a *masseur* is soon demonstrated to rest on substantial grounds. The celerity and despatch with which he draws teeth borders on the marvellous. Last evening, just as a rheumatic patient had mounted the platform a heavy shower of rain came on, and the majority of the crowd incontinently fled, but those who remained had speedy proof of the efficacy of Sequah's treatment. Already his medicine and oils are attaining a large sale, and great satisfaction is expressed as to the benefit which each confer.

An audience numbering several hundred had assembled when Sequah drove down to 272 on Wednesday night, the crowd increasing as the performance proceeded. There seemed to be no end to the number of people who wanted teeth extracted, and nearly a hundred of them were accommodated in a very short space of time, a continuous stream—up one side of the carriage and down the other—being individually relieved of their troublesome ivories in a few seconds. Sequah places a band round his head, and from his forehead shines a brilliant electric light, by the aid of which the undesirable member is immediately detected. Then selecting the suitable instrument from a row laid out ready to hand, the operator had the tooth out in a second in scores of instances. Men, women, and children were relieved, not a slip or a breakage occurring in a single case. A peculiar feature of the performance was that the faces of those operated upon showed no sign of pain, not even those who had two teeth extracted, of which there were several. It was comical, however, to witness those who, not knowing the tooth was out, sat, mouth wide open, waiting for the operator to begin. After a few words from Sequah, which were repeated in Japanese by an interpreter, a *sendo* presented himself to be cured of lumbago. Sequah said that, though the man had been suffering for a year and had been unable to work for the past two months, and would be cured after four or five minutes' rubbing with the oil, he desired a more difficult case—a confirmed rheumatic for instance. A committee of two foreigners and two Japanese then mounted the car and witnessed the rubbing, and the patient was allowed to rest for ten minutes while the virtues of Sequah's remedies were diluted upon. After this the *sendo* was made to bend his back and sit Japanese fashion, which he could not do before being rubbed with the oil, and the patient said he felt all right. Shortly after this an old man, who had been cured of rheumatism several days ago, presented himself to say that he never felt better in his life. Sequah then proceeded to sell his remedies.

THE CONTROL OF ECCLESIASTICAL PROPERTY.

We read in the *Yiji Shimo* that the Home Department deems it necessary to draw up a new set of regulations relative to the control of temple property. From time to time it has transpired that such property has been mortgaged, and not infrequently land attached to temples has had to be sold to pay the debts of priests. In addition to this, increasing difficulty in keeping temples in a proper state of repair has been experienced of late years, and unless the Government comes to the rescue many fine old buildings will lapse into a state of ruin. The intention now is to draw up minute regulations, and to require local officials to undertake their enforcement.

METALS.

The following is extracted from Messrs. S. W. Royse & Co.'s Report of July 30:—This has been a dull month in the Iron Trade; little business has been done in Scotch Iron, but rather more activity is now noticeable, and shipments are showing somewhat better and prices have latterly improved slightly. Prices of Middlesborough Iron have, however, fallen about 2s. per ton during the month, transactions have been

limited, and for prompt delivery only. Shipments from Middlesborough are very low, being only 36,308 tons up to the 25th inst., as compared 49,886 tons for corresponding period of last year; still, stocks in the public stores have been reduced, and there is now a more extended feeling that prices can scarcely be expected to fall further, and there is some enquiry for forward delivery. Tin has dropped steadily, and is now more than £5 per ton lower than at the beginning of the month. Copper also has fallen slightly, but the reports as to the arrangements for the restriction of production should have a good effect. Lead has fluctuated a little, but is practically unchanged. Spelter is rather lower, and is easy.

"TRANSPORT."

We extract the following from a new weekly with the above title, published in the interests of Docks and Harbours, Canals and Railways:—The judgment of the Court in the inquiry into the loss of the *City of Chicago*, which lies a hopeless wreck off the Old Head of Kinsale, will commend itself to all who have watched the case. There was much to be said for the captain in the difficulty he had to contend with—that of navigating his vessel through a thick fog along a dangerous coast, upon which there were no fog signals—but it is impossible to exonerate him from blame. The Court thought the master was not justified in keeping the vessel at full speed, 14 to 14½ knots after passing Cape Clear, and as the lead was not used with sufficient frequency, proper efforts were not made from time to time to ascertain and verify the position of the vessel. The Court appears to have been satisfied that after the stranding the men took all proper measures for the safety of passengers and ship. The stranding, it was found, was due to the fact that the master, though he could not be certain of his position, altered the vessel's course at 7.25 p.m. to east-north-east, which led her towards the land, and continued that course at full speed without using the lead before 7.45 p.m. Having regard to the fact that the weather was an intermittent fog, very thick at times, that the vessel had again set nearer to the land than the master had expected, and the log showed that she was travelling faster than he calculated, the master was in default for not having used the lead with greater frequency, and for allowing the vessel to proceed in full speed upon a course approaching the land at a time when, as the Court believed, the weather was not such as to justify that proceeding. The Court suspended the certificate of the master, Captain Arthur Redford, for nine months. The presiding magistrate stated that the Court would make a suggestion to the Board of Trade that a fog signal should be placed on the Old Head of Kinsale, a matter which, I am glad to learn, has already been taken in hand by the local authorities.

It was announced at a meeting of the Channel Bridge Company held on Tuesday, that an inquiry by Schneider and Company, of Le Creusot, Mr. Hersent, and Sir Benjamin Baker, had been made on the basis of a new route, which gave the advantage of shorter communication and superior soil. The result has been that the number of piers has been reduced from 121 to 72, and that the spaces have been increased in size. They measure on the new plans 400 and 500 metres alternately from end to end. The company will now seek to obtain concessions which will enable them to carry out the work which has been before the public.

THE POLICE.

The Government is stated to be at present contemplating an important reform with regard to the police, namely, to deprive them altogether of judicial functions. If this change be effected, and according to the *Kokkai* it is likely to be, the executive duties of the police will be under the immediate direction of Headmen of Wards Districts, who in turn will be answerable to Governors of Prefectures, these latter being under the ultimate direction of the Home Department; while the judicial functions now dis-

charged by the police will be entrusted to the Public Procurators under the final direction of the Department of Justice. The statement does not convey a very clear meaning in this broad form, but apparently one result of the change would be to dispense with the office of Chief of Police, who is at present a very important functionary in the Government.

COMMITTEE OF INVESTIGATION OF CHIEF TAX COLLECTORS.

For some time back the Chief Tax Collectors of the various Prefectures have been sitting as a Committee of Investigation at the Department of Finance. No details are published as to the precise points submitted for discussion by the Committee. We are only told that the members had to consider questions relating to the collecting of taxes and to taxation in general—a tolerably wide programme. However, it is stated that most satisfactory results were reached, and that the Minister of Finance expressed himself highly pleased with the labours of the Committee. His Excellency delivered a brief address when the session came to an end. A verbatim report is published by the News Agency, but as the speech does not travel beyond an enunciation of general principles, excellent enough, doubtless, but not specially interesting, we refrain from translating it.

ANOTHER OUTRAGE IN KORRA.

The *Mainichi Shimbun* reports another outrage against a Japanese subject in Korea. The particulars, as given by our contemporary, are these:—One Nakahara, a native of Tsushima, having obtained official permission, repaired to Poh-tsing Sinpo in Korea, and set himself to collect and cure *blêche-de-mer*. Three times the Governor of Poh-tsing issued instructions urging the people to obstruct his business, and finally several hundred persons assembled and invaded his house, seeking to carry off his implements and the *blêche-de-mer* he had collected. Nakahara, aided by seven Japanese boatmen, attempted to withstand the intruders, but the Japanese were borne down by weight of numbers, and compelled to beat a retreat, saving only their implements. They have lodged a complaint at the Japanese Consulate, claiming that not only were several thousand catties of *blêche-de-mer* stolen from them, but they themselves were badly beaten and their property was much injured. The frequent recurrence of these troubles between Japanese and Koreans must end by disturbing the friendly feeling between the two countries. Japan does not appear to make much outcry, or seek redress by peremptory methods, but her forbearance may reach its limit.

THE NEW MITSU BISHI BANK.

A very imposing building is in course of erection on a portion of the 80,000 *tsudo* of land purchased by Mr. Iwasaki from the Military Department a few years ago. The structure is to be four storeys high, and will be sufficiently large to allow of being let in flats. The Bank, it is said, will occupy the ground floor and make use of the underground cellar, while the upper part of the building will be let to the Yusen Kaisha, the Fire Insurance and Life Assurance Companies. According to present calculations, the building should be completed by the end of next year.

A HARD CASE.

The *Hochi Shimbun* reports a case of rare occurrence in Japan. A new Government school is to be erected in Nagaoka. A short time ago tenders from various contractors were solicited and it was stipulated that a certain sum of money should be paid in as security by the contractor whose tender was accepted. In accordance with this agreement, one Imata Gorokichi, the successful tenderer for the building, was required to pay to the prefectural authorities some thirteen or fourteen hundred *yen* as security. He paid one thousand *yen* and promised to bring the balance by a certain hour of a certain day or forfeit the money advanced. The account states that the unfortunate contractor resided at

some distance from the town, and that owing to floods he was 45 minutes late in paying in the money. In such cases the Japanese are usually considerate, but, from what cause it is hard to determine, the prefectural assembly by whom the affair was discussed, permeated with the spirit of Shylock, voted for the enforcement of the letter of the bond, and so the astounded contractor found that 45 minutes' delay had cost him the sum of one thousand yen and the loss of the job for which he had tendered.

THE MEETING OF GOVERNORS.

THE *Nihon* draws attention to the fact that this year the investigation of local government affairs by the Home Minister is being conducted in a different manner to that hitherto adopted. The old custom was for the Home Minister to consult the Vice-minister and the heads of Bureaux as to the subjects on which it was desirable the Governors should be interrogated. Questions were then drawn up, printed, and sent to the Governors some time before the Tokyo meeting. They were thus able to prepare their answers. This year the new Minister has called no meeting of officials, and has not informed the Governors of the business to be submitted to them. This change, according to our contemporary, has caused considerable uneasiness in some quarters, and not a few anxious faces are to be seen among the Governors whose prefectures have been the scene of disturbances of various kinds.

The *Kokumin Shimbun* has the following comments on the meeting. Prior to Count Inouye's appointment to the Home Office the control exercised by the Central Government over provincial Governors was very imperfect. It was not at all uncommon for Governors to express in public, opinions directly opposed to those known to be held by their superior officers, and it not infrequently happened that Governors combined and originated measures without consulting the Home Minister, or that they advocated policies in public which had not been sanctioned by the Central Government. The whole system of local government, originally elaborated by Count Inouye and enforced with much ability by Count Yamagata, has become seriously disordered. Count Inouye is determined to restore things to their former state. The firmness he has already displayed has produced unmistakable results in the provinces. It is to be hoped that the Home Minister will not stay half way, but make the reform thorough. Irregularities have been numerous. We have had a case of the chief of a district dismissing 27 heads of villages. We have had an instance of a police inspector urging people to attend a pro-Government social meeting, and a case of the dismissal of a school teacher without adequate reason. Official interference with political meetings and elections has been notorious. This is all known to the new Minister, and we trust he will act up to his knowledge. Thus far it seems to us (*Kokumin Shimbun*) that the Home Minister has erred in the direction of over leniency, but we trust that the public has not yet seen the end of the reforms which he deems necessary.

RESCUING SHIPWRECKED SAILORS.

It is seldom indeed that sea-going folk meet such a string of opportunities of succouring their distressed and imperilled fellows, as those on board the *Sesshu Maru* met last Monday. When off Daio Misaki, and nearing the entrance to Owari Bay, a wreck was sighted on the south-eastern horizon and the course was altered to see if assistance could be of any avail. The steamer had not proceeded far, however, when 5 or 6 men were seen struggling in the water crying out for help. This was at 1.50 p.m. when the steamer was about 28 miles south of the point named. The struggling men proved to be the Captain, Chief Mate, and sailors of the foreign built sailing vessel named the *Handa Maru*, owned by one Mase Shotaro, of Kamezaki, Aichi Ken, and which was lost at 2 p.m. on Sunday the 4th, when on a voyage from Yokohama to Aisuta. When they reached the steamer's deck the men said that there were probably others still in the water. Further search was therefore made, with the re-

sult that another was found, but the unfortunate fellow died very shortly after being pulled on board. As there was much wreckage about, additional search was made, and within a short time others were caught sight of struggling in the water. These too were eventually rescued, and they proved to have belonged to the junk *Kompira Maru*, owned by Awa Ukichi, of Wakayama. Just at this time the steamer *Tamon Maru* passed and reported having rescued some men, and that she would proceed to the aid of the vessel on the horizon. The *Sesshu Maru* then remained in the vicinity of the spot where the first lot of survivors was found, recovering three more before resuming her course. There was quite a heavy sea running, and it was with much difficulty the men were got on board. Before these poor fellows were rescued it became evident that some one belonging to the crew would have to go overboard to the rescue if they were to be saved. Inouye Sakutaro, one of the sailors, a man noted for his powers as a swimmer, consented to go, and after a gallant effort succeeded in rescuing the three, who proved to have belonged to the first crew found, that of the foreign built vessel. By this time it was 4.30 p.m., and as there were apparently no others still afloat, a course was made for the land. On the way thither a vessel under jury masts was sighted. The alteration of course necessitated by a desire to succour her, led to three more men being saved from a watery grave, in the rescue of these also, the man Inouye further distinguishing himself. These men proved to have belonged to the junk *Tomifuku Maru* owned by Takemura Chotaro, of Tokoname, Aichi. The disabled vessel flying distress signals was found to be the *Torayoshi Maru*. The *Sesshu Maru* got out a line and started off for Hamashima with her in tow. On the way, however, the tow line parted, and it was thought best to push on and despatch aid to the vessel from Hamashima. Hamashima was reached at 6.50 p.m. and the matter was at once reported to the village officers, and request made that some vessel should be sent out to the assistance of the *Torayoshi Maru*. The rescued men, fourteen in all, including the dead sailor, were handed over to the local authorities, and the *Sesshu Maru* resumed her voyage to Shinagawa at daylight the following day, 6th inst.—*Kobe Herald*.

THE END OF THE TEH-HUA AFFAIR.

THE *Foochow Echo* contains the following:—

The concluding scene of the Teh-hua affair, which had been waited for patiently by the authorities for nine long months, took place outside the city on Tuesday last. The rebel chief had been taken and was executed. Although a reward of three thousand taels had been offered for his arrest, it was only on Monday last that he was brought in to the Provincial capital. On his arrival he was taken to the Provincial Judge and afterwards to the Viceroy. A telegram was at once sent to Peking announcing the capture; and instructions were received, in reply, that the man was to be beheaded. This order was partly carried out the following morning at 8 o'clock, that is to say on Tuesday last. Seven officials were present, and, besides a body of a thousand braves marched on to the ground, there were several thousands of citizens there as spectators of the proceedings. At the appointed time the doomed man refused to kneel down when requested by the executioner to do so. He stood, and stoutly denied that he was a party at all to the revolutionary movement; much less was it leader. He added that the people had put his name on their flags altogether against his wish, and that he had been powerless to prevent them. The execution was attended with the most painful circumstances. A veil must be drawn over the details. Suffice it to say that as the executioner could not prevail upon the man to kneel, he essayed to decapitate him while standing, and succeeded so badly that the sword was used seven times before the execution was complete. Of course it would have been otherwise had the man knelt, but he could not be induced to do so and it would have taken several ordinary men to have forced him into position, as he was a stalwart athlete of great physical power. There were murmurs amongst the lookers on at the ill manner in which the execution had been performed, but when the executioner was proceeding to carry out his further orders the uproar amongst the people was so great that the carrying out of this part of the sentence had to be abandoned. The head was sent to Teh-hua for exhibition in a public place as a warning to the people there. The story of the rising at Teh-hua is still fresh in the memory of most of us. For some time previous, there had been a marked falling off in the salt tax

revenue, and, suspecting smuggling, the authorities adopted the extreme measure of collecting it from the consumers instead of from the dealers, assessing each member of a family whether man, woman, or child on a scale of 5-lbs. of salt a month per head. New-born babes were counted in, and a register made which was to be subject to no alteration even though death occurred in a family. The indignation of the people knew no bounds, but they kept quite quiet, and agreed amongst themselves to petition the authorities to have this new regulation rescinded. The petition was drawn up and presented in person by the headman of the locality, a petty mandarin of large means (the native in fact, who has just been executed). The authorities, instead of taking the petition into their consideration, became furious, imprisoned the man who presented it and fined all those who had signed it, threatening the arrest of the whole lot if they dared to be so presumptuous in the future. Then the people rose: three thousand of them banded together, went straight to the *yamen*, released their headman by force and carried him back to his village. Shortly afterwards the authorities sent an officer with a few hundred soldiers, and a magistrate, to recapture their prisoner, but they were met by the large body of peasantry and defeated, the magistrate being killed in the fight. After this, there seemed to be no going back. Some sort of organisation of the force was at once made, and the district declared itself in a state of revolution. Their headman, just released by them from prison, was called upon to be their leader, but he refused. They declined to accept his refusal, notwithstanding that he would take no active part in the movement, put his name on their flags, and forced him to provide all the dollars they needed. They were mad with excitement, and he was powerless in their hands. At this juncture, he (the man who was beheaded on Tuesday) ran away and had nothing to do with that day's proceedings, or the subsequent more important events. Going off in a hurry, he left his family in his home. Every member of it and all his relations suffered death, later on, at the hands of the authorities. If this story is not correct in every particular, it is the one current amongst the people of Foochow as true, and has led to the feeling that an injustice has been done. They disapprove of the hasty execution without a proper investigation of the man's case. For ourselves, we think it is utterly impossible that the authorities can have made any mistake in the matter, although the people asserted that the real leader of the rebellious movement is still at large.

INTERNATIONAL CHESS CONGRESS AT DRESDEN.
